(iii.)—Instruction of Officers in Army Telegraphy and Signalling.

(*Army Circular dated 16th January* 1869.)

1. The Secretary of State for War has decided that, subject to such regulations as may be approved by him, and issued under his authority, the superintendence of the working arrangements of all permanent military telegraph stations, electric and visual, established under his authority, as well as the construction of military telegraphs, shall devolve on the Royal Engineers as one of the regular duties of the corps, subject to the general supervision of the Inspector-General of Engineers and Director of Works.

2. All officers of Royal Engineers, and such non-commissioned officers and men of the corps as may be selected, will be required to go through a course of instruction in electricity and telegraphy, and in the methods of constructing telegraph lines, in the School of Military Engineering at Chatham. These officers and non-commissioned officers will be employed, when occasion requires, to superintend instruction or work at out-stations.

3. The flashing system of signalling has been approved for field service, for military signal stations, and for communication between Her Majesty's ships and troops on shore, and will be introduced at all permanent signal stations, as opportunities occur, superseding the local systems now in force.

4. Full details and description for working the flashing system of signals are promulgated in the new edition (1868) of the Army and Navy Signal Book, which has been prepared for field service, as well as for use at permanent signal stations, and for communication between Her Majesty's ships and troops on shore.

5. Arrangements have been made at the School of Military Engineering for the instruction in signalling of a certain number of officers and non-commissioned officers

APPENDIX VII. (F.)

Instruction of Officers.

from each regiment and corps in the army, who, when duly qualified, will be employed as instructors in their regiments or corps.

6. The number and strength of these classes and the extent to which instruction will be afforded will be regulated by the Commander-in-Chief, regard being had to the provision made in the estimates for the purpose.

7. All telegraphs, electric and visual, at each military station, where signal stations have been established under authority, will be under the superintendence of a competent officer who has passed through the Telegraph School at Chatham, or has been proved to possess a practical knowledge of electricity as applied to, and of the instruments approved for, telegraphic purposes, and for day and night signalling (including communication with ships, as adopted for general army and naval service). The officer in charge of the telegraphs, &c., at an established signal station will, when possible, be an officer of Engineers, and the duty of superintendence will form a portion of his ordinary duty, under the Commanding Royal Engineer.

APPENDIX VII. (G.)

G.—ACCOUNT OF THE SURVEY CLASS, ALDERSHOT.

Aldershot Survey Class.

Major Woolsey.

LETTER from MAJOR WOOLSEY, Royal Artillery, in charge of the SURVEY CLASS.

Survey Office, Aldershot,
10th August 1869.

SIR,

IN reply to your letter of the 29th ultimo, I have the honour to state for the information of his Lordship, the Chairman of the Royal Commission on Military Education, that it appears by the records of this office, that two extra deputy assistants quartermaster general were appointed in 1857, for the purpose of affording professional instruction to such officers of the Aldershot division as might desire to obtain it.

The instruction given originally appears to have embraced military sketching and surveying, field and permanent fortification, and photography.

The officers under instruction do not appear at first to have been exempted from duties which would entail work on others.

In 1862, on the recommendation of the Council of Military Education, the officers under instruction were divided into two classes, and two separate courses of instruction drawn up, the orders relative to which were on 6th September 1862 published in the local standing orders as Survey Office Regulations. On 5th October 1865 these regulations were altered to their present form, a copy of which I enclose.

In 1862 the duties of the cooking department were imposed upon one of the Staff officers in charge of the Survey Department, and in 1863 their number was reduced from two to one. Subsequently an officer was appointed to assist in the cooking department, who assisted also in the other duties, and who appears to have mainly conducted the instruction in surveying.

In 1867 my predecessor, Captain Hutchison, assistant in the cooking department, was relieved from the duties of that department, and given sole charge of the Survey Department, in which charge I relieved him in May 1867.

With respect to the second, or more advanced course, I found that there were no books of reference provided, nor any means of affording instruction in the actual construction in the field of intrenchments, or of gabion and fascine making, &c.

Two officers only have joined the advanced class to go through the second course since I have had charge of this department, neither of whom completed the course from their regiments quitting this station; and their time while they were with me was so broken up by musketry instruction and regimental duties, that the attendance on their part was irregular.

With respect to the first or elementary course, I found notes by Captain Hutchison, and by his predecessor, Captain Creagh, defining the plan pursued by them, which course I have followed, being further guided in the method of instruction by a memorandum on military topography, dated 13, Great George Street, S.W., 23rd February 1867, which I received from the Council of Military Education.

This course is not always rigidly adhered to, on account of officers joining with such varied acquirements and degrees of ability. It is as follows:—

Explanation, use, and construction of scales,—several examples worked and a plate of scales drawn,—mode of using the usual drawing instruments, protractors, and Marquois' scales.

Use of the prismatic compass,—a road is traversed with the compass,—bearings and measurements entered in a field book, and the result plotted indoors on a large scale.

A plate of the conventional signs used by the topographical department, and a set of the seven examples of shading ground (by the late Major Petley), according to the latest scale of shade, are given to each officer to copy.

The general principles of plan drawing and the mode of conducting a survey by means of measuring a base, and by a triangulation, are explained, and a flat piece of ground is sketched with the compass, and plotted in the usual manner in the field.

The method of representing ground by contours only is now explained and illustrated by models, drawings, &c., and it is shown how from a contoured plan sections and elevations of ground are made, also how by adding shade to the contoured plan, a certain pictorial effect is produced, and the sketch is more easily read, &c., &c.

Abney's pocket level and clinometer is explained, and various modes of rough levelling illustrated.

The method of using the pocket sextant is next shown and the officers are taken to a plateau with strongly marked slopes, a base is measured, and the triangulation made by means of the sextant, the artificial features are then filled in.

As the hills in the immediate vicinity of the camp have but slight elevation, this sketch is made on a large scale to enable the scale of shade to be more easily and accurately applied.

Contours at 25 feet vertically apart are now sketched in chain dotted lines, and several sectional lines taken by means of the level, clinometer, compass, and a scale of hypothenuses, and the various angles of inclination written on the sketch. The scale of shade is explained, and the officers taught how to apply it to the sketch of ground so contoured, and the sketch finished up as directed in the memorandum by the Council of Military Education.

Major-General Napier's pamphlet on reconnaissance is given to each officer, and four or five miles of road reconnoitred, sketched, and reported on, the form of report recommended by Major-General Napier being used.

A sketch on a small scale of as large a tract of country as time and weather will permit of is next made, triangulation done with the sextant or theodolite (rarely with the latter), and lastly, a rapid eye-sketch without instruments of some hilly ground is made.

This, with occasional reports on and sketches of field days, or the marches of flying columns, is about as much I can get the officers to do in the two months, and many are not able to get through as much, although, as a rule, they are most anxious to learn, and generally devote more time to study than is required by the regulations.

I endeavour to induce them to study some work on field fortification, chiefly the chapters describing the defence of buildings, villages, and positions, also some work on surveying, not always with success in the absence of books of reference.

At the conclusion of each course all sketches and reports, with a return showing the number of hours' attendance of each officer, his attention, and progress, are forwarded to the Quartermaster-general, Horse Guards, by whom they are transmitted to the Council of Military Education.

I enclose a return as requested.

I have, &c.
O'B. B. WOOLSEY,
Major, R.A.,
In charge of Survey Department.

The Secretary to the
Royal Commission on
Military Education.

ENCLOSURES IN MAJOR WOOLSEY'S LETTER.

Enclosure No. 1.

SURVEY OFFICE REGULATIONS.

MEMORANDUM.

The following rules and regulations on the subject of the instruction of officers are published for general information:—

1. There are two courses of instruction given by officers of the quartermaster-general's department at the Survey Office, No. 33 hut, "Q" lines, south camp, of which the officers of the division are strongly recommended to take

lvantage, as this station affords peculiar facilities for
litary instruction.

One: An elementary course comprises practical geometry,
far as is necessary for the understanding of the principles
surveying and fortification, plan drawing, the construc-
on and use of scales, and military sketching.

The other course embraces surveying in its more advanced
anches, military reconnaissances and road reports, field
rtification, including the attack and defence of small posts,
e construction of simple intrenchments, redoubts, and
ld works, profiling and tracing on the ground, gabion
d fascine making, camping, and the construction of field
ens and cook houses.

2. Officers will not be allowed to go through the course
instruction unless their commanding officer will certify
at they are intelligent, zealous, and well conducted; but
nsidering that the stay of regiments at this camp is fre-
ently limited, the Lieutenant-General Commanding would
ish that every facility should be given to officers to avail
emselves of the instruction offered here, even though they
ay not be thoroughly acquainted with all their duties.

3. Every officer wishing to attend the course of instruc-
on will submit his application to his commanding officer,
ho will forward it with his recommendation and the cer-
icate mentioned in the last paragraph, or with such
marks as he may have to offer, should he consider it his
uty not to recommend the application.

4. Officers going through the elementary course will be
ruck off all duty for two months (Sundays excepted).
hey will go on flying columns.

5. Officers anxious to attend the second course will be
llowed to do so for four months, during which time they
ill take all regimental duties which would entail extra
ork on the other officers, but will be excused all brigade
id divisional duties, except those mentioned in para-
raph 7.

6. Officers permitted to attend are not to absent them-
lves without leave from the Lieutenant-General Com-
anding obtained through the deputy assistant quarter-
aster-general.

7. Officers are to be present at divisional field days, and
hen the division marches into the country during the
inter months, either with the deputy assistants quarter-
aster-general sketching the ground, noting the move-
ents, preparing reports, &c. (in undress without swords),
if not so employed they are to fall in with their respec-
ve corps.

8. The number of officers attending is to be restricted to
vo per regiment for the present.

9. The instruction will extend over three hours, viz.,
om 10 a.m. till 1 p.m., excepting on Saturdays, when all
ne officers will attend from 10 a.m. till noon only.

10. Staff officers who may wish to avail themselves of the
struction given at the Survey Office or in the field, may
tend at such hours as the nature of the duties they have
perform will admit.

11. Officers of the division generally will be assisted by
ne D.A.Q.M.G's as far as practicable, in pursuing their
tudies in other branches besides those mentioned in the
rst paragraph.

12. A diary will be kept showing the names of all officers
ttending, the hours of attendance, the work done, &c.; this
iary is to be submitted for the inspection of the Lieu-
enant-General Commanding, and from it a monthly report
s to be prepared for the information of H.R.H. the Field-Marshal Commanding-in-Chief, to whom the sketches are to be forwarded.*

Appendix VII. (G.)

Aldershot Survey Class.

13. Officers will be allowed the use of surveying instruments, but will have to provide their own drawing and other materials. They will, however, be permitted to retain all sketches, plans, and reports thus made on their own materials, after they have been returned from the Council of Military Education.

14. An officer going out surveying occasionally requires men for the purpose of carrying instruments, bandrols, &c.; the necessary men will be provided by the regiment to which the officer belongs, on his application countersigned by one of the D.A.Q.M.G's.

By Order,
Arthur Herbert, Col.,
A.Q.M.G.

Assistant Quartermaster General's Office,
Aldershot, 5th October 1865.

Enclosure No. 2.

Return showing the number of officers who have attended each course since the institution of the class.

Survey Office, Aldershot,
August 10, 1869.

Period.	Number attended.		Remarks.
1857, Oct. 1 to Dec. 31	18		During this period there was only one course of instruction.

1869, „ Aug. 10	20	—	Includes 13 at present under instruction.

O'B. B. Woolsey, Major R.A.,
In charge Survey Department.

* A diary is kept by each officer showing how every hour was occupied, from which, at the end of the course (two months), a general return is made out by the instructor, which is inspected and signed by the Lieutenant-General Commanding, and transmitted with all the sketches, for the information of H.R.H. the Field Marshal Commanding-in-Chief, to the Quartermaster-General, by whom they are forwarded to the Council of Military Education.

APPENDIX VIII.—ROYAL ENGINEER ESTABLISHMENT, CHATHAM.*

Appendix VIII (A.)

Royal Engineer Establishment.

A.—GENERAL ACCOUNT OF THE ESTABLISHMENT.

Questions addressed to Colonel T. L. Gallwey, Royal Engineers, Director of the Establishment.

I.) Will you be good enough to give, for the information of the Commission, a general account of the objects of the Royal Engineer Establishment, the mode and conditions of admission to it, its present organization and staff, the number of officers under instruction at it, and the nature and course of the course of instruction?

II.) Will you favour the Commission with a brief statement of your opinions as to the working and results of the Establishment, and with any suggestions for its improvement which you may think it desirable to make?

Answers received from Colonel Gallwey.

Col. Gallwey.

(I.)

a. Object.

The object of the Royal Engineer Establishment is the provision of a sound course of practical instruction in military and civil engineering for the officers, non-commissioned officers, and sappers of the corps of Royal Engineers, in addition to and prior to which both officers and men pass through the ordinary drills and military duties common to the army generally.

b. Mode and conditions of admission.

From the Royal Military Academy at Woolwich.

* Called the "School of Military Engineering" since August 1869.

APPENDIX VIII. (A.)

Royal Engineer Establishment.

c. Present organization and staff.

Composed as follows, viz. :—
The Director.
Instructor in construction and estimating.
Assistant do. do.
Instructor in field works.
Assistant do.
Instructor in surveying.
Assistant do.
Instructor in telegraphy, photography, &c.
Assistant do. do.
Temporary assistant instructor in signalling.
Brigade major.
Quartermaster in charge of stores.
Field officer for military discipline.

d. Number of officers under instruction.

Officers recently commissioned, *i.e.*, within two years - - - - - -	63
In the military branch :—	
Captains - - - - -	9
Subalterns - - - - -	9

Non-commissioned officers and sappers, average 1,200 of which 42 non-commissioned officers and 21 sappers are under instruction in the special schools.

e. Nature and length of course.

There are six distinct courses for officers, viz. :—

	Days.
1. Drill and military duties - -	107
2. Telegraphy, signalling, submarine mines, &c. - - - - -	35
3. Chemistry - - - -	15
4. Field works, military bridging, &c. -	122
5. Architectural course - - -	183
6. Surveying and astronomy - -	183
Leave - - - - -	61
Length of course -	706

1. The military course includes a complete course of drill, and instruction in the interior economy of a company, procedure of courts-martial, boards of survey, courts of inquiry, &c.

2. Telegraphy, &c.—This course includes instruction in telegraphy as applicable to fixed lines, and those required for an army in the field.

The construction and maintenance of the same.

A thorough knowledge of all instruments and batteries necessary for the proper working of telegraph lines.

Application of electricity to explosions.

Also instruction in the management of torpedoes and submarine mines for purposes of attack and defence.

3. Chemistry.—The instruction in chemistry consists of a short course comprising the analysis of limes, cements, and other building materials.

4. Field works.—This course comprises instruction in all earth-works thrown up in the attack and defence of fortresses.

Pontooning.

Rafts.

Spar and other temporary bridges as applied to all probable contingencies.

Reports on existing continental fortresses.

Project for the attack of a given fortress.

Construction and maintenance of railways.

Escalading.

Diving, &c., &c.

5. Architectural course.—This course consists of a series of lectures on various building materials.

The solution of numerous examples in theory of construction.

The design, estimate, and specification for a building.

Inspection and report, accompanied by hand sketches, of various works in execution, lime and cement works, quarrying, brickmaking, &c.

An inspection and report of various kinds of machinery connected with the arts of building and manufacture.

6. Surveying course.—This course includes,—

Trigonometrical survey in all its details.

Military reconnaissance.

Special survey.

Road reconnaissance.

Astronomical memoranda and calculations from actual observation.

Adaptation of works of defence to a contoured site, and report.

Road survey and report.

Inspection tour of works of defence in England, and report.

In addition to the above specified courses, there are series of lectures on geology, electricity, machinery, &c., &c., delivered by selected professors of the several sciences.

Course of instruction for non-commissioned officers and sappers.

All recruits for the corps join at Chatham, and, as with the officers, are first placed under the field officer for military discipline for instruction in drill and military duties. They are then passed to the instructor for field works and instructed in all engineer duties incident to campaigns and sieges, and finally, previous to being drafted to the service companies, they are employed for three months at general duties.

The duration of the recruit training is about sixteen months.

The service companies of the corps are periodically quartered at Chatham,—two at a time,—prior to proceeding to, and after return from, foreign service, for the purpose of going through a course of instruction in field works.

There are also special schools for instruction in architecture, surveying, photography, chemistry, telegraphy, lithography, and printing.

(II.) The improvements which have been gradually effected within the last few years leave but little to be desired as far as the practical instruction of the officers and men of the corps are concerned.

The wants of the Establishment apply to accommodation, which is limited in every way. The mess establishment is most insufficient; at present we are obliged to use the library as an ante-room, which is inconvenient, and prevents officers of studious habits making proper use of it.

Officers of the professional staff and others who ought to live in barracks or quarters are obliged to live in lodgings, which are difficult to obtain in the neighbourhood of Brompton barracks.

The halls of study are very poor and confined.

If we look upon this establishment not only as a school where young officers and soldiers receive practical instruction in engineering, but in the light of a place where all officers of the corps may refer for the varied scientific information embraced in the duties they are called upon to perform, and model it accordingly, great benefit would result. In order to effect this we require an Engineer Institution, somewhat similar in character to that established at Woolwich for the Royal Artillery, and which has been the means of developing science among the officers of that distinguished corps to a great extent.

T. L. GALLWEY,
Colonel, R.E.

NOTE.

A sum of money is granted annually to the officers under instruction at Chatham to defray their travelling expenses while engaged in visiting engineering works. This allowance was first sanctioned by a Treasury letter of the 15th April 1854, which authorized the annual expenditure of 200*l.* for the purpose of enabling the junior officers of the Royal Engineers to visit engineering works at home and abroad. The original application for the grant was grounded on the fact that an allowance for a similar purpose was made by the Indian Government to the officers of the Indian Engineers under instruction at Chatham. The amount of the annual allowance at the present time is 500*l.*

Information regarding the state of the Royal Engineer Establishment in 1856 is contained in the Report of the Commissioners on the training of the scientific corps (pages lxxvii. to lxxxvi.). Since that time the staff of the Establishment has been very considerably increased, the period for which young officers remain at it has been lengthened, and a more extensive and systematic course of instruction has been introduced. In addition to the account above given by Colonel Gallwey, further information regarding the present state of the establishment will be found in the evidence of Major-General Simmons, the late Director (Evidence 6517–6552, 6558–6583, 6628–6648). The name of the Establishment has quite recently, in August of the present year, been changed to that of the "School of Military Engineering," the head of which is styled "Commandant," instead of "Director," as formerly.

B.—COURSE OF INSTRUCTION.

Synopsis of the Course of Instruction at the Royal Engineer Establishment, furnished in June 1868 by Major-General J. L. Simmons, C.B., Director of the Establishment.

I.—The Survey Course.

The course of surveying for the officers of the Royal Engineers is intended to qualify them for carrying on survey operations of every description, and for designing and laying out engineering works, so far as these are influenced by the features of the ground on which they are placed or over which they are carried.

The course consists of two parts—the one relating to surveying processes exclusively—the other to the uses made of the plans and maps, prepared by such processes, for engineering purposes.

Under the first of these divisions the officers are practically instructed in astronomical, general, special, and reconnoitring surveying, including the accurate delineation of the inequalities of ground by levelling and by contours traced instrumentally, and also the giving reliefs to hill forms by sketching with the pen and drawing with the brush.

Under the second division they are exercised in the adaptation of works of fortification to contoured sites, and in the selection and survey of lines of communication by roads, railways, and canals, and in drawing up projects for their execution.

Astronomical Surveying.

The officers are taught the construction and use of astronomical instruments, and are practised in making observations with them. They study from published works and memoranda printed at the establishment the most useful problems for finding the time, the latitude and longitude, the direction of the meridian, and the variation of the compass.

Examples of each problem are worked out by them from their own observations or from observations made in their presence.

The use of meteorological instruments and the reductions of the observations made with them are also practised.

General Survey.

As a preliminary exercise in drawing each officer constructs a plate of scales from data supplied to him. For particular information on the delicate and powerful instruments and apparatus which have been used in great national surveys, and which cannot be studied in the establishment observatory, the officers are referred to published works; and they are instructed in the adjustments, the unavoidable errors of construction, and the powers of the instruments put into their hands for the execution of their survey course.

The general survey comprises,—

1st. *The selection and measurement of a base.*—The base is measured with an ordinary chain and a 5-inch theodolite, and this measurement having been reduced to its horizontal value at the level of the sea, the section of the base is laid down on paper.

2nd. *Triangulation.*—The measured base is extended by a triangulation over 10 or 15 square miles of country, and the relative altitudes of, and the distances between, the stations selected are determined from observations. The computed horizontal distances are laid down, and the azimuth of one of them is determined.

3rd. *Traversing.*—The positions of the roads, streams, boundaries of woods, and other marked features, surrounding and intersecting an area of six or eight square miles of the country triangulated, are then determined by running traverses with a theodolite from one station to another, so as to cut up this area into spaces, which will admit of being filled in by a less accurate method, without introducing an error in the plan.

4th. *Plotting of detail and completion of the work.*—The protracted lines are now transferred to another sheet of paper, and the detail, obtained as the traverses proceeded, is plotted from the field book. From this plot sketch sheets are prepared, and the remainder of the work is sketched in with the aid of a prismatic compass, the form of the ground being represented by pencil strokes assisted by contours put in with the aid of a portable level.

The sketch sheets are etched in with a pen, and a finished brush-work plan of the complete survey, embracing all the information collected, is prepared from them, with the original plotted detail as a basis.

Special Survey.

A piece of ground, about half a square mile in area, is surveyed with minute accuracy as for some special purpose, and is laid down on a scale sufficiently large to admit of the calculation of the areas of the enclosures from the paper. The method followed is the same as that pursued on the Ordnance Survey, and with the Tithe Commutation Surveys, &c.

Contouring.—On the ground thus specially surveyed contours are traced instrumentally at given vertical distances apart, and are plotted on the plan.

Military Reconnaissance.

This is conducted on principles similar to those which govern the operations of the general survey; the instruments employed, however, are all portable. The measurement of a base is made by such means as readily offer themselves (generally by pacing), and the trigonometrical points are fixed simply by protracting angles observed with a box sextant or compass. The whole of the remaining features and details considered necessary in a military point of view are sketched in with the aid of bearings and pacing. The reconnaissance embraces about six square miles.

In addition to the topographical sketch of the ground, each officer sends in a detailed report of its general character, its resources, and military capabilities. Each officer also makes a hasty reconnaissance of a road with a view to its employment as a military communication. All the information which can be obtained as to the character of the country through which it passes, and towns and villages near it, together with the construction, gradients, &c. of the road, are noted on the face of the sketch.

Fortification Branch.

Every officer is required, in this branch of the survey course, to design one or more works of defence for the occupation of a site, of which a contoured plan is furnished to him.

In performing this exercise the officer becomes expert in reading the various forms and slopes of ground, as expressed by contours; he meets with and learns to provide for some of the many modifications of the conditions of defence which the occupation of irregular sites necessitates, and he acquires facility in the application of descriptive geometry to the determination of the planes of defilade and the several planes of a work.

The data upon which the design is framed consist of a plan of ground shown by contours, and of some of the conditions to be filled by the proposed fortification, such as the objects for which the site is occupied, the strength of the garrison, the extent of the works, the nature of the defence of the ditches, the trace, or the profile to be adopted, &c.

On the completion of his design the officer writes a report explanatory of the character of the works he has adopted, and describing his arrangements both for the distant and near defence, with any improvements which have suggested themselves in working it out; and since the scale of the design admits of considerable accuracy in its preparation, he is required to enter very fully into the detail of the arrangements he proposes.

The report is accompanied by tables showing how the remblai and deblai are equalized, and that the distribution of the latter is economical.

Civil Applications.

Projects for a line of communication, general plan, and trial sections.—The officers are instructed in the general principles which should guide them in laying out lines of communication, whether by road, railway, or canal, and are then sent out to examine the country between two points five or six miles apart, and are required to decide on two or more routes which apparently offer the greatest facilities in point of gradients, soil, and the materials of construction. Availing themselves of the best map or plan they can obtain, they draw a plan showing approximately the divisions of the properties through which the trial lines are run; they then make trial sections; and from these sections and their previous examination of the ground, they determine on the line to be adopted, embodying in a report a general description of the country, the obstacles encountered on each route, the gradients, curves, &c., and also the calculations which led to their decision. In their calculations they estimate the cost of the necessary constructions on each of the trial lines, the cost of conveyance for heavy goods on an assumed basis of daily traffic, and the time occupied in each case for quick transit.

APPENDIX VIII. (B.)

Royal Engineer Establishment.

Working plan and section.—A length of one mile of the route determined on as the best is selected, and for this a special survey is made, which is laid down as a working plan, the line being picketed out when no objection is made by the owners of the property through which it passes. A working section of the line is also prepared from accurate levels.

Plan of details, &c.—For the works proposed on that portion of the line which is included within the limits of the working section, a plan of details is prepared, as well as a specification for the works and an estimate of their probable cost.

II.—THE COURSE OF CONSTRUCTION AND ESTIMATING.

For this course 142 days, including Sundays, are allowed. The course is divided into four parts.

Part I.—Theory of Construction.

This part consists of a series of examples in construction, about 50 in number, which will be varied from time to time.

They are drawn up with a special view to the application of the mathematical knowledge already possessed by the officers to some of the cases which they are likely to have to deal with in practice.

References are given in the margin of the printed paper of examples to some of the many books in which the information necessary for their solution can be found.

The instructing officer will explain every morning, except Saturday, as many of the examples as he considers the officers can work during the remainder of the day, and the officers are expected to study these subjects from some one of the books referred to.

The object of these short explanations is two-fold: 1st, to explain the principles on which the particular cases or similar cases are to be dealt with; 2nd, to impart in a condensed form some of the varied information which is familiar to all engineers of experience, but which an engineer at the commencement of his career often has a difficulty in finding.

The officers will take notes of these explanations and write each morning notes at the head of the fair copy of the examples to which they refer. The examples explained on each day are to be worked out on that day in the fullest manner; the reasoning of each step is to be stated, and all rough calculations are to be left on the paper so as to lessen as much as possible the labour of examination. They are to be brought to the instructing officer the following morning, and after examination are to be written out fair on ruled foolscap, quarter-margin, on the right-hand sheet, with explanatory diagrams to a large scale, where necessary, on the left-hand sheet.

The fair notes of each week's work must be sent in before the end of the following week.

The weights, strength of materials, and other information will be found in the printed tables.

This part of the course occupies about 40 days, and while it continues leave will be granted on Saturdays and Sundays only.

Part II.—Materials.

The object of this part of the course is to give the officers some sort of guide in judging of the quality of the principal materials which they will have to use, as well as to afford them information as to the particular material most suitable for a building or engineering work.

It may be subdivided into three parts, viz.—Lectures given by professors in the lecture theatre; lectures given by the instructing officer; and visits made by the officers to lime works, cement works, brickfields, &c.

The lectures in the lecture theatre are delivered at the periods most convenient to the lecturer, but the notes taken by the officers form part of this course, and will be bound up with the rest of the papers.

The notes of the lectures delivered by the instructing officer are to be written out fair immediately after the lecture in accordance with the instructions given, and brought to the instructing officer on the following morning.

A printed paper detailing the particular points to which officers visiting manufacturing works are to direct their attention will be given to each officer, and a report is to be sent in as soon as possible after each visit to the instructing officer.

Sketches to illustrate the lectures and visits are to be as numerous and complete as possible.

The value of these sketches for future reference, and as aids to officers in their professional constructions hereafter, will be very much enhanced by having the dimensions clearly written on them, which should include at least those of all principal parts of machines and structures.

This part of the course occupies about three weeks, inclusive of the time required to visit the works referred to.

The officers will also be instructed, after they leave the course of construction, in the method of testing the quality of some of the materials by chemical analysis, for which a fortnight is allowed.

Part III.—Valuation and Measurement of Work.

This part of the course will occupy in all about 37 days, and will commence with a series of lectures, the subject matter of which will be found chiefly in the printed "Notes on the practice of Building" and "Notes on the Building Trades." They will comprise, in separate lectures for each trade,—

1. The materials, tools, &c., and apparatus employed, together with their application to the different kinds of work produced.
2. The technical terms in vogue.
3. The general practice of measuring and valuing.

Hints and memoranda useful in designing, estimating, and carrying out works will be given, and explanations afforded by reference to models and drawings, from some of which coloured sketches, with the names and dimensions of the different parts given on them in full, will be made by each officer and attached to his printed notes. These sketches will be done in the Hall of Study from the originals deposited there.

A lecture will be given explaining the different steps taken in preparing the annual estimates of a district, to be laid before Parliament, and the various methods of carrying out the services which may be authorized.

The cost of a building will be approximately estimated by cubing it out from the general plans and elevations.

The quantities of the same building will then be taken out from the specifications, working drawings, and a model, by filling in a measurement form having the details of work done, printed on it.

Details and estimates of the same building will be made out on W.O. Form 1554, the items and prices being taken from the W. D. Schedules of the district, and the descriptive part printed on.

Lastly, the quantities will be abstracted and brought into bill, as though the work were to be put up to tender, or as would be done in drawing out contractors' bills for work to be paid for on a schedule of prices.

The portions of the copper plates to be coloured will be partly done in the course of lectures, but about a week at the close of this part of the course will be allowed to complete the whole. They are to be coloured in the Hall of Study from pattern drawings deposited there. No drawing whatever is to be removed from the Hall of Study.

Part IV.—Design.

At the commencement of this part of the course each officer will read through the "Notes on Military Buildings," by Colonel Collinson, Royal Engineers, studying more particularly the parts which have special reference to his own design. The lithographed drawings which accompany them are not intended to be models to be copied from, but are given as examples of works executed, many of which with the advance of sanitary science have become obsolete as a whole. They contain many useful details still applicable.

The design is intended to afford to each officer an opportunity of applying the knowledge he may have acquired in the course to some case which he may actually hereafter have to deal with.

About six weeks are available for this part of the course, and the conditions under which the design is to be made will be furnished to each officer.

As a rule the design will consist of a general plan and report, with some part worked out in detail, this part being specified for and estimated.

The drawings are to be prepared in accordance with the instructions deposited in the Halls of Study.

Tour Reports and Lectures.

All tour reports and lectures pertaining to the course of construction will be written in accordance with the general regulations for reports, that is to say, on foolscap paper, quarter margin, on both sides of the paper, divided into paragraphs, with headings in the margin, and signed and dated by the officer. They will form part of Part II. of the course, and will be bound in the proper places.

In writing tour reports and lectures the object should be to condense as much practical information and fact into as small a space as possible without abbreviating the language or omitting any of the facts. Sketches should be made by hand, approximately to scale, but should be clear, and contain full dimensions. Statistical and tabular information should be given in full.

For the tour report each officer will receive a statement of the particulars of each work he has to report on.

Binding.

The whole of the notes, &c. of each officer will be bound in one or more volumes. Therefore, before leaving the establishment, each officer should arrange his notes in the order in which he wishes them bound.

III.—Field Work Course.

The time allowed for this course is 122 days, including Sundays. While on it officers may be required to attend drill one day in each week, and also brigade field days.

The course comprises instruction in all those duties (with the exceptions mentioned below) which devolve upon the Royal Engineers when employed with an army engaged offensively or defensively, either at a siege or in the field.

The exceptions are, surveying, reconnaissance, telegraphy, firing mines by electricity, &c., torpedoes, and demolition of permanent works; on all which subjects instruction is given to the officers while on other courses.

The officers are required to read carefully the notes on field work instruction, to make models in sand, &c. of such works as admit of this practice, to take part in the construction of the several works in the field, &c., and to draw up projects on the subject.

Before leaving the course an officer must be competent to impart instruction to sappers in all their field duties.

The practical instruction is divided into seven parts.

Part I.—Modelling in Sand, &c.

This part consists of making models of gabions, fascines, hurdles, and sap-rollers; of throwing up models in sand of portions of a first parallel and its approaches, of a second parallel, of single and double saps, both kneeling and standing, of a trench cavalier, of a lodgment by half double sap, of rifle pits, and of trons-de-loup.

Also of making models in sand of field powder magazines, and of elevated, sunken, half sunken, and screen, gun and mortar batteries (ordinary and indented), revetted with gabions, fascines, and sand bags.

It includes the laying of model gun and mortar platforms, the making of a salient of a field redoubt, with gun en barbette, of a field kitchen, and of the passage of a wet ditch by means of gabionsand fascines.

Also the erection of spar bridges of different forms with model spars, and the laying in of a cross-over road to connect two lines of railway.

Part II.—Siege Works.

This part consists of making gabions, fascines, hurdles, and sap-rollers, of tracing (part by night) parallels, approaches, batteries, &c.

Also of seeing parallels, approaches, batteries, saps, trench cavaliers, &c. constructed by the sappers; and the mode of extending men and setting them to work.

The officers are also required to take up for enfilade the prolongation of faces, &c.

Part III.—Works of Defence.

This part consists of instruction in forming abattis, entanglements, rifle pits, trons-de-loup, &c., and in putting up stockades, palisades, fraises, &c.

Part IV.—Mining.

This part includes boring and blasting rock, sinking shafts, driving galleries, making chambers and powder hose, loading, tamping, and firing mines, also the preparation and firing of fougasses.

Part V.—Bridging.

This part includes knotting, splicing, and lashing spars, diving, rowing in boats, packing pontoons, and forming temporary military bridges over streams with large and small pontoons, casks, &c.

Also the construction of spar, timber, and suspension bridges to re-establish a communication by turnpike road or railroad.

Part VI.—Railways.

This part consists in seeing the mode of laying down and repairing lines of railway, and of putting in a cross over-road to connect two lines of railway, and also the mode of destroying railways.

Part VII.—Sundry practices.

Under this head are included boring for water (with the American tube wells as well as with the ordinary apparatus), erecting field kitchens, filling and throwing hand grenades, and escalading, also the erection of field observatories.

The officers are, in addition, required to draw up the following projects:—

1. Project of attack of a fortress actually in existence.
2. Project for the restoration of a bridge.
3. Project for a floating bridge.
4. Project for a field work as a bridge-head.
5. Hasty project for a temporary bridge, or, hasty project for the demolition of a portion of a line of railway.

IV.—Miscellaneous Subjects.

(a.) *Course of Telegraphy.*

15 days are allowed for this course.

All officers under instruction learn the theory and practice of telegraphy and visual signalling, bearing in mind that a thorough knowledge of the theory will enable them to overcome difficulties which would be perplexing to the men, who can only be expected to learn the practical working of the telegraph.

The various instruments in use for signalling and testing are explained to them, and they are taught the ordinary methods of measuring electrical forces and resistances, and of testing conducting wires for insulation and conductivity, and for determining the nature and positions of faults. The degree of accuracy which may be attained in these measurements is pointed out to them.

They learn the European Morse alphabet, and the method of sending and receiving messages, but they are not expected to devote so much time to the subject as would enable them to become expert telegraphists.

Each officer is required to give in a project for the construction of a line of electric telegraph, including at least three stations. In the report are described the instruments to be used and the modes of connecting them in circuit; the batteries, the conductors, the supports, the insulators, and the mode of putting up the line; and the number of cells required to work the line is calculated.

An estimate of the stores and materials required accompanies the report, with a general plan showing the route proposed.

The various methods of exploding gunpowder by electricity are taught while the course of telegraphy is going on; the application of this branch of electrical science is made when the officers are employed on projects for demolitions by mining.

In the School of Telegraphy a certain number of the men of the corps are trained every year as telegraphists.

The instruments of which the use is taught are,—

The single needle instrument worked by voltaic electricity.
The Morse recording and sounding instrument.
The double needle instrument.
Wheatstone's magneto dial instrument.
Also day and night signalling with the approved visual apparatus.

Each man is required to read a specified number of words per minute, and to send correctly by each instrument, before he passes on to the next.

The European Morse alphabet is used with all the instruments, except with the double needle instrument, which has a special alphabet.

The men are taught how to make up and repair the voltaic batteries and instruments, and to put up conducting wires over ground, and to lay them underground, and also to test roughly for the position of faults. Their previous education does not generally admit of their acquiring a knowledge of the theory of electricity, or of performing the more delicate tests required in telegraphy.

The men who enter the Telegraph School are also instructed in the practical manipulation of Grove's voltaic batteries, Wheatstone's magnetic exploder, and the dynamo-electric machine, in the use of frictional electricity, in making the electrical fuzes, and in connecting and arranging the wires necessary for firing mines by electricity.

(b.) *Chemical Laboratory Course.*

15 days are allowed for this course.

The object of this course is to enable officers and men at the establishment, who may show an inclination for chemical studies, to pursue them practically.

The course is confined to the chemical relations and behaviour of the substances which affect the qualities of building materials, or which may influence the questions which are most likely to require the professional investigation of a military engineer. It is arranged with the idea of supplying the want of practical experience in dealing with substances used in construction, by giving an insight into their nature and composition; and also with that of imparting such information as may lead in a new colony, should an officer be called upon to act as its explorer and pioneer, to a more rapid development of its resources.

APPENDIX VIII. (B.)

Royal Engineer Establishment.

The course for the officers consists,—

1st. In making themselves acquainted with the action of re-agents, both by wet methods and by the blow-pipe, on different simple substances, in experiments to which they are directed by a text book.

2nd. In applying the information so gained to the qualitative examination of substances, simple and compound, specially prepared as exercises for analysis.

3rd. In the quantitative as well as qualitative examination of building stones, lime and cement stones, gypsum, brick earths, paints, solders, and other building materials. A sample of water is also examined, and a qualitative examination is made of one or more ores.

4th. In preparing, on an experimental scale, bricks, limes, cements, and plasters, directly from natural stones or earths by simple calcination, and also by the more complex method which it is often necessary to adopt.

5th. The chemistry of the voltaic battery.

The course for the men only differs from that for the officers in respect of the order in which the several divisions of the subject are taken up. The men, instead of commencing with a thorough examination of numerous simple substances, begin with a few easy experiments on recognizing lime and cement stones, and on the mode of ascertaining their comparative values, so that, in case it is judged inexpedient, in any instance, that the whole course shall be completed, the knowledge which has been gained may be of a character requiring comparatively little skill and intelligence to apply to practical uses.

A certain number of men only are taught.

(c.) *Course of Photography.*

This study is not compulsory; but any officer and a limited number of men who have completed the prescribed course satisfactorily, and who wish to study photography, are allowed to do so.

The officers devote their attention more particularly to the chemical theory of the subject, in order that they may be able to overcome the practical difficulties which constantly occur when this art is pursued in foreign countries under circumstances of climate and situation different from those in England, and when chemicals get out of order and produce anomalous results. In such cases men who have acquired considerable skill in manipulation, but who have no knowledge of chemistry, are unable to devise remedies or to overcome difficulties, and it is the place of their officers to assist them by their superior knowledge and intelligence.

The men are taught the negative wet collodion process in all its branches (except the manufacture of pyroxyline), also the dry process, and photozincography.

They are also practised in the use of the dark tent, and in taking negatives in the field, and in photographic reductions of plans.

It is seldom that their previous education admits of their becoming well versed in the chemical theory of the art, but the means of overcoming the usual practical difficulties are pointed out to them. Each man is required to enter in a note book the various solutions, and to make memoranda of the processes.

(d.) *Lectures.*

Lectures are delivered between the months of September and April on civil and mechanical engineering, metallurgy, architecture, electricity and its applications, and on other subjects of a professional character. The lectures are attended by all the officers and men under instruction, and the former are required to take rough notes, and afterwards to write them out fairly, for binding with their other work.

(e.) *Visits to Professional Works.*

With the object of giving an idea of the best methods of carrying on extensive works, and of imparting practical information on professional subjects, a certain number of the junior officers are selected every year to visit engineering, architectural, and other works of professional character, accompanied by one of the instructing officers of the establishment.

Of the various constructions and processes seen during these tours they make notes and drawings, which are embodied in the form of reports to the director, and are subsequently bound up with the other parts of the course.

General Note.—Further explanations of the mode of filling up the details of the course, and of the forms for the notes and drawings, are given in the special instructions.

(f.) *Demolitions.*

The ignition of gunpowder or other explosives by powder hose and Bickford's fuze as well as by electricity, both on land and submerged under water, is taught to all officers.

In order that the best methods of using gunpowder or other explosives for the demolition of works and buildings by mining may be thoroughly understood, each officer is required to make projects for the following demolitions, viz.:—

1. A front of fortification, or some similar work, exhibiting various sorts of revetments, and requiring the simultaneous explosion of a large number of mines.

2. A casemate, powder magazine, or other substantial military building under two suppositions: 1st, that there is plenty of time, that sufficient men and tools are available, and that it is required to effect complete demolition without wasting gunpowder unnecessarily; 2nd, that time presses, and that the demolition must be effected in the most expeditious manner possible.

3. A bridge or viaduct under two different suppositions, as in No. 2.

The mines in some cases are directed to be fired by powder hose, and in others by electricity.

Each of these projects consists of a memoir and explanatory drawings. The memoir comprises,—

1st. A description of the building, or work to be destroyed, in all points which may influence the mode of demolition.

2nd. A general description of the proposed mode of demolition.

3rd. The calculations for the charges of the mines.

4th. The mode of preparing and firing the mines.

5th. An estimate of the men, tools, and materials required, and of the time necessary for the operation.

6th. An estimate of the gunpowder.

7th. When electricity is to be employed for firing the mines, a full description of the batteries, &c. is given, with calculations of the number of cells, &c.

The drawings include a plan and such sections as may be required to explain clearly the situations of the various charges of gunpowder, and of the shafts and galleries.

(g.) *Submarine Mines.*

All officers and a certain number of men are practised in the use of submarine mines.

The course consists of,—

1. The nature and construction of case.
2. Mode of mooring.
3. Mode of arranging and laying insulated cables.
4. Mode of testing fuzes, also testing cables for conductivity and insulation and for the detection of faults.
5. Modes of firing at will and by self-acting arrangements.

APPENDIX IX. (A.)

Artillery Advanced Class.

APPENDIX IX.—ADVANCED CLASS OF ARTILLERY OFFICERS AND DEPARTMENT OF ARTILLERY STUDIES.

A.—QUESTIONS AND REPLIES RELATING TO THE ADVANCED CLASS OF ARTILLERY OFFICERS.

QUESTIONS ISSUED BY THE COMMISSION.

(I.) Will you be good enough to give, for the information of the Commission, a general account of the Advanced Class of Artillery Officers, the mode and condition of admission to it, its present organization and staff, the number of students, and the nature and length of the course of study at it?

(II.) Will you favour the Commission with a brief statement of your opinions as to the working and results of the institution, and with any suggestions for its improvement which you may think it desirable to make?

The above questions were addressed to Lieut.-Colonel Young, Director of Artillery Studies; question (II.) was

rwarded also to Captain C. B. Brackenbury, Assistant Director of Artillery Studies.

i.)—Answers received from Lieut.-Colonel Young.

(I.) The first Advanced Class was formed in April 1864. ntrance is by competitive examination under the Council Military Education. In the regimental circular, 8th May 67, notifying the date of the last entrance examination r this Class, it is stated that "Candidates for this examination must have undergone a course of instruction at Shoeburyness; or they must pass satisfactorily a preliminary examination in practical artillery."

"No officer will be admitted who will not have completed six years' service on the 31st March 1868."

"The subjects in which the candidates will be examined nd the relative importance attached to the subjects are as llows:

Mathematics - - -	700
Chemistry and physics - -	300

"Officers competing are expected to be able to read rench scientific works, such as Didion's Traité de Balisque, Piobert's Cours d'Artillerie, &c., &c."

Candidates are required to send their applications hrough their Commanding Officers.* They are not eligible nless they have given unqualified satisfaction in the discharge of their purely regimental duties, or unless, from a ilitary point of view, they are active and efficient artillery fficers.

The course extends over two years; at the conclusion of he first year there is a final examination in the subjects ead through the year, the marks being carried forward to he second year's examination.

The objects of this Class may be briefly stated to be—

The scientific and special training of a proportion of rtillery officers to enable them to discharge the duties of he appointments connected with the Government manufacturing departments and other offices of a scientific character connected with the artillery service, such as Professors and Instructors Royal Military Academy, Instructors School of Gunnery, Inspectors of Warlike Stores, Artillery Committees, &c., and to assist in the investigation of the numerous mechanical and mathematical questions involved n the manufacture of ordnance and other war stores, the cience of gunnery, and the working of chronographs, lectro-ballistic apparatus, &c., &c.: it being most desirable hat officers of artillery should be able to decide important questions of this nature with scientific as well as professional authority.

The number of students is limited to eight. At the resent moment there are only four, two having just been withdrawn at the close of the first year's examination upon he recommendation of the Council of Military Education.

The staff directly in connexion with this class† are the following:—

Director of Artillery Studies,—also in charge of the Department of Artillery Studies.

Professor of Applied Mathematics,—also appointed Official Referee to the Ordnance Select Committee (now the Department of the Director-General of Ordnance).

Lecturer on Metallurgy -
„ Chemistry‡ - } §
„ Mechanism and physics

An assistant to the lecturer on chemistry, who also assists the professor of mathematics and the other lecturers.

The subjects of study the first year are,—

Pure mathematics.
Metallurgy.
Chemistry.
Mechanism and the steam engine.
Royal Gun Factories.
Royal Laboratory, Part I.

The subjects for the second year are,—

Mixed mathematics and applied to gunnery.
Metallurgy.
Chemistry.
Heat and electricity.
Royal Laboratory, Part II., III., IV.
Royal Gunpowder Factory, including manufacture of gun cotton.
Royal Small Arms Factories, Enfield and Birmingham.
Royal Carriage Department.

In connexion with the instruction on metallurgy, the Class visit each year some of the principal private establishments in England and Wales, accompanied by Dr. Percy, F.R.S., the lecturer on this subject. They also visit locomotive and marine engine works in connexion with the lectures on the steam engine.

(II.) There cannot be a question as to the importance of the Advanced Class, which has for its chief object, that of affording assistance to artillery officers predisposed to mathematics and scientific research. The present course of study arranged under the Council of Military Education appears admirably adapted to further the desired object. It has been urged as a reason so few officers come forward for admission to the Class, that the military authorities are not favourably disposed towards the students. This is not borne out by the orders issued from the Horse Guards from time to time respecting the Class; moreover the following very encouraging paragraph appeared in the Regimental Circular dated 9th January 1868:—

"His Royal Highness proposes, in future, that in all first appointments to special employments of a scientific character, preference shall be given to such officers who shall be specially recommended as having passed the Advanced Class with credit."

The preparation for the Class, which involves some labour, and the close reading required during the two years' course are likely to deter many competent officers, unless a fair prospect of after employment can be held out to those who pass through the Class with credit. If employment could be ensured to successful students, I am satisfied there would be no lack of candidates for admission to the Class.

The last Class, who completed their studies in March 1868, was a most successful one, as will be seen by a reference to the Report to the Council of Military Education. Several of the officers obtained an unusually large decimal in the higher branches of mathematics, besides passing admirable examinations in the other subjects.

Charles F. Young, Bt. Lieut.-Colonel, R.A.,
Director of Artillery Studies.

Woolwich,
26th April 1869.

(ii.)—Answer received from Captain C. B. Brackenbury, Assistant Director of Artillery Studies.

(II.) Too high qualifications in mathematics are required for entrance. As a rule the best men will not risk their credit by competing under such circumstances. I cannot share in the idolatry of mathematics. The Advanced Class consists of officers holding a considerable position in the regiment. The test ought to be a means of proving their powers of voluntary work. It appears to me to be a mistake to set fathers of families down to desks like schoolboys. They should have more freedom of choice in the nature and time of their studies, their progress being rigorously tested by periodical examinations. The object ought not to be to make a good show, but to find out the men best qualified for certain appointments, and assist them in their studies.

Mathematics may be wanted from one officer, chemistry from another, metallurgy combined with chemistry from a third. The second and third will be all the better for devoting themselves to their own subjects with greater concentration than is possible for them if they are labouring painfully to pick up again their forgotten mathematics.

The periodical examinations should be for a pass, not competitive. Honours should carry pecuniary rewards.

The Commission seem to be unaware that the Advanced Class is but one of the many classes which pass through the Department of Artillery Studies. Amongst other subjects, lectures on military law, foreign artillery, explosive agents, small arms, harness, iron-plated fortifications, &c. are given to various classes by the Assistant Director. The officers from the Staff College, those going to Shoeburyness, and many other artillery officers pass through his hands for longer or shorter courses. Militia and volunteer officers are frequently sent down for instruction.

It would be of great value to the Royal Artillery if a lecturer upon the art of war were appointed at the Department of Artillery Studies. The studies of the young officers on joining ought to be thoroughly organised.

C. B. Brackenbury, Capt. R.A.,
Assistant Director of Artillery Studies.

* *Vide* regimental order No. 492, dated 2nd November 1863.
† For the remainder of the staff in connexion with the Department of Artillery Studies, *vide* Army estimates, *vote* 15.
‡ This gentleman also instructs officers qualifying for the appointments of firemaster, and a large class of Royal Artillery officers who pass through a course in the Department of Artillery Studies before going to Shoeburyness.
§ Lectures open to officers of the garrison, members of the R. A. Institution.

Appendix IX. (A.)

Artillery Advanced Class.

Capt. C. B. Brackenbury.

APPENDIX IX. (B.)

Department of Artillery Studies.

Lt.-Col. Young.

B.—MEMORANDUM ON THE DEPARTMENT OF ARTILLERY STUDIES, BY LIEUT.-COLONEL YOUNG, R.A., DIRECTOR OF ARTILLERY STUDIES.

A Director of Artillery Studies was first appointed in 1850, upon the recommendation of Field-Marshal Sir Hew Ross, G.C.B., R.A.* (then Adjutant-General of Artillery). His duties were to take charge of and direct the studies of the young officers of artillery on first joining at Woolwich, to assist them in their professional pursuits, and read with them military law, military history, treatises on artillery, fortification, &c.

The appointment was made provisionally in the first instance, but confirmed before the close of a year. In April 1853, the department was increased by the addition of French and German masters, who, besides assisting the young officers, were called upon to afford instruction in their respective languages to officers of artillery of all ranks who might be desirous of profiting by it.

An allowance of 300*l.* per annum was also made to enable a proportion of the more intelligent of the young officers to accompany the Director in visits to arsenals and fortresses abroad and manufacturing districts at home.†

The course of instruction, with the exception of that given in French and German to voluntary classes, was suspended in 1854, owing to the exigencies of the service calling for the immediate active employment of the young officers on quitting the Academy.

In July 1855 the Director of Artillery Studies was re-established, with the following staff of assistants in addition to the French and German masters:—

2 Captains of Artillery.
1 Instructor in Surveying.
1 Instructor in Military Drawing, &c.
1 Lecturer on Natural Philosophy and Mechanics.
3 Non-commissioned officers.

This establishment was formed‡ for the purpose of giving instruction to certain gentlemen provisionally commissioned from public colleges or schools after a competitive examination, but without passing through the Academy.

Upon a discontinuance of this plan of admission to the regiment in 1857 the department was again broken up, leaving only the Instructor in Surveying and the French and German masters, who continued to afford help to voluntary classes.

The appointment of Director of Artillery Studies was revived in the person of Lieutenant-Colonel, now Colonel, Smythe, Royal Artillery, on the 19th May 1858. He was expected to advise and assist the efforts of officers of the Royal Artillery in improving their professional qualifications, and to arrange classes of officers for instruction in chemistry, photography, drawing, French, and German at the Royal Artillery Institution. He was to inform himself of all the more interesting experiments under the Ordnance Select Committee, as well as the operations and processes carried on in the Government manufacturing departments. He was to arrange and conduct the annual military tour on the continent; also to direct the studies of the young officers on joining the regiment.§

Upon the formation of the Advanced Class‖ in 1864 the staff of the department was greatly increased, and an Assistant Director appointed. His duties were stated as follows:—

To take charge of the department in the unavoidable absence of the Director—to give instruction to classes of officers of the regiment sent to Woolwich from time to time, to officers from the Staff College, and to Militia and Volunteer artillery officers—to prepare questions for the examination of subaltern officers Royal Artillery for promotion, and report on the results of such examinations—to attend on foreigners of distinction—and other duties performed by the Director prior to the formation of the Advanced Class.

At the present time all officers, non-commissioned officers, and men sent to Woolwich for instruction are attached to the Department of Artillery Studies, and their courses are arranged by the Director or his Assistant. The officers also are partly instructed in the department. The following is a list showing the officers, non-commissioned officers, and men that have been attached to the department during the year ending 31st March 1869:—

	No.		
Advanced class of artillery officers	6	2	years' course.
Firemasters' class, R.A.	7	9	months' course.
3 short course classes — Royal Artillery	*29	2	„ „
3 short course classes — Military Store Staff	8	2	„ „
Shoeburyness gunnery class, R.A.	20	3	„ „
Officers of the late Indian brigades	3	1 for 3 months' course; 2 for 2 months' course.	
Officers from the Staff College	13	1½	„ „
Militia artillery officers	6	2	„ „
Volunteer artillery officers	2		
Total	94		

Non-commissioned Officers and Men, Royal Artillery.†

2 long course classes, non-commissioned officers	19	6	months' course.
10 short course classes, non-commissioned officers and men	200	2	„ „
Shoeburyness gunnery class, non-commissioned officers	36	3	„ „
Total	255		

The young officers lately joined attend here twice a week to receive instruction, by lectures, from the Assistant Director of Artillery Studies on military law, courts-martial, and interior economy.

The questions on gunnery and professional subjects for the examination of subaltern officers, Royal Artillery, for promotion to the rank of captain are framed in the department. The answers to these questions are credited here, and a report on each subaltern examined is forwarded to the Deputy Adjutant-General of Artillery.

The grant of 300*l.* per annum made in 1853‡ for a foreign tour of instruction was removed from the estimates of the department for the current year. No communication has been made to me as to the cause of this withdrawal.

CHARLES F. YOUNG,
Brevet Lieut.-Colonel, R.A.,
Director of Artillery Studies.

Woolwich,
1st May 1869.

* *Vide* Report of Commissioners appointed to consider the training of officers for the Scientific Corps, 1857, pages lxx. to lxxiii.

† This annual expenditure was sanctioned by the Treasury in a letter dated 18th March 1853.

‡ Letters in the Department of Artillery Studies.

§ *Vide* letter from the late Field-Marshal Sir Hew Ross, G.C.B., R.A., then Adjutant-General Royal Artillery, to Military Secretary, Horse Guards, dated 22nd March 1858.

‖ *Vide* correspondence connected with the origin of the Advanced Class. Letter dated January 1863 (Appendix IX. D.).

* The short course classes of officers commencing their studies in March 1868 and 1869 appear in this statement. This shows an excess of 10 officers over the probable number instructed in one year.

† There were fewer classes of non-commissioned officers and men instructed last year than in any previous year since the approval of the scheme for these classes.

‡ *Vide* Army Estimates, 1869-70.

APPENDIX IX. (C.)

Artillery Advanced Class.

C.—NOTE ON THE INSTITUTION OF THE ADVANCED CLASS OF ARTILLERY OFFICERS.

(BY THE SECRETARY.)

The Commissioners appointed in 1856 "to consider "the best mode of re-organising the system for training "officers for the scientific corps," drew attention, in their report, to the strong expression of opinion, in the evidence they had received, as to the necessity of developing the scientific instruction of artillery officers. The advantages were pointed out which had resulted from the establishment of the Royal Artillery Institution, originally started by the private exertions of officers of the corps, and, though receiving some assistance from Government, supported mainly by the voluntary subscriptions of its members. Several distinguished artillery officers, in the evidence given to the Commissioners, urged the expediency of establishing in connexion with it, for the special instruction of officers of the artillery service, an institution similar in principle to that which then existed for the army generally in the Senior Department at Sandhurst.*

No immediate steps were taken to carry out this recommendation; but in 1862 the subject was warmly taken up by Colonel Lefroy and other officers of the Royal Artillery, who urged the importance of providing the artillery service with means of higher scientific instruction than had hitherto been afforded.†

* Report, page lxxiii. to lxxv.

† *See* correspondence connected with the origin of the Advanced Class, Appendix IX. D., page cix.

The views thus expressed having met with the approval of the Commander-in-Chief and the Secretary of State for War, the Council of Military Education were directed to draw up a detailed scheme for carrying out the proposal. The result of the Council's recommendations was the establishment of the Advanced Class of Artillery Officers, the first regulations for which were issued on the 2nd November 1863.* The first examination for admission to the class took place in April 1864, and the course of instruction was formally commenced on the 1st of May. The number of students admitted was originally fixed at ten, but has since been limited to eight. The course of instruction lasts two years, and admission to the class only takes place biennially. Information regarding the subjects of study, the objects of the institution, and the staff employed in connexion with it, will be found in the answers received on the subject from Lieut.-Colonel Young, Director of Artillery Studies at Woolwich, under whose superintendence the instruction is carried on. The present regulations for admission to the class are printed at page cxiii.

D.—CORRESPONDENCE CONNECTED WITH THE ORIGIN OF THE ADVANCED CLASS OF ARTILLERY OFFICERS.

Appendix IX. (D.)

(i.)—Observations on the Present State of the Higher Scientific Instruction of the Royal Artillery.

Woolwich, 10th Sept. 1862.

1. Having been given to understand that we are at liberty to submit to the Deputy Adjutant-General of the Royal Artillery our views as to the necessity which exists for forming a class of officers in the Royal Artillery possessing more advanced attainments in mathematical and mechanical science than the present system is calculated to produce, we have drawn out and respectfully submit the following observations and suggestions.

2. The introduction of rifled ordnance, the manufacture of wrought-iron guns on the coil principle, and the multiplication of new data in gunnery, determined by means of the electro-ballistic apparatus, have revived and given fresh importance to numerous mechanical and mathematical questions of a class which for many years past has engaged little or no attention in this country. It is not only desirable in the nature of things that men of military experience should have a large share in dealing with these questions, to prevent mere theorists from carrying them into extravagances; but it is also absolutely necessary to the maintenance of the scientific reputation of the artillery that it should produce officers capable of taking a leading part and of speaking with professional as well as scientific authority in the discussion of such subjects.

3. Many such officers cannot be expected to present themselves spontaneously. If the experience of the past and what we know of the national characteristics of Englishmen were not enough to prevent any such hope, a little consideration of the ordinary career of the artillery officer will do so.

The artillery officer obtains his commission at an age varying from 19 to 22, with attainments not higher than those of young men who in the universities at the same time of life are preparing for an ordinary bachelor's degree; but unlike these latter, who are stimulated to study by the high academical prizes and honours before them, these young officers attain a fixed and invariable position, and are thenceforward in no regular way benefited either by the continuance of their studies, or by the character for talent they have already acquired. They become subject to all the chances of home and colonial service; and every day's observation tells us how very few feel sufficient interest in the studies of their youth, or sufficient desire for the acquisition of further knowledge, to persevere under the difficulties inseparable from military life in any severe study whatever; moreover, the system at the Royal Military Academy, by which the highest places are commanded by mathematics alone, and the fact that those who are first in every batch, as a rule, prefer the Corps of Royal Engineers, has an inevitable tendency to draft the mathematics into that service, and in the long run to leave the artillery in a position of inferiority in that respect, which is not warranted by the duties of either corps.

4. To have scientific colonels we must make scientific subalterns or captains. After a certain time of life little fresh knowledge is acquired, although experience every day adds to the value of knowledge already acquired. Hence we are led to the indispensable necessity of so organizing the more advanced technical or scientific training of the regiment, that a proportion of officers shall in youth make further progress in pure and applied science than is possible at the age when they leave the Royal Military Academy,—shall keep these acquirements in exercise by subordinate employment in departments requiring their application,—and shall thus be fitted when they arrive at the rank and standing to which the higher appointments are annexed, to fill them with honour to themselves and with advantage to the public service.

5. We believe that there is no artillery in Europe except our own where this is not acknowledged, and where it is not the subject of what we may term a policy on the part of the Government. In Prussia we learn that there are schools of applied science, called the "Gewerb-Schulen," something resembling the School of Mines, in Jermyn Street, to which a proportion of officers of artillery are sent to prepare themselves for scientific appointments. In France, besides the *Ecole d'Application d'Artillerie*, there is a systematic employment of artillery officers in their arsenals, foundries, and other establishments, with a view to the formation in the military body of a fund of practical and theoretical knowledge adequate to deal with every question of applied science which arises. In England alone, so far as we know, has it until very recently been taken for granted that qualified officers would always be forthcoming without any trouble on the part of the State to form them, further than by giving a good education up to 19 or 20, in extreme cases 22, years of age, notwithstanding the peculiar disadvantages the English artillery officer is under in his liability to colonial service—the frequency of our little wars, which occasion all the interruption, but give little of the experience of a great war—and by the fact of our having but one instead of several arsenals, where constructions and other operations of applied science can be studied. The recent exception is the limited training of officers for the post of inspector of warlike stores.*

6. We believe the continuance of this state of things not only injurious in a high degree to the scientific character of the artillery, but fraught with many serious public evils. No one would expect or desire in these days that a purely military opinion should control mechanical progress, or be able to arrest improvement; but it is quite as little to be desired that for want of adequate weight of professional authority, subjects of great importance, involving it may be a great expenditure, and future consequences of vital importance to the military efficiency of the artillery service, should pass too entirely into the hands of civil engineers, amateurs, rival inventors, or their representatives in the House of Commons.

7. The remedy appears to us practicable, simple, and in entire harmony with the course recently adopted in respect to military staff appointments. It is in the formation of a senior class of officers in connexion with the Royal Military Academy, analogous to the late senior class at Sandhurst; and the selection after a proper interval of time of all officers for what we may term scientific appointments (in contradistinction to purely military ones) from the list of those who have passed through this class.

To define what we mean by scientific appointments, and at the same time to show how ample a list of purely military appointments will be left to meet the claims of officers of distinguished merit and ability who have not turned their attention into this channel, we subjoin a classification, excluding the Indian service.

(1.) Not specially referable to either class—
Inspector-General of Artillery.
Director of Ordnance.
Deputy Adjutant-General of Artillery.
Superintendent School of Gunnery.
President Ordnance Select Committee.

* A remarkable comment on this state of things will be found in the "Revue des deux Mondes" for 1st July 1862, p. 114.

APPENDIX IX. (D.)

Artillery Advanced Class.

(2.) Military Class.

Annexed to good soldiership without special regard to attainments.

Staff at Horse Guards.
Staff at Woolwich.
Colonelcies on staff.
Local brigade staff.
Other local staff.
Military appointments, Royal Military Academy.
Royal Horse Artillery.
Military Staff of School of Gunnery.
Brevet promotion.
The Bath.

(3.) Scientific Class.

Annexed to special fitness and attainment combined with military character.

Members, Secretary, and Assistant Secretary O.S. Committee.
Inspector of Artillery, and Assistant.
Professor of Artillery, Royal Military Academy.
Director of Artillery Studies.
Heads of manufacturing departments.
Attached to topographical department.
Officers attached to manufacturing departments.
Assistant Superintendents, Royal Laboratory.
Assistant Inspectors of Warlike Stores.
Instructors, Royal Military Academy.
Instructors, School of Gunnery.
Particular services under the War Office and Horse Guards.

8. It will be seen that on the one hand there is no reason to fear that special encouragement given to pursuits of the more studious character will withdraw officers from an active interest in their profession, because an ample share of prizes will be left to purely military merit; and on the other hand that the number of appointments calling for special acquirements is so large that it warrants and indeed calls for a regular provision for the supply of them.

It by no means follows that the same individual will not often be qualified in both lines. We believe on the contrary that officers whose talent and energy qualify them to succeed in the senior class will rarely be undistinguished in purely regimental duties; and nothing can be more remote from our intention than the formation of a class exempt from the ordinary liabilities of the service. We believe that there would be fewer instances of the same individuals holding advantageous appointments for a long term of years, if there existed a class of officers duly qualified to succeed them, and naturally expecting to do so in turn.

9. It would be both easy and interesting to sketch out a course of study for the proposed class; but for this there is no necessity at present. It has already been done to a certain extent by the committee of which Colonel Wilford was President in 1858, and whose conclusions coincided very much with our own. The urgency of the case has become much more apparent since that period; but it gives an increased confidence in our present representations to know how many officers have urged the same views before us. We will only submit the following suggestions:—

(1.) Officers of any rank of not less than four years' service to be admissible and taken off all other duties.
(2.) Entrance to be by examination, on terms corresponding to those which regulate admission to the Staff College.
(3.) Course to extend to three half-years.
(4.) Certificates in three classes to be given at final examination.
(5.) Attendance at the physical lectures at the Government School of Mines, Jermyn Street, to form part of the course.
(6.) Didion's *Traité d'Artillerie* to be the text book for the present.
(7.) The course not to include drawing or languages, which have been already taught at the Royal Military Academy, and can be advanced at any time, and which are not required for the special appointments in contemplation, in the sense in which they are required for military staff appointments.
(8.) The course to be distinctively a mathematical one, that is to say, one of enough pure mathematics to enable the students to read profitably, and follow the professor, in those advanced treatises which require familiarity with the processes of the differential and integral calculus; but, with this basis, as practical as it can be made.

10. We do not deceive ourselves by supposing such a plan as this can be carried out without a distinct provision for the expense of it. In the first place there will be very great difficulties unless the students are made regimental supernumeraries for the time being. Supposing the class to consist of eight or ten officers, partly subalterns, partly captains, the expense of this may be put at 1,650*l.* a year. There must be a professor of appplied mathematics at about 400*l.* Extra payments to other instructors already partly occupied, say 400*l.*, and with incidental charges we cannot reckon the whole at less than 3,000*l.* a year. But with the greatest earnestness we contend that the importance of the object to the public service is worth this and a far larger annual charge, and we trust that our proposal will not be dismissed as impracticable on the score of expense without counting the cost to the country of a great expenditure uncontrolled by thorough knowledge;—of a scientific service wanting the science which gives its claim to authority;—and of the misdirection of inventive ingenuity which inevitably attends the empirical treatment of artillery as of all other mechanical questions.

J. H. LEFROY, Brevet-Colonel, R.A.,
Secretary of Ordnance Select Committee.
C. F. YOUNG, Brevet-Major, R.A.,
Director of Artillery Studies.
C. H. OWEN, Brevet-Major, R.A.,
Professor of Artillery.

Woolwich, 10th September 1862.

(ii.)—MEMORANDUM BY THE COUNCIL OF MILITARY EDUCATION ON THE ABOVE OBSERVATIONS.

13, Great George Street, S.W.,
December 30, 1862.

THE Council of Military Education have the honour to return the correspondence received with the Military Secretary's letter, dated 25th ultimo.

The authors of the "Observations on the present state of instruction of the Royal Artillery" represent the inadequacy of the system of military education now pursued in England to enable its members to maintain the scientific reputation of that corps, and they state that a want of knowledge in the higher branches of mathematics has caused artillery inventions and the discussions on subjects concerning artillery to be thrown into the hands of unprofessional men.

They support their views by an extract from a French journal, which, in discussing the systems pursued in France and in England for preparing artillery officers, draws a contrast very unfavourable to the latter. It appears, however, to the Council that the verdict therein given is rather the author's opinion of what the effects of the two systems should be, than a record of the results of actual experience.

The Council submit that the writer of this article does not represent the opinion of those French officers who are most qualified to judge in such questions, in support of which assumption they annex an extract from a report to the Secretary of State for War, written by Colonel Claremont, Her Majesty's Military Commissioner at Paris; and they consider that a system of education which produced such good results could not have been so faulty as the foreign journalist would make it appear.

A high mathematical education will not of itself produce invention. Were it so, there would be good reason to expect that the highly trained officers of the French artillery from l'Ecole Polytechnique and Metz would take the lead in the invention of those weapons which are causing a revolution in the art of war; whereas that distinguished body have been content to adopt the principle of the early rifle in the manufacture of their guns.

Whilst fully recognizing the value of mathematics in the scientific branches of the service, the Council do not consider it indispensable that every officer of artillery should be an advanced mathematician; and they would hesitate to recommend the introduction of the French system into this country.

The standard of mathematical qualification hitherto required from all cadets on leaving the Royal Military Academy and the late Indian Military College was sufficient to justify the belief that among the large number of officers in the amalgamated artillery considerable mathematical talent would be found, which could be made available if facilities were offered for its development.

The plan now proposed would produce the desired effect of eliciting that talent for practical purposes, and the Council are fully alive to the advantages to be derived from its adoption. The scheme consists in establishing in connexion with the Royal Military Academy at Woolwich a senior class of officers, who shall be instructed in the

higher mathematics and the application of them to questions of practical science, certain staff appointments in the Ordnance Department being reserved as rewards to the students of this class.

It appears to the Council that this proposal, if adopted, would supply a number of scientific officers sufficient to sustain the reputation of the Royal Artillery in scientific discussion, and to afford a valuable staff corps for that arm. The Council would however submit to His Royal Highness the Field Marshal Commanding-in-Chief, that admission to a class whose education is to be conducted at the public expense, and whose exertions it is proposed to reward by a monopoly of special Government appointments, should be, not by selection, but, as the authors of the observations proposed, by competitive examination open to all artillery officers of a certain standing, thoroughly acquainted with their military duties, and certified to have been zealous and efficient in the performance of them. It may, however, become a question for subsequent consideration whether some of the appointments proposed exclusively for officers who have passed this higher examination might not remain open to all competent officers of Artillery or Engineers; particularly the appointments of instructors at the Royal Military Academy, amongst whom a well grounded knowledge in the comparatively lower mathematics, added to a special fitness for teaching, may be considered more desirable qualities than a thorough knowledge in the higher branches of science.

Before reporting further on this subject, the Council submit that the authors of the paper herewith returned may be requested to draw up a scheme of study for the proposed class, in which it is suggested that a thoroughly practical course of instruction should be introduced, as well as the more theoretical branches of science which appear to be contemplated.

(Signed) F. W. Hamilton, Major-General, Vice-President.
F. Abbott, Major-General.
Henry Moseley.
T. Elwyn, Colonel.
J. E. Addison, Colonel.

Extract from Colonel Claremont's Report.

"I must add that all French officers to whom I have spoken on the subject, admit that whatever may be our system of education, our artillery officers have proved themselves all through the war as most highly efficient, and thoroughly acquainted with every branch of their profession; in fact they cannot praise them too much."

(iii.)—Letter to the Deputy Adjutant-General, Royal Artillery.

Sir, Woolwich, January 1863.

In accordance with your letter of the 5th January we have now the honor to submit in further detail the scheme of study which we recommend for the class of artillery officers proposed to be formed at Woolwich for the study of the higher branches of professional acquirement. In so doing we request permission to advert for a moment to the memorandum of the Council of Military Education dated 30th December 1862, for the purpose of removing a misapprehension of our meaning, which appears to have resulted from the introduction of a quotation of a French writer. That writer draws a comparison between the French and British Artillery services in respect more particularly to the professional training of officers, which is unfavourable to the latter. The Council in refutation quote a letter from Colonel Claremont, written in 1856, in which he gives the generous testimony of the French themselves to the great efficiency of the British Artillery, and to the success of our system as known to them by its practical results. We submit that there is nothing in our position inconsistent with this testimony, which is entirely borne out by the observations of officers who have seen much of the French in the Crimea and China. Not to dwell on the democratic constitution of the French army, the absence of a wealthy middle class in that country, and the immense advantages of culture which the British officer enjoys in his opportunities of travel, and high social position; we may remark that the essentially practical genius of the people, and the manliness of character instilled into every English youth are sure to produce, as they ever have done, a race of soldiers, who have no superiors in energy and devotion to duty. These qualities are in the race, and would bear the same fruit if every officer and man were as theoretically accomplished as we wish a proportion only of the officers to be.

The undisputed superiority of the British Artillery over every other nation in Europe at the close of the Peninsular War was not a little due to the immense superiority of our horses, men, and material; and in this way too, the mechanical superiority of this country, although relatively less apparent than it was at that period, and the resolution of the Government to secure the best material at any cost, will always concur with the qualities of the officers and men to make our artillery an object of admiration to foreign soldiers. But the expression of that feeling cannot be held as a verdict upon parts of the system which are not under observation. There was no more generous admirer of the British Artillery than Baron Dupin, yet the absence of science did not fail to attract his attention. We could quote the writings of Moritz Mayer, and other foreign military writers to the same effect. A system admirable in many respects may yet be defective in one, and it is in the persuasion that such is our case, that we venture to submit these observations to His Royal Highness the Commander-in-Chief. It is with much gratification, however, that we find that the Council of Military Education on the whole concurs with us, and we now proceed to submit our proposed scheme. With respect to the prominence, which, notwithstanding our great desire to make the course eminently practical, may appear to be given to mathematical studies and to treatises which base their practical instruction on strict mathematical investigation, we desire to apply to the science of the artilleryman a sentence long since written of his own science by Sir John Herschel* :—"Admission to its sanctuary," he says, "and to the privileges and feelings of a votary is only to be gained by one means, sound and sufficient knowledge of mathematics, the great instrument of all exact enquiry, without which no man can ever make such advances in this or any other of the higher departments of science as can entitle him to form an independent opinion on any subject of discussion within their range." If officers can read the books we propose there can be no objection to their use, as they are unquestionably the highest text books. If they cannot, they fall short of the standard of professional science which prevails where those books are written and read, and the purpose of the class will be fulfilled when they have learnt to do so with the aid of a competent professor and their own assiduous study. It is needless to repeat the arguments of our letter of Sept. 10, as to the importance of this, when His Royal Highness the Commander-in-Chief and Secretary of State for War have so fully recognized it; but we may add, that the observations of our former paper were not intended to convey any reflection upon the education given to the gentlemen cadets at the Royal Military Academy. Considering the time they are under instruction, and the age at which they must be commissioned, these young men acquire as much knowledge of mathematics and of artillery and other professional subjects as can be expected, or as is required for general purposes. We are persuaded that young officers of the Royal Artillery are to the full as well educated when they are commissioned as the young officers of any European Artillery whatever. But an artillery officer in our service has little or no opportunity of carrying forward his professional studies, so as to fit himself, after a certain period of regimental duty, for the appointments we have in view, and which require for their discharge an amount of special and scientific knowledge which is not at all required for the performance of ordinary military duty.

It only remains to us to advert to the last paragraph of Major-General Crofton's letter of 24th November, touching the suppression of the present department of artillery studies at Woolwich. As regards its original subjects, the junior officers of the corps, the duties of the Director have been for some time in abeyance, but his time has been fully occupied with the instruction of officers from the Staff College, Inspectors of Warlike Stores, Officers of Militia, Volunteer, and Gold Coast Artillery, and in conducting annually a party of officers on a foreign military tour; to which may be added furnishing examination papers for promotion, and attendance on Foreigners; none of these services will be affected by the new plan: but as there must be an officer in military charge of the class, they may be placed under him. In like manner, the instruction in topographical drawing and military sketching, and the instruction in French and German, which are largely maintained for the benefit of voluntary classes of officers at the Royal Artillery Institution should not be discontinued, although their relations may alter.

The Staff we contemplate as necessary to carry out the arrangement is,—

Military.

A field officer in military charge, instructor in practical artillery.

* Herschel, p. 5.

Appendix IX. (A.)

Artillery Advanced Class.

An assistant in connexion more particularly with the present duties of the Department of Artillery as described above.

A first-class staff non-commissioned officer as clerk, from that department.

Civil.

A professor of applied mathematics and theoretical artillery.

A lecturer of chemistry.
" metallurgy.
" mechanics.

Special instructions will be requisite to the heads of Departments, Inspector of Artillery, Principal Inspector of Stores, and others concerned, with reference to what may be expected from themselves, the officers, managers, and accountants under them, but into this detail we apprehend we need not go.

We have, &c.,
J. H. Lefroy, Bt.-Colonel, R.A., Secretary O.S. Committee.
C. F. Young, Bt.-Major, R.A., Director of Artillery Studies.
C. H. Owen, Bt.-Major, R.A., Professor of Artillery.

The Deputy Adjutant-General, Royal Artillery.

N.B.—The detailed scheme of study alluded to in the above letter is not printed, as it was to a great extent embodied in the scheme of instruction prepared by the Council of Military Education, which is explained in the General Regimental Order announcing the establishment of the Advanced Class.

Appendix IX. (E.)

E.—ORIGINAL REGULATIONS FOR THE ADVANCED CLASS.

Order issued to the Royal Artillery announcing the Establishment of the Advanced Class of Artillery Officers.

Horse Guards, S.W., 2nd November 1863.

1. His Royal Highness the Field Marshal Commanding-in-Chief has the satisfaction of announcing to the Royal Artillery, that the Secretary of State for War has been pleased to make provision for the future special instruction of officers who may desire to qualify themselves for employment in connexion with the Manufacturing Departments, the Civil Establishment of the Royal Military Academy, and generally for all appointments usually held by officers, not being military staff appointments, which are special to the Artillery Service.

2. It it the earnest hope of His Royal Highness, that by this arrangement the Royal Regiment of Artillery will continue to sustain its scientific reputation under any progress which may be made in the mechanical arts as applied to *matériel* of war.

3. The Deputy Adjutant-General is charged by the Field Marshal Commanding-in-Chief, to exercise the utmost vigilance that no officer be permitted to compete for a place in the proposed class, who has not given unqualified satisfaction in the discharge of his purely regimental duties, and is not, from a military point of view, an active and efficient Artillery officer.

4. Officers desirous of competing at the first examination, will make application through their Commanding Officer, who in forwarding it will append a certificate in accordance with par. 3.

No officer will be admissible under six years' service, and he must have undergone a course of instruction at Shoeburyness. A medical certificate of good health will be required.

5. The first examination will take place in March 1864, under the Council of Military Education.

The books to be specially taken up, until further notice, are *Twisden's Mechanics* and *Todhunter's Differential Calculus*, but the examination will be chiefly confined to the earlier portions of the latter.

The French will be qualifying for the purpose of ascertaining that the candidate has such an acquaintance with the language, and especially with the technical terms in common use, to be able to consult professional works, such as Didion's *Traité d'Artillerie* or the *Aide-Mémoire d'Artillerie*, with facility.

6. The relative importance to be attached to the subjects of examination will be as follows:—

	Marks.
Differential and Integral Calculus - -	700
Practical Mechanics - - -	
Chemistry - - - - -	300
Physics - - - - -	
French—Qualifying - - - -	"

7. The course of instruction will extend over two years, and embrace in succession the special duties of each manufacturing department. For example, in the Royal Gun Factories:—

Metallurgy of copper, tin, zinc, and their compounds; mechanical and chemical properties of gun metal.
Metallurgy of iron, including cast iron and wrought iron, steel and alloys; mechanical and chemical properties.
Principles of construction of cast guns.
Principles of construction of built-up guns, welding, &c.
The steam hammer.
Turning, boring, rifling, and sighting guns. All the machines, lathes, special tools, and processes.
Comparison of systems of rifling and breech-loading for cannon.
Gauges and micrometrical measurements.
Organization of labour in the Royal Gun Factories.
System of account keeping, pricing, and payment in the Royal Gun Factories.
Relations to the Director of Stores, Director of Contracts, Principal Superintendent of Stores, and Director of Ordnance.
Patterns, system respecting them.
Examination of Stores.
8. Duties of the Inspector of Artillery:—
Proof of guns.
Examination of guns and stores.

9. The Small Arms Departments, Enfield and Pimlico, will follow the Royal Gun Factories, and be treated in the same comprehensive manner, including the system of supply of smal. arms to the army, their repair, and comparison of systems of rifling and breech-loading for small arms.

10. From the Royal Gun Factories the class will proceed to the Royal Carriage Department, where the subjects will be:—

Selection and purchase of timber.
Seasoning of timber.
Sawmills.
Planing and other machinery applied to working of timber.
Construction.
Mechanical principles as applied in military machines.
Friction, draught, traction, locomotive power.
Harness.
Organization of labour in the Royal Carriage Department.
System of accountability and payment.
Prices.
Relations to Director of Stores, Director of Contracts, Principal Superintendent of Stores, and Director of Ordnance.
Patterns, systems respecting them.
Examination of stores.

11. Here will conveniently come in the organization and duties of the department of the Principal Superintendent of Stores, including the detail of equipments for all services, and proportions of stores, packing ammunition, arrangement of magazines.

12. The last term will be devoted to the manufacture of gunpowder, ammunition, and generally the duties of the Royal Laboratory, including the chemistry of the subjects.

Selection and purchase of pyrotechnic material.
Examination and refining of saltpetre, &c.
Gunpowder and powder-mills.
Theory of gunpowder, qualities, effect of different sized grains.
Electro-ballistic apparatus, and other modes of proof.
Gun cotton.
Detonating compounds.
Other laboratory preparations.
Small arm ammunition, cannon ammunition, fuzes, rockets, &c.
Manufacture of bullets.
Casting of every description of projectile for smooth-bored and rifled ordnance.
Organization of the Royal Laboratory Department.
Supply of raw material.
System of account keeping and payment.
Prices.
Relations to the Director of Stores, Director of Contracts,

Principal Superintendent of Stores, and Director of Ordnance.

Patterns, inspection. Examination of stores.

13. The professor of applied mathematics, and the several lecturers, will proceed in corresponding order through their subjects, so that practical instruction may be based on thorough acquaintance with principles. If found necessary to do so, a large part of the first term will be devoted to theoretical instruction and mathematics, in order that the students may be in a position to follow the professor in the more advanced subjects of his subsequent lectures.

14. There will be periodical examinations, and certificates given at the close.

15. No payment will be required.

16. After a certain date, to be fixed hereafter by His Royal Highness the Field Marshal Commanding-in-Chief, first appointment to all special employments of a scientific character will be made exclusively from officers who have passed through the contemplated course of instruction.

By order of His Royal Highness The Duke of Cambridge, K.G., Colonel of the Royal Artillery,

CHARLES BINGHAM,
Deputy Adjutant-General.

Appendix IX. (E.)

Artillery Advanced Class.

F.—PRESENT REGULATIONS FOR ADMISSION TO THE ADVANCED CLASS.

Appendix IX. (F.)

Deputy Adjutant-General's Office,
Royal Artillery,
Horse Guards, 12th May 1869.

Royal Artillery.—Regimental Circular.

Referring to the regimental circular of the 8th May, 1867, it is notified for general information that the next examination of officers of the Royal Artillery for admission to the Advanced Class at Woolwich, will be held early in February 1870, under the Council of Military Education.

There will be vacancies for eight officers.

Officers appointed to the class will be required to join on the 31st March 1870.

Candidates for this examination must have undergone a course of instruction at Shoeburyness; or they must pass satisfactorily a preliminary examination in practical artillery.

No officer will be admitted who will not have completed six years' service on 31st March 1870.

The subjects in which the candidates will be examined, and the relative importance attached to the subjects, are as follows:—

Mathematics - - -	700
Chemistry and physics - -	300

"*Mathematics*" includes—

Plane trigonometry, (so much of it as is included in the first 16 chapters of Todhunter's treatise).

Co-ordinate geometry of two dimensions (Hymer or Todhunter), viz.:—

Straight line referred to rectangular, oblique, and polar co-ordinates. The circle, parabola, ellipse, and hyperbola, referred to rectangular and polar co-ordinates. The equation to the tangent, and the normal to the circle, parabola, ellipse and hyperbola referred to rectangular axes, the sections of a right cone made by a plane.

Applications of the above to solutions of simple problems.

Differential Calculus.—Differential co-efficient of simple, inverse, trigonometrical and complex functions, proof of Taylor's and Maclaurin's theorems and examples of expansions of functions; differentiation of functions of two variables; limiting values of functions which assume an indeterminate form; change of independent variable; maxima and minima of functions of one variable; tangents, normals and asymptotes to plane curves; differential co-efficients of arcs, areas, &c.; radius of curvature (Hall or Todhunter).

Integral Calculus.—Meaning of integration; examples of simple integration; integration by parts; lengths of curves; areas of plane curves (Hymer, Hall, or Todhunter).

Elementary Mechanics.—(Whewell or Parkinson.)

Chemistry.—The general laws of chemical combinations,—the chemistry of oxygen, hydrogen, carbon, and nitrogen, and of their chief inorganic compounds. The metallurgic chemistry of iron. The chemical principles of the manufacture and explosion of gunpowder.

Physics.—In heat,—the subject of "thermometric heat" as treated in the first seven chapters of "Tyndall on Heat."

In electricity,—the subject of frictional electricity.

Officers competing are expected to be able to read French scientific works, such as Helie's Traité de Balistique, Piobert's Cours d'Artillerie, &c., &c., reference being constantly made to such works during the course of instruction.

At the conclusion of each year's course there will be a final examination in the subjects read during the year; the marks gained at the first examination being carried forward to the second, when certificates will be given to those students who are found qualified.

Officers desirous of competing at the examination will make application not later than the 1st January 1870, through their commanding officers, in the manner pointed out in paragraph 4 of the General Regimental Order of the 2nd November 1863.

By Command,
G. GAMBIER,
Deputy Adjutant-General.

APPENDIX X.—SCHOOL OF GUNNERY, SHOEBURYNESS.

Appendix X. (A.)

School of Gunnery.

A.—GENERAL ACCOUNT OF THE SCHOOL.

QUESTIONS ADDRESSED TO COLONEL ELWYN, COMMANDANT.

(I.) Will you be good enough to give, for the information of the Commission, a general account of the objects of the School of Gunnery, the present organization and staff of the establishment, the conditions upon which admission to it depends, the number of officers and non-commissioned officers under instruction at it, and the nature and length of the course of instruction?

(II.) Will you favour the Commission with a brief statement of your opinions as to the working and results of the establishment, and with any suggestions for its improvement which you may think it is desirable to make?

ANSWER received from COLONEL ELWYN.

School of Gunnery, Shoeburyness,
May 12, 1869.

SIR,

I HAVE the honour to acknowledge the receipt of your letter of the 28th ult., and in reply to the questions which accompanied it to state as follows for the information of the Chairman and Members of the Royal Commission on Military Education.

(I.) The objects for which the School of Gunnery was established are detailed in the accompanying letter marked A.,* addressed by Sir Hew Ross when Adjutant-General of Artillery, on 19th December 1857, to the Military Secretary, and in that of the Adjutant-General to the Forces, marked B.,† when submitting to the Secretary of State for War, on 30th June 1858, the views of His Royal Highness the General Commanding-in-Chief upon the subject, viz.:—

For the purpose of ensuring a completeness and uniformity in the instruction of the officers and men of the Royal Artillery in the use of the weapons and military machines they are called upon to use; of imparting to them a knowledge of the ammunition, stores, and appliances made use of in the artillery service; of the effect of shot and shell under various circumstances; and, by

* *See* page cxv. † *See* page cxvi.

APPENDIX X. (A.)

School of Gunnery.

constant practice from guns of every description, of training and educating from year to year a number of officers and men who would carry with them to their respective brigades an amount of valuable knowledge and experience which would become in that way, and in due time, diffused throughout the Royal Artillery, in the same manner as the gunnery instruction for the Royal Navy on board the "Excellent," and the musketry instruction for the infantry at Hythe have percolated with such advantage through those services.

The arguments made use of by the Adjutant-General to the Forces and by the Adjutant-General of Artillery in the letters before referred to, may be used now with greatly increased force, not only because the progress of science and of mechanical skill has placed in the hands of the artilleryman weapons of a power which could then have been scarcely contemplated, and requiring great skill to work so as to produce the full effect of which they are capable, but because the whole of the Indian Artillery has been amalgamated with the Royal Artillery, and without some central school of instruction, an uniform system of artillery exercises, with the means of carrying on gun practice at all times, would have been impossible.

For carrying out the foregoing objects the following arrangements are made:—

On the 1st April in each year a class of from 20 to 25 officers is formed for what is termed a "long course," embracing a period of 12 months.

On the same date a class of about 40 non-commissioned officers is formed for a similar course.

These classes are formed into two separate squads, and entirely occupy the time of the chief instructor, one gunnery instructor, and four assistant instructors. They are instructed in the drills and exercises of every species of ordnance, and the mode of mounting and dismounting them under various circumstances and with different means; in transporting the heaviest guns from place to place and mounting them under difficulties; in making rafts; embarking and disembarking guns; making up ammunition; preparing demands for stores; carrying on gun practice with shot, shell, &c.; making signals; throwing up batteries as at a siege, and afterwards testing their efficiency by firing at them; attending lectures on artillery subjects by the officers instructing the classes, and on subjects of a scientific nature, and bearing upon the science of artillery, by professional gentlemen engaged from time to time for the purpose.

The non-commissioned officers attend these latter lectures, and also receive from the schoolmaster, under the direction of the officer in charge of the class (and with great advantage), instruction in mathematics, and in mechanical drawing applicable to the course they are being carried through.

In addition to these "long courses," as they are termed, another class of 33 non-commissioned officers is sent every three months to go through what is termed a "short course," for the purpose of being instructed in the various duties connected with the service, transport, &c. of heavy guns, which they would seldom have an opportunity or the means of learning with their brigades. At the end of the course they undergo an examination, and a report is forwarded by the Commandant to the Deputy Adjutant-General of Artillery for the information of their respective commanding officers.

The result of this system is that an officer and two non-commissioned officers highly qualified to instruct in all artillery duties and exercises are sent annually to each brigade; also eight non-commissioned officers well qualified to assist in the instruction of the non-commissioned officers and men of their brigades in most duties connected with heavy ordnance, and with enlarged views of artillery subjects generally, acquired during their residence here, where important and valuable artillery experiments are being carried on almost daily, and which must tend largely to expand their minds towards such subjects.

Further instruction is imparted to the regiment by sending batteries from Woolwich, Aldershot, and other contiguous stations, to carry on their annual practice, and during that time they are enabled to acquire much valuable professional knowledge.

Some batteries are also sent for regimental duty. They take guards and fatigues, move guns, and otherwise prepare for experiments, and each in its turn goes through a short course of instruction. The officers and a proportion of non-commissioned officers of these batteries are formed into a class under one of the gunnery instructors and his two assistants, and when they have gone through a preliminary course one of the batteries, or more if practicable, are taken off duty for a month in order to go through a systematic course, which though short is nevertheless much more valuable than can be given them elsewhere, whilst the frequent employment at other times in the heavy duties of artillerymen enables them to rejoin their brigades or stations with a practical knowledge and skill which cannot be too highly valued.

These batteries are generally relieved every three or four months. A constant stream of instruction is thus kept up, which is gradually spreading throughout the regiment, and is beginning to bear valuable fruit in return for the expenditure incurred.

Squads of militia officers and non-commissioned officers are occasionally formed for a course of three months' instruction.

Detachments from various corps of volunteer artillery, about 700 officers and men, assemble annually for competitive firing. These "meetings" are organized by the National Artillery Association, and occupy one week, during which time the officers and men are encamped within the garrison under the immediate orders of a field officer of the Royal Artillery; and in addition to the actual prize shooting, they are instructed in the service of rifled guns and the details necessary thereto, the whole available strength of the School of Gunnery being placed at their disposal for the time being.

An experimental department is attached to the School of Gunnery, and the whole establishment consists of—

Commandant and Superintendent of Experiments.
Brigade major.
Surgeon.
Adjutant.
Quartermaster.
Master gunner.
Serjeant-major.
Quartermaster-serjeant.

School of Gunnery.	*Experimental Establishment.*
1 chief instructor, a field officer.	1 assistant superintendent.
4 gunnery instructors (including 1 at Woolwich), captains.	1 second-class assistant superintendent.
1 first-class clerk.	1 first-class clerk.
1 third-class clerk.	3 laboratory serjeants.
6 first-class assistant instructors.	3 range serjeants.
1 army schoolmaster.	*15 storemen, &c.
* 22 store, magazine, and lobbymen.	

1 staff wheeler.
1 hospital serjeant.
1 photographer.
1 armourer.
2 wheelers.
2 smiths.

Of the above staff the gunnery instructor, stationed at Woolwich, is in charge of the Royal Military Repository, which has been retained as a branch of the School of Gunnery, for the purpose of affording instruction in heavy artillery duties to the officers and non-commissioned officers of that garrison; to officers from the Staff College and others stationed at Woolwich, under the Director of Artillery Studies; and to officers of militia and volunteer artillery. A separate staff of non-commissioned officers as assistant instructors and artificers is borne on the strength of the depôt brigade.

The only condition upon which admission to the School of Gunnery depends is the recommendation of commanding officers of brigades, each of which is supposed to furnish annually one officer, either a captain or a subaltern. The same applies to the class of non-commissioned officers, whether for the long or for the short course; and it is the interest of a commanding officer to select his best officers and non-commissioned officers for this service, since the instructors of brigades are furnished from those only who have passed through and obtained certificates from the School of Gunnery.

The number of officers and non-commissioned officers now under instruction is—

"Long course," 12 months, officers, 23.
" " non-commissioned officers, 40.
"Short course," three months, non-commissioned officers, 33.

Of batteries stationed at Shoeburyness, and now under instruction, one month:—

Officers, 3.
Non-commissioned officers, 19.
Gunners, 74.

* These men furnish also the gun detachments for, and assist generally at, experiments.

The nature of the "long course" of instruction is the same for officers as for non-commissioned officers, with the exception that the latter receive instruction from the schoolmaster in pure arithmetic and mechanical drawing, and calculations connected therewith: it may be thus specified:—

Elementary exercises for the purpose of instructing the squad in dealing with heavy weights without machines, showing the best mode of applying power in moving guns, commencing with light and progressing to guns of 23 tons, instruction concerning ropes, tackles, knots, &c.

Field, garrison, and siege gun drill with smooth bore and rifled guns mounted on various carriages and platforms.

Drills with howitzers and mortars, throwing up works of offence and defence, arming them and laying platforms, making up ammunition, and arrangements for night firing.

Exercises with military machines, construction of sheers, derricks, &c., and placing them in awkward places, construction of trestle and other bridges for the purpose of passing heavy artillery across ditches, &c., and of rafts for similar purposes.

Embarkation of artillery and horses.

Mounting, dismounting, and moving heavy guns without the aid of machines.

Practice from heavy and field guns, smooth bore and rifled, at known and unknown distances, with full and reduced charges.

Battalion drill and telegraphy.

In the lecture room instruction in the mechanical powers in gunnery, systems of rifling, action and penetration of the service projectiles; construction, examination, and record of guns.

Army administration as affecting artillery.

Lectures on gunpowder, gun cotton, and fulminates; on metallurgy; on the various modes of computing velocities and the instruments employed; on electricity and steam; on strategy and tactics.

From the officers and non-commissioned officers who form these squads are selected the instructors of the brigades; it is therefore not only necessary that they should be able to perform the several drills and manœuvres, but be able to impart instruction in the same.

The "short course" comprises instruction in—

Cordage, knotting, tackles, parbuckling, pinching, slewing, &c.

Mounting and dismounting with and without gyns.

Drill and practice with 32-pr. and 8″ guns.

Drill and practice with mortars on standing and travelling beds, also mounting and dismounting.

Drill, practice, mounting, dismounting, and embarking rifled field guns.

Drill, and practice with 40-pr. and 64-pr. guns firing at moving target.

Drill with 7″ B.L. guns.

Drill with 7″, 9″, and 12″ M.L.R. guns, and practice.

Dismounting and mounting the above.

Laying platforms, &c.

Use of platform wagon.

Light sheers.

Rocket drill and practice.

Facing B.L. guns.

Practical examination, &c.

The course occupying only one month through which the batteries are passed consists chiefly of—

Cordage, knotting, elementary exercises.

Ordinary shifts and machine drill.

Mortar drill and practice.

12-pr. B.L. gun drill and practice.

40-pr., 64-pr. and 7″ B.L. gun drill and practice.

7″ and 9″ M.L. gun drill and practice.

Dismounting 7″ and 9″ guns by gyns and jacks.

Parbuckling 7″ and 9″ guns and moving on sledges.

Laying platforms.

Rocket drill and practice

Sheers (heavy and light), derricks, &c.

Facing vent pieces.

Re-drilling and examination of the non-commissioned officers.

(II.) The benefit which the School of Gunnery has conferred on the regiment is undisputed; without relieving officers commanding brigades from the responsibility of the perfect efficiency of their brigades, it has furnished them with the means of thoroughly instructing their men on one uniform system.

The system was originally founded on that of the old very limited school of instruction at the Royal Military Repository, Woolwich; and the experienced officers who have preceded me at the School of Gunnery have invariably signified their approval of the working of the system, which appears to me also to have been well devised.

The full benefit of the School of Gunnery will not be felt until those officers who have had the *advantage* of being trained at it attain to the higher ranks.

A considerable amount of additional information on artillery subjects might be imparted in a practical form if the property purchased were not so limited; the effect of loaded shells on earthworks, &c. cannot be shown without endangering life, and this is a subject which deserves consideration.

I have, &c.

(Signed) T. ELWYN,
Colonel, Commandant and
Superintendent.

The Secretary to the
Royal Commissioners
on Military Education.

ENCLOSURE A.

SIR, Horse Guards, S.W., December 19, 1857.

I HAVE the honour to request that you will lay before His Royal Highness the General Commanding-in-Chief the following remarks on a subject which becomes of greater importance, viz.:—

The instruction of the officers and men of the Royal Artillery in the use of the weapons and military machines which they are called upon to use; with the view of ensuring completeness and uniformity in this instruction, it is submitted that a special school is required.

The two establishments now in existence, the "Excellent" gunnery ship for the instruction of the navy, and the School of Musketry at Hythe for that of the infantry, recognize the principle; and the great advantages that have resulted from them are acknowledged on all hands.

The instruction in gunnery of a most important arm of the service, the Royal Artillery, is still exclusively in the hands of the field and company officers; and, scattered in small bodies, as the regiment is, in all parts of the globe, numerous systems of instruction (some perhaps very good) have arisen, whereby the soldier becomes confused, when the exigencies of the service remove him from one to another.

Yet, if a school is required to teach the infantry man the use of his rifle, and the sailor that of his cannon, is it not still more so required in the case of the Royal Artillery?

The infantry man has one arm, and one only. The sailor must be trained to the use of guns of several calibres, but those, generally speaking, the larger ones. The artilleryman is called upon to use guns of every size, weight, and calibre, with various kinds of projectiles, on different descriptions of carriages, and he is expected to work them under all conceivable circumstances. His guns must be accompanied by great quantities of ammunition and stores, in the proper arrangement, packing, and preservation of which the most careful and minute instruction is necessary.

Further, he should be perfectly well acquainted with the effect of his shot or shell, and his knowledge of ranges, fuze lengths, and charges ought to be so complete as to require no effort of mind to recollect and apply it.

It must be borne in mind that vast improvements have been made in the effective range of the infantry soldier's arm, and that he has acquired a very perfect knowledge of its use; it is therefore probable that battles may be decided in future, supposing the enemy to be similarly armed and instructed, at longer ranges than heretofore; and it becomes necessary that every exertion should be made to increase the range of artillery, as well as to obtain precision of fire.

A strong argument is hereby furnished for a school of artillery, if this arm,—so important and so costly,—is to maintain its place in this country.

At Shoeburyness exertions are now being made to increase the range of field and garrison guns; and in the opinion of the officer charged with the superintendence of the experiments, with good prospect of success; and this officer, Colonel Mitchell, remarks "that precision of fire "is unattainable with any arm when in the hands of un- "skilled men; that perfect simplicity is impracticable, and "in proportion as you depart from simplicity, so must you "instruct and explain."

I would suggest that an establishment should be formed for instruction in practical artillery (somewhat similar to that at Hythe), where practice from every description of ordnance could be carried on free from danger and interruption, and where the effect of fire could be noted, whether on targets, earth, masonry, or timber.

Explanations relative to the numerous duties connected with ammunition might be afforded in the form of lectures, each subject, when fully understood, being illustrated by actual practice; and a simple course could be devised for all non-commissioned officers and men, wherein, without

Appendix X. (A.)
School of Gunnery.

entering into the theory of projectiles, the general principles of the art of pointing guns should be explained, as well as the trajectory of the missile, the meaning of point blank, &c.

It would not be possible to send every company in the regiment to such a school; but a great amount of information would be diffused through the regiment, which might be increased by instructing some officers, with a large proportion of non-commissioned officers, eventually sending the former forth as instructors to stations: where practice can be carried on, an ample supply of ammunition should be allowed.

I have, &c.
(Signed) H. D. Ross,
Adjutant-General,
Royal Artillery.

The Military Secretary,
&c. &c.
Horse Guards.

Enclosure B.

Sir, Horse Guards, S.W., June 30, 1858.

With reference to the War Office letter of 21st January 1858, I have the commands of the General Commanding-in-Chief to state that His Royal Highness is most desirous that the proposition for a School of Gunnery to be established for the Royal Artillery should again be brought under consideration:—with which view I am directed to enclose a copy of Sir Hew Ross' letter on the subject, and the reply thereto, and to acquaint you that His Royal Highness is led to believe that, from want of an uniform system of instruction, the practice of the Royal Artillery is not what it ought to be. Increased facilities for improvement are afforded by the recent grant of additional practice ammunition (by War Office letter dated 28th June 1858, $\frac{55 \text{ Artillery}}{386}$) rendering a school of instruction more desirable, and which would still be enhanced by a compliance with the original application to allow 300 rounds per troop, battery, and company, as affording more adequate means of instructing the officers, non-commissioned officers, and gunners of the corps in this essential part of their duty.

Too much cannot be advanced to show the importance of having the Royal Artillery efficient in the field and fortress: but its efficiency will be more or less marked by its scientific principles and unity of action.

The School of Gunnery would afford the officers and men so many and great advantages beyond those which they now possess, that, under existing circumstances, His Royal Highness feels justified in strongly recommending its adoption, as the only means of enabling the Royal Artillery to keep pace with the rapid improvements which are continually being effected in other arms of the service, and of imparting such instruction to the men relative to the capabilities and properties of the arms they are called upon to use, as will give that confidence and efficiency which is so essential to artillerymen in the various situations in which they are expected to act so important a part.

I have, &c.
(Signed) G. A. Wetherall,
Adjutant-General.

The Under Secretary of
State for War.

Appendix X. (B.)

B.—HISTORICAL NOTICE OF THE SCHOOL OF GUNNERY.

(By the Secretary.)

Shoeburyness first became a station for artillery practice in the year 1849. The practice was, however, at that time confined to experiments, which were conducted on a very limited scale, under the department of the Director-General of Artillery. A battery was constructed and some wooden huts erected at the station in that year; but for several years nothing but experimental practice was carried on by batteries of artillery who were sent to Shoeburyness merely for the summer months, and were quartered, at least partially, under canvass. No permanent staff were employed, the senior officer present with the troops being in command of the station. In 1854 the establishment assumed a more permanent character, and was placed under a lieutenant-colonel of artillery as commandant, who was also at the same time superintendent of experiments. It still, however, continued to be merely a station for artillery practice and experiments, no regular course of instruction having at that time been instituted in connexion with it.

It was not until 1859 that the School of Gunnery was established. The causes which led to its institution are explained in the correspondence accompanying Colonel Elwyn's account of the present state of the school.* The staff fixed for the whole establishment at that time consisted of:—

One commandant and superintendent of experiments.
One chief instructor.
One instructor in rifled ordnance.
One instructor in gunnery.
One carbine instructor.
One brigade major.
One assistant superintendent of experiments.
One adjutant.

During the year 1859 several "short courses" were formed for the instruction of artillery and naval officers in the use of the Armstrong guns then lately introduced into the service. The first class of officers for the "long course" also commenced their instruction in July of the same year, since which time similar courses have been formed annually.

A full account of the present state of the School of Gunnery, and of the instruction given at it, is contained in Colonel Elwyn's letter in reply to the questions addressed to him by the Commission.

* *See* above, page cxv.

Appendix XI. (A.)
Staff College and Staff Appointments.

APPENDIX XI.—STAFF COLLEGE AND STAFF APPOINTMENTS.

A.—QUESTIONS AND REPLIES RELATING TO THE STAFF COLLEGE.

(1.)—Questions issued by the Commission.

First Series.

(I.) Will you state your views as to the results of the Staff College, and as to the present system of appointing officers both to the personal and general Staff.

(II.) What is your opinion regarding the system of admission to the College? Do you consider that under the present system the officers admitted to the College are those in the service best fitted, both intellectually and practically, for Staff employment? Can you suggest any improvement in regard to the certificates required from Commanding Officers, or any trustworthy guarantee for the possession by the candidates of the practical qualities required in Staff officers.

(III.) From your observation of the officers who have passed through the College, do you think that as a rule they prove efficient Staff officers?

The above questions were addressed to—
Lieut.-General W. F. Forster, K.H., Military Secretary.
Colonel the Hon. H. H. Clifford, C.B., V.C., Deputy Quartermaster-General to the Forces.
Colonel J. W. Armstrong, C.B., Deputy Adjutant-General, Ireland.

(i.)—Answers received from Lieut.-General Forster, Military Secretary.

(I.) Many excellent Staff officers have been produced by the Staff College, and although they must of course have obtained a certain amount of knowledge whilst there, which, when brought to bear professionally, has been of great advantage to them, still so very much depends upon the activity and intelligence of officers, that I cannot presume to say that officers not possessing these qualifications, however well

hey may have been educated, would be efficient on the taff; nor can I say that the most efficient Staff officers ave passed out of the Staff College, for certainly there are any officers who have not had the benefit of that institu- on who have established a high character in that particular partment. But if an officer is a good rider, which I look pon as a necessary qualification for a Staff officer, possesses good eye for a country, energy, and activity, surely the struction he can obtain at the Staff College would be of mense advantage to him.

But I am not prepared to say that there is an absolute ecessity for a Staff College. The information and instruc- on derived from that institution might be obtained by fficers from other sources, and I should be very glad to be ertain that officers enter the Staff College for the sole pur- ose of improving themselves in their profession, and with o other view.

(II.) I think commanding officers might be more careful n making out the certificates they give to the candidates or the Staff College. Now, officers are not selected, but hey volunteer; consequently it would be bold to say that here are not officers who are not better qualified in some espects than those who go there, for there are many officers f independent fortune who would rather remain with their egiments than qualify for the Staff.

W. F. Forster,
Military Secretary.

---

ii.)—Answers received from Colonel the Honourable H. H. Clifford, V.C., Deputy Quarter-master-General.

(I.) In my opinion the Staff College has been the means of giving a large number of officers the means of improving themselves and acquiring knowledge most valuable to them in the army, but I consider that the present system of providing Staff officers for the army is very unsatisfactory, both as regards the efficiency of that branch of the service, and also as regards the officers themselves.

I would establish one military college, through which every young man who wished to enter the army should pass. I would divide it into branches suited to the preparation of young men for the Royal Artillery and Royal Engineers, as well as for the cavalry and infantry. One uniform system of education and examination should prevail; amongst other advantages it would no longer be necessary for parents to send their sons to professors to be prepared for their examination for the army. I would select the Staff of the army from its officers and form a Staff Corps. No officer should be eligible for the Staff Corps unless he had served eight or ten years in the cavalry, Royal Artillery, Royal Engineers, or infantry. During these eight or ten years he would have time and opportunity to qualify for the Staff. On each successive step to a higher appointment on the Staff he should be required to pass a further examination.

The Staff Corps should be composed of only a sufficient number of officers to fill the Staff appointments provided for in army estimates. In these appointments I would include that of Aide-de-camp. I think it very undesirable that young officers, with very little experience or knowledge of military duty should be selected for these appointments. An officer once selected for the Staff should be employed on it so long as he proved himself effective, not necessarily in the same appointment, but always on the Staff. Officers wishing to join the Staff Corps should be recommended by their Commanding Officer, and should be required to pass a qualifying examination.

On joining the Staff they should leave their regiments, and their pay on the Staff should be such as to enable them to do so with advantage in a pecuniary point of view.

The present uncertainty of employment on the Staff is, I think, a great drawback to it, and the cause of bitter disappointment to officers who, having done all that is required of them to qualify themselves for the Staff, cannot be employed on it for want of appointments to give them. There are not a sufficient number of Staff appointments to make it possible to employ all the officers who have passed through the Staff College, besides which there are a certain number of officers who served on the Staff prior to the establishment of the Staff College, and before Staff appointments could be held only for five years; who have served as Staff officers in the field, who have seen much service, and who have proved themselves efficient Staff officers; they also have some claims for employment which are taken into consideration. It is very discouraging to an officer at the end of his five years Staff employment to see that, however well he has discharged the duties required of him on the Staff, however valuable or efficient a Staff officer he may be acknowledged to be, he must of necessity, perhaps only for a time, perhaps altogether, retire from the Staff because an appointment cannot be held for more than five years, and because there is not sufficient employment for the number of officers who have just claims for Staff employ. In these days of changes and the introduction of new systems, this retirement from Staff duty, if only temporary, is not only a great loss in a pecuniary point of view, but it throws an officer out of the line of regular work, and on re-appointment after a lapse of months or years he returns to the Staff having lost much valuable time and knowledge, and finds himself behindhand and obliged to devote much time to making up his lost ground. The compulsory removal of Staff officers at the end of five years is also in my opinion prejudicial to the service. It sometimes happens that in a department the whole of the officers are changed about the same time, and it follows that no single officer in that department is for a time master of its details, which I consider it most desirable that every Staff officer should be. The same devoted attention to the Staff duty can hardly be expected from an officer who feels that his appointment lasts only for five years, and that at the end of that time he may possibly never be called upon to serve on the Staff again, as from one who feels that the Staff is his profession, and that he may depend upon being employed so long as he performs his duties in an efficient and satisfactory manner.

(II.) I do not think that it is a good one, and it does not, in my opinion, follow that the officers admitted to the Staff College are those in the service best fitted, either intellectually or practically, for Staff employment. Some officers might go there to suit their convenience, their regiments being on foreign service, or because it was in other ways convenient to them, but with no intention or hope of serving on the Staff. I consider that an officer who wishes to qualify himself for Staff employ has ample time at his disposal whilst serving with his corps, without being withdrawn from duty, particularly if professors are provided for his instruction at all the large military stations, and that he has passed through a military college before entering the army.

The selection of officers for the Staff is no doubt very difficult, especially when the great ordeal of employment in the field cannot be made use of, but from my experience the following qualities should be looked for in the selection of Staff officers:—

(1.) A good military education.
(2.) A clear right-seeing and sound judgment.
(3.) A sound and healthy constitution, including excellent eyesight.
(4.) Great energy, and active habits, good nerve, and composure when in danger.
(5.) The power of riding well.
(6.) Implicit obedience to authority.
(7.) Very great tact and forbearance.
(8.) Courteous and gentlemanly manners.
(9.) Great discretion in speech.
(10.) Close application and business habits.

I would myself select for a Staff officer one with fewer merely intellectual acquirements, but fully endowed with some of the other qualities I have mentioned. I have seen lamentable examples of very well read, highly educated, men who have proved most inefficient Staff officers, because they have been wanting in some of the other qualities I have mentioned.

(III.) Not having served in the field with officers who have passed through the Staff College, I do not feel competent to answer this last question, but I think that several officers who have passed through it are proving themselves efficient Staff officers.

H. H. Clifford,
Colonel.

(iii.)—Answers received from Colonel J. W. Armstrong, C.B., Deputy Adjutant-General in Ireland.

(I.) I do not think that the results of the Staff College have been altogether so satisfactory as was expected. This effect may be possibly caused from the fact that the best officers in the army do not enter the College; the number of Staff appointments are comparatively so few that they see no certainty of being employed after they have qualified. Again, when an officer has held an appointment for the prescribed period of five years, and has been in a position of considerable authority and responsibility, he returns with reluctance to his corps—I allude here to the rank of captain—and has a distaste for regimental duties; he becomes careless and discontented, and the service suffers.

Appendix XI. (A.)

Staff College and Staff Appointments.

I think too it is not just to a regiment to deprive it of the services of any officer for a lengthened period, viz., two years' study at the College and five years' Staff employment; during this time the officer, if of the rank of captain or subaltern, is drawing his full regimental pay and his comrades are performing his duties. I would not disturb the existing system of appointing officers to the personal Staff of general officers, but an officer so employed should be seconded if on full pay.

(II.) I do not think that the officers who enter the College are the best fitted practically for Staff employment; that they are so intellectually the examination they undergo is the best proof.

I have stated above why, in my opinion, the best officers in the army do not compete for admission to the College.

The most active, energetic, and practical officers, both in the field and in quarters, prefer remaining with their regiments.

Officers who dislike the restraint of discipline, who are married, who wish to avoid foreign service, in many instances compete for admission.

The prescribed certificates appear to me to be sufficient, provided always they are signed in their integrity.

(III.) I answer this question with a degree of reluctance, as I have not passed through the course myself; still, honestly and conscientiously I am of opinion that in my experience those who have qualified at the College as a rule—though with exceptions—have not been efficient Staff officers.

J. W. Armstrong,
Colonel, D.A.G.

(2.)—Questions issued by the Commission.

Second Series.

(I.) Will you be good enough to give, for the information of the Commission, a general account of the objects of the Staff College, the mode and conditions of admission to it, its present organization and staff, the number of students, and the nature and length of the course of instruction at it?

(II.) What is your opinion regarding the system of admission to the College? Do you consider that under the present system the officers admitted to the College are those in the service best fitted, both intellectually and practically, for Staff employment?

Can you suggest any improvement in regard to the certificates required from Commanding Officers as a guarantee for the possession by the candidates of the practical qualities required in Staff officers?

(III.) Do you consider that either the course or method of instruction is capable of improvement?

If so, what are the alterations which you would suggest?

(IV.) Are you of opinion that in the instruction given at the College sufficient importance is attached to strictly practical subjects, and to the duties which devolve upon Staff officers on active service?

(V.) Will you state whether you consider that the establishment of the Staff College, and the present system of appointment to the Staff, have on the whole been of advantage to the army, or the reverse? Is it your opinion that the officers who pass through the College are as a rule likely to prove efficient Staff officers?

(VI.) Will you be good enough to favour the Commission with any other suggestions which you may think it desirable to make in regard to the Staff College?

Question (I.) was addressed only to Colonel T. E. Lacy, Commandant of the Staff College; the remaining questions were addressed also to the following officers:—

Colonel E. B. Hamley, C.B., Royal Artillery, Member of the Council of Military Education; formerly Professor of Military History at the Staff College.

Colonel the Hon. W. H. A. Feilding, Coldstream Guards, Assistant Adjutant-General, Dublin.

Rev. J. F. Twisden, M.A., Professor of Mathematics at the Staff College,

Major C. Adams, Professor of Military History at the Staff College.

Major G. P. Colley, 2nd Regiment, Brigade-Major, Western District.

Major G. D. Barker, 64th Regiment, Deputy Assistant Quartermaster-General, South-Western District.

Major A. S. Jones, V.C., 13th Regiment, Adjutant of the Staff College.

Captain H. Schaw, Royal Engineers, Professor of Fortification and Artillery at the Staff College.

Captain E. M. Jones, 20th Regiment, Professor of Military History at the Cadet College, Sandhurst; formerly Adjutant at the Staff College.

Captain G. M. Cardew, 67th Regiment, Deputy Assistant Adjutant-General, Ireland.

Captain A. L. Walker, 99th Regiment.

(i.)—Answers received from Colonel T. E. Lacy, Commandant of the Staff College.

(I.) The Staff College has for its object the training and instruction of officers for the service of the Staff of the army.

It was instituted in its present form in the year 1858, and is governed by a code of regulations drawn up by the Council of Military Education, and promulgated to the army by authority of the Field Marshal Commanding-in-Chief.

One of these regulations sets forth that no officer will be appointed to the Staff (with special and rare exceptions) who has not passed the final examination at the Staff College. Hence it is to be inferred that success at the College is certain to lead to a Staff appointment when opportunity offers; and this inference is borne out by the appointments that have been made since the foundation of the system.

Admission to the Staff College is open to officers of all arms, except the Royal Engineers, subject to certain conditions of service, character, and physical capability; and to the test of a competitive examination.

No payment is required from the student either on entrance or during residence.

The course of instruction, which occupies two years, is laid down in the published regulations, and more detailed information on each subject is supplied by a printed synopsis prepared by the professors and approved by the Council. The number of students at present is 33. At the beginning of each year, 15 or 16 are admitted to replace an equal number passed out at the preceding final examination.

Periodical tables based upon a system of study prescribed by the Council, and drawn up by the Commandant, regulate the distribution of time and study for the different seasons of the year.

The Commandant has the immediate charge of the discipline of the College, and exercises a general supervision over the studies. He is permitted to offer suggestions from time to time for the alteration or improvement of the course, but in all such matters, as well of study as of discipline, he reports to the Governor of the Royal Military College, to whom he is directly responsible.

The work produced in the principal branches of study, whether drawings, memoirs, or note-books, is sent to the Commandant for his inspection, and he has the sole direction of the reconnaissances undertaken in the fourth term.

At the end of each year he sends through the Governor, for the information of the Field Marshal Commanding-in-Chief, a confidential report upon the officers who have passed out of the College at the final examination.

The only other permanent officer of the College is the adjutant, whose duty it is to give general assistance to the Commandant, and supply his place if he should be unavoidably absent.

The Medical Officers, the Paymaster, and the Quartermaster of the Royal Military College, act for the Staff College in their several capacities, and the riding-master of that establishment teaches riding.

The educational staff consists of eight professors, one for each branch of instruction, with an additional instructor for mathematics; instruction in natural and experimental sciences being supplied by the professors of those branches at the Royal Military College.

A quartermaster-serjeant stationed in the building, a serjeant instructor of artillery, an office clerk, who is also librarian, and eight civilian servants complete the establishment.

(II.) I consider that the mode of admission to the Staff College is the key of the whole system; its object being to bring into the College those men who from a variety of points of view, are best fitted to profit by its advantages, and to make good Staff officers. Obviously this object can be only partially attained by a competitive examination. Hence the importance of the provisions of the 4th paragraph of the regulations. The certificate there called for, might with advantage be amplified into a fuller and more detailed statement of the candidate's professional antecedents and merits. Such a report might even proceed from a board composed of the three senior officers of the regiment.

It is very desirable that the interest and support of Commanding Officers of regiments should be enlisted in the furtherance of the objects of this College. They cannot but feel that the successful career of officers sent by them

to the College, must in some measure redound to the credit of their regiments.

As regards the examination, it seems essential that for entrance it should be competitive, but I think that a wider choice of subjects should be offered to the candidate, in order to draw out the results of his early education, whatever it may have been. Thus the subjects might include the classics and general history, but more especially the modern history of Europe during given eras, and its geography; as a preparation for the study of military history.

I acknowledge the difficulty of the matter, but it seems of greater consequence that the candidate should show the results of a good general education, than that he should bring with him a knowledge, just sufficient for his purpose, of subjects that he will afterwards study with better effect at the College, and which he may have superficially acquired in the few weeks preceding the examination. In modern languages a high standard of proficiency should be required. The power of the College is lost, and the public money wasted in teaching a grown-up man the rudiments of a language, or even the first lessons in line drawing. He should have reached this point at least, before claiming the assistance of the State to perfect his education. Without going so far as to say that the officers admitted to the College under the present system are "those in the service "best fitted both intellectually and practically for Staff "employment," I believe that generally they have creditably maintained in these respects the character of the British Army.

(III.) The method of instruction is on the whole well adapted to its purpose. It is, however, a defect that it does not sufficiently tend to improve the special talent of the individual, which should be the chief aim of adult education.

Whatever may have been the direction of the tastes and pursuits of each, it treats the students as if they were all cast in the same mould and possessed of the same attainments, both in kind and degree, when they entered the College.

In this view, I think it is judicious to relax as far as possible compulsory attendance at study; attendance at the lectures on the principal military subjects must of course be obligatory; but in regard to the others (especially languages) the latitude at present given might be extended, leaving the student a greater freedom in the apportionment of his time for study.

(IV.) It will be found on an inspection of the tables that the importance of practical instruction and out-door work has not been unrecognized in the arrangement of the course, due regard being had to the number of other subjects to which the student's attention is invited.

I am quite of opinion that too much time cannot be given to these exercises, if it can be afforded without disadvantage to the other studies of the officers. The time may still be somewhat increased within this limit, but any very considerable change would render necessary a reconstruction of the whole course, and a demand for an increased allowance of public money.

(V.) I believe that the present system of appointment to the Staff has been of great advantage to the army. It is certain that this College has been the means of developing much valuable talent which, but for it, would have remained in obscurity. It has sent forth, from time to time, officers of very remarkable attainments and ability. Many more have turned out good and useful Staff officers, and it may be hoped that the return to their regiments of the large body of officers who have left the College within the last ten years, has had the effect of diffusing throughout the army a spirit of emulation and a disposition to self-culture, which cannot fail to be of ultimate benefit to the service.

(VI.) I have only one suggestion at present to offer in regard to the system of education at the Staff College, but it is one on which I am disposed to lay great stress. It is that after the entrance examination, personal competition for place should cease, or at all events be much modified. Whatever may be the value of this stimulus in very early education, I am convinced that it has an evil effect when it is applied to grown up men. It tends to weaken that respect for knowledge which should influence a reasoning man, and substitutes for it mere motives of personal interest.

Doubtless a system of searching examination at stated periods of the course is indispensable for sifting the men and ranging them in an order of merit, but for many reasons I should prefer to the present system a method of classes, with a separate classification for each subject, in which the names would be ranged alphabetically.

The most salutary effect of such a change would be that it would do away with the all-engrossing scramble for marks which has become a reproach to this College.

It would enable the student to apply his energies to, and to master, the subjects for which he has a natural aptitude, without prejudice to his acquiring a useful knowledge of other subjects; and, lastly, the prominent accomplishment of each passed officer of the College would be recorded, so as to afford a ready means of selection when a particular man is wanted for a particular service.

T. E. Lacy, Colonel, Commandant.

Appendix XI. (A.)

Staff College and Staff Appointments.

(ii.)—Answers received from Colonel E. B. Hamley, C.B., Member of the Council of Military Education, late Professor of Military History at the Staff College. Col. Hamley.

(II.) A certain proportion of the officers who pass through the Staff College (probably of each year's class) are excellent representatives of the best kind of military men, and become valuable Staff officers. But there is also a certain proportion that falls short of this, being in no respect above the average level of the army. This should not be; all the students ought to be on the level of the best, not of the average. At the same time it must be said that the students to whom positive exception might be taken, on the ground of manifest unfitness, are few.

The certificate of fitness required from the Commanding Officer is sufficiently stringent if it were always conscientiously given. But experience shows plainly enough that it is not of much practical value. It is difficult to see how this can be remedied so far as regards the "character, "habits, and disposition" of the officer, because none of his superiors are likely to be better acquainted with these than his Commanding Officer. Subordination, activity of mind and body, industry, urbanity, habits of observation, and promptitude of thought and of decision, are all elements of the character of a good Staff officer, and it will be often difficult to get a satisfactory report on these, for however conscientiously the Commanding Officer may form his opinion, it requires a power of judging character which he may not always possess, or which his acquaintance with the officer may not enable him to exercise. I can only suggest, therefore, that, in addition to the present certificate, a board of field officers, chosen, if possible, from other regiments or the Staff, should certify to the candidate's regimental qualifications in certain prescribed particulars, and that the Commandant of the Staff College should report on his character and habits at the end of the first term of residence. If the report were unfavourable the student should be withdrawn.

(III.) It has been considered that the necessary final qualification in a modern language might be demanded before entering the College, and that thus, without preventing a student from being examined in other languages, no instruction in any should be given at the College. I think this would be an improvement.

(IV.) I think additional practical instruction should be given in the following subjects:—

1. Transport of troops of all arms and material, by railway, and preparations for embarking and disembarking them from the trains.

2. The construction and use of the field electric telegraph as taught at Chatham. Staff officers will have constant occasion to employ the telegraph in war, and ought to understand its operations.

3. The mode of directing operations by signals in the field, according to the code now in use.

4. It would be of the greatest advantage if the students could apply their theoretical knowledge by being employed for a time, during the course, as Staff officers in the direction of the actual movements of troops. A brigade from Aldershot is frequently encamped near the College in the course of the summer. I would propose that a brigade of infantry, a battery of artillery, and a regiment or part of a regiment of cavalry should be placed for a time under the Commandant as brigadier, and the duties of the Staff performed entirely by the students. The operations should be such as these:—The occupation of a certain portion of ground by the force, considered either as independent or as the flank or other part of a line of battle. The disposition for its march as an advanced guard; its disposition for covering an army with a line of outposts; for protecting a convoy, the carriages of which might be supplied for the occasion by the Military Train; for passing an obstacle in presence of an enemy; for encamping. The ground for these might be chosen beforehand by the Commandant, assisted by the professor of military art, who should receive reports from every student of each operation.

(V.) The only means of answering the first part of this question must be afforded by actual service in the field. But I am of opinion that the College course cannot be other than highly beneficial to officers destined for the Staff.

APPENDIX XI. (A.)

Staff College and Staff Appointments.

(VI.) It has been represented that the system of placing the officers according to numerical precedence at the final examination still induces extreme competition in marks as distinguished from sound knowledge, and it has been suggested that classifying them alphabetically in three classes in each subject would obviate this. If so (and I dare say it would) it would be a beneficial change. I think, too, that officers who pass through the College should not be appointed indiscriminately to the Staff as vacancies happen to occur, but should be assigned to the different branches of it, according to their special qualifications.

E. B. HAMLEY, Colonel.

Col. Feilding.

(iii.)—ANSWERS received from Colonel the Honourable W. H. A. FEILDING, Assistant Adjutant-General, Dublin.

(II.) I am of opinion that the present system of admission to the Staff College is open to objection.

1stly. I think that no officer should be a student in the Staff College who shall not have obtained the rank of captain, and held that position for a year in his regiment, exclusive of all leave prior to his passing the examination for admission, except in special cases.

My reasons for this are as follows:

a. Because I think that a man should have a practical knowledge and experience of the difficulties encountered in the actual command of a troop, or company, before he is eligible for the position of brigade-major, deputy assistant adjutant-general, deputy assistant quartermaster-general, aide-de-camp, or any other appointment on the Staff of the army of a combatant or an administrative nature.

b. Because, as it is not usual to appoint officers below the rank of a captain to the Staff (except aides-de-camp), an officer who passes through the Staff College, as a subaltern, may have to wait many years before he can make any practical use of the instruction of the special nature taught at the Staff College. Meanwhile he gets disgusted at getting no appointment, and has often forgotten the habit of study acquired during his stay at the Staff College.

c. Because for a man to do well on the Staff he should have had experience of the world, to give him manner and tact; and of command to give him assurance and confidence in himself.

d. Because, as the object of establishing a Staff College is to have at command a number of officers fit for employment on the Staff, it is desirable that a man who has proved himself a thoroughly good and efficient Staff officer should be passed on from one Staff appointment to another, and so enable the authorities to have a number of young men of great experience in Staff work and administration. I have always recommended a man not to go to the Staff College until he has been a captain for a year at least. Thus he spends two years in the College, and by the time he has spent five years on the Staff, he is generally either a regimental major, or has entitled himself to a step of brevet rank, which will enable him to hold a Staff appointment of the rank of assistant adjutant-general, or assistant quartermaster-general, and so on, up the highest grades of the army.

2ndly. I do not approve of the present tests of examination, as likely to select the men best suited for employment on the Staff.

I would wish to see the subjects for examination classified, so that an officer who may have a particular wish for a certain branch of the Staff should have an opportunity of going to the Staff College, and to perfect himself there in the various subjects required for that particular branch.

Our present system tends to make mere smatterers, jacks of all trades and masters of none (except by accident). I should therefore group the subjects of examination somewhat after the following system:

Assistant Adjutant-General.—The certificate from the Commanding Officer in this case should be special, to the effect that the officer is very observant, and possessed of considerable judgment and tact in dealing with his equals and with those above him, and that he should be rather self-reliant than the reverse.

The special subjects for examination should be the interior economy of a regiment; the framing of charges from evidence; he should show a thorough knowledge of the Queen's Regulations, Mutiny Act, Articles of War, and the practice of Courts-Martial, as regards the admission of evidence, and the framing of questions; and he should show a certain knowledge of the War Office Regulations respecting pay and promotion.

In addition to this, he should be able to survey roughly, but accurately, have a fair knowledge of fortification, and such an amount of mathematics as will give him a facility in surveying, and in the study of gunnery. He should give evidence of having studied military history, and military geography, and have a thorough knowledge of one foreign (modern) language.

Assistant Quartermaster-General.—The certificate in this case should be that the officer has a facility for the comprehension of the features of a country, that he is a good rider, that he has a talent for sketching from nature, and a good memory for details. The examination of such a candidate should be chiefly practical, except in mathematics in which it should be much higher, going into statics and dynamics, hydrostatics and hydraulics, and in such branches of science, as geology, mineralogy, and chemistry, as are likely to be useful to him on service.

Topographical Department.—Candidates for this should be good linguists, excellent mathematicians, and men of great accuracy and method.

I do not consider that the present system produces, as a rule, a good class of officers, fitted for general employment on the Staff, and I attribute this to the nature of the examinations, which induces officers to educate themselves superficially on all subjects, rather than to aim at a high standard of perfection in such branches of science to which they feel attracted by nature, or by their previous education and reading.

(III.) I do consider that both the course and the method of instruction are capable of improvement.

1. The course should embrace every possible subject which could be useful to an officer on the Staff; embracing every language (likely to be of use), geology, chemistry (including electricity, telegraphy, &c.), mechanics (in its highest sense), astronomy, practical carpentry and turning, the keeping of accounts by single and double entry, in addition to the subjects which more obviously bear on the career of a military Staff officer.

2. The method of instruction should be to allow an officer, who has become a student in the Staff College, to select any particular branch of Staff employment for which he may wish to qualify himself, and then to dictate to him the various subjects which he must study. The students should be closely examined once every quarter (by number and not by name) in the subjects so selected. These examination papers and a confidential report (also by number and not by name) from the Commandant and professors, on the application and general conduct of that student, should be transmitted to the Council of Military Education, and any special cases, showing illness, should be reported by the Council to the Commander-in-Chief, who would (except in a very bad case) meet the first report with a caution or a severe reprimand, and in a second case, with instant dismissal, carrying with it the cost of return to join the headquarters of the offender's regiment. The students should be allowed the greatest latitude, and should not be obliged to keep "so many" studies per week, but be treated like men, seeking their own good and their own advancement; and let any show of idleness, prior to the quarterly examinations, be met with advice instead of a rebuke or an order to attend more lectures. At present the system makes the students feel themselves too much like schoolboys, acting under the eye of a master.

I should wish them to feel themselves their own masters, answerable to themselves for all shortcomings in study, and bearing in mind that idleness persevered in will surely bring its own punishment, in expulsion from the College, accompanied by heavy expense to themselves.

(IV.) I do not think that sufficient attention is paid to the education of the students at the Staff College, in such matters as practical bridging of all kinds, practical pontooning, practical mining, fortification, rapid surveying, and reconnaissance; the construction of huts, and shelter of all kinds; the construction of field kitchens, field ovens, contrivances for the drainage of camps, and cantonments, and such like matters.

(V.) I do consider that the establishment of the Staff College has been of great advantage to the army, but I think that if officers were appointed to the various situations on the Staff, to which they are best fitted, more credit would redound to the Staff College. I believe that much good would ensue to the army at large, and to the Staff in particular, if the appointment of Commandant were filled by an officer specially selected for the following reasons: He should not be too old, as he should be able to mix socially with all the students, and win their confidence and esteem; he should have a ready and an acute perception of character; not inclined to favoritism or prejudice; not of ultra-strict morals or denominational opinions; a first-rate rider; possessing a pleasant and winning manner; he should be the soul of honour, and most rigid in the execution of any duty; he should have been a student at the Staff College, and have passed out with credit to him-

self; he should have served at least five years on the *General* Staff of the army; he should not be below the rank of colonel; his duties should be to watch carefully the habits, manners, and characters of the students, so that he might be able at the end of each quarter to furnish to the Council a confidential (full) report on each student, and at the end of the course to furnish to the Commander-in-Chief a report on the qualifications of each student passing out of the College, and thus enable him to select a fitting officer for each appointment on the Staff, as it becomes vacant.

I think that the following arrangement would be of inestimable benefit to the army.

That each officer who has served five years on the Staff should be eligible for a member of a Staff Corps, but that such officers only should be appointed to the Staff Corps as have especially distinguished themselves in the appointments they have filled. They should, if captains, have a brevet of major, carrying with it 2*s.* per diem. From this corps, officers should be selected for foreign missions, complimentary or otherwise, for scientific travel, and explorations, civil or military, and with the option of being reinstated in a regiment after two years' service, (exclusive of all leave) in the Staff Corps. By this means men of high military and special acquirements would rise to the top by their own merits, and fewer incapable men would be found in command of regiments, &c. &c.

I would attach one of these officers of the Staff Corps to every regiment of cavalry and infantry, and his duties should be to instruct the young officers in the military sciences and their application, as soon as they shall have been passed by their Commanding Officer, as knowing their company drill. They should lecture to the non-commissioned officers and men at least once a month, submitting first to the Commanding Officer the subject proposed for each lecture. These officers would perform the staff duties of such officers as might be on leave, and thus keep up their practical knowledge of that branch of military administration.

W. Feilding,
Colonel,
A.A.G. Dublin.

iv.)—Answers received from the Rev. J. F. Twisden, M.A., Professor of Mathematics at the Staff College.

(II.) and (V.)—1. With respect to questions II. and V., there is a good deal on which my opinion should not be given, but I may be allowed to observe that:—

(*a.*) There can be little doubt that as a rule intellectual and practical qualifications go together; and that if by any means men of good ability are obtained and duly trained for any service they will prove in practise the most efficient.

(*b.*) I feel, no doubt, that many officers who have passed through the Staff College are men likely to do well in any kind of practical work to which they have been trained. And I may add that, as a rule, the ablest students in the Staff College come to the top in the examinations.

(*c.*) I think it quite evident that any officer, whatever his qualifications in other respects, would receive great benefit from passing through the course of study at the Staff College. On this point I may be allowed to quote the following account of General Jarry's experience in the early part of this century:—"General Jarry soon found "that the rudiments of military science in the British "army were not sufficiently known to enable all the "students to profit by his instruction, and recommended "that mathematical, and fortification and other classes "should be established." [Sir H. Douglas' evidence before the Select Committee on Sandhurst, p. 157.] This was at the time of the first organization of the Senior Department, i.e., the Staff College. It may be added that the whole, or nearly the whole, of the Quartermaster-General's Staff and the Adjutant-General's Staff during the Peninsular war consisted of officers trained in the Senior Department.

d.) I would venture to draw attention to Sir H. Douglas' evidence, taken before the Select Committee of the House of Commons on the Sandhurst Royal Military College, given in 1855, particularly to No. 2309, 2310, 2311, 2312, 2323, 2324.

2. With reference to my own department, mathematics, I do not think the present arrangement satisfactory. Of course I do not think that the object of the Staff College is to make officers mathematicians, but it is plain that a sound knowledge of the elements of mathematics and natural philosophy are essential,—in fact, plan drawing, surveying, fortification, artillery, are based on mathematics. Now under the present arrangement, if an officer come to the Staff College ignorant of mathematics it is nearly certain that he will *not* take up the subject for examination; if he bring the knowledge with him he probably will take it up. This is exactly the reverse of what ought to be the case.

Premising that there are at present three courses—the lower course, the course of astronomy, and the higher course of mathematics—my suggestion is that the lower course should be made obligatory, but on the other hand officers should have every opportunity of proving their acquaintance with this course and getting done with it. Thus, an examination on the whole course, *i.e.*, the whole of the lower course, might be held at the end of each half year, and then an officer who makes 240 marks out of 400 should be allowed to carry his marks forward and drop the subject. The effect of this regulation would be that in most cases officers would pass in this course at the end of the first year.

The other two courses should be left as at present optional. I may observe that Sir H. Douglas' opinion went beyond my own as stated above; his (No. 2299) comes to this, that the course of astronomy also should be made obligatory.

(VI.)—3. In answer to No. VI., I would venture to submit the following remarks and suggestions:—

First. I would draw attention to three general rules at present in force, and which, in my opinion, are of the greatest possible value and should on no account be altered, viz.,—

(*a.*) That no officer be allowed to take up for examination more than a certain number of subjects.

(*b.*) That each officer be called on early in his course to name the subjects, so far as voluntary, in which he will be examined.

(*c.*) That the ultimate qualification depend on the subjects taken up as a whole, and not on the subjects individually.

Secondly. I would urge with regard to the non-military subjects *generally* that they are in need of protection. There is always a tendency to regard as useless what is only indirectly useful, and this in a military college is the case with the non-military subjects. The proper degree of protection could easily be given by making the final qualification depend on the whole of seven subjects instead of five as at present; of these seven, three would be non-military. In connection with this subject I would further suggest that attendance on a short course of physics, and perhaps of geology, might be made compulsory on all with advantage. Such a course should consist of matters having an immediate bearing on practice, such, for instance, as the laws of current electricity and chemistry, on which the telegraph and the electric light depend. The fuller course of these subjects should certainly be voluntary.

Thirdly. I presume that whatever alteration be made in the present system, the students will always be examined and classified in accordance with the examination; I would therefore notice the following points:—

(*a.*) That smattering ought to be kept from counting as much as possible. The best way of doing this seems to be to strike off a portion of marks from those gained in each subject, and base the classification on the remainders; not to have as at present a fixed standard for each subject.

(*b.*) The examinations ought to be entirely conducted by the public examiners, or if any exceptions are made it should be for some very stringent reason. At all events the work which any professor does as professor should be kept strictly apart from what he does in his compacity as examiner, if he is allowed to act in that capacity at all.

(*c.*) Work done during the course of study should not count in the examination.

(*d.*) If in any case it is necessary that part of the examination be conducted during the half-year by the professor, the result, whether estimated in marks or not, should not be communicated to the officers.

(*e.*) Considering that the examinations range over several subjects, it might be practicable, and certainly should be attempted, to put the examiners in communication with each other, so that the standard of proficiency in several subjects should be made as uniform as possible.

(*f.*) It is also a point well deserving of consideration whether the old plan of examination by *vivâ voce* might not be restored, as a substantial *part* of the examination, with very great advantage both with reference to the stringency of the examination and to its reaction on the instruction given in the College.

(*g.*) The above remarks apply to the public or final examination, not to the half-yearly examinations, which are very properly entrusted to the professors.

There are two other points to which I would venture to draw attention, though in doing so I must express a hope that I am not going beyond my proper sphere. It seems

Appendix XI. (A.)

Staff College and Staff Appointments.

to me that the Staff College might be made much more useful to the army at large, if more inducements were held out to officers to take advantage of the opportunities of study which the institution offers; it should be regarded as a place where the scientific part of the profession is acquired; and though to pass through it should be an essential qualification for a Staff appointment, it ought not to be assumed that every officer who passes has a claim for such appointment. In this connexion I would advert to two points.

i. That the Royal Warrant of A.D. 1808 states that the Senior Department [*i.e.* the Staff College] was established with a view to enable officers to discharge their duties better when in command of regiments as well as to qualify them for the Staff.

ii. That there seems no good reason why, after sufficient notice, it should not be made necessary for aides-de-camp and military secretaries to pass through the College. Any officer who cannot get through the Staff College is clearly a man of inferior ability, and as such should not be appointed; on the other hand, if he is a man of ability he cannot but be the better for his two years of study. Although this view seems to me dictated by the plainest common sense, my chief object in adverting to the point is to draw attention to the following opinion of Sir H. Douglas:—

"Do you think that he would perform his duties as an aide-
"de-camp better for possessing that knowledge?—I think
"that an aide-de-camp selected from those young men who
"have passed their examination at Sandhurst, and more
"particularly so at the Senior Department, as it was ori-
"ginally, would be very highly qualified to perform all the
"duties of an aide-de-camp; whereas a man not so edu-
"cated would not be able to perform them." (No. 2312.)

John F. Twisden, M.A.,
Professor of Mathematics at the Staff College.

Major Adams.

(v.)—Answers received from Major Adams, Professor of Military History at the College.

(II.) It seems very difficult to propose any alteration of the system of admission to the Staff College; its value, of course, depends upon the practical integrity with which it is carried out.

I mean, that the certificates required from Commanding Officers should not be regarded by these as mere matter of form. Grave responsibility should attach to such documents, resulting in censure from the highest authorities where the spirit of the measure has been obviously neglected, ascertained from the confidential report of the Staff College Commandant.

In foreign armies with which I am acquainted Commanding Officers are credited with the power of vetoing absolutely an application on the part of a regimental officer to go up for admission to the training institutions for the Staff. In Austria the power was frequently exercised, and, on the whole, without injustice to the individual. An experienced officer may satisfy his own conscience as to the discretion used, but still find great difficulty in adducing special grounds for the justification of his act. Moreover, in Austria, the action of a Commanding Officer in this respect was to some extent controlled by public feeling existing in the regiment. It was generally recognized that the welfare of the service depended in great degree upon the character and ability of the Staff Corps. To enter the *Kriegs-schule* was, therefore, a distinction, and officers earnestly attached to their profession were reluctant to cede the honour to men whose qualifications were not generally recognized in their regiments.

I venture to enter into these details inasmuch as, in most instances, the Commanding Officer will be considered the best if not the only competent judge of the qualifications of the aspirant. As he stands at the fountain's head, the duty entrusted to him should not only be restrictive, but stimulative, if the welfare of the service be considered.

I do not think that any alteration in the certificate would effect the object in view; it must depend in great measure upon the importance attached to the subject in the highest quarters; and further, upon the palpable advantages offered to the student by the service.

I should say that the ability of the service is fairly represented by two-thirds of the students at present. My means of forming a correct opinion on this point are, however, limited.

(III.) It is my opinion that the course at the Staff College, considering its duration, should be altogether restricted to the compulsory subjects mentioned in par. 26, General Order 102.

They are certainly those bearing most directly on a military career, and, if thoroughly studied, amply sufficient to command the attention of the student.

To many officers who have not enjoyed the advantage of a special military education, the variety of subjects is exceedingly trying. Yet if they are to attain place and position they cannot afford to neglect any. The consequence is, that the excessive exertion required in many instances becomes injurious. It either enfeebles the student's intellectual power at the moment when he most requires it, or induces a degree of reaction when the final ordeal has been succesfully passed, calculated to engender distaste for future study.

It is for this reason that, individually, I am strongly opposed to the system of personal competition by marks. However productive in results this may be in the case of boys, I feel convinced that it is not suited to grown-up men, and least of all to officers.

It narrows the area of study, and substitutes place for knowledge as its object, being at the same time a constant source of grievance and discontent.*

To some extent it interferes with the harmony which should prevail between professor and student, and for this reason his marking duties are anything but agreeable to the former. It is very questionable, moreover, whether, under the present marking system, the general interests of the service are properly served. To lay down any absolute standard for marking is barely possible, and where latitude exists with regard to a distasteful duty, the error will usually be found on the side of leniency. The question whether officers who have qualified under the existing system would not have failed to satisfy a board of competent examiners is certainly an open one.

I would advocate competition for honours in the several subjects, and leave the certificates for class and efficiency in the hands of the Council's examiners.

(IV.) I think it essential to recollect that the Staff College course can only form a portion of the training required by an accomplished Staff officer. Unless the value of theoretical teaching be denied in this country alone, that must constitute its first purpose, for the simple reason that it is not offered elsewhere.

Those who advocate increased attention to strictly practical subjects seem to overlook the fact that these may be studied with more advantage in another place. No doubt practical calculations as to time and distance, as to the marching order and power of the different arms, separately or combined, as to posting troops under varying conditions of ground for attack or defence of different localities, &c. &c., are matters of very grave import on active service. Such, however, would seem to be the express purpose of the several camps of instruction which have been formed throughout the kingdom. There the use of troops for the solution of minor military problems is available, and this consideration alone should be practically decisive. For this reason I would attach officers who have passed through the College and completed the remainder of their course, for a certain period, to the Staff of the several camps, assuming that such exercises are practised in these as constitute a field training for both men and officers.

The one subject which, in my opinion, ought to be developed, as a practical subject, to its fullest extent is field fortification, even though this be effected at the expense of permanent fortification, which may safely be left to the care of Engineers.

On the whole, therefore, I consider that, including the latest instructions of the Council of Military Education, sufficient importance is attached to strictly practical subjects at Sandhurst, provided the authorities will place the necessary time at the disposal of the officer for the further acquirements demanded by the welfare of the service.

(V.) I cannot doubt but that great benefit has already accrued to the army from the establishment of the Staff College and the consequent restriction as to Staff appointments.

Time, however, and active operations, perhaps, are required that the results may be fully realized.

From my own experience I should say that two-thirds of the officers who have qualified at the College are likely to prove excellent Staff officers, provided their training be completed, and their knowledge kept up.

Charles Adams,
Staff College, late Major.
May 5.

N.B.—Answer to question VI. embodied in the preceding

(vi.)—Answers received from Major G. P. Colley, Brigade-Major, Western District.

(II.)—(*a.*) On the whole it works fairly well, though of course open to the same objection as all examinations, viz.,

* These views quite endorse the opinion of Professor Seeley, though they were formed before his essay had been perused.—C. A.

that tact, energy, and other most important qualities are not represented at all. Perhaps the present examination unnecessarily favours *scientific* as opposed to *practical* acquirements. A knowledge of his own duties is almost the only thing which does *not* help an officer in getting in; thus hard-working officers, like adjutants, who have little time to devote to such studies as chemistry, compete at a disadvantage.

I think this might be partly remedied by substituting papers on interior economy, administration, law, &c., for those on chemistry, geology, &c.

Military administration is the only subject which counts at the final examination but not at the entrance. It appears to me it ought to count very high at the entrance. At present an adjutant, or officer who has served on the Staff already, derives no advantage from his practical knowledge.

(*b.*) Not altogether. I think that adjutants, who as a rule are picked men, and the best fitted for some classes of Staff appointments, are not now as well represented on the Staff as they should be; and that many of the best practical officers still hang back from fear of the scientific requirements. I think, however, that this, and the prejudice against the Staff College as a scientific establishment is wearing off, and that most who have the energy, and desire to get on, look to passing through the Staff College.

(*c.*) I do not think the present certificate answers its purpose, and doubt if any would. A good deal might be done through the "confidential reports" if Commanding Officers would act up to the principles laid down for the guidance of General Officers in par. 189, c. Queen's Regulations; but few will, and many hold it "invidious to "make any distinction but that of seniority between offi- "cers who have all done their duty satisfactorily." There is also a not unnatural disinclination on the part of some Commanding Officers to bring forward their best officers for the Staff and so lose them to the regiment.

The certificate fails, because few commanders will refuse it, having to give distinct reasons for doing so. If the onus of giving reasons was thrown the other way I think it would make some difference. I would suggest that a Commanding Officer in forwarding and recommending the application of a candidate should be required to give distinct reasons why he specially recommends him, stating whether he has ever been employed as adjutant, on the Staff, &c., or has had any opportunities of showing special qualifications.

(III.)—(*a.*) I consider that military administration, drill, and tactics are not sufficiently attended to, while artillery, strategy, and experimental science are allowed too much time.

Military administration is a vast subject, embracing nearly the whole of the duties ordinarily required of a Staff officer, and increasing in importance as railways, telegraphs, &c. add to the complications and science of war. I do not think it takes at all its proper position in the studies of the Staff College. I believe only 400 marks are allowed for this subject (exclusive of "law"), the same number that are allowed for chemistry, and the time given to it is so short that many subjects which foreign armies think it necessary to work out into lengthy and detailed codes of instructions, are little more than touched upon in our course.

By drill, I mean the principles on which battalion and light infantry drill, brigade and divisional movements, &c., are based. I know nothing that tends so much to give an intelligent knowledge of one's own drill as the habit of comparing it with that of foreign armies, and observing by what means they arrive at the same ends; and in war it would be most important to know the system of movements of an adversary.

This formed no part of the instruction at the Staff College when I was there.

Tactics, I think, should receive more attention than they do. The military history course used to be divided approximately into three-fourths strategy and one-fourth tactics. I would rather suggest two-thirds tactics and one-third strategy, as it appears to me the occasions on which a knowledge of the latter would prove serviceable to a Staff officer are very rare, whereas his knowledge of tactics would come almost daily into use in war time.

I cannot consider the present scale of "marks" a satisfactory one. Officers eager to distinguish themselves will certainly select those subjects which count most, regardless of their ultimate utility. I therefore think marks should be awarded on a scale proportionate to the real value of the subject. I have already instanced military administration and chemistry, and I would also instance *French* and *Italian*, which count the same, the first being almost invaluable, the second almost useless to a Staff officer. I would not exclude any of the present subjects from the course, only let them count in proportion to their real value.

(*b.*) The alterations I would suggest are,—

That more time be devoted to military administration, tactics, and drill (our own and foreign), the time to be obtained from that now given to strategy, artillery, and experimental sciences.

That instruction in artillery be given at Woolwich, and struck out of the Staff College course.

That advantage be taken of the proximity of Aldershot to give practical instruction in the working of the three arms, &c.

That, if possible, students should be afforded the opportunity of visiting one of the foreign camps of instruction.

That, at the examinations, marks should be awarded on a scale proportionate to the true value of the subject.

(IV.) No. See answer to preceding question.

(V.)—(*a.*) On the whole, decidedly of advantage to the service, though I am not prepared to say that the appointments are individually better filled.

I think there has been a great increase of military education throughout the army, caused by the number of men who either have passed through the Staff College or are reading for it, or at some time have thought of it and commenced reading. I also consider that a body of Staff officers are being provided, who as a whole are superior in general intelligence and education (though perhaps not in knowledge of routine duties), to what would otherwise be obtained, and that this would more especially be found to tell in war time.

On the other hand it is to be observed,—

1st. The system of selection does not now exist as it used to; an officer receives a Staff appointment rather because he has passed through the Staff College, and there is a vacancy, than because he is specially fitted for that post.

2nd. Many officers, undoubtedly, get appointments under the present system who never would have been selected for the Staff.

3rd. The Staff College course is mainly adapted to the requirements of the quartermaster-general's department in the field. The appointments mostly filled from the Staff College are brigade-majorships. Most generals, if allowed to select their brigade-majors, would take old adjutants; under the old system many were so appointed, and they would certainly, as a rule, possess a better knowledge of their special duties than can be imparted at the Staff College.

For these reasons I think the Staff College has been tried so far at a disadvantage. In war time I think the advantages of the College, and of a trained Staff (if properly selected), would be most apparent.

(*b.*) Yes; but very much depends upon the selection of officers according to their special qualifications for the appointment they are to fill.

(VI.) There are two things which seem to interfere with the working of the present system.

(*a.*) Passing through the Staff College is generally regarded in the army as giving a claim to one Staff appointment, but leading to little else.

A five years' stationary appointment is a special boon to officers who are married or about to marry, and suffer under the expense and inconvenience of frequent moves. Having a more direct and pressing interest to serve, such officers work harder than others to get in, and thus the Staff College is largely supplied from men whose motive is comfort rather than zeal, ambition, or love for their profession, and many of whom leave the service on the completion of their time.

On the other hand, many of the younger men, subalterns, who are actuated by love of their profession, and desire to improve themselves, are discouraged by finding themselves entirely unnoticed after they leave; if unfortunate in regimental promotion they may remain so for years.

I think the Staff College might be made more popular among the ambitious young officers, if it were understood that when not actually on the Staff, they would always be employed on all possible occasions as acting Staff officers, extra aides-de-camp, &c., &c. At present it is difficult to carry this out as they have not always horses; but if every officer who has qualified at the Staff College was allowed forage for a horse when unemployed, I believe this small boon would have a very great effect in increasing the popularity of the Staff College, and especially among that class from whom one most wishes to draw the Staff.

(*b.*) Officers who have passed through the Staff College consider themselves as placed on a regular roster for employment. How far this impression is a correct one I am not in a position to state, but the impression does exist, and if an appointment falls vacant, and the officer next for employment does not receive it, however little fitted he may be for that particular one, he and his friends look on it as a

C

Appendix XI. (A.)

Staff College and Staff Appointments.

hardship. As I conceive the success of the system to depend upon selection, this impression acts injuriously.

I think the number of students at the Staff College might be increased with advantage for many reasons.

The buildings, staff, &c. are sufficient for more; thus, increased value may be got out of it without increased expense.

If the number of persons qualified considerably exceeds the number of appointments, selection becomes inevitable, and the larger the number to select from the better. This is especially important, as neither certificates nor examinations can be taken as conclusive proofs that the officers are all likely to make efficient Staff officers.

It is very desirable that the Staff College course should be considered as conferring a certificate of certain qualifications only, not a claim, for Staff employ. The greater the number who have passed through, the more will this be the case.

It is also advantageous to the army generally, that there should be a large body of trained and highly educated officers distributed through it.

I consider that every Staff officer should be required to join his regiment for a year, before being eligible for a fresh appointment. The chief argument in favour of our system (in place of the usual one of a separate Staff Corps) is that our officers have the opportunity of keeping up their knowledge of regimental detail, and learning by practical experience the working of orders which they have been in the habit of issuing.

I would recommend that the number allowed to compete at the entrance examination be limited to 20, selected from the candidates; giving the preference to those who as adjutants or otherwise have had opportunities of showing their practical qualifications for the Staff.

Finally, I would urge that the efficiency of the Staff must, after all, depend more upon the selection of officers for the special appointments they are to fill than upon any system of education or examinations. If the Staff College examinations are treated as a sufficient test of an officer's qualifications to fill any Staff appointment, the system will certainly fail, but if treated only as a means of securing a picked and highly trained body of officers from which to select, there is every reason to believe that (with a few modifications), they will answer their purpose thoroughly. It is essential that the Commander-in-Chief should have all possible information to guide him in making selections, both before they enter, while at the Staff College, and subsequently from General Officers under whom they serve before receiving an appointment. General Officers might be allowed a voice in the selection of officers to fill vacancies in their command, wherever they have had opportunities of judging personally of the men they recommend. But the opinion of the Commandant of the Staff College, who for two years has had constant opportunities of studying the officers individually, would naturally carry especial weight, and the influence which he might thus exercise on the efficiency of the Staff of the army is immense.

G. P. Colley, Major,
Brigade-Major Western District.

Major Barker.

(vii.)—Answers received from Major G. D. Barker, Deputy Assistant Quartermaster-General, South-western District.

(II.) I consider the system of admission to the Staff College to be good so long as Commanding Officers limit their recommendations strictly to those officers who possess the qualifications laid down in the prescribed form of certificate.

I am, however, of opinion that in the entrance examination, the qualifying standard is fixed too low; and also that a longer period of previous regimental service should be required from candidates.

I do not consider that under the present system the officers admitted to the College are in all cases those in the service best fitted, both intellectually and practically, for Staff employment.

As regards the certificate required from Commanding Officers I consider that it should be made more stringent and definite, and I would suggest the following modification of it, viz. :—

"I hereby certify that ———— is in all respects a good regimental officer; that he is smart, active, and intelligent; and I consider him to possess the qualifications of a good adjutant: to the best of my belief and judgment I further consider him from his general knowledge of the service, character, habits, and disposition to be qualified for employment on the Staff, and I recommend him for admission to the Staff College. He is a (good, fair, or indifferent) rider, and is not short-sighted."

(III.) As regards the course of instruction, the only improvement which I would suggest, is that more importance should be attached to eye-sketching than is the case at present.

As to the method of instruction I am of opinion that it would be desirable in the selection of professors to attach more importance to their capabilities for *imparting* the knowledge or skill which they possess; and that either by some mode of supervision or by a shorter term of appointment continued activity and efficiency on their part should be ensured.

(IV.) Yes, with the exception mentioned in my last answer.

(V.) I consider that the establishment of the Staff College and the present system of appointment to the Staff have, on the whole, been of advantage to the army.

I am of opinion that the officers who pass through the College are as a rule likely to prove efficient Staff officers, provided that in the first instance Commanding Officers are careful to recommend only those officers to whom the terms of the certificate strictly apply.

(VI.) The only suggestion I should wish to make is, that appointments to the Staff should still be made by *selection;* the field of selection being limited to graduates of the Staff College.

Also that as a rule men should, in the first instance, be appointed to Brigade-Majorships, and that all appointments on the Divisional Staff should be filled by selection from the Brigade-Majors.

G. Digby Barker, Major,
Deputy Assistant Quartermaster-General,
S.W. District.

Portsmouth,
29th May 1869.

Major Jones.

(viii.)—Answers received from Major Alfred S. Jones, V.C., Adjutant of the Staff College.

(II.) The existing test for admission to the Staff College does not, as a rule, secure the selection of the class of officer best fitted to be educated for Staff employment.

I believe it is impossible to make an indifferent regimental officer into a good Staff officer, no matter how you educate him, and that consequently *thorough* efficiency with a regiment should be insisted upon before any attempt is made to educate for the Staff.

At present an officer who takes all the leave of absence he can get, and devotes it to cramming superficial acquirements, has a preponderating advantage in competitive examination over one whose occupations prevent his undergoing such a preparation; thus I believe many excellent regimental officers are deterred from coming forward, or fail in the examinations.

When I think of the number of short-sighted men and bad riders I have known admitted, I cannot but believe that the Commanding Officer's certificate is, in many cases, signed as a mere matter of form, and that no such document ought to be taken as a guarantee, even upon points so evidently within the knowledge of the Commanding Officer as those I have named, which are certified in distinct terms; much less should it be depended upon, where in its first paragraph it is qualified by the expression "to the "best of my belief," &c.

(III.) I consider both capable of improvement, as follows :—

(*a.*) The length of quiet residence at Sandhurst in the present course affords too great an attraction, and if European languages (which are best acquired in their own localities) be dispensed with, one year would I think suffice to give as good an education on all other points as is now obtained in two years.

Under the present system, I believe, there are few students whose energies are fully applied during the whole of their four terms, and long absence from regimental duty, with, in many cases, more time allowed than necessary for each task, is I am sure very injurious.

When officers in India pass a qualifying examination in Hindustani or Persian they are, or used to be, paid a lump sum, called moonshee allowance, and I think that the present salaries of European language professors at the Staff College would be more usefully expended in the grant of similar gratuities to passed Staff College students on their attaining a good knowledge of any language at any time after leaving the College.

Leave to reside abroad might be granted to such officers as desire to prepare for a language examination, their pay being allowed or withheld (as contingent on examination) to secure genuine study.

An officer might very fairly be required to have a good knowledge of one modern language, as a condition of

admission to the Staff College, and the facilities above proposed would, I think, afford ample encouragement for all who have natural talent for languages to pursue their study.

I would make an exception as regards the Hindustani professor, because he is unusually successful in imparting knowledge of that language, and a little study of it here has been found of very great value by officers going to India.

(*b.*) I think that every riding master will agree with me in the opinion that it is nearly impossible to teach riding, especially to men of 25 or more years of age, whose muscles must be more or less set, by *two* lessons a week, and I would therefore make riding drill obligatory *daily* until "dismissed," which in most cases would be after four or five months.

(*c.*) I should recommend that a good text-book on military administration should be printed, and the lectures on this subject limited to those occasions when changes of law or material demand explanation.

(*d.*) Reconnaissances and field fortification schemes have too long periods allotted for execution, and too much attention to prettiness; one of each might be done slowly, and mistakes carefully explained in a lecture, after which a series should be performed, each very rapidly, as they would be required on service in the field; one might also be executed on a very rainy day, to test fertility of resources under difficulties.

I should also recommend that all reconnaissances, except the first, should be made on fresh ground, at least 10 miles from the College, a distance to which the students might very reasonably be required to ride and return the same day.

(*e.*) The students should be required to have a serviceable horse during the whole course, in order to keep up and improve their riding, as well as for reconnaissance duties.

(*f.*) As the course now ends at Christmas, the period during which the students are attached to other branches of the service falls in winter, when they can have little opportunity of learning the drill of those arms, and this evil might easily be obviated by changing the date of entrance from 1st February to the 15th July in each year,

(*g.*) I now come to what I consider the worst feature of the present system, viz., the encouragement of competition.

The system of marks is a most complicated one, and is the first object of severe study to a newly joined student.

When a man has passed the entrance examination and sees his place on the list published in a General Order, a natural ambition is stirred up within him to improve or at least maintain that place in the General Order which he knows will be published as the result of his final examination, and hence it becomes a matter of great moment to him to select (with little regard to his abilities or natural bias) such subjects for study as will pay best, *i.e.*, produce him most marks with least expenditure of labour.

If a system of classification were adopted, and the result of the final examination made known to the authorities and the students only, I think the former would have a far better test for selecting men for special employment of any kind than they now possess.

The authorities could see at a glance in which subjects any individual was, 1st, 2nd, or 3rd Class, while at present they cannot easily know more than that in a particular year he was better, on a number of subjects massed together, than such and such men with whom he competed; in fact, at present there is no fixed standard of comparison.

(*h.*) I think that admission to the Staff College should be confined to officers of regiments serving at home, as nearly every officer has a home station at one period or other of his service, so that the condition would not be an unfair one, while it would remove the reproach to which the institution is now open, of affording an opportunity to shirk foreign service.

(*i.*) If competition be abolished, the Commandant must of course be held responsible for getting a due amount of work out of the students, but if he be endowed with real power to remand an officer to his regiment for want of application, I do not think he need fail to elicit more useful work in one year, without any compulsory exact number of studies, than is now obtained in double the time under a complicated system of checks which are of little real use.

The Commandant should employ one of the students as his Staff officer by weekly roster. The adjutant, who is much like a fifth wheel in a coach, should be removed, for an idle man is not a good example to the students.

(*k.*) It is very difficult to say what would be the best substitute for the present entrance examination, but two or three years satisfactory duty as adjutant or assistant to the adjutant of a regiment, with such examination as would give all a fair start, would, I think, be an improvement.

Perhaps the fair start might be provided for by not announcing the subjects selected for each year's examination until one month before the date on which it is to be held, and making it a condition that the candidates do not quit their regiments during that month.

Many officers who are indisposed to cram for long periods, or to compete with those who have done so, would be willing to try a short burst on equal terms, which, no matter what subject was selected, would give evidence upon which the Council of Military Education could elect the given number of students without indicating any order of merit.

(IV.) I am decidedly of a contrary opinion to that indicated in this question.

(V.) On the whole probably the establishment of the Staff College has been of advantage to the army, particularly in liberalizing its ideas by the association of some thinking men of different regiments; but I do not think the present system of appointment to the Staff which gives an implied claim for Staff appointments is altogether a good one, as it interferes with pure selection and nourishes unsoldierlike aspirations.

It is my opinion that in many exceptions "officers who "pass through the College are likely to prove efficient Staff "officers," but not "as a rule."

(VI.) I have given suggestions with great freedom in answer to question No. III., but will briefly summarize them for the sake of clearness as follows:—

(*a.*) Elimination of languages and reduction of the course to one year.

(*b.*) Daily riding drills.

(*c.*) A text book of military administration.

(*d.*) Assimilation of reconnaissance, &c. to requirements of actual warfare.

(*e.*) All students to keep horses.

(*f.*) Course to commence 15th July instead of 1st February each year.

(*g.*) Abolition of all competition after entrance to the College.

(*h.*) Open the College to officers of regiments at home only.

(*i.*) Responsibility and power of Commandant.

(*k.*) Proposed entrance test.

ALFRED S. JONES, Brevet Major,
Adjutant, Staff College.

Staff College, 6th May 1869.

(ix.)—ANSWERS received from CAPTAIN H. SCHAW, Royal Engineers, Professor of Fortification and Artillery at the Staff College. Capt. Schaw.

(II.) Undoubtedly by means of the present system a great number of very superior men are admitted into the College; but some enter who are not fitted for Staff duties, and some, who would make excellent Staff officers, are, I believe, deterred from competing by the present system.

The question of certificates from Commanding Officers is a very difficult one, because their value so much depends on the character of the Commanding Officers themselves, and few men, in the position of Commanding Officers of regiments, can look with favour on a system which deprives them of their most efficient officers. The present certificate appears to me too vague and general in its wording. I would suggest the substitution of the words, "Energy of "mind and body, personal influence with his men and his "brother officers, and good manner and address" for the words "character, habits, and disposition." Possibly also an additional check might be obtained by forming a committee of the senior officers of the regiment, to record their opinion of the probable fitness of the candidate by filling up a form of fixed questions.

(III.) I think that both the course and the method of instruction are susceptible of improvement.

The objections seem to me to be—

1st. That the course pursued now, depends too much upon the estimate each officer forms of his chances of obtaining a good aggregate of marks, rather than upon the gifts he naturally possesses, and to the improvement of which he might most beneficially devote the majority of his time.

2nd. That the method of instruction now followed divides the day into minute portions, and obliges the officers to occupy their minds on a variety of subjects in the course of each day. This rapid change of subject is better adapted to a school for boys than to the studies of men of mature age.

These two causes combined conduce to a system of cramming, and a superficial style of learning merely to obtain marks, and although it must be admitted that, as a rule, the men work very hard under the existing system, I do not think that their energies are always well directed.

Appendix XI. (A.)

Staff College and Staff Appointments.

The remedies I would suggest are—

1st. To do away with the system of competing for an aggregate of marks after entrance, and to allow each officer to select the subjects which he desires to study (the number of different subjects not to fall below a minimum to be fixed by the Council); these subjects to be studied thoroughly. The officers to be required to obtain a high minimum of marks at each half-yearly examination on penalty of being removed from the College, and finally to be classed according to their proficiency in each subject. Thus an officer might be finally classed as 1st class in mathematics, fortification, and surveying, 2nd class in French and German, and so on.

In this way I conceive each officer's natural gifts would be cultivated to the utmost, and a record would be kept of the special qualifications of each, so that they might be employed on duties which they would be capable of performing thoroughly well. I believe that it is hopeless to attempt to obtain a large body of officers, all of whom come up to the ideal of a Staff officer; although there are a few exceptional men whose remarkable gifts and energy will enable them to master all, or the greater part of the subjects taught at the College. Considering the present state of education in the army, it is probable that the entrance examination might be made sufficiently searching to ensure a competent acquaintance with all the ordinary branches of a military education, and that the courses pursued at the College should have for their object to carry on, rather than to commence, the education of officers in those special subjects for which they have a natural aptitude. But in some cases it might still be necessary for an officer to pass in some of the obligatory military subjects, after entering the College.

2nd. To make a different arrangement of the time, in order that longer periods might be devoted to each subject.

The system pursued at the Royal Engineer Establishment at Chatham of taking up only one subject at a time, and completing it before another is commenced, appears to me the best; but there would be many difficulties in applying this system fully to the course of study at the Staff College. I am convinced, however, that a more thorough knowledge of subjects is obtained by giving undivided attention to them for some considerable time, than can be generally acquired by the system of parcelling out the day into small portions devoted to a variety of different studies.

(IV.) I think that more practice in rapidly executed projects for defence and attack of posts, reconnaissances, and surveys would be of advantage, if not to all, at least to those officers who have an aptitude for such work; and also that all should be attached, after leaving the College, to the Royal Engineer Establishment at Chatham, to go through a course of field works, mining, and bridging, in the same way and for the same reasons that they are now attached to artillery, cavalry, and infantry, according to the corps to which they belong.

(V.) I have no doubt whatever that the establishment of the present Staff College, and the present system of appointment to the Staff, have upon the whole been beneficial to the army, not only on account of the higher standard of ability and knowledge now ensured in Staff officers, but also from the impetus given to study amongst the officers of the army generally. At the same time it must be acknowledged that some officers have entered and passed through the College, who are not likely to be efficient on the Staff.

(VI.) My suggestions, in short, are as follows:—

1. Select officers more carefully by making the certificate to be signed by Commanding Officers more definite, and supplementing it by replies given to fixed questions relative to the character, habits, and disposition of the candidate, by a committee of senior officers.

2. Encourage the best men to come to the College by removing the necessity of obtaining an aggregate of marks in chosen, or prescribed subjects, after entrance, and allow them to take honours in the different subjects of study they may select, and thus also encourage the attainment of excellence in special branches.

3. Divide the studies so as to give longer unbroken periods for each subject. If possible complete one subject before taking up another.

4. Give more time for the execution of rapid sketches and memoirs of attack and defence of posts, reconnaissances, and surveys, and arrange that the officers shall be mounted for the performance of these exercises.

5. Arrange that officers shall leave the College at such a time of year that they may have the full benefit of being attached to the different arms, by being with them during the drill season. Attach them also to the Royal Engineer Establishment at Chatham to go through a course of field works, mining, and bridging.

I believe also that a definite course to be followed should be established in all cases of officers being attached for a time to another arm, and a certificate should be signed by the Commanding Officer, to the effect that the officers attached have satisfactorily gone through the prescribed course.

6. Devise some means for retaining officers in the service who have been trained at the Staff College, either by the formation of a Staff Corps, or by employing them as regimental instructors, or in some other way.

7. Add "landscape drawing" and "military correspondence" to the subjects taught at the Staff College.

H. Schaw,
Captain, Royal Engineers.

Staff College, May 3, 1869.

(x.)—Answers received from Captain E. M. Jones, Professor of Military History at the Royal Military College, late Adjutant of the Staff College. Capt. E. Jones.

The system is tolerably satisfactory as a test of knowledge, but in no other respect.

(II.) The present system appears to secure, as far as competitive examination can, the selection, from those who present themselves, of the men best provided at the time when the examination takes place with the knowledge which is held most important.

As a test of intellect, talent, or practical fitness, it appears insufficient.

Even as a test of knowledge it is unsatisfactory, because it affords no security that the knowledge possessed by the candidates is thorough or abiding.

Evil of cramming.

The system of cramming which has grown up interferes very seriously with its practical value as a test, and is exceedingly difficult to check.

Suggestions for checking it.

Something may perhaps be done by directing the examination as much as possible to ascertain the intellectual calibre of the candidates and their thorough knowledge of the subjects; by allowing a very wide range of subjects, so as to give reasonable advantage to men who have a good general education; and by fixing a high minimum standard in each subject, and providing that no marks below the minimum should count towards the aggregate. It might, perhaps, be worth considering whether the selection could not be restricted to officers who have been doing duty with their regiments for a considerable period immediately before the examination.

Practical qualities most important.

The most important qualification for Staff duties is, however, the possession of practical qualities; and they should carry the greatest weight in determining the selection of men for the College. An officer who wishes to enter it virtually expresses his wish to enter on a competition to prove himself in all respects among the ablest men in the army. It is not unreasonable that he should himself bear the burden of proof.

Suggestions for obtaining the desired guarantee.

(*a.*) If an officer has any pretensions to be one of the best in the army, he must of necessity be one of the best in his regiment; a Commanding Officer may be expected to know, and there would be nothing invidious in his naming, the half-dozen men whom he considers to be the best officers under him. It would not be unfair to demand from a candidate for admission to the Staff College that he should have distinguished himself as one of the best officers in his regiment.

(*b.*) Certain definite questions might be put to the Commanding Officer of a candidate and the field officers of his regiment, to be answered by each of them independently, and transmitted through the General Officer in immediate command, accompanied with his remarks. These questions would probably refer to the candidate's general smartness and business habits, his thorough knowledge and conscientious performance of his duty, his mental and bodily energy, temper, judgment, readiness, and to the nature and degree of influence exercised by him in the regiment.

(*c.*) A candidate might fairly be required to show practically his fitness for the post of adjutant; and to learn the drill and field movements of all arms of the service. The reports of the officers commanding the corps to which he might be attached for this purpose, would supplement those of his own officers as to his practical fitness; and there

would be distinct advantages in his having passed his riding drill, and being practically familiar with the duties of all arms before entering the College.

With these or similar measures it might be hoped that mission to the College would be barred against candidates ny way decidedly unsuitable for Staff employment. It ht then, perhaps, be desirable that the number of yearly missions should be limited only by the accommodation ilable. If selection became necessary, both the practical ities, as evidenced by the regimental reports, and the cational ones, as shown by the examination, should, I ture to think, be taken into account and carry due ght.

Instruction should be practical and thorough.

III.) and (IV.) I am disposed to think, though I speak h diffidence on the subject, that the instruction given the College is capable of improvement, mainly by being de more practical and thorough.

Objects to be fulfilled by the College.

The "*raison d'être*" of the College is, I suppose, marily to supply the public service with the best men ined in the best way for responsible positions; a ondary object being to give facilities for professional provement to zealous and deserving officers.

As there are Staff duties of different kinds requiring ferent qualifications, and as there is a corresponding iety in the bent of men's tastes and intellects, it would m that the good of the service would be consulted by tivating each man's speciality to the highest point, e being taken that he is thoroughly well grounded all matters which every Staff officer ought to know.

In order to fulfil these purposes at all, the system of truction must be elastic; and in order to fulfil them ll, the training must be thorough, practical, and sonal, *i.e.*, there must be facilities for separate in- uction when necessary.

Alterations suggested.

I cannot think that the present system meets these uirements. The alterations which I would venture submit are:—(1), to strike out of the course (*a*) such jects as may be fairly expected from candidates for trance, (*b*) such as can be better learned elsewhere; to extend and deepen the instruction in those which retained.

Subjects which need not form part of the course.

Under the first head I would suggest (*a*) that a thorough owledge of lower mathematics; mechanical facility sketching ground and drawing fortification plates; d some acquaintance with French might fairly be de- nded from candidates for admission. And, I think, at every officer should have passed in riding drill before ning to the College; (*b*) that a command of modern ropean languages, by which I mean the power of ent conversation, can hardly be acquired except by a idence abroad.

Economy of time.

A considerable saving of time would be effected by these asures; and a further saving might, I think, be found in lifferent division of the year. The present arrangement eaks it into two terms and two short vacations; it would obably be more satisfactory in every way, if there were ly one long vacation, say from the latter part of July till tober; the rest of the year being spent at the College, th perhaps a short break at Christmas and Easter.

How the time saved might be utilized.

It would then be possible to give more time and at- ntion than has been the case hitherto to subjects of portance, and to those which it may be decided to retain. mong these I would mention particularly; (*a*) physical ography and military topography, with special refer- ce to the British Empire and adjacent countries; (*b*) aff duties, including practical work; (*c*) the organiza- n, armament, &c. &c. of foreign armies; (*d*) oriental guages including, not Hindostani only, but the prin- al dialects spoken in our Indian possessions, Persian d Arabic.

Subjects of special importance.

Practical work, comprising field engineering and re- nnaissance, is perhaps the most important subject of dy, as being that which bears most directly on the ual requirements of service. It should, therefore, present as accurately as possible, what would devolve on a Staff officer in a campaign.

Field engineering.

I believe it very desirable that officers, before leaving the College, should go through the Woolwich course (which they now do after the final examination), and a course of siege works and pontooning with the Royal Engineers, and that the zeal and ability shown and the proficiency gained should affect the final classification. I do not know how far this suggestion is practicable, but perhaps the long vacation, recommended above, might afford some facilities for the purpose.

Reconnaissance.

The work done out of doors under the head of reconnaissance might, with advantage, be preceded by careful and exhaustive instruction in the lecture room, and should be done under conditions similar to those of actual service. The sketches should be made and the reports furnished within a very limited space of time; and advantage might be taken of field days and marches of troops in the neighbourhood to exercise the officers in some of the work of actual reconnaissance.

General remarks on the system in force at the College.

I ask permission to offer a few observations on the system in force at the College, which do not perhaps come quite within the scope of the questions put to me; but I trust that the very great influence which the points alluded to have upon the healthy working of the institution, may be held to justify me.

Competition does not answer the purpose intended, and does active harm.

I believe that all, or very nearly all, who have been at the College, agree in opinion that better results might be obtained if (1) the system of marks and final classification were changed; (2) the regulations as to attendance at studies were modified.

(1.) The system of classification is one of pure competition. In theory it is supposed that it will place the students at the end of the course in order of merit, by which is implied their fitness for responsible positions. Practically, however, no such result is obtained; though an exceptionally able man will make his way to the head of the list, as he probably would under any system. But all experience proves, I think, that the final classification list, as it is now arrived at, affords a vague and often delusive indication of the real value of the officers.

Nor is the system unsatisfactory only; in some important respects its working is, I believe, positively mischievous. It tends to make an officer look less to the advantage of the service or his own professional improvement than to his position on the final list; it tempts him to study how he may get most marks with least trouble. Its tendency, therefore, is to demoralize, to substitute a low for a high motive; and further, to make officers neglect the subjects for which they have a special aptitude, and those in which study would be most to their advantage, in order to make a show of knowledge in those which pay best.

Change suggested.

These objections might, perhaps, be obviated, and more satisfactory data with regard to the qualifications of officers be obtained, if they were arranged in classes in the various subjects which form the course of study, as is (or was in my time) done at Oxford.

Regulations as to attendance ineffectual, unnecessary, and injudicious.

The regulations as to attendance at a certain proportion of the studies are supported on the plea that they are necessary as a guarantee against idleness. I believe that the security supposed to be obtained is illusory. A pretence of industry may be exacted from idle men, but it is only a pretence; and the free action of industrious men, who have always formed the great majority, is unwisely cramped. A more effectual and quite sufficient safeguard is to be found in the periodical examinations, and I submit that men of some experience, the élite of the army, may be trusted to understand and care for their own interests and those of the public service; and that the more they are trusted the more likely are they to show themselves worthy of confidence.

(V.) I think my answers to the other questions will indicate the reply which, as far as my experience and judgment go, I should give to this one. In general, I may perhaps say, that if the purposes for which the Staff College was established, have not been entirely, yet they have been

APPENDIX XI. (A.)

Staff College and Staff Appointments.

in some measure, answered; that the causes of failure can be detected and remedied, and that the proportion of able men and good officers who have passed through it, is larger than might have been expected.

Inducements to enter the College.

(VI.) In answer to this question I would ask permission to observe that, if the Staff College is to be a success, it is not enough to prevent unsuitable men from entering it, or to make the training at it perfect. The point is, to get the best men in the army to go to it. I think the feeling in the service is that the inducements at present held out are insufficient. The Staff appointments at the disposal of the Commander-in-Chief are not enough to give everyone a turn, and an officer's tenure is not only limited to five years, but is not certain for that period; as he may have to rejoin his regiment at any time, if it happens to be ordered on foreign, not active, service. If the appointments available embraced a wider area, and officers after proving their fitness were employed, as they are in other countries, in every kind of responsible position connected with the service, I suppose that it would make a difference.

But I believe that the institution of a Staff Corps is almost essential for the purpose under consideration. Admission to it might be restricted to officers who distinguish themselves in any branch at the College, and be optional with them. It should carry certain advantages as regards rank and pay. There is not anything unreasonable in giving some such practical acknowledgment to men who have satisfied every imaginable test of superior ability; and it is quite certain that the army, in the present day, is not the most promising career open to men of superior abilities.

Appointments on the Staff of the College.

There is one other point, a vital one as regards the interests of the Staff College, on which I would, with very great submission, say a few words. Officers go to the college from the rigid routine and discipline of their regiments, and are of necessity, and I think should be, comparatively unfettered while there. They are expected to be young, full of spirit and energy, and intellectually, as well as in other respects, the pick of the service. Men who are placed over them, and are to get from them the best work, and a great deal of it, must unquestionably be very superior men themselves; and I venture to submit that one of the most important points in view to the success of the College is the due supply of the best men for the control and instruction of the students.

E. M. JONES,
Captain, 20th Foot.

---

apt. Cardew'

(xi.)—ANSWERS received from CAPTAIN G. M. CARDEW, Deputy Assistant Adjutant-General, Ireland.

(II.) The present system of admission to the College I consider good. The subjects for examination embrace a wide field of knowledge, and ought to attract men of the most varied abilities. As regards details I would suggest that it should be obligatory for candidates to gain half the total marks allotted to each subject in which they compete, and that seven instead of five years' service should be a necessary preliminary qualification.

I believe that the majority of the officers admitted to the College under the present system consist of the best material for Staff officers to be found in the service, and I think that more officers of this stamp would be forthcoming were greater inducements to compete for entry to the College held out to the army.

I doubt whether any change in the wording of this certificate is necessary. I would suggest that the attention of Commanding Officers should be periodically strongly drawn to the vital importance of this certificate with regard to the future composition of the Staff, and that the General Officer who countersigns should also give his opinion with regard to the candidate's fitness.

No system of mere examination will provide against the admission to the College of officers who, though possessed of talent and application, are otherwise quite unfitted for the Staff.

(III.) I think that the course at the College might be shortened to one year, or at the most to eighteen months. Much time is at present wasted in writing lectures on military law, fortification, &c., which might be advantageously lithographed or printed; by incessant examinations rendered necessary by the competitive system, and which only foster a system of cramming; and by much needless plan drawing.

(IV.) Sufficient importance has been, on the whole, attached to practical subjects. I would suggest that more time should be allotted to the sketch and report on country executed in the last half year, and that a greater district should be surveyed.

(V.) I am of opinion that the establishment of a Staff College and of the present system of appointment to the Staff have been advantageous to the army. Now there is some guarantee that candidates for the Staff are possessed, at any rate, of a certain amount of useful knowledge. They have acquired a like style of sketching ground, are accustomed to do this in concert, and have been versed in writing reports and memoirs on various subjects. Each officer who has passed through the College has become intimately acquainted with upwards of forty officers, many of whom in any war would probably be on the Staff with him; and this I consider would be a great advantage on active service. There may be, and probably are defects in the details of the system, but these are capable of remedy, the principle I am convinced is right.

I would here remark that considerable modifications have recently been made in the course, and sufficient time has not yet elapsed to admit of an opinion being formed as to their effect.

I believe, as a rule, that the officers who pass through the College are likely to prove efficient Staff officers.

(VI.) In order to stimulate competition for entry to the College, I would suggest,—

1. That in future, as soon as practicable, all appointments to the personal Staff of generals, &c. should be made from the list of officers who have passed out of the College. Exceptions being made in favour of officers who have distinguished themselves in the field.

2. That each student at the College should receive while present 2*s.* a day extra pay to cover cost of books, &c., and other expenses incidental to a residence at the College. (I may mention that at present living at the College is more expensive than with a regiment.)

3. That officers who have passed out of the College, while serving with their regiments and waiting for employment on the Staff should wear some distinguishing badge in uniform. This, I believe, is the custom in the Austrian service.

The competitive system at the College should be abolished. I believe there is nothing to be said in its favour. It is very liable to cause ill feeling amongst men who hereafter may have to work in concert. It is admittedly no guide to the practical qualities of the respective officers for Staff employ.

Owing to this system being in force officers, instead of turning their attention to useful subjects in which they are not well up, pursue those studies in which they were proficient before entering the College, in order to take a high place at the examinations; thus much of the benefit to be derived from the College course is not gained. Instead of competition I would institute a "pass" examination at the end of the course of a higher standard than the minimum at present obligatory. The examiners should be gentlemen unconnected with the College. The combination of instructor and examiner in one person militates against successful teaching. What the instructor should render clear, the examiner keeps back to form a puzzling question at the examination.

The instructor also, under this system, naturally takes less interest in the progress of his class. It would be an improvement were the instructors in military subjects changed periodically, say after three or five years. Taken up with teaching at the College they are apt to fall back, and not keep pace with modern changes and improvements in their particular science.

In order to ensure a fair amount of application in the students half-yearly examinations should be held, and dismissal from the College should be the result of decided failure. Those officers that wished to pass in extra subjects should be examined at the end of the course, and specially mentioned if found qualified; the qualifying standard in these examinations should, however, be sufficiently high to indicate that the examined possessed a useful knowledge of these subjects.

In conclusion, I would suggest that at the end of the course the successful students should be attached to the other branches of the service for a longer period than at present—four months to each branch at least—and at a season of the year when field movements can be carried on.

G. M. CARDEW,
Captain, 67th Regiment,
May 7th, 1869. D.A.A.G. Dublin.

(xii.)—ANSWERS received from Captain A. L. WALKER, 99th Regiment.

(II.) The present qualifications for admission to the College are those required by para. 237, Queen's Regulations, and the passing a competitive examination.

In respect to the former I consider that the previous vice required, viz. five years, is too short in ordinary es, and I should prefer six or seven. But no restrictions to length of service should apply to officers specially ntioned for distinguished conduct in the field, and I uld relieve them from the annoyance of the competitive amination also, only obliging them to qualify for entry to College.

I have no remarks to make on the other heads of the graph in the Queen's Regulations, except in answer to t part of this question which relates to the certificate uired from Commanding Officers. This question of ical qualities is the most important of all in the ection of officers for the Staff. The certificate is often en by Commanding Officers who have seen little of applicant, it is very general in its terms, which has per- ps led to its being considered as a mere form. At any e it is the competitive examination which bars the trance to the College, rarely, if ever the certificate. It pears to me that it might be made more exact, in the m of question and answer, for instance, and that that t of it which relates to "character, habits, and dis- sition," should be confidential. You can never expect a mmanding Officer to report publicly on an officer applying a certificate that his temper, want of common sense, of lf-reliance, or some other point in his character, renders n unfit for the staff. His habits would require perhaps ually delicate handling. A colonel would naturally tell officer what form his report would take, and the officer uld in the event of its being adverse, either withdraw his plication or appeal to the general to whom the report ould be addressed.

At the competitive examination which forms the other ualification for admission I would have more obligatory bjects—they are mentioned below. Officers should join e College with such a knowledge of the principles and de- ils of the purely military sciences as to enable them at once proceed to their application. At present too much time wasted in mastering the mere rudiments of fortification, rveying military art, &c., which would be better given to ose studies in which they could apply a general knowledge them all.

Subjects for competitive examination, a certain knowledge which it is suggested should be obligatory.

Surveying.—Demand such a knowledge on the part of the ndidate that on joining the College he may at once be able commence surveying and hill sketching. Thus, he should able to produce a good copy of such an example as is at sent given, and further show his knowledge of contouring, ie of shade, conventional signs, &c.

To enable officers to prepare themselves properly on these ints and to ensure a uniform style of drawing, a gradu- ed series of examples of the scale of shade should be lected for their use. These, accompanied by a short planatory paper, need cost only a few shillings and be thin the means of every officer, but I should suggest that copy be supplied to the orderly room of every regiment.

Fortification.—In permanent fortification the obligatory art to be confined to definitions of terms, a general know- dge of the modern French and German systems, and pro- sed method of attack and defence—no drawing except nd sketches.

In field fortification a thorough knowledge of principles nd definitions, but not to expect the candidate to apply it by asking him to draw up plans for the attack and defence f positions, &c., test his knowledge of geometrical drawing, se of scales. &c.

It is a great drawback to many officers on joining the ollege that they have never drawn a plan and cannot even nderstand one. They come there unaware that several ave to be drawn and with great neatness. Now, although ou do not want a Staff officer to produce such plans as you ould require from an engineer who proposes to build a ermanent fort, there is still some knowledge necessary; he ould be able at least to draw a simple field fort with the sual accessories tolerably neatly and to scale. This I ould have him able to do when he enters the College. imilar facilities might be afforded to officers to enable them o be prepared on this subject as recommended above under rveying.

Military History.—Perhaps there is no subject on which fficers on joining are more equally informed, but if more bjects are made obligatory, it is possible that its study ght be neglected. I should therefore suggest an obliga- y minimum in this subject.

In order to give due weight to obligatory subjects at the ompetitive examination, I would allow a maximum of not s than 600 marks to obligatory subjects and of not more han 300 to voluntary subjects.

With respect to the second paragraph of the question as o the class of officers at present admitted to the College, the system certainly does not bring only those best fitted for the Staff, it brings a fair proportion without doubt. The union in one person of the highest intellectual and practical qualities is rare, the latter no College can ever supply, but it may materially improve the former.

(III.) I consider that the course is too long, and I believe that it can be shortened without detriment by adopting some such changes as proposed above for the entrance examination, by postponing the artillery instruction until the following year, and by modifications in the present course, which, together with some remarks on the method of instruction, are appended below.

In respect to the length of the course, I consider in the first place that the College should only give a military education. Though still allowing mathematics, languages, natural and experimental sciences to be taught, it should be with the view of affording officers an opportunity of keeping up their previous knowledge in these subjects rather than of encouraging them to commence their study. This would tend to shorten the course, which I suggest should only include one year's residence at the College, and some eight months in the following year, during which those officers who had qualified would go through the artillery and repository course at Woolwich, which is now taught at Sandhurst. This would occupy, say, the first two months of the year; two more would be required during which they would be attached to those branches of the service to which they did not belong. They could well learn regimental drill in this time, and Commanding Officers of corps to which they were attached should certify that they had attended a certain number of drills.

This completes the present course of practical instruction. I should suggest, however, that the officers be attached during the drill season, which would be just commencing, to brigades at Aldershot, the Curragh, or wherever opportunities might exist for seeing the three arms work together. This I am convinced might be made a most valuable part of the instruction both in field and office work. The Generals, assisted by their Brigade Majors, should furnish detailed reports of the capabilities of these officers, and these reports would show pretty correctly their fitness or otherwise for employment on the Staff. If an officer appears to be wanting in one branch of his future duties, the General should ascertain his knowledge of another. A man may be bad in the field but excellent in the office, all the riding in the world will never make a good administrator or organiser.

This opinion of the Generals of brigades to which officers are attached would be supplementary to that given by Commanding Officers at the commencement of the course, and would probably lead them to exercise due discrimination before giving candidates the very high character demanded by the regulations.

By this arrangement officers would complete the course by autumn in the second year, instead of as at present by summer in the third.

The year's course at the College might be divided into two terms of five months each, which would leave two months for vacation.

(III.) *Modifications, &c. suggested in present course.*

In surveying as already pointed out (see answer to question II.) the students would at once commence the practical part of the study.

In field and permanent fortification nearly the whole of the lectures at present given during the first year at the College, and also the plate drawing, to be discontinued. This would be provided for by the students coming properly prepared (*see* answer to question II.), and by modifying the present course of lectures on permanent fortification, so as only to include general instruction on the effects produced by the new elements in attack and defence which have been introduced during the last few years.

In military history, &c., double the number of lectures should be given, and if thought necessary double the work, that is, in one year what is now done in two. But the intention is, I suppose, rather to direct the attention of officers to the study than to get over a certain number of compaigns. The memoirs written at present under this branch of instruction are extremely valuable to officers, giving them practice in composition, and exercising their judgment in an important branch of their profession.

In military administration, &c., there ought to be no difficulty in getting through the work in one year. Officers should be expected to know military law on coming to the College, and be able to pass an examination on going out without allowing the present period devoted to lectures on the subject. The system of allowing a certain number of marks for the notes taken at lectures on this subject does not give officers any exercise in précis writing; either in this subject or in military history a certain amount of

Appendix XI. (A.)

Staff College and Staff Appointments.

practice should be given. The great drawback to study in this branch is the want of some text book, a want which could be supplied without great difficulty.

In the study of artillery at Sandhurst there must always be one great difficulty—there are no guns and carriages there, at least not the descriptions and varieties which are required. The Sandhurst course is in a great measure repeated at Woolwich during the six weeks the officers are attached to the artillery. Woolwich offers such well-known facilities for a study of artillery that one cannot suggest its continuance at Sandhurst. A course of two months would be sufficient to teach all that is now taught on this subject. At the end of this time an examination should be held, which artillery officers who had been at the College the preceding year should have to pass; their attendance at lectures should be voluntary.

(IV.) I believe that every importance is attached to them, but there are many causes which prevent a good course of practical instruction being carried out. I notice a few points in which I think improvements might be made.

One or two surveys should be done on horseback, and rapidity in producing a fair sketch should be as much demanded as correctness and neatness; at present it is not recognized.

Military telegraphy and signalling should be taught.

Less time generally should be allowed for out-door work. There should be more practice in reconnaissance. More instruction should be given in framing reports.

With respect to the practical part of fortification, such as bridging, &c., I don't see that more can be done with the means at disposal at Sandhurst. Although the subject is taught practically, the examination is necessarily theoretical; to obtain a thorough practical knowledge of the subject would take more time than can be given.

(V.) My limited experience forbids my answering this question. At any rate no decided opinion can be pronounced on the merits of officers who have passed through the Staff College until they have been tried in war.

I am quite of opinion that officers who pass through are likely, as a rule, to prove efficient Staff officers.

(VI.) I believe that the present system of marks might be done away with, and some such system as the following introduced with great advantage:—

If an officer passes a good examination in any subject, does a good sketch, or anything else which at present entitles him to marks, let him count a first class in that subject which can be denoted by A; if his work is average, it can be denoted by B; and if showing a decided want of knowledge on the subject, by C. This would save professors and examiners the thankless and unsatisfactory task of drawing such nice distinctions where, after all, criticism is often a mere matter of opinion. It would do away with that part of the system at the College which is most disliked by the students, whilst it need not lead them to be less attentive to their studies. In the obligatory subjects a certain proportion of A's would have to be obtained as in the present system, which demands about two-thirds of the total marks. This would be met in the system of classes by an officer getting B in everything, or an average of A, B, and C, which would be equal to it. In all extra subjects I am convinced that there would be no falling off in point of attention, and the more prominent mention which I propose should be accorded to officers who pass in extra subjects would be more appreciated than the present system.

Marks give an equal value to all subjects; 300 marks in mathematics and 300 in geology count equal in determining an officer's place at the final examination; they are supposed to represent an equal amount of knowledge and application. The result, of course, is that an officer who wants to take a high place takes up the most paying subject.

By adopting the system of classes it would be easy to publish the names of officers leaving the College according either to their own rank or the seniority of their regiments. After their name could be noticed the subjects in which they had obtained honourable mention.

A. L. Walker,
Captain, 99th Regiment.

Appendix XI. (B.)

B.—MEMORANDUM ON THE SUBJECT OF THE STAFF COLLEGE BY CAPTAIN J. N. CREALOCK, 95th REGIMENT.

Capt. Crealock.

I. Remarks on the Selection of Officers for Staff Employment.

It appears to me that the existence of a Staff College, for the training of Staff officers and testing their qualifications, is a necessity if we wish to have them with a knowledge of the higher branches of their profession.

For entrance to such College I can see no escape (I regret it) from a competitive test. And to this rule for qualification for "Staff employ" there should be but one exception, viz., in the case of officers who have held Staff employment with credit in the field on active service for upwards of a year.

I cannot see that, because an officer may have had the luck of being noticed in a gallant act ranging over a quarter of an hour, he should henceforward be credited with the qualities, capabilities, and education which other officers are expected only to attain by long labour and brain work; though it might be allowed that an officer specially distinguished on active service should be nominated to the Staff College, without the competitive entrance test, though subjected to that for "qualification;" this would give him an advantage, and yet apply to him a sufficient test, as he would be still subject to the remaining ones (as advocated in Annex B.). Nomination to the College by "pure selection" would result in a belief on the part of the army, and of the public, that interest ruled the day; and selection based on the highest certificates sent in, given by superiors, would only be valuable if the fitness of the superiors to give such certificates were beyond question.

But the competitive test for entrance and qualification in the present College course, it must be owned, does not preclude the possibility of a per-centage of officers being certified as qualified for Staff employ, who are in reality either unfit for any department of the Staff, or for only certain departments (for officers who are short-sighted and bad riders might yet be excellent organizers, and even strategists, and yet physically unfit for many departments).

If it be true, as I have stated, that an entrance test, in principle as at present, or slightly modified (vide Annex B.), be the only practicable one, and that yet we fail in sorting or disqualifying sufficiently our Staff aspirants, it follows that tests of another nature, both at the College and in the practical course when at the camps of instruction should be instituted.

Under any system that entails on us book work, self-denial, and the non-consideration of service and military rank, we must expect to hear words such as "our best men don't come forward;" "you have but boys who have not forgotten their school work;" "you can't expect to attract men of service when they may be defeated in book work by the boys who were at school when they were campaigning."

The more is the pity; but by offering every encouragement to officers to come forward, every facility and opportunity for officers to qualify themselves for the entrance examination, and a frank recognition of the hard work of those who do take up this unremunerative labour, we may hope to bring to light and afterwards use this hidden reserve of "good men."

We cannot specially legislate for them or their prejudices; the good of the service, a fair field and no favour, with a reasonable prospect of employment and a guarantee as at present that others, who have not thus qualified, shall not enjoy the prizes of the service, is as much as we can ask for, or the authorities be asked to give us.

The present system has reasonably succeeded, but requires reform in many details, and those who criticize it and its existence must remember that it is a choice between a Staff College or the system previous to the Crimea. Reform it, but do not do away with it.

II. Remarks on the present System of Instruction at the Staff College.

Competition productive of no good result.

1. The present system is virtually based on competition shown by "marks" credited for work done. Its defenders claim for it that it causes an incentive for work, and brings the best men to the top of the examination lists. The first object would be equally obtained by raising the present test for qualification, and the attainments and "spécialités" of men would be infinitely better recorded by instituting, in addition to a high qualification test, 1st and 2nd classes

the different subjects, such lists to be published alphabetically.

In place of the system of "marking," unpopular both with officer students and professors, I propose that the work done should be classified into A, B, and C, representing (A) very good, (B) good, (C) indifferent. A large average of A gained in the year would represent honours in a subject, and a lower average, qualification.

This would do away with the present unfair system, whereby marks in different subjects, and given by different examiners, determine the place of students at the final examinations without reference to the relative value of the subjects or recording their special knowledge. Again, it would destroy the tendency for taking up only those subjects that will pay best for gaining marks. At present a smattering of "geology" will give a fair number of marks sufficient to count for place; not so, however, with the student who has but a good grounding in a difficult language (as German). Mathematics and astronomy offer to an officer working for a high place at the final examination, such advantage that he is tempted to take them up, although he may feel that the like amount of study given to military subjects or languages would be of more value to him as a soldier; in fact, astronomy is at present obligatory, in so far that no man, however good he may be in other subjects, can hope to take the first or second place without it.

Number of subjects taught too many.

2. The subjects on which study is demanded at the College are too many. It results that in a system of competition the knowledge gained becomes superficial, while it is a matter of notoriety that officers frequently seriously injure their health in their endeavour to meet the requirements of the system.

My remarks seriatim, on the synopsis of the present course (vide Annex A.), point out the subjects which I consider might be dropped with advantage, and Annex B. shows the course I would suggest for the Staff student, which course, it will be seen, could be carried out in 10 months' actual study at the College.

I do not consider that the result in the attainments of the students would be different from that at present, except in military history, inasmuch as a certain amount of elementary instruction in drawing, surveying, and fortification would be insisted upon before entering the College; and although languages would not form a part of the College instruction, yet every inducement would be offered to their being acquired, as a sound knowledge of one foreign language would be by my system demanded at the entrance examination, and honours given to languages as to the other subjects in the final examinations, while the three or four months' leave on the continent at the conclusion of the course to those officers duly qualified, would offer them far more facilities for learning a language with but equal or less expense to the public than at present. (Vide Annex B., course suggested.) If it were *practicable* to carry out an 18 months' course at the College, I would advocate it. But the difficulties are very great; so I have as a choice between a two years' and one year's course decided on the latter.

Results claimed for the course advocated in Annex B.

The following good results I claim for the course I have the honour to suggest:—

1st. That in place of the two years and four or five months' absence from regimental and active duties, of which two years are spent at the Staff College, an officer would have but one year at the College, followed by six months' "practical instruction," during four months of which last term he would be of practical use to the service as aides to the brigadiers at the camps of instruction, and practically learning his future duties in the field and in the office, while, on the other hand, the authorities would have a practical test of his efficiency for certain departments.

Thus tested by examinations and personal reports and by general observation, a number of officers would have become qualified and sorted for different branches of Staff or regimental employment; "passed Staff course" would be added to their names.

From such number some would have shown a taste for languages and a power of observation, which it would be of service to the army to have developed.

They should be sent abroad for the autumn under an already qualified officer to report on foreign armies; the money allowance for such instruction would already be at the disposal of the military authorities by the abolition of language and natural science professors.

A shorter course would lessen the number of students.

It is evident that if the course at the College were reduced from two years to one, the number of students at the College would be but one half what is at present there; the work of the professors would, however, be the same, as the work of two years would be done in one. (Vide Annex B.)

The number of entrances, however, might with advantage be increased from 15 to 20 yearly, while, if it were necessary, double that number could be educated without any additional expense.

Professors' work.

The professors themselves would, I consider, have a far more satisfactory system to carry out, as they would in place of two classes in different stages of instruction (as at present) have but one. I think that the Staff College would be viewed by officers commanding regiments more favourably, as their officers would not be away from their corps so long, while the officers themselves would not doubt (as they do now) their powers of reading in a course spreading over but one year, while the practical course at Woolwich and the camps of instruction would offer inducements to many active-bodied officers, who are now afraid to come forward. The army at large would frankly allow that a crucial reasonable test (with fair opportunities for learning their duties practically and theoretically) had been applied to Staff aspirants.

Finally, opportunity for making the unfair and disparaging remark, that the Staff College only tempted men who desired a comfortable two years' retirement, could no longer exist.

Annex A.

Remarks on the Synopsis of Staff College Course, published by Authority.

Mathematics.

In the compulsory course of practical mathematics, for those officers who do not take it up as a subject, no credit is given. This I consider unfair; but I should be glad to see the course rather increased, with the view of assisting in surveying, &c., and the qualification in it higher and more searching.

Too much importance is given to this subject, which I am induced to believe, by the opinions of others and my own experience, to be of secondary importance in the general duties of the Staff.

As a training earlier in life it is, of course, most valuable.

The qualifying for the topographical department (vide Annex B.) should not form part of the College course, though an officer should be allowed to take honours in mathematics as in other subjects. In the present system of "marks" an undue advantage is given to the study of mathematics, which induces students to give up time which might be more profitably used.

Fortification.

Geometrical Drawing.—Much time is at present spent in teaching officers the elements of this subject; such elementary knowledge, such as drawing by scale, the plan and elevation, &c. of a building, should have been gained before entering the College.

Field Fortification.—No knowledge of field or permanent fortification is at present obligatory in the entrance examination; if it were otherwise, much of the elementary part of the present instruction could be dispensed with, and officers would not attend lectures with the matter of which they are possibly already acquainted.

Permanent Fortification.—A general elementary knowledge of the systems might be asked for before entrance, but I do not consider that this subject should be studied at the College in too great detail, and the whole of the present laborious time-wasting drawings should be done away with.

A College examination in this subject, tending to prove a general knowledge, illustrated by free-hand drawings, would be quite sufficient in my opinion.

Artillery.—The present course ranges over one year, supplemented by a fortnight under an instructor at Woolwich, after completion of the College course; the whole of the College instruction, with the exception of "application of "artillery," should be given at Woolwich (as I propose in Annex B.); however good the instruction given at the College, it is manifest that it must be better when it can be daily connected with visits to an arsenal.

Field Engineering.

Theoretical.—The whole course is excellent; if time would permit, I would wish to see an increase in the number of "schemes" for defence and attack of positions, villages, &c.

Practical.—The Repository course, it is evident, could be carried out better at Woolwich, from the means at their disposal, and therefore should be added to the Artillery course (as proposed in Annex B.).

In the field work officers should be made personally to plan, mark out, and supervise a few simple works.

More credit should be given to the bonâ fide sketches and notes made in the field note book.

Military Drawing and Surveying.

First Quarter.—No knowledge of military drawing is obligatory in the entrance examination; thus the first three months are given up to teaching the students the rudiments of this subject, which might have been easily learnt before.*

Second Quarter.—No remarks, except that it should be the work of the first quarter. (Vide Annex B.)

Second Half-year.—No remark, except that it is unnecessary to test a knowledge of contouring, by demanding that the whole of the two miles survey should be contoured; a quarter of a mile of the survey so contoured would be ample. The surveys done by officers in former years should be kept by the Commandant, the better to insure officers being unassisted in their work.

Third Half-year. — Eye Sketching.—The number of sketches should be increased, one portion being for instruction with but small credit, and longer time allowed for their execution, whereas with those given as tests with large credits, rapidity should have great credit, and some also given for rough free-hand landscapes, illustrating the country. A certain portion of eye sketches, and sketches with the prismatic compass should be performed on horseback (at a distance from the College); at present none are so done, and the time allowed for the execution of sketches is sufficient to meet the requirements of the slowest draughtsman,

Fourth Half-year.— No remark, except that as many reconnaissances should be done as possible.

Military Administration.

Précis making.—Credit is at present given to the notes taken at lectures with a view of teaching "précis making," but as these notes are not credited until months afterwards, there is no attempt to ensure that the notes credited are the bonâ fide ones taken; generally they are re-copied. They should be credited at once, before the professor leaves the room.

The instruction under this head must, of course, be purely theoretical at the College, though, as I advocate in my proposed course (vide Annex B.), it should be supplemented later in the Staff students' course. The officers should be given credit for having a rudimentary knowledge of their profession (as laid down in the Queen's Regulations), and their attention directed to general reading bearing upon military organization, &c. At present the notes taken down in lecture are but too often the extent of their reading. Much unnecessary labour is at present inflicted by the taking down these notes; they might, I think, with advantage be slightly reduced and printed for the use of the students.

A portion of the précis making might be transferred to the notes taken during the military history lectures. Too much stress is laid by the examiner in his periodical examinations, on numbers, such as number of men, horses, carriages, packs, tents, bootings, medical panniers, &c.; this but tends to a system of cramming, and tests no other capabilities,

Legislation.—There is but little broad reading in this or the former subject, owing to the supposed sufficiency of the notes taken and the amount of work demanded in other subjects.

Military Art and History.—The carrying out of this instruction must depend, in a very great degree, on the fitness of the professor; the whole course during my residence at the College was excellent, but owing to the number of other subjects, it was difficult to find sufficient time for a proper amount of study.

The system of memoir writing I consider excellent, and should be developed in a two years' course even to a greater degree.

When we remember the amount of research and work a well-written and carefully thought-out military history paper represents, it must be conceded that it is [illegible] credited than any other subject, and the manner of crediting increases this. The best memoir would be worth, say, 10 marks, the worst generally 20, that is to say, A. has gained 10 marks over B. by a month's hard reading and writing, but it is very possible for B., by two well-coloured, clean-looking, carefully compassed fortification plates, to far counterbalance the advantage A. has gained.

I feel that in the course I advocate in Annex B. the small amount of time (one year) would seriously interfere with this study, one of the most important of all the studies; but I would trust that the taste developed in the student while at the College would not stagnate in after life.

Languages.—The result obtained is not equal to the expense gone to in keeping up professors of languages. I have never seen an European language learnt at the College, though a good grounding might have often been given; but the time given up by officer students to these studies would have been better employed in those in which they could not get instruction when away from the College.

I would advocate the abolition of the teaching of languages at the College, though all credit to be given for them at entrance and final examination. (Vide Annex B.,

Natural Sciences.—Geology and chemistry may form part of a liberal education, but I cannot see the necessity for their being included in the military course of instruction for a Staff officer; as at present credited in examinations they form an inducement for students to neglect other more important studies.

It adds expense to the College, and tends of course to protract the course or add to the labour demanded.

Honourable mention might be given in them in final examination, but no credit for "place" in the present system of competition.

Two years' residence at the College is by no means too much time for the course now carried out; and whatever may be the motives that actuate officers to desire entrance, it may be safely asserted, that during their residence at the College it but very seldom occurs that any officer is idle, or enjoys the comfortable life popularly assigned to him. The burthen and expense laid on their shoulders is a heavy one, and I would gladly see both lightened.

ANNEX B.

PROPOSED ENTRANCE EXAMINATION, College and Practical Course of Instruction.

1. *Entrance.*—The Staff College to be open to officers of all arms, in the proportion as at present laid down; the yearly vacancies to vary from 20 to 40, according to the exigencies of the service.

2. *Qualifications.*—Qualifications requisite for admission.

1st. A previous service of not less than seven years, exclusive of leave, unless the officer had been adjutant of his regiment for two years, when any less service should be allowed, or when he had distinguished himself on active service.*

3. *Certificates for admission.*—The present class of certificate to be rigidly adhered to, though it might be better were it framed in distinct questions for answers. The present power of the authorities to override Commanding Officers' objections to be permitted on proper grounds.

4. Competitive examination for entrance to comprise the following subjects, and thus credited:—

	Voluntary.	Obligatory.	
†O Mathematics	900	250	for qualification.
O Military History, O Military Geography	900	250	ditto.
O French	500	350	one language obligatory.
German	500	250	
Hindustani	500	250	
V‡ Italian or Spanish	300	200	obligatory to count.
O Fortification	500	200	
O Military Drawing	400	200	
O Geometrical Drawing	100	50	
§V Natural Sciences	400	200	
Total	3,300	1,200	

* Regimental (or garrison) instruction in surveying and field fortification could be afforded.

* In the latter case, he should be nominated to the Staff College, if he passed the qualification test, without reference to competition.

† O. Obligatory. V. Voluntary.

‡ To count only for place, not as an obligatory language.

§ Only voluntary.

The present proportion to be carried out regarding the credits for arithmetic.

A high qualification in one language to be required (German, French, or Hindustani).

5. The College course to commence 1st January, and to close the 1st of the following December. A vacation of one month from 1st June to 1st July, with a few days at Easter.

6. The obligatory subjects to be studied at the College to be,—

1. Military History.
2. Military Administration and Legislation.
3. Mathematics (practical course).
4. Military Surveying.
5. Fortification.

Opportunities for entering a course of higher mathematics to be afforded; the qualification test in each of the five subjects to be higher than at present; greater proficiency in either of them, or in the following subjects to be shown by the officer students' names being published alphabetically in 1st and 2nd class lists.

1. (One language qualifies in entrance).
   A good examination in { 2 languages to give a 2nd class. / 3 languages to give a 1st class.
2. Mathematics, including astronomy.
3. Natural sciences.

Language and Natural Science omitted in course.—No professors for languages or natural science would be retained by the College.

Credit for work.—Credit to be given for students' work by dividing their examination answers, schemes, surveys, and memoirs, &c., under three heads,—

A. Very good.
B. Good.
C. Indifferent.

Professors would thus be saved the laborious and difficult system of giving marks, and decimals of marks for the students' work, which gives satisfaction to none, and is only of use under a system of pure competition, which I am anxious to see abolished, as offering no results that cannot be obtained more easily and satisfactorily under a system of classes in separate subjects.

The special attainments of officers would be distinctly recorded for the information of the authorities, when the opportunity arose of employing such officers.

System of Instruction.—The system of giving instruction in the before-mentioned obligatory subjects could be as follows :—

Military History.—Two lectures a week (four hours), half of each to be précis making. Seven memoirs or essays on certain campaigns.

Military Administration.—Two lectures a week (four hours), half of each précis making.

Fortification.—*1st Quarter.* Lectures, including the work of the present first year's course, and that of the first term, second year, with the exception of Artillery. Repository course,* and the Fortification plates.

2nd Quarter.—Lectures on, and schemes for defence of houses, villages, and strengthening positions by field works and artillery.

Motion of water in rivers, buoyancy of floating bodies, &c., as under head of Field Engineering and Practical Instruction of 2nd term of 2nd year of present course.

Surveying.—To be carried out as at present, only as the subjects to be studied at the College are reduced, less time for the surveys should be given, and more work done. Sketching on horseback should form a part of the course.

Rapidity in the "test" sketches to be credited. Encouragement to be given to landscape sketches illustrating the surveys.

Committee for Credits.—A committee of three, consisting of the Commandant, adjutant, and professor, to adjudicate the credits; in no case should the professor alone do so. Ample time in the scale of studies is given for a thorough course of surveying, I consider.

Final Examination.—During the last fortnight of November examinations for qualification, and classes in the different subjects which had not already been tested (such as surveying and memoir writing), should be held.

By the system of classifying all the students' work under three heads, the results would be rapidly arrived at.

Examination Lists published in March of 2nd year, alphabetically.—No examination lists would be published until March, after the conclusion of the Woolwich course, but those who had thus far failed in qualification would rejoin their corps.

* N.B.—The Artillery course and Repository provided for later.

I now annex a scale of studies :—

Appendix XI. (B.)

Staff College and Staff Appointments.

Proposed Scale of Studies for one year's course at Staff College.

——	9.30 A.M. to 12.	12.15 to 1.15 P.M.	2 to 4 P.M.
	LECTURES.		
Monday -	*Military administration.	Riding School.	1st Quarter.—Field fortification lectures and use of artillery, both days.
Tuesday -	* Military history.	Ditto	2nd Quarter.—Tuesday; for schemes for defence of houses, villages, positions. 3rd and 4th Quarters.—Monday; Permanent fortification. Tuesday; Practical field works and bridging, pontooning, mines, &c.
Wednesday	* Military administration.	Ditto	Compulsory course in mathematics.
Thursday -	* Military history lecture.	Surveys	Reconnaissances, &c.
Friday -	Surveying or reconnaissances the whole day.	—	
Saturday -	Surveying - -	—	N.B.—Allowing Saturday afternoon for officers attending voluntary lectures in languages or natural sciences, or general reading; one whole day and two half days are given up to surveying. Memoirs on history; one the first quarter, two each succeeding quarter, in military history.

* One hour of each lecture, notes to be taken and credited for précis.

Course proposed after Completion of the Staff College Course.

The course at the College would conclude on the 1st December. Those officers who had not failed in qualifying in the foregoing course would be sent to Woolwich on the 1st January following, and there, under the Director of Studies, would undergo a two months' course of instruction, thus divided :—

Artillery.—Four weeks being given to artillery lectures and visits to the Arsenal.

One week for visiting the powder and small arms factories and Shoeburyness, where a three days' course should be arranged.

Repository.—Three weeks' Repository course; a per-centage of attendances in these subjects to be compulsory, except with artillery officers.

The notes taken by the students bonâ fide, in lectures and repository course, to bear credit. At the close of the course, examination papers for qualification and honourable mention to be given to all the students, including artillery officers. Between the 1st and 15th March the examination lists of the whole Staff course, alphabetically arranged, to be published, and those officers who had distinguished themselves to take classes.

Cavalry and Artillery Drill and Interior Economy.—Quarters should now be given at the camps of instruction to these qualified officers, from 15th March to end of August, For the first six weeks they would have to attend a stated number of adjutant's and commanding officer's drills with the cavalry or infantry regiments to which they are attached, and likewise attend a certain number of battery drills, and otherwise qualify for a certificate of efficiency, as regards understanding the general interior economy and drill of the two arms to which they do not belong.

Practical Staff Course with Brigades, &c.—On the 1st May they should be placed at the disposal of the General Officer commanding at the camp of instruction, with a view of their being attached for three months to the different brigade or divisional offices, and one month with the Comptroller's department.

In the field these officers would act as aides-galoppers, or acting brigade majors, as required and ordered by the brigadiers on whose Staffs they would thus temporarily be.

They would likewise daily attend at the offices, and by the assistance of the brigade major or other Staff officer endeavour to master every detail of work going on in such office.

At the close of August a list of printed questions should be filled up by the brigadier and other officers to whose Staff or to whose offices these officers have been attached, relating to their qualifications for the active duties of the Staff in the field and duties in the office; the brigadiers and other officers thus questioned should be impressed with the importance, both to the service and prospects of individuals, by affording the authorities reliable information. Such reports should be supplemented by remarks by the General commanding the division. Should the report on an officer be satisfactory, the letters P.S.C. (passed Staff

Appendix XI. (B.)

Staff College and Staff Appointments.

course) should now be added to his name, and on every occasion in full dress such officers should wear a small aiglette, as in the Prussian service, as an honourable distinction.

Some officers will doubtless have evinced qualifications which would be for the benefit of the service and themselves, if opportunity for developing them were afforded.

Visits to the Continent during the last four months of the course.—Those officers who are thus distinguished, and desirous of doing so, should, assisted by a small money grant, be sent to the continent for the autumn. A selected officer should accompany them (an artillery officer), and all assistance ordered to be given them by our military attachés. They should visit foreign armies, at the same time improve their language attainments.

Reports, detailing seriatim their tour, to be sent in to the authorities in December, when a further money grant should be made to such officers whose reports showed labour and ability, and who the officer in charge of the tour reported as present throughout.

These officers would rejoin their regiments in Europe by the 1st January of the second year following their leaving them, while those proceeding to India would be able to do so at a favourable time of the year, from October to February (which is not the case at present). Other officers who had shown high qualifications for mathematics and surveying, should during the autumn months be permitted to proceed to Chatham and qualify for the Topographical department.

J. North Crealock,
Captain, 95th Regiment.

Appendix XI. (C.)

C.—HISTORICAL NOTICE OF THE STAFF COLLEGE.

(By the Secretary.)

The Senior Department of the Royal Military College at Sandhurst had existed, as a place for the instruction of officers in the higher branches of military science, for many years before the institution of the Staff College. The objects of the Senior Department, as originally constituted, are stated in the Warrant of 1808 for regulating the affairs of the Royal Military College.* An account of its origin and earlier history has been already given in the historical notice of the Military College; and the steps have been there briefly traced by which it was gradually brought to the state in which it stood in 1855, at the time of the appointment of the Select Committee of the House of Commons on Sandhurst.

The Senior Department was never actually so far recognized as a staff school as to confer upon officers who passed through it any claim for staff employment; the certificate obtained at it was not even an indispensable condition of appointment to the staff. At the same time, one of the objects of the institution of the department is expressly stated to have been that of enabling officers "to qualify "themselves to be employed in the Quartermaster-General's "and Adjutant-General's departments;" and during the Peninsular war a great part of the Quartermaster-General's staff was composed of officers who had been educated at the Senior Department.† It appears also, from a statement made by Lord Hardinge, that the establishment enjoyed at that time so great a reputation for efficiency as a school of instruction for staff officers, that it was made the model on which the French *Ecole d'Etat-major* was subsequently established.‡

In later years, however, the Senior Department entirely ceased to fulfil the purposes of a staff school. From having originally had a separate military staff and a distinct body of professors, it became little more than a class attached to the Junior Department of the Military College. The number of students on the establishment was reduced from 30 to 15, and even this latter number was seldom complete, for as no reward in the shape of staff employment was held out to those who obtained certificates at the Department, there was little inducement to officers to seek admission to the institution. Indeed, in 1854 the Department only contained six students, and may be said to have become all but extinct.§ The course of study appears also to have gradually come to be almost entirely mathematical, to the exclusion of nearly all practical military instruction, with the exception of surveying.‖

Frequent allusions both to the former state of the Department, and to what it had become in 1855, are made in the evidence given before the Select Committee of the House of Commons on Sandhurst;¶ the contrast presented between its original and later condition is described in the Report of the Committee as follows :—

"In earlier times the Senior Department had its own "military staff. General Le Marchant was attached to it. "General Jarry, an eminent officer who had been on the "staff of Frederick the Second during his campaigns, was "engaged as scientific instructor, and a sufficient number "of professors for fortification, for mathematics, and lan- "guages were attached to the department. At the present "moment two professors compose the whole establishment "exclusively attached to the Senior Department. M. Nar- "rien, the senior professor of mathematics, teaches, in "addition to his own proper branch, fortification, gunnery, "tactics, and castrametation. The other professor teaches "military surveying. Languages are taught by aid of the "professors of the Junior Department, paid for by the "cadets, and as Your Committee are inclined to believe, "when there is ample demand on their exertions and all "their time for instructing the cadets. Your Committee "are of opinion that this state of things is unsatisfactory, "and requires revision and reform."

The Commissioners appointed in 1856 to consider the training of officers for the scientific corps speak of the department in similar terms :—

"There is also a Senior Department at Sandhurst, of "which it appears that the original object, or, to use the "words of Sir Howard Douglas, the 'special, distinct, and "'separate form' was to be 'an establishment for training "'officers for the general staff.' This institution does "not seem, at least recently, to have been regarded as a "staff school in the sense in which schools bearing the "same name in France, Prussia, Austria, and Sardinia "educate for the Staff Corps; since in these countries it is "necessary that all officers on the general staff should have "frequented for some years the staff school, whilst it ap- "pears that out of 216 officers who have received certifi- "cates at the Senior Department of Sandhurst since 1836 "only 15 were employed on the staff in May 1854. Nor "can it be doubted that both the importance and the edu- "cation of the Senior Department, whatever may be the "cause, have greatly diminished of late years, since lat- "terly there has been only an attendance of nine or ten "officers, whilst the whole instruction has been in the "hands of two, indeed, it may almost be said of one pro- "fessor. The significance of this last fact may be esti- "mated when we mention that for the staff school in "France there are 13 military and 5 civil professors."

As early as 1854, Mr. Sidney Herbert, when Secretary at War, in suggesting his general scheme of instruction for the officers of the army, appears to have contemplated the idea of converting the Senior Department into a staff school similar to the *Ecole d'Etat-major* in France.* Several of the witnesses examined before the Sandhurst Select Committee in 1855 advocated the same view,† and the Committee in their Report recommended various changes with the object of improving the institution,—among others that a military officer should be placed at its head, and that it should have a separate staff of professors. The Report continued :—

"Your Committee must add one remark. They have "not shrunk from recommending that Parliament should "be called upon to vote money to render the Senior De- "partment efficient; but if Parliament grant the money, "Your Committee consider that officers so educated, if "otherwise fit, should not be neglected in appointments to "the staff. The expectations of Parliament in granting "the funds, and the labours of officers who have undergone "a severe course of study, should not be overlooked. "Your Committee have the satisfaction of observing that "some cases have come before them from which they are

† *See* especially evidence of Sir Howard Douglas, Colonel Prosser, and Major Addison.

" led to believe that Lord Hardinge has not lost sight of " this important point. Your Committee believe that it " will be of great advantage to the officers under instruc- " tion in the Senior Department if arrangements were made " by which they should be employed at the camps of in- " struction. They also suggest that facilities should be " given to officers who have passed the Senior Department " with good certificates of attending the course at Chatham " and at Woolwich, and they should be attached to cavalry " or infantry regiments, so that they may become acquainted " with all the branches of the profession."

No immediate steps were taken to carry out the recommendations contained in the above Report.

Up to this period no special qualifications had been required by the regulations of the service as a condition of appointment to the Staff; but it appears that, during the active operations in the Crimea, officers recommended for employment in the Quartermaster-General's department were subjected to an examination in military sketching and reconnaissance, before being accepted by the Quartermaster-General as qualified for appointments.*

In the debates in Parliament during the Crimean war, in the sessions of 1855 and 1856, the necessity of insisting upon special professional acquirements as a condition of staff employment, and of establishing an adequate system of instruction for candidates for the staff, were frequently urged upon the Government. The detailed scheme of military education brought before the notice of the House of Commons by Mr. Sidney Herbert on the 5th of June 1856, included, as an important feature, the conversion of the Senior Department into a staff school, to be situated at Farnham, a certificate from which should be a necessary condition of appointment to the staff.†

The subject of military education generally,—and, as an important element of it, the question of the preparatory training of staff officers,—was at this time undergoing careful consideration; and towards the end of the year 1856 Colonel Lefroy was directed by Lord Panmure, as has been already stated, to draw up a scheme for "the organization " of a department of military education, with an outline of " the arrangements for the education of officers for the " army and staff." Colonel Lefroy's plan included the establishment of a School of Application for the staff. Numerous other schemes were also about the same period submitted by various authorities to Lord Panmure, bearing upon the re-organization of the system of military education, all of which coincided in recommending the foundation of a staff school in some form or other, and proposed that special qualifications should be required as a condition of appointment to the staff.

In January 1857 the Commissioners appointed in the previous year to consider the training of officers for the scientific corps presented their Report, in which they strongly recommended the institution of a special college for the purpose of educating officers for the staff. In speaking of the means of professional education required for officers, the Commissioners say, "Lastly, a good staff college, to be " frequented by officers already in the army, is necessary to " complete the means of military education. Such a col- " lege, if attendance at it be made a *sine quâ non* for a staff " appointment, and still more if staff appointments are " given in accordance with the distinctions of its pupils, " will almost necessarily be frequented by most of the " young officers of talent and energy in the army."‡ In another passage the Commissioners say, "A college or " senior department for the staff is indeed the completion, " and may be termed the strongest encouragement, of " general military education, although the schools of the " special corps may carry their own science to a still higher " point. The chief defect noticed in connexion with our " own Senior Department at Sandhurst has been that its " course of study was regarded as no recommendation for " promotion. Nor could two professors be expected ade- " quately to discharge functions for which 18 are required " in the French staff school. The contrast presented by " all foreign staff schools is certainly striking. There are " differences indeed between these schools in France and " Austria, as to the period of admission and other points. " But both are alike in *this*, that they are so framed as to " give every conceivable premium and encouragement to " such military acquirements as the service of the staff is " thought to require. In both the officers enter by com- " petition, and after a laborious course obtain their appoint- " ments on the staff as the reward of their distinctions in " the school. It seems needless to urge that a college of " this kind, opening the door to advancement and fre- " quented when the mind is in full vigour, would possess " every inducement to call forth the energies of young " officers of talent. But a Senior Department, offering a " bare opportunity for military study with no ulterior " results, stands in a wholly different position."*

The necessity of systematic instruction for the staff being thus at this time universally recognized, and the establishment of a special school for this purpose being recommended by so many different authorities, the determination was arrived at early in 1857 to convert the Senior Department into a staff school. The first official proposal on this subject was contained in a letter of the 6th April 1857, from the Commander-in-Chief to the Secretary of State for War,† in which the immediate introduction of a system of examination for staff appointments was proposed, as an instalment of a more comprehensive plan for affording professional instruction to candidates for the staff by the enlargement of the Senior Department and its conversion into a staff school. The same letter recommended the institution of the Council of Military Education; and the instructions issued to the Council on their appointment, on the 22nd April 1857, desired them "in the first instance to direct their attention " to the proper organization of the present Senior Depart- " ment at Sandhurst, the numbers of which should be " doubled, and the name of which should be changed to " that of *Staff College*, to be presided over by a command- " ant with a proper staff of professors."‡

On the 9th April 1857, the system of examination for future appointments to the staff, which was to come into operation on the 1st January 1858, was promulgated.§

While the Council of Military Education were still engaged in elaborating their scheme for the organization of the Staff College, further representations of the necessity of special instruction for staff officers were urged upon the Government. The principle of competition as the means of admission to the staff was affirmed by a resolution passed in the House of Commons on the 28th July 1857, on the motion of Sir De Lacy Evans, to the effect "that " in the opinion of this House a higher standard of profes- " sional instruction, and more complete provision for it " than hitherto deemed requisite, ought to be established " for the commissioned ranks of the army, but especially " for the staff; that this will be best promoted by recourse " to competitive examination of officers desiring to qualify " themselves for the staff, and by assured encouragement " for proficiency and general fitness for advancement."

In the discussion which took place upon this motion, Mr. Sidney Herbert most strongly advocated the establishment of a staff school, in preference to a mere system of examination for staff appointments; and he urged in the most decided manner that the special instruction required for the staff should be extended to aides-de-camp, and that the qualifications required for appointment to these posts should be the same as those demanded from officers of the general staff. Speaking of aides-de-camp, Mr. Sidney Herbert said, " They are required to discharge most important duties, " and very high responsibility often attaches to them. It " is said they are only 'the twopenny postmen' of the " army; but if this description is accurate, on what prin- " ciple is it that they take superior position and receive " increased pay? Although it is not their duty to direct " operations, but to convey orders, circumstances may " change before they arrive at the point to which they are " despatched, and they may be called upon to exercise con- " siderable discretion. If they are only to be the bearers " of messages that duty might as well be performed by an " orderly of dragoons. They are usually in personal at- " tendance on the officers in command, and they are sure " to be mentioned in despatches and to obtain promotion; " for the generals to whom they are attached naturally " speak of duties which are performed under their own " eyes. I do not say that a general officer may not be " allowed to choose his own personal staff, but he should " be limited in his choice to those persons who are on the " list as having qualified themselves for those duties which " they will be called upon to perform."

The debate afforded the Government the opportunity of announcing publicly that the institution of a Staff College, with competitive examination as the condition of admission to it, had been decided upon.‖

A further recommendation in favour of the establishment of a special school for the staff was made by the Royal Commission on the Purchase System, which had been appointed in 1856, and presented its Report in August 1857. Much evidence had been taken before the Commis-

Staff College and Staff Appointments.

sion both on the subject of military education generally, and on that of special instruction for staff officers. In regard to the latter question the Commissioners in their Report spoke as follows:—

"The mode of entry into our army cannot of course be "assimilated to the system of foreign countries, where "purchase of the first commission is unknown. But we "may observe, that in making appointments to the staff "similar difficulties do not occur. The staff is in no way "concerned with the purchase system. Here, therefore, "there is every facility for the adoption of such improve- "ments in education and military training as may be "deemed advisable; and without imputing any deficiency "to the staff of the army, for such an imputation would "be in direct contradiction to the evidence we have re- "ceived, we may yet suggest that promotion to the staff "might be made the means of stimulating military "education, rewarding meritorious officers, and obviating "some of the hardships which must arise under the "purchase system. It appears that in France, in Austria, "in Prussia, and in Sardinia, there are special establish- "ments for the instruction of staff officers; entrance to "these establishments is, it is said, gained by competition, "while admission to the staff of the army is only to be "attained by passing through these establishments with "credit. A similar system might be adopted for the "British army; the Senior Department at Sandhurst might "be strengthened and rendered available for the purpose "for which it is said to have been originally intended; and "a course of training in this department might then be "made an indispensable condition to the attainment of a "staff appointment. The system of study and of training "would require careful consideration, with the view of "testing and of cultivating those physical and mental "qualities which are more essential to an officer than "literary or even than high scientific attainments. Regu- "lations rendering a staff appointment an object of honor- "able emulation would have a beneficial effect not only on "the staff itself, but would promote military education "throughout the army. Such regulations might more- "over prepare the way for an improved system of army "promotion hereafter. The limitation of the time during "which officers shall hereafter hold situations on the staff, "a measure recommended in a former report, would render "these appointments additionally serviceable to the in- "terests of the army."*

In the course of the year 1857 the Council of Military Education submitted their detailed plan for the organization of the Staff College.† Various localities had been suggested by different individuals as the site for the College; Mr. Sidney Herbert had originally proposed Farnham, principally from its proximity to the camp at Aldershot; the general scheme of military education drawn up by Colonel Lefroy, by the direction of Lord Panmure, recommended that the School of Application for the staff should be placed in London, on the ground of the advantages of such a central situation, and the facilities for instruction afforded by the Government School of Mines and other establishments. The Council, after careful consideration, came to the conclusion that Sandhurst afforded the most eligible site. They also recommended that the contribution of 30*l.*, which had been hitherto required from officers studying at the Senior Department, should be discontinued in the case of the students at the new College.

On the 17th December 1857 a General Order was issued announcing that the name of the Senior Department was to be changed to that of Staff College, and that the establishment was to be placed under a Commandant with a staff of professors of its own.‡ The strength of the College was fixed at first at 30 students. The regulations for admission, which was to be determined by competitive examination open to officers of all branches of the service, and for the course of study at the College, were at the same time notified. The first examination for admission took place in February 1858, five officers who were then students at the Senior Department being at the same time permitted to remain until the end of their recognized period of residence as students of the Staff College. For some time, however, after its original establishment, the business of the Staff College was conducted in a portion of the buildings of the Cadet College. The present buildings were not commenced until the end of 1859, and were not permanently occupied until the summer of 1862.

Although placed under a separate Commandant the Staff College has always continued a branch of the Royal Military College, under the control of the Governor of which it remains. Of the members of the general staff, the chaplain, paymaster, quartermaster, surgeons, and riding-master are common to both the Cadet and Staff Colleges. The duties of the professors of geology and chemistry also extend to both establishments.

By the original regulations the period of service necessary for admission to the College was fixed at three years, engineer officers, like those of other branches of the service, were eligible for admission; officers were permitted to present themselves as candidates either at the final examination at the close of the two years' course of instruction, without residence at the College, or at the examination at the end of the first year, without having resided during that year, joining the College for the remainder of the course. The subjects taught at the College were, in the main, the same as at present; seven of these subjects were obligatory on every student, but no limitation was placed upon the number of subjects which might be taken up at the final examination. The system of individual competition among the students which now exists was not, however, at first recognized; the successful candidates at the final examination were to be arranged in three classes, a special report being made of those who particularly distinguished themselves. After leaving the College the officers who had successfully passed the final examination were to be attached for six months to each of those arms of the service in which they had not previously served. It was also announced that until the 1st January 1860 officers might continue to be appointed directly to the staff on passing the examination for staff appointments which had recently been instituted by the General Order of the 9th April 1857; but that after that date no officer would be appointed to the staff who had not gone through the Staff College or passed the final examination at it, with the exception of those who should have attained at that date the rank of lieutenant-colonel, and of officers of proved ability in the field.*

Various modifications have from time to time been introduced in the original regulations.

Shortly after the institution of the College the system of arranging the candidates in order of individual merit at the final examination was substituted for the plan originally proposed of distributing them in classes.

In 1860, the date for the termination of the system of direct appointments to the staff, without passing the College examination, was extended from the 1st January 1860 (as originally fixed) to the time when "the College shall be in "a position to supply all vacancies in the staff of the "army,"—an alteration which has been retained to the present day. It has also been decided that the appointments of Aide-de-camp and Assistant Military Secretary should be excepted from the staff appointments for which a Staff College certificate is a necessary qualification.†

The period of six months for which officers after leaving the College were to be attached to each of the other arms, has been successively reduced, in 1860 to four months, in 1863 to three months, and in 1864 to six weeks with cavalry or artillery, and to one month with infantry.

In 1861 it was decided, mainly in consequence of the demand for engineer officers in connexion with the works of fortification in progress at that time, that officers of the engineers should not be admitted to the College, and should be eligible for staff appointments without holding a Staff College certificate.

In 1862 an important alteration was made in the certificate required from a Commanding Officer as a condition of a candidate's admission to the entrance examination. This certificate, which had previously been to the effect that the candidate was "an intelligent, zealous, and well-conducted "officer, and thoroughly acquainted with all his duties," was, on the recommendation of the Council of Military Education, altered to its present terms, with the view of increasing its stringency.

The regulation allowing officers to present themselves for the final examination without residence at the College was suspended as early as 1861; and both this regulation and that permitting officers to join the College at the end of the first year for only one year's instruction, after being variously modified, were finally abolished in 1866.‡

The length of previous service required as a condition of admission to the College was in 1866 increased from three to five years.

The subjects of instruction have not been materially altered since the foundation of the College, but various modifications have been introduced in the details of the course of study. At first the students were required, as a condition of qualification, to obtain a certain proportion of marks in each of the military subjects, and in mathematics and French; so that a failure in any one of these subjects

‡ Third General Report of the Council of Military Education.

excluded an officer from a certificate. In 1861 the system was introduced of requiring only an aggregate of marks on the subjects taken as a whole, with the exception of military surveying and reconnaissance, in which an obligatory minimum was still required for qualification. In the earlier regulations no limitation was placed on the number of subjects which could be taken up at the final examination. In 1862 the subjects were for the first time limited to seven; of these the strictly military subjects, four in number, were made obligatory on every one; the three others a student was allowed to select at his option out of the subjects taught at the College, one of them being necessarily a language. In 1866 the number of subjects by which a certificate of qualification for the staff could be obtained was reduced from seven to five,—the four military subjects and one language,—but every one was still permitted to select two other subjects, the marks gained in which should count towards his place in the final examination. Another change made at this time was a considerable reduction in the great premium hitherto attached to mathematics; up to this period the subject, though since 1861 nominally voluntary, was, owing to the high marks attached to it, practically obligatory on every one who wished to obtain a high place in the final examination. The subject was now divided into two courses—a high and a low course—either or both of which might be taken up by a student among his voluntary subjects; but a considerable preponderance of marks was still attached to the higher mathematical course, and the premium upon mathematics, in comparison with other subjects, is further increased by the regulation which permits every student to increase his total aggregate of marks at the final examination by taking up spherical trigonometry and astronomy as an entirely extra subject.

The system of allowing marks awarded for work done during the two years' course of instruction, and for the probationary examination at the end of the first year, to be carried forward to the final examination, has from time to time been gradually extended, until it has been applied, in every subject except mathematics, to the marks gained in the numerous periodical examinations held by the professors of the College. But in 1866 a further extension of this principle was introduced, by the adoption of the system of disposing of subjects by instalments. The College course of instruction, by the regulations then introduced, was divided into two distinct periods; one portion of each of the military subjects of study is by this arrangement finally concluded at the end of the first year, and after this is entirely laid aside. The first year's examination is made final in regard to this portion of the subject, the whole of the marks then gained being carried forward to the examination at the end of the course. In mathematics and languages the principle has been carried so far as to allow of a candidate being finally examined in the whole subject at the end of the first year, and discontinuing its study afterwards. The result of this arrangement is that the final examination of a student may in some cases embrace only a small portion of the four military subjects; and that the marks required for a certificate of qualification have not unfrequently been gained by a candidate a considerable period before the final examination takes place.* The system in regard to the course of study which was introduced in 1866 is still in force.

In 1864, on the recommendation of Major-General Napier, at that time Commandant of the College, a system of reconnaissance on an extended scale was introduced for the instruction of the students of the second year, shortly before leaving the College. Owing to the reduction in recent years of the sum voted for this purpose in the estimates, this system of reconnaissance has of late been much less completely carried out than when originally instituted.

No alteration has been made in the number of officers admitted to the College since its institution, though, owing to the exclusion of the engineers, the proportion from the different arms has been modified. At a very early date the regulation was established which prevents the admission of more than one officer at a time from the same battalion or regiment. Since the second entrance examination, in November 1858, the advantages of the College have been extended to the officers of the Royal Marines, two of whom are admitted as supernumerary students.

The dates of the series of regulations published on the subject of the Staff College are as follows:—

17th December 1857.	25th August 1863.
2[illegible] January 1860.	21st October 1864.
24th April 1861.	23rd May 1866.
6th March 1862.	1st November 1868.

* Evidence of Mr. Twisden, 8872.

The latter regulations, which are now in force, and show the present conditions of admission to the College, and the course of instruction pursued at it, will be found at page cxlii. Further details on these subjects are given in the evidence of Major-General Napier, Vice-President of the Council of Military Education, and of Colonel Lacy, the Commandant of the College, as well as in the replies to the questions addressed to the latter officer.

The present establishment of the College is as follows:—

1 Commandant.
1 Adjutant.
2 Professors of Mathematics.
1 Professor of Military History.
1 „ „ Fortification and Artillery.
1 „ „ Military Topography.
1 „ „ Military Administration.
1 „ „ French.
1 „ „ German.
1 „ „ Hindustani.

The riding master and the professors of chemistry and geology who are attached to the Cadet College also give instruction to the students of the Staff College.

The regulations at present in force for the examination of officers appointed directly to the Staff, without passing through the Staff College, will be found at page cxliv. These examinations have of late years been confined almost entirely to officers nominated to the personal staff as Assistant Military Secretaries and Aides-de-camp; the minor appointments on the general staff—those of brigade-major and deputy assistant in the Adjutant-General's and Quartermaster-General's departments—are now, with the exception of the post of brigade-major to the Guards, almost exclusively reserved for Staff College officers; while the superior appointments of Assistant-Adjutant-General and Assistant-Quartermaster-General are filled by officers who, from having attained the rank of lieutenant-colonel, are, in virtue of their rank, exempted from examination.* Military secretaries, independently of their rank, are not examined on appointment.

In connexion with the question of the institution of a Staff College and the introduction of a system of special instruction for Staff officers, the formation of a Staff Corps has been at times suggested. The subject was frequently referred to in the evidence given before the Select Committee of the House of Commons on Sandhurst in 1855, but the opinions of several important witnesses, including Sir John Burgoyne, Sir George Wetherall, and Sir Howard Douglas,—the latter a strong advocate for making special professional qualifications an indispensable condition of employment on the staff—were decidedly unfavourable to the proposal.† The Committee in their Report called attention to the opinions expressed on the subject, but refrained from making any recommendation as to the expediency of forming such a corps.

Mr. Sidney Herbert in his general scheme of military education, as explained to the House of Commons in 1856, did not propose the formation of a special Staff Corps, and stated his belief that such a corps would be regarded with jealousy by the rest of the army, and that the advantage would be lost which is derived from the return of highly qualified and instructed officers to their regiments.‡ On a later occasion, when advocating the establishment of a special school for the staff, he reiterated his objections to the formation of a Staff Corps. "I do not believe," he said, "that the French system of a separate Staff Corps, "rising by promotion within that corps, and never going "back to regimental duty, would be suitable to the British "army. It would create a separate caste, which would be "regarded with the greatest jealousy; and I believe the "best feature of our system is, that the staff officer, when "not employed on the staff, goes back to his ordinary "duties and mixes with the regimental officers."§

The formation of a special Staff Corps was again advocated by three of the witnesses examined before the Royal Commission on the Purchase System—Colonel Stuart, Sir Duncan Macdougall, and Sir Charles Trevelyan.‖ No other witness, although there was a general unanimity in favour of strict examinations and professional qualifications for the staff, appears to have suggested the formation of a special corps; while Sir George Brown expressed an opinion decidedly unfavourable to it, and Colonel Claremont, in his

Appendix XI. (C.)

Staff College and Staff Appointments.

evidence, pointed out the objections which are found in the system of the Staff Corps in France.*

Neither the Report of the Royal Commission on the Purchase System, nor that of the Commissioners for considering the training of the scientific corps, although both strongly advocated the conversion of the Senior Department into a Staff School, contained any recommendation in favour of the formation of a Staff Corps.

The subject has been again occasionally referred to in the evidence taken before the present Royal Commission. A few witnesses have advocated the formation of such a corps,† but opinions decidedly unfavourable to the idea have been expressed by the Duke of Cambridge, Sir W. Codrington, and Sir Percy Herbert;* while numerous other witnesses have referred to the advantages of a system which permits of the appointment of regimental officers to the Staff.

In reference to this subject it may be observed that in the French service, during the present year, an important alteration in the system hitherto prevailing has been introduced, the result of which will be that appointments on the staff, at least in time of war, will no longer be filled exclusively by members of the *corps d'état-major*. In Austria also the abolition of the Staff Corps as a special and distinct service appears to be contemplated.†

Appendix XI. (D.)

D.—PLAN FOR THE INSTRUCTION OF STAFF OFFICERS PROPOSED BY THE RIGHT HON. SIDNEY HERBERT.

Extract from a Speech in the House of Commons on Military Education, June 5, 1856.

I now come to the question how we are to deal with the staff. In France they have a staff school and a staff corps quite distinct from the army. The system is to send a young man first to the Polytechnic or to St. Cyr, whence he can enter by competition into the Ecole d'Application, privates and non-commissioned officers likewise competing. When an officer has attended this school for a certain period, and passed an examination, he has to serve two years in the infantry, two in the cavalry, and two in the artillery—thus spending six years in making himself acquainted with all the branches of the service. He is then called to serve as a captain in the staff corps, and from that moment all his promotion is there; he never goes back again as a regimental officer. That is not the system in either Prussia or in England. Here, every officer who has been taken from his regiment and has served five years upon the staff, is, or ought to be, at the end of that period, sent back to his regiment. But we have a staff school. During the last five years of the Peninsular war, I believe there was but one officer on the staff of the Quartermaster-General who had not passed through our staff school at High Wycombe. I am afraid we have retrograded in that respect within the last few years. The staff school at High Wycombe, afterwards moved to Farnham, produced some of the most eminent men in our army. It was established by the Duke of York, and was at first presided over by General Le Marchant, and military instruction was given by a distinguished French officer.* Among the celebrated officers educated there, I may mention the names of Sir George Murray, Sir John Hope, Sir Richard Bourke, Lord Hardinge, General Wetherall, Sir Charles Napier, and Sir William Napier. The school was removed first to Farnham and then to Sandhurst. Its original course of instruction was much superior to that which obtains now. Military science has comparatively dropped out, and mathematics have got almost exclusive possession of the school. In the senior department, I am told that the text books are in the proportion of one on military science to seven on mathematics. But that department has languished, because, during peace, you have not taken officers from it for the staff. You have not had your army in divisions or brigades; and a number of scattered regiments does not deserve the name of an army, any more than a number of scattered men can be called a company. There has been no proper staff employment, and, there having been no great necessity for good staff officers, the senior department at Sandhurst has lost its prizes, and with them its efficiency. I want to restore it to its former effective state. The whole establishment, when at its best, cost but 5,080*l.* a year—showing how small is the sum by which the additional efficiency of an army can be secured.

I have consulted many military officers with respect to the comparative merits of the French system and our own. There is one great defect in the former as applicable to our army. We want to inoculate the whole army with a more professional spirit. The professional spirit in the navy far exceeds that in the army; naval officers are more thoroughly devoted to the duties and interests of their branch of the service than military officers. I think the object would not be attained by the establishment of a separate staff corps; for if you make a separate staff corps, which is to be a distinct caste, it will be regarded with jealousy by the other departments of the army, and you will not have the advantage derivable from the return of highly qualified and instructed officers to their regiments. I do not purpose, therefore, to adopt the French system, but to revert to our old plan, only making it compulsory, instead of optional. I propose to remove the staff school back to Farnham,* where, being in the neighbourhood of the headquarters of Aldershot, it will be close to a vast camp, and will see all the operations of an army conducted on a large scale. I purpose to leave the junior department at Sandhurst, and thus, in addition to other advantages, get rid of the objectionable practice of putting officers and boys together.

After consulting with military officers whom I thought capable of giving me sound advice, I have come to the conclusion that—following so far the French system—every officer who serves upon the staff should not only go through the staff school and qualify himself for the higher duties of his profession, but should be attached for a certain period as a supernumerary to each branch of the service. In France six years is the period allotted for that purpose—two in each branch of the service. In the evidence before the Sandhurst committee, six months in each service is recommended.† I believe, however, having consulted others, that three years of such duty—one in the infantry, one in the cavalry, and one in the artillery—would, in addition to the staff instruction at Farnham, be sufficient to procure a good staff officer. But, it may be said, what advantage will an officer derive, if, after thus qualifying himself, his position with respect to the staff is no better than that of others? I confess the present system is indefensible. An officer is not only anxious to serve upon the staff, but is ambitious, and wishes to make himself conversant with the higher scientific branches of his profession. He asks leave of absence from his regiment, in order that he may go to the senior department at Sandhurst; but his request cannot be complied with, unless he has served four years with his regiment and passed a certain examination. If, however, he gets a nomination to the staff itself, then no examination is necessary; so that, in fact, you do not require for an actual appointment on the staff what you demand from an officer who merely wishes to prepare himself for the staff. I propose that it should be laid down as a rule—speaking, of course, of times of peace, for all rules disappear in time of war, which is itself a rude but nevertheless the best of all instructors—that no officer should be eligible for a staff appointment who has not passed through the staff school with a certificate (or passed an equivalent examination if he has studied elsewhere), and who has not studied for three years in each branch of the service, namely, one year in the infantry, one in the cavalry, and one in the artillery. It may be urged, as an objection to such a plan, that it might exclude many officers who, though men of talent and energy, are not scientifically instructed. In the first place, I answer, that if you exclude one man, you probably get another just as good. But I doubt very much whether it would have any such effect. For if an officer thought he had a chance of getting on the staff, he would naturally be induced to obtain the necessary qualifications, and would be impelled by a sense of his own interest to go in search of them; and thus you would get such men, with all their talent and energy unimpaired, *plus* all the scientific knowledge to be imparted at Farnham. Such is an outline of the scheme I propose. I am supported in its favour by the opinion of Sir Howard Douglas,‡ a

* General Jarry, who had left the French army with Moreau.

‡ Evidence before Sandhurst Select Committee, 2335.

competent judge, who has suggested a plan for the re-establishment of the staff school, in accordance with my proposal; and by that of Major Addison,* one of the officers whom I intended to appoint as staff instructors—the others being Colonel Moody, late of the practical class at Woolwich, Captain Watson, a man of great ability, and Captain Gleig, also engaged at Woolwich. I think, therefore, it will not be unacceptable to military men.

E.—SCHEME PROPOSED BY THE COUNCIL OF MILITARY EDUCATION IN 1857, FOR THE ESTABLISHMENT OF THE STAFF COLLEGE.

Extract from the first general Report of the Council, published in* 1860.

The Council, in the first two parts of the official Report, and in the subsequent supplementary memoranda of November 18th and November 27th, 1857, endeavoured to lay the foundation of a system which should at once provide for the general as well as for the professional education of the officers of the army; at the same time it did not overlook the great question of the preparation of officers for the staff. This question was, in fact, under consideration simultaneously with the preceding, which, indeed, in addition to their own special advantages, ought to be viewed as the first steps towards it; since it is evident that the selection of well-educated officers for the staff will be more effective in proportion as the officers of the army (at large) are more highly trained and more perfectly instructed in professional subjects.

Part III. of the Report contains the result of the Council's deliberation on this most important subject, namely, the organization of a Staff College. At the time when the Council entered on the consideration of the best mode of training officers for staff employments, the Royal Military College, Sandhurst, consisted of two departments; a junior composed of cadets; and a senior, of officers who had been several years in the service. It was probably anticipated, when the senior department was first formed, that cadets who had distinguished themselves in their studies at the junior college would, after some years of active service, join the senior department, in order to continue their studies there, and that the result would be the gradual elevation of the character of British staff officers as scientific soldiers.

At the first establishment of the senior department it was not located with the junior department, but was in every respect distinct as regards position, government, and instruction; and it is believed that the early records of the senior department are sufficient to prove that in many instances the result anticipated was actually obtained, and that some of the most distinguished staff officers of the Peninsular war had been students of that department. Since then the two departments have been brought into intimate connexion under one roof, and gradually under the same military authority.

Latterly, the means of instruction having been much diminished, whilst an opinion had grown up that the senior department was not a certain channel of introduction to the staff, the number of students decreased, and the expectation of good results from the establishment was greatly diminished.

The adoption of the name of "Staff College," in lieu of that of Senior Department, prescribed by the original memorandum of His Royal Highness the General Commanding-in-Chief,† and embodied in the recommendation of the Council, was, therefore, in itself a most important step, as it recognized the real object of the institution, and, when coupled with the provisions of the second paragraph of clause 22 of the Council's Report, Part III., left no room for doubt on the mind of any officer who should obtain admission to the Staff College, that by perfecting himself in the course of studies and professional training pursued in that establishment, and passing with credit through his term of residence, he would secure for himself a staff appointment; no other channel for admission to the staff being left open after the 1st January 1860, excepting in the case of officers either of the rank of lieutenant-colonel at that particular date, or who had proved in the field their fitness for staff appointments.

These exceptions were manifestly necessary in order that the new rule should not act injuriously on officers who had previously risen to high rank, or who had distinguished themselves on active service; but, as the first of them is limited to those officers who shall have actually attained the rank of lieutenant-colonel on the 1st January 1860, it is evident that by the time the college may be expected to supply a sufficient number of staff officers, the number then annually appointed to the staff under this provision will be very small. The exception in favour of ability for staff appointment, proved in the field, must be permanent, but cannot be said to interfere with the prospects or expectations of the students of the Staff College.

The third clause of the memorandum opens the Staff College to officers of all arms of the service, under certain necessary conditions, the admission being by competitive examination; so that it may be fairly said that staff appointments, which, as a mark of distinction, have always been coveted by officers of the army, just as much as the higher offices of the law and other civil professions are by the members of those professions, are placed within the reach of all officers possessed at once of ability and of zeal sufficient to induce them to make the exertions necessary to secure the prize they wish to obtain.

It will be observed that the course of study has been arranged with the view solely to the beneficial results which the application of certain sciences to military objects is calculated to secure, whilst, at the same time, ample scope has been afforded for the development of a higher and more special order of talent, and a mode of applying it usefully to the public service, suggested, namely, by the employment, either in the Topographical Department or in the National Survey, of officers who have exhibited superior talents.

---

*Report referred to in the above Extract.**

The Staff College.

It is recommended that, for the due superintendence of both the junior and senior establishments at Sandhurst, the Council of Military Education should be constituted a Board of Visitors of both Establishments, with full authority to ascertain that every branch of instruction is conducted according to the regulations, and to suggest such alterations as may be found necessary from time to time.

1. The Council recommends that the name of the present Senior Department be changed to that of Staff College, and that this College be placed under the charge of a commandant, with a quartermaster and staff non-commissioned officers on its establishment.

As regards the position of the Staff College, the Council has carefully considered the only serious objection which has been urged against its continuance at Sandhurst, namely, the inconvenience of too much intercourse between the officers studying there and the cadets, and it must express its conviction that that objection is of a nature to be readily counteracted by a proper system of discipline. On the other hand, the qualities of the ground in the neighbourhood are so favourable for instruction in sketching, and the advantage of having a quiet retired situation for study so great, that the Council feels itself bound to recommend that the Staff College should be still located at Sandhurst.

2. It is recommended that the commandant of the Staff College should, in matters of discipline, report to the governor, and in educational matters through the governor to the Council.

3. The Council proposes that the Staff College shall be opened to officers of all arms of the service, and that admission thereto shall be by competitive examination.

The establishment to consist, in the first instance, of 30 students, in the proportion of 25 from the cavalry, guards, and line, to five from the two ordnance corps, should any officers of these corps desire to compete for admission.

This increased establishment to commence on the 1st April 1858.

As it appears to the Council that the payment of 30*l.* per annum by each student is a heavy call on the income of a young officer, and might deter those of limited means from entering the Staff College, while under the increased strictness of the system of instruction to be proposed, it will no longer be required as a check to officers becoming students without serious views of study—it is recommended that this payment be discontinued.

* * * * *

* From the Appendix to the First General Report of the Council of Military Education, page 54.

APPENDIX XI. (E.)

Staff College and Staff Appointments.

10. It is proposed that the following shall be the establishment of professors, viz.:—

Number of Professors.

Mathematics	2
Fortification and Artillery	1
Military Topography, and to assist in Fortification	1
Military Art, History, and Geography	1
Military Administration and Legislation	1
Hindustani	1
French	1
German	1
Total number of professors	9

Of whom four are professors for military subjects.

Natural Philosophy, Chemistry, Geology by occasional lecturers.

* * * * *

12. The Council proposes that the yearly course shall be divided into two terms, viz., from 1st February to 15th June, and from 15th July to 15th December, the intervening periods constituting the vacations.

The above half-yearly terms, it is recommended to subdivide each into two periods, viz.:—

First half year, winter period, 1st February to 30th April.

First half year, summer period, 1st May to 15th June.

Second half year, summer period, 15th July to 15th October.

Second half year, winter period, 16th October to 15th December.

This arrangement is proposed in order to apply the principal part of the summer periods to out-door studies.

13. The studies in each of the above periods of the student's course, and the time devoted to them, should be as follows:—

In the first half year, from 1st February to 15th June:—

Winter Period. February 1 to April 30.

	Hours per week.
Mathematics	12
Fortification	7½
Topographical Drawing	7½
French, German, or Hindustani	9
Military Art, History, and Geography, one lecture a week.	
Military Administration and Legislation, one lecture a week.	

Summer Period. May 1 to June 15.

	Hours per week.
Mathematics	12
Fortification	7½
French, German, or Hindustani	9
Military Art, History, &c., one lecture a week.	
Military Administration, &c., one lecture a week.	
Practical Instruction, viz.:—Ground Problems, Use of Instruments, Tracing, and Profiling	7½

In the second half year, from July 15 to December 15:—

Summer Period. July 15 to October 15.

	Hours per week.
Mathematics	6
Fortification and Artillery	6
French, German, or Hindustani	4½
Military Art, History, and Geography, one lecture a week.	
Military Administration, one lecture a week.	
Surveying (three days in the week)	19½

Winter Period. October 16 to December 15.

	Hours per week.
Mathematics	12
Fortification and Artillery	7½
French, German, or Hindustani	9
Military Art, History, and Geography, one lecture a week.	
Military Administration, &c., one lecture a week.	
Plotting Surveys done in the summer period	7½

In the third half year, from February 1 to June 15:—

Winter Period. February 1 to April 30.

	Hours per week.
Mathematics	6
Fortification and Artillery	12
French, German, or Hindustani	15
Military History, &c., Military Administration, &c., one lecture a week in each subject.	
Practical out-door Instruction	3

Summer Period. May 1 to June 15.

	Hours per week.
Mathematics	6
Fortification	4½
French, German, or Hindustani	6
Military History, &c., Military Administration, &c., one lecture a week in each.	
Field Engineering, Construction of Field-works, Bridges, &c. (three days per week)	19½

In the fourth half year, from July 15 to December 15:—

Summer Period. July 15 to October 15.

	Hours per week.
Plotting and report on Reconnaissance	6
French, German, or Hindustani	4½
Mathematics	3
Fortification	3
Military History, &c., Military Administration, &c., one lecture a week in each.	
Reconnaissances and Application of Field Fortification (three days a week) under the direction of the commandant	19½

Winter Period. October 15 to December 15.

Independent study, preparatory for final examination, assisted by Professors at the College.

Exercise in composition will be afforded to the student, during the whole course of instruction, in writing memoirs or essays on the subjects of lectures delivered.

Instruction in riding to be given three days in the week during the entire course.

Courses of evening lectures will be given in Natural Philosophy, Chemistry, and Geology.

14. The above course of studies has been drawn up after consultation with the Superintendent of Studies and the Professor of Mathematics and Fortification at the present senior department; and the number of hours allotted to each subject has been regulated on the assumed average of the attainments of the students on joining.

In carrying it out the students will be divided into two classes, those of the first year constituting the junior, and those of the second year the senior class.

* * * * *

15. It is proposed that there should be three lessons or lectures of one and a half hours each, and one of two hours daily, making in all six and a half hours of study. On alternate days each student will have a riding lesson of one hour. The hours of study will be hereafter arranged in time tables.

* * * * *

18. The course of studies has been drawn up, subject to any modifications which experience may suggest. The Council therefore proposes to consider annually what alterations may be necessary, and to insert its recommendation in its annual Report to the Secretary of State for War.

D. A. CAMERON, Major-General.
J. E. PORTLOCK, Colonel.
J. E. ADDISON, Lieut.-Colonel.

N.B.—The passages omitted in the above Report are embodied in the General Order of the 17th December 1857, announcing the establishment of the Staff College.

F.—ORIGINAL REGULATIONS FOR THE STAFF COLLEGE.

GENERAL ORDER ANNOUNCING THE ESTABLISHMENT OF THE COLLEGE.

Horse Guards,
17th December 1857.

THE Queen having been pleased to approve of the name of the present Senior Department of the Royal Military College at Sandhurst being changed to that of Staff College, which college is to be placed under the charge of a commandant, with a quartermaster and staff non-commissioned officers, on its establishment; and Her Majesty having also approved of the following regulations for the admission to, and for the studies of officers at the college, and for other matters connected therewith, the same are hereby published for general information.

1. The Staff College will be open to officers of all arms of the service, and will consist at first of 30 students, in the proportion of 25 from the cavalry, guards, and line, to five from the two ordnance corps, admission to the college being determined by a competitive examination.

2. No payment will be required from students to the funds of the college.

3. The qualifications requisite for admission are:—

(1.) A previous service of not less than three years, exclusive of leaves of absence.

(2.) A certificate from his commanding officer that the candidate is an intelligent, zealous, and well-conducted officer, and thoroughly acquainted with all his duties.

(3.) The candidate, if not a captain, to have passed the examination for a troop or company.

(4.) A medical certificate of good health and fitness for the active duties of the staff.

4. Commanding officers of regiments will in every case forward applications for admission to the Staff College through the general officer in command to the adjutant-general. If the commanding officer of the regiment or the general officer commanding cannot recommend the application of any candidate, the grounds of objection to be distinctly stated.

5. The competitive examination for entrance to the Staff College will comprise the following subjects, the relative values of each at the examination being shewn by the number of marks attached to it:

	Marks.
Mathematics	1,200
Military history and geography	900
French	300
German	300
Fortification	300
Military Drawing	300
Geology	150
Chemistry	150

In mathematics 400 marks will be allotted to arithmetic, the first four books of Euclid, and algebra, including questions producing simple equations; and of this number at least 300 must be obtained for qualification.

In French 75 marks at least must be obtained for qualification.

The remaining subjects, as well as the higher portions of mathematics, may be taken up or not at the option of the candidate, the marks gained therein being reckoned in determining his position in the list of competitors.

It is to be understood that these qualifications will be raised so soon as the system shall have been a sufficient time in operation to enable officers to come up for examination better prepared.

After the year 1858 the candidate will in addition be expected to have a sufficient use of the pencil to be able to draw from an example or object placed before him.

In regard to military history, the candidates will be required, when sending in their application for admission to the college, to state what has been the course and extent of their reading, in order that the Council of Military Education in framing the examination papers may be enabled to select for each candidate some one or more important campaigns, which he will be expected to describe in detail.

6. The examination of officers serving in the United Kingdom for entrance to the Staff College will be held in London under the direction of the Council of Military Education.

In the case of officers serving abroad the examinations of such as shall be allowed to compete will be conducted by means of the same printed questions as are set for the examination of candidates in London. These questions will be answered in writing in the presence of a board of officers which will be appointed by the general officer in command, and which will certify that the candidate has obtained no assistance from books, or help of any kind in the examination.

7. The college course of study will commence annually on the 1st February. The transmission of the printed examination papers to stations abroad will be so arranged that the claims of the candidates may be decided upon in time to admit of those who are successful joining the Staff College by the 1st February next ensuing.

8. The following will be the course of instruction at the Staff College, viz.:—

In mathematics, the minimum course will include Euclid, algebra, mensuration of planes and solids, trigonometry, and the application of those subjects, and elementary mechanics.

The French language, German, and Hindustani (the two latter optional).

Fortification and artillery.

Topographical drawing, military surveying and sketching.

Reconnaissance.

Military art, military history and geography.

Military administration, including the organization and equipment of armies in the field.

Military legislation.

Elements of natural philosophy, chemistry, and geology, as applied to the military sciences by lectures.

Exercise in composition will be afforded to the students during the whole course of instruction, in writing memoirs or essays on the subject of the course.

Riding.

9. The above course of study will occupy two years, which period is not to be exceeded except in cases of illness, with the sanction of the General Commanding-in-Chief.

The yearly course will be divided into two terms, viz., from the 1st February to 15th June, and from the 15th July to the 15th December, the intervening periods constituting the vacations.

10. As officers may be expected to join the college with very varied degrees of attainment, provision will be made to enable any student who may be well prepared in any particular subject to attend more especially to other subjects in which he may feel himself deficient. If, for instance, the student should come to the college previously well instructed in mathematics, he will be enabled to direct his attention principally to the military sciences, or to languages, in lieu of mathematical studies.

11. During the whole course monthly reports of the progress of each student will be forwarded by the Commandant of the Staff College, through the Governor of the Royal Military College, to the Council of Military Education.

There will be examinations at the end of every half year, the summer examinations being conducted by the professors of the college, and the winter examination by examiners independent of the establishment.

The winter examination at the termination of the first year of the students' course will be probationary, and any students who may appear unlikely to qualify themselves for the final examination at the close of the second year will be removed. Should, however, any marked case of deficiency or neglect be brought under the notice of the Council of Military Education at any half-yearly examination, or at any other period, such student will be also liable to removal.

12. The following will be the marks allotted to each subject at the final examination:—

	Marks.
Mathematics	600
Fortification and Artillery (Theory, 400; Drawing, 100; Memoir, 100)	600
Mrtillery drawing and surveying	300
Reconnaissance	400
Military art, military history and geography, with memoirs	600
Military administration and legislation	300
French	300

In the above subjects the officer will be expected to obtain at least one-half of the number of marks allotted to them. The following subjects can be taken up or not, at the option of the candidates, but one-third of the marks assigned to each must be gained in order that it may be allowed to count in determining the candidate's place on the list, viz.:—

	Marks.
German	300
Hindustani	300
Natural philosophy, chemistry, and geology, as applied to military science	300

Appendix XI. (F.)

Staff College and Staff Appointments.

13. Any officer may, with the sanction of the General Commanding-in-Chief, compete at the annual final examination, without previously passing through the college. And, further, any officer who desires to enter the college for one year only will be permitted, if there be a vacancy, to present himself at the first annual examination of the junior division of students (who will then have completed their first year), and, if qualified, may join the college accordingly. In each case the qualifications noted in paragraph 3 (above) will be required.

14. After the final examination, the Council of Military Education will draw up and submit for the consideration of the General Commanding-in-Chief a list of the successful candidates arranged in three classes according to merit, with a special report of those who particularly distinguish themselves, whose names will be also mentioned by the Council in its annual report.

15. The first annual college examination under the system above described will be held in December 1858.

16. Officers who shall have passed their final examination at the Staff College will be attached to each of the arms successively in which they have not previously served. They will be required to attend drills, parades, and field days, and they will avail themselves of every practicable means of making themselves generally acquainted with the discipline, interior economy, field movements, and duties of those arms.

Certificates to this effect will be forwarded to the Adjutant-General, in the case of officers attached to the artillery, by the Inspector of Drills at Woolwich, and in the case of officers attached to regiments of cavalry or infantry, by the officers commanding such corps.

It is presumed that a period of six months with each arm will be the utmost that will be required in this respect.

17. The order of the 9th April 1857, relative to the qualifications of officers for staff appointments, will continue in force until the 1st January 1860, when the system which has been above detailed will have fully come into operation; and the examinations referred to in that order will be conducted under the direction of the Council of Military Education.

Officers, however, who have attained the rank of lieutenant-colonel will be exempted from the operation of that order.

After the 1st January 1860 no officer will be appointed to the staff who shall not have gone through the Staff College, or passed the final examination of that college (par. 13), with exception of those who shall have attained at that date the rank of lieutenant-colonel, and in every case excepting officers of approved ability in the field.

18. Although the course of mathematics at the college has been limited to that amount of knowledge which is considered essential to complete the education of the staff officer, it is probable that many officers may desire to pursue their mathematical studies to a much higher point; and any candidates, therefore, who shall have proved their fitness for employment in the Ordnance Survey or in the Topographical Department, by superior progress in the science of geodesy, as well as of topography, will be named in the annual report of the Council of Military Education to the Secretary of State for War, as deserving employment in those services.

By order of
His Royal Highness
the General Commanding-in-Chief,

G. A. Wetherall,
A.G.

Appendix XI. (G.)

G.—PRESENT REGULATIONS FOR THE STAFF COLLEGE.

Extract from General Orders, by His Royal Highness The Field-Marshal Commanding-in-Chief, 1st November 1868.

G. O. 102.—*Staff College.*

I. The accompanying revised Regulations for the Staff College (Appendix) are promulgated for the information and guidance of officers of the army.

II. All applications to study at the Staff College must be made whilst the officer making it is present and serving with his regiment, through the commanding officer. No application from an officer on leave will be entertained.

III. Although only one officer can be spared from a battalion, at a time, for the purpose of studying at the college, this will not necessarily prevent a battalion sending more than one to compete at an examination, if circumstances admit of their absence from their regiment.

IV. The principle under which officers are allowed to enter the Staff College being that of pure competition, it follows that candidates who may be found qualified at any examination, but who, from want of a sufficient number of vacancies, cannot then be admitted, will not have any claim to subsequent admission, without undergoing another competitive examination.

V. Officers who have passed their final examination at the Staff College will be attached to other arms of the service for the purpose of acquiring instruction in those duties and field movements which are not common to their own. Certificates of their efficiency therein will be forwarded to the Adjutant-General by the officers commanding the corps to which they have been attached.

Officers of cavalry and infantry will attend at Woolwich, or such other station as may be ordered, for instruction in artillery, for a period of six weeks.

Officers of cavalry will be attached to infantry for one month.

Officers of artillery, horse artillery excepted, will be attached to cavalry for one month, and officers of infantry for six weeks.

Officers of artillery will not be required to be attached to infantry.

VI. The regulations relative to the qualifications of officers for direct staff appointments will continue in force until the system which has been above detailed shall have fully come into operation, and the examinations referred to in those regulations will be conducted under the direction of the Council of Military Education,

VII. Substantive field officers, however, who have attained the rank of lieutenant-colonel, will be exempted from the operation of that order.

VIII. As soon as the college shall be in a position to supply all vacancies in the staff of the army, no officer will be appointed to the staff who shall not have passed the final examination of the college, with the exception of those of the Royal Engineers, and of those substantive field officers who attained, before the 1st January 1860, the rank of lieutenant-colonel; and in every case excepting officers of proved ability in the field.

IX. Candidates who shall have proved their fitness for employment on the Ordnance Survey, or in the Topographical Department, by superior progress in the higher course of mathematics, as well as in topography, will be named in the report of the Council of Military Education as deserving of employment in those services.

W. Paulet, A.G.

Appendix to G. O. 102.

The following regulations for the admission of officers to the Staff College are substituted for those of the Memorandum of the 1st May 1866, published with the General Order No. 886 :—

1. The Staff College is open to officers of all arms of the service except the Royal Engineers, who are eligible for staff appointments without passing through the college, and consists, at present, of 30 students; admission to the college being determined by a competitive examination. Only one officer at a time can belong to the college from a battalion of infantry or a regiment of cavalry, and only four officers at a time from the corps of Royal Artillery; but so far as the exigencies of the service shall permit, there will be no limitation to the numbers allowed to compete for admission.

2. Fifteen vacancies will be offered for competition annually, two of which may be filled by officers of the Royal Artillery, provided they are among the 15 candidates highest on the list.

3. No payment is required from students to the funds of the college, beyond an entrance fee of 3*l.* from an unmarried and 1*l.* 10*s.* from a married officer, as a contribution to the college mess funds, in addition to the regulated quarterly subscription; and an entrance subscription of three guineas to the college library.

4. The qualifications requisite for admission are :—

1st. A service of not less than five years, previous to examination, exclusive of leave of absence.*

2nd. A certificate from his commanding officer, as follows :—

" I hereby certify that I have examined
" on the various subjects connected with his duty as a
" regimental officer, and more especially on the points
" which form the chief qualifications of a staff officer, with

* This is not to apply to the usual leave of absence annually granted to officers.

"a view to his competency for admission to the Staff College, Sandhurst; and to the best of my belief and judgment I consider him, from his general knowledge of the service, character, habits, and disposition, to be qualified in those respects for employment on the staff.

"He is a (good, fair, or indifferent) rider, and is not shortsighted."

Signature of Commanding Officer of regiment - - - } _____

Countersigned by the General of Brigade, or other superior officer - - - - } _____

3rd. The candidate, if not a captain, to have passed the examination for a troop or company.

4th. A medical certificate of good health and fitness for the active duties of the staff.

5. Commanding officers of regiments will, in every case, forward applications for admission to the Staff College, through the general officer in command, to the adjutant-general. If the commanding officer of the regiment, or the general officer commanding, cannot recommend the application of any candidate, the grounds of objection are to be distinctly stated.

6. The competitive examination for entrance to the Staff College comprises the following subjects, the relative value of each at the examination being shewn by the number of marks attached to it:—

	Marks.
Mathematics - - - -	1,200
Military history - - 600	900
Military geography - - 300	
French - - - - -	300
German - - - - -	300
Hindustani - - - -	300
Fortification - - - -	600
Military drawing - - - -	300
Mineralogy and geology - - -	300
Chemistry, heat, electricity, and magnetism - - - -	300

In mathematics 400 marks are allotted to arithmetic, the first four books of Euclid, and Algebra, including questions producing simple equations; and of this number at least 250 must be obtained for qualification.

7. Every candidate must take up either the French, German, or Hindustani language for qualification; the qualifying minimum is, in French, 150 marks; in German or Hindustani, 100 marks.

8. The remaining subjects, as well as the higher portions of mathematics, may be taken up or not at the option of the candidate, the marks gained therein being reckoned in determining his position in the list of competitors. No candidate, however, will be allowed to count marks in any subject left optional unless he obtains at least one-sixth of the number allotted to it.

9. In regard to military history, early notice will on each occasion be given of the special campaigns on which questions will be set at the next ensuing examination.

10. The examination of officers serving in the United Kingdom, for entrance to the Staff College, is held in London about the month of July, under the direction of the Council of Military Education.

11. In the case of officers serving abroad, the examinations of such as are allowed to compete are conducted by means of the same printed questions as are set for the examination of candidates in London. These questions are to be answered in writing in the presence of a board of officers, which will be appointed by the general officer in command, and which will certify that the candidate has obtained no assistance from books, or help of any kind in the examination.

12. Notice will be given of each examination, and detailed instructions for the guidance of candidates will be published annually in the General Orders of the army. Candidates are recommended to obtain the reports of the past examinations for admission, with copies of the Examination Papers, published by Taylor and Francis, Red Lion Court, Fleet Street.

13. The college course of study commences annually on or about the 1st of February. The transmission of the printed examination papers to stations abroad is so arranged that the examinations may be held simultaneously, and the merits of the candidates decided upon in time to admit of those who are successful joining the Staff College by the 1st February next ensuing.

14. A synopsis of the course of study will be forwarded to any officer on application to the Council of Military Education, 13, Great George Street, S.W.

15. The following are the subjects of instruction at the Staff College, viz.:—

Mathematics.
French, German, and Hindustani.
Fortification and artillery.
Topographical drawing, military surveying and sketching.
Reconnaissance.
Military art, military history and geography.
Military administration, including the organization and equipment of armies in the field.
Military legislation.
Elements of natural philosophy, chemistry, and geology, as applied to the military sciences.
Exercises in composition will be afforded to the students during the whole course of instruction, in writing memoirs or essays on the subjects of the course.
Riding.

16. The course of study occupies two years, which period is not to be exceeded except in case of illness, and then only with the sanction of the Field-Marshal Commanding-in-Chief.

17. The yearly course is divided into two terms, viz:, from the 1st February to 15th June, and from the 15th July to the 15th December, the intervening periods constituting the vacations.

18. During the whole course monthly reports of the application and progress of each student will be forwarded for the information of the Council of Military Education. Examinations are held at the end of every half year; the summer examination being conducted by the professors of the college, and the winter examination by examiners independent of the establishment, under the superintendence of the Council of Military Education.*

19. The winter examination at the termination of the first year of the student's course is probationary, and any student will be required to withdraw from the college who shall fail to obtain the minimum aggregate of marks hereinafter stated.

20. Should, however, any marked case of deficiency or neglect be brought under the notice of the Council of Military Education at any half-yearly examination, or at any other period, such student will be also liable to removal.

21. The following five subjects will be taken up by every student at the Probationary Examination, viz.:—

	Maximum of Marks.	Minimum of Marks allowed to count.
I. Fortification - -	280	90
II. Military drawing and surveying - -	270	90
III. Military history -	300	100
IV. Military administration and legislation -	300	100
V. French, German, or Hindustani - -	400	133

Every candidate will be expected to obtain 800 marks on the above subjects.

22. All credits gained on the four military subjects will be carried forward to the Final Examination.

23. Of the following subjects the student may select any two, and in those numbered from 1 to 6, as well as in the language already selected as "Obligatory," the student may at his option carry forward to the final examination the marks he gains, provided they amount in each case to three-fourths the allotted maximum: when he will be considered as finally examined in that subject:—

1. Mathematics, lower course - -	400
2. Mathematics, higher course -	500
3. French - - - - -	400
4. German - - - - -	400
5. Hindustani - - - -	400
6. Any other modern language -	400
7. Natural sciences, lower course -	150
8. Experimental ditto, lower course -	150

In those numbered 7 and 8, the marks gained will be carried forward to the final examination.

24. In addition to any two of the above subjects the following may be taken up at the probationary examination; and if 150 marks be gained in it they may, at the option of the student, be carried forward to the final examination:—

Spherical trigonometry and practical astronomy - 200

25. Any officer who does not take up mathematics as a subject will be required to satisfy the Examiner that he has a competent knowledge of mensuration: of the mode of determining heights and distances by ground problems, by the ordinary trigonometrical calculations with the aid of logarithms: and of elementary mechanics; as shown in the synopsis of studies of 1868. His knowledge of these subjects will be tested at the probationary examination at the end of his first year of residence.

* In military history periodical examinations are conducted by the College Professor and the Public Examiner in concert.

APPENDIX XI. (G.)

Staff College and Staff Appointments.

26. The following are the marks allotted to each subject at the final examination.

Subjects to be taken up by every student:

	Maximum No. of Marks.*	Minimum allowed to count.
Fortification and artillery	600	300
Military drawing and surveying	350	350
Reconnaissance	350	
Military art, history, and geography	600	300
Military administration and legislation	600	300
French, German, or Hindustani	400	200

Every candidate will be required to obtain for qualification an aggregate of 1,800 marks on the above five subjects.

27. Of the following subjects the student may select any two, and the credits gained will count for position in the order of merit:—

	Maximum No. of Marks.	Minimum allowed to count.
Mathematics, lower course	400	240
Mathematics, higher course	500	300
French	400	240
German	400	240
Hindustani	400	240
Any other modern language	400	240
Natural sciences	400	240
Experimental do.	400	240

28. In addition to any two of the above-mentioned subjects the following may be taken up by any student who did not take it up at the first year's examination, or did not then obtain three-fourth marks in it:—

Spherical trigonometry and practical astronomy	200	120

29. In the examination in modern languages great stress will be laid on original composition.

30. Officers desirous of showing their proficiency in other of the optional subjects, in addition to those which are allowed to be taken up for the competitive examination, may be examined therein, and a special report of their qualifications will be made to the Field-Marshal Commanding-in-Chief, provided they obtain three-fifths of the maximum allotted to the subject; but they will not be allowed to count any marks thus gained in determining their position in the order of merit.

31. After the final examination the Council of Military Education will draw up, and submit for the consideration of the Field-Marshal Commanding-in-Chief, a list of the successful candidates, arranged according to merit.

* Including the marks appropriated to the probationary examination.

APPENDIX XI. (H.)

H.—GENERAL ORDER INSTITUTING EXAMINATIONS FOR STAFF APPOINTMENTS.

Horse Guards, S.W., 9th April 1857.

HIS Royal Highness the General Commanding-in-Chief having had under his serious consideration the question of Army Education, especially as relating to qualifications for Staff Appointments, is pleased to promulgate, for general information, that from and after the 1st of January 1858, the undermentioned acquirements will be considered indispensable before appointment to the situations annexed.

Every officer, before appointment, will be required to undergo an examination on the subjects mentioned, in such manner as shall be hereafter announced.

This regulation is not intended to affect officers now on the Staff.

Qualifications of Staff Officers.

Aides-de-Camp.

To write a distinct and legible hand, and compose English correctly.

To have a good colloquial knowledge of one foreign language.

To have a good eye for a country, and to be able to produce an intelligible sketch of it.

To know the use of the sketching compass, or pocket sextant,—in order to lay down and protract the leading features of a country to be described.

To have a thorough knowledge of regimental duty, and tactics, and field movements on an extended scale.

Also a knowledge of field fortification, both as regards construction and correct description on reconnaissance.

Brigade Majors.

To have all the qualifications of a good adjutant,—the same acquirements as are exacted from an Aide-de-Camp, —and a thorough knowledge of Military Law, and the Army and War Office Regulations.

Deputy Assistants Adjutant-General and Quartermaster-General.

The following further acquirements will be required to qualify for Deputy Assistants Adjutant-General and Deputy Assistants Quartermaster-General, viz.—

Practical sketching,—both on horseback, called "flying sketching,"—as well as correct and finished plotting;—practical trigonometry and geometry, with knowledge of logarithms.

To write, read, and speak at least one foreign language;—to judge of ground and its proper occupation by all arms;—to have a perfect knowledge of castrametation, and the principles of permanent fortification.

And to be thoroughly acquainted with geography and military history,—especially as relates to the campaigns of ancient and modern commanders.

Assistants Adjutant and Assistants Quartermaster-General.

To the whole of the foregoing will be added, for Assistants Adjutant and Assistants Quartermaster-General, the elements of mechanics, hydrostatics, and geology;—the construction of military bridges, dams, &c.;—an acquaintance with the principles of strategy;—and statistics of the Army.

All Staff officers should be able to ride well.

By command of His Royal Highness,
The General Commanding-in-Chief,
G. A. WETHERALL,
Adjutant-General.

APPENDIX XI. (I.)

I.—PRESENT REGULATIONS FOR EXAMINATIONS FOR DIRECT STAFF APPOINTMENTS.

From the Queen's Regulations for the Army, 1868.*

220. As soon as the Staff College shall be in a position to supply all vacancies on the Staff of the army, no officer will be appointed to the Staff who shall not have passed the final examination of the college, with the exception of officers of the Royal Engineers, and of substantive field officers who attained before the 1st January 1860 the army rank of lieutenant-colonel, and in every case except officers of proved ability in the field.

221. Until such time, however, all officers recommended for staff appointments (except substantive field officers who have attained the rank of lieutenant-colonel), who have neither obtained certificates at the Staff College nor proved their fitness for staff employment by services in the field, will be required to pass examinations before a board of officers and by the Council of Military Education respectively, in the following subjects:—

* Section 6, paragraphs 220 to 222.

a.—Aide-de-Camp.

Regimental Duty.—The candidate must be prepared in all the subjects required in the examination for promotion to a troop or company, as laid down in paragraphs 161 or 166 of these regulations.

Tactics and Field Movements.—He will be expected to show a competent knowledge of the tactics and field movements of that branch of the Service to which he is destined to be attached as a staff officer, and a general knowledge of those of the other two arms; the examination will include the movements of a brigade, and will be based on the regulation books for the several arms.

On being reported by the Adjutant-General to possess the necessary professional qualifications, the candidate will be examined by the Council of Military Education in the following subjects:—

English Composition.—The candidate's proficiency in this respect will be tested by his answers to the examination papers.

Foreign Languages.—He will be examined *vivâ voce* by the examiner appointed under the Council of Military Education in whatever language he may select, and he will also be required to write a short letter on a given subject in that language.

Military Sketching.—He will be required to sketch at least two square miles of ground selected by the Council. The sketch need not be elaborately finished, but it must clearly and intelligibly represent the features of ground, the principal points of which must be determined by means of the pocket sextant or prismatic compass.

Field Fortification.—He must show a knowledge of the principles and construction of field works, and must be able to explain the particular objects to which they are respectively applicable, as well as the modes of attacking and defending them.

b.—Brigade Major.

A certificate will be required from the commanding officer of the regiment to which the candidate belongs, or has belonged, that he possesses all the qualifications of a good adjutant. The examination for brigade major will be especially directed to the points more immediately connected with the duties attached to the appointment, as Military Law, the "Queen's Regulations and Orders of the Army," the Royal Warrant for Pay, Promotion, &c., and, in tactics, all that relates to alignments, points of formation, distances, &c., &c. The subjects of examination are the same as in that for the appointment of aide-de-camp, but the examination will be, throughout, of a higher order.

*c.—Deputy Assistant Adjutant-General, Deputy Assistant Quartermaster-General, and Assistant Military Secretary.**

Military Drawing and Sketching, Judgment of Ground, and its Occupation by all Arms.—The candidate will be required to make a rapid sketch on horseback, with report, of about six square miles of country; and to select a position which might be occupied by a given force of the three arms, for some stated object, and to show how he would dispose the troops for that purpose. He will afterwards be required to make a correct and more finished plan of the position selected, with the disposition of the troops shown upon it.

Practical Geometry and Trigonometry.—The examination in these subjects will be limited to determining heights and distances by ground problems, and the ordinary trigonometrical calculations with the aid of logarithms.

Castrametation.—The candidate will be expected to know the mode of encampment for each arm of the Service.

Permanent Fortification.—The theory and construction of permanent works, as exemplified in Vauban's or any other system the candidate may select, as well as the modes of attack and defence applicable to them.

Military History and Geography.—The candidate will be expected to give proof that he has carefully studied at least four of the most memorable modern campaigns, of which the details are best known, such as those of Marlborough, Frederick the Great, Napoleon, and Wellington, and in these he must be able to explain the apparent objects of the various movements and the reasons which he supposes led to their adoption, and, further, to describe the military geography of the seat of war.

Foreign Languages and Professional Subjects.—In languages before the Council of Military Education, as well as in professional subjects before the board of officers, the examination for this appointment will be of a higher order than those in (*a*) and (*b*).

d.—Assistant Adjutant-General and Assistant Quartermaster-General.

The examination for these appointments will include all the subjects in (*c*), and will throughout be of a higher order.

222. When an officer has once passed the qualifying examination for an appointment on the Staff he is not to be required to pass a second examination should he be recommended for a similar appointment at any future time.

* It has recently been decided that the examination for the appointment of Assistant Military Secretary shall be confined to the subjects required for Aides-de-camp. (Third General Report of the Council of Military Education, 1869.)

APPENDIX XII. SCHOOL OF MUSKETRY, HYTHE.

Note by the Secretary.

The School of Musketry was established in June 1853, and was on its first institution placed under the direction of Lieutenant-General (then Lieutenant-Colonel) Hay, by whom a scheme had been proposed for the instruction of non-commissioned officers and privates in the use of the Minié rifle, which had at that time recently been introduced into the service. The school originated in detachments from various regiments being sent to Hythe for instruction, as announced in the following letter from the Adjutant-General to Lieutenant-Colonel Hay:—

Sir,— Horse Guards, 3rd June 1853.

I am directed by the General Commanding-in-Chief to intimate to you that detachments from regiments as per margin * have been ordered to Hythe on Monday the 6th instant, there to be placed under your orders for the purpose of instruction in the practice of the Minié rifle.

Captain Fox, of the Grenadier Guards, has been appointed to the establishment at Hythe, and directed to report himself to you at that station on the day above specified.

You will be pleased to nominate a subaltern officer whom you may consider capable of assisting you in the duties at Hythe, that the sanction of the General Commanding-in-Chief may be obtained for his appointment.

I have, &c.

Lieutenant-Colonel Hay, 19th Regiment. G. A. Wetherall, Adjutant-General.

In August 1854 the following fixed establishment was sanctioned for the School of Musketry† :—

One lieutenant-colonel, commandant.
One captain.
One lieutenant.
One quartermaster.
One armourer.
One serjeant-major.
Five staff serjeants.
Nine privates.

In the following year a permanent "Corps of Instructors of Musketry" was organized in connexion with the School of Musketry,* the regulations for which were at subsequent periods revised by Royal Warrants dated 8th April 1856, and 27th September 1861—the latter warrant being that by which the School of Musketry is at present regulated.

An extension of the instructional branch of the establishment took place in August 1861 by the institution of a second School of Musketry at Fleetwood. The cause which led to the opening of the latter establishment was in a great measure the demand by officers of Rifle Volunteer Corps for admission to the course of training at Hythe, which the accommodation and means of instruction there did not admit of adequately meeting. In later years the same pressure no longer existed, and as it was considered that under these circumstances one establishment would be sufficient for the training of an adequate number of officers of the regular army, as well as of a due proportion of officers and serjeants of Militia and Volunteer Corps, the school at Fleetwood was closed on the 30th September 1867.

The establishment of the School of Musketry at Hythe is at present as follows:—

One commandant and inspector-general of musketry.
One deputy-assistant adjutant-general.
One chief instructor.
Two captain instructors.
Two lieutenant instructors.
One paymaster.
One quartermaster and acting adjutant.
One surgeon.

In connexion with the central establishment at Hythe, district inspectors are appointed to superintend the general system of musketry instruction throughout the army. Of these officers there are at present three in Great Britain, two in Ireland, five in the Colonies, and ten in India. It has, however, been recently decided that the office of District Inspector of Musketry shall be gradually abolished, as the existing appointments successively fall vacant.

* Contributions from Indian Government.

† To 31st March 1867.

‡ The sum of 216*l.* stated as the receipts in 1862–63 merely represents the balance of the sums due from students and cadets of the Royal Military College on account of the prior period, a change having taken place in the mode of dealing with the contributions for 1862–63. The amounts received were at that time made items of account with the paymaster of the institution, instead of being paid direct into the Bank of England within the period to which they related. The result of the change is that the receipts stated against the year 1863–64 apply to the year ended 30th September 1863, and so on, for the subsequent periods.

N.B.—The return for the six years ended the 31st March 1864 does not contain certain charges, such as military emoluments, clothing, &c., the cost of which was provided for under other votes, but which have since that date been included in the grant for these educational establishments.

DIGEST OF THE EVIDENCE (ORAL AND WRITTEN)

GIVEN BEFORE THE

ROYAL COMMISSION ON MILITARY EDUCATION.

N.B.—In the following Digest, references to **Arabic numerals** have relation to the numbered questions in the Minutes of Evidence, **Roman numerals** to the pages in the Appendix.

For the sake of brevity, educational establishments are designated by the name of the place where situated. Thus, unless the context clearly point to another meaning—

"Addiscombe,"	will signify	the late East India Company's Military College at Addiscombe.
"Chatham"	„	the School of Military Engineering at Chatham.
"Sandhurst"	„	the Royal Military College for cadets at Sandhurst.
"Shoeburyness"	„	the School of Gunnery at Shoeburyness.
"Woolwich"	„	the Royal Military Academy at Woolwich.
"The Council"	„	the Council of Military Education.

NAPIER, MAJOR-GENERAL WILLIAM C. E., Vice-President of the Council of Military Education.

Was a cadet at the Military College, 2; from 1858 to 1861 was Major and Superintendent of Studies there, 3, 4; subsequently, till 1864, Commandant of the Staff College, 5; has, since 1866, been Vice-President of the Council, 7.

Council of Military Education. Details composition of Council, 8, 9. The Commander-in-Chief is President, 103, *ex-officio*, 140, but the office is honorary, 137. He is occasionally consulted personally, 105, 138; but never comes to the Council office, 69. If he were not Commander-in-Chief, the President would take his share in the work, 139. Practically the Council consists of the Vice-President and four members, 70. Names the members, 68; their salaries, 49. Fresh blood is desirable from time to time, 14, 45; but the tenure of appointment should be extended to ten years, 12–16. The five-years rule has been irregularly applied, 17; and the authorities will not re-appoint for a second term, 18. Under any fixed term would scarcely lose two members at once, 19–21. There are a secretary, 67, and eight clerks, 85, 86. Captain Greentree has been Secretary throughout, 131–133. The members are appointed by Commander-in-Chief, with Secretary of State's concurrence, 106. The Vice-President and Military Members attend, as a rule, daily, 56–58, 64, from four to five hours, 60; with a vacation of two months annually, 61, 62. The civil member rarely attends, except for examinations; but he gives his opinion, when asked, on cases sent to him, 53–55. He sees all important papers, 88. When required is bound to attend, 96, at his own cost, 97, 98. The members have separate rooms, 65; and meet when there is anything to discuss, 66, 76. Two make a quorum, 84. Differences of opinion are settled by discussion, 28–30; which is not always short, 78. There is no *Agenda* paper, 77. Never knew a member resign because he dissented, 33. The Council advises the Commander-in-Chief and Secretary of State in matters of military education, 35, 118, freely and unreservedly, 119. Reports and advice are addressed to the Commander-in-Chief, as such, 72, 104, often for transmission to the Secretary of State, 73. The Council reports occasionally to Secretary of State, 120, on matters of finance or on army schools; on all other subjects to Commander-in-Chief, 23–26. The direct War Office business is not large, 80–82, 109; but the Secretary of State can communicate directly when he pleases, 121, 122, 126. Questions involving principle must be settled by Secretary of State, 108–110, possibly after personal communication with the Council, 111. A letter must be

NAPIER, Maj.-Gen. WM. C. E.—*cont.*

signed by the Military Secretary to authorize action, 112. Sees no gain in making the Council a Department of Horse Guards or War Office, 36; but it could not be independent of the Commander-in-Chief, 34, 107. Describes the Council's duties, 10, 92; which have gradually increased, 128–130; their distribution, 93, 94. The work is chiefly with army schools, but varies, 59; much correspondence about schools, libraries, and recreation rooms, not much about the colleges and general education, 74. The numerous returns cause much labour, 87. Council advises on every change in studies at the three colleges; but this does not cause much correspondence, 134–136. Important papers are submitted to the Council, 75; but each member manages ordinary details in his own branch, 79. The Council has nothing to do with discipline at the colleges, merely with inspection of studies, 27, 117. Examines by means of a staff of examiners, 11, who, with the professors, are selected by the Council, 22, 115, 116, collectively, 31, 32. The Council recommends, but cannot appoint, 32, 114. Criticizes examination papers, 43, 44. One member of Council, at least, is present at every admission examination, 89; of which there are nine or ten yearly, 90. The Woolwich examination takes a fortnight, others a week, 91. Has but little to do with Hibernian school, 95. Council's recommendations are sometimes overruled, but never as to appointment of professors or examiners, 37–41, 113. Mentions the failure of an appeal against its recommendation, 123–125. Is not aware of any general regulations for the Council, 71, 127–130.

Examiners. Mode of selecting examiners, 142–145. They hold their appointments at will, 42; but examining is not easy, and the Council are glad to keep an examiner, 303. List of examiners, 148–150. They are employed in rotation, 146, 147; and paid by fees, 50–52. Crammers do become acquainted with the style of an examiner; cannot say if that be a reason for often changing examiners, 305, but there would be an advantage in it, 400. Examiners are not officially in communication with public schools, 334.

Public Schools. Cannot explain why public school candidates fail, 264; but examinations prove that instruction in public schools is faulty, 180–183, 320, 321. Counts as public schools Eton, Harrow, Rugby, Westminster, Winchester, and Shrewsbury, 201; not such as the High School in Edinburgh, 203, 204. Is not aware whether French is now taught at all public schools, 246. If marks in English and mathematics were not obligatory, there would probably be more candidates from public schools, 252. To make French so, would diminish them, 253. Would

NAPIER, Maj.-Gen. WM. C. E.—*cont.*
accept the certificate of the head master of a public school in lieu of examination for direct commission, 292, if there were security that a proper school examination had taken place, 322–324; but the fixing on certain schools would be a difficulty, 293, and the advantage of an independent examination would be lost, 325. Encouragement of a "modern department" in public schools tends to keep candidates from cramming schools, 301; but cannot say whether their pupils are better educated than those from crammers, 299. The Council and the public schools work up to each other, 313, 314; communication from time to time with the head masters might facilitate such agreement, 333. In public schools elder boys exercise disciplinary control over younger boys, which is wanting in private schools, 377. Might so far meet the public schools as to enable them to compete with crammers for direct commissions and for Sandhurst; but not for Woolwich, 388, the entrance examination being much higher, 389. Cannot judge of public school education, because boys (except about 5 per cent. of those examined) leave school and go to a crammer, 391–394; cannot say for how long, 395. Parents think there is no certainty of passing without the crammer, 186, 396. Some Commanding Officers like cadets direct from public schools, 472. Does not include in the 5 per cent. direct from public schools the candidates from Cheltenham and Marlborough, 188, who almost always pass, 189, without aid of crammers, 300. They are very successful for Woolwich, 390.

Private Schools and "Cramming." Candidates usually go to private tutors, 155, 288; probably to make up their total of marks by cramming special subjects, 156, 157. The nature of the examination causes the employment of crammers, 274; but cramming is bad educationally, 386, and should be stopped, 387. There is not a shadow of foundation for the idea that crammers know beforehand the questions to be put, 398; but as the questions are published after each examination, anyone may become cognizant of their general style, 399. Nearly all the candidates who fail come from crammers, 193. Cramming schools are in and around London, 290, 366; and are distinguished by a low tone of discipline and morals, 289, 291, 335; but this opinion is not based on official knowledge, 336–338. Has heard that, in many schools, boys are allowed to be absent all night, 369, 378; but has no personal knowledge thereof, 379. Members of Council are sometimes asked to recommend cramming schools, 339; witness refuses, 340. The Council proposed to appoint an Inspector to supervise the discipline and morals (not the education, 344, 362, 372) in cramming schools; and that candidates should be accepted only from those schools which obeyed the Inspector's regulations, 341–344, 362, 385. Inspection of discipline and moral tone would be difficult, but not impracticable, 363, 382, 383. In London schools the young men must be free for some hours at a time, 365, 367; would not impose military discipline, 368; but merely check the hours of allowed absence, 369, 370. Would not take any responsibility towards parents, 372. The Inspector would visit schools without notice, 374, 375, like a detective, 376. It would be hard to define the schools to be registered, 351, and to prevent crammers from evading the rules, 352–356, 358. Thinks well-conducted schools would be glad to be registered for supervision, 350. Would register any place of education requesting it, 357, 360; reserving powers to strike it off the register, 361. Believes parents would support the registered schools, 359, 384. The scheme was held impracticable, 343, as regards Woolwich, for which the competition is open, without an Act of Parliament, 345–349. Was not personally in favour of the measure, 373; but no disciplinary system would be perfect without supervision, 380, 381. Children are better taught at cramming schools than at public schools, 304.

Examination for Direct Commissions. Conditions and nature of examination for Direct Commissions, 141, 280; which, having no other object than to determine if candidates have had the education of gentlemen, 151, 260, 279, 310, 420, is deliberately fixed without reference to the professional knowledge required from officers, 309–312, 332; and is, he considers, quite satisfactory, 165, 166. The standard was fixed (as regards subjects, not marks, 263) after consultation in 1857 with head-masters of public schools, 152–154, 255; who would be unlikely to over estimate, 277, 318, 319. It is a very low standard, 281; and has been reduced, 46, 48, 210–212, as low as possible, 47, or officers could not have been got, 48; but the minimum qualification is practically the same as in 1858, 213–216. Candidates are now better prepared

NAPIER, Maj.-Gen. WM. C. E.—*cont.*
than before the standard was reduced, 219, 220. Should regret to see the knowledge of officers limited to what is actually indispensable for routine duties, 259. The State has a right to expect the education of a gentleman, 260. Examiners were desired not to be so strict, 282, some years ago, 284. Never heard that the style of questions alarms the candidates, 397. They are not difficult, 240; as the examination is not competitive, 241. An examiner is always present to explain any doubtful point in a question, 275, 276. Publishing the questions is not necessary, but is an advantage to the candidates, 401. A little mathematics and English are the only compulsory subjects, but so many marks must be made up in others, 157. The minimum to pass is 1,500 marks, 160; 3,600 marks might be won in classics, 158; and classics, mathematics, and English ought to pass a candidate, 159; or English, Latin, and arithmetic would suffice, 164, 187. Some candidates obtain 6,000 marks; others fail because they cannot get 1,500, 261, 262. Some young men are incapable of acquiring mathematics. The examination would exclude them, 273. The object in giving so many marks to natural and experimental sciences is to make the admission as wide as possible; if the number of subjects were lessened, the successful candidates would probably diminish, 416–419. Increased attention is now given to such subjects at schools, 421. Examination papers are submitted, before printing, to the Council, 402, 403; who know the total marks for each paper, but not the number for each question, 404. The mixing in one paper of the obligatory and non-obligatory parts of a subject may be in favour of a crammed candidate; their separation might be an improvement, 405–415. Details the *Mathematics* required, 161. An officer cannot do without arithmetic, 258; though more than the first four rules may not be indispensable to a regimental officer, still would retain as obligatory a higher standard, with some Euclid as a test of general education, 221–233, although a lad may now pass without any Euclid, 256. An officer ought to be able to keep his men's accounts without aid from the pay-serjeant, 272; and he cannot do so without fractions, proportion, and interest, 266, 267. The first three books of Euclid would be very advantageous to him in his profession, 268–270, even though an officer, ignorant of mathematics, may manœuvre a regiment admirably, 271. In *English* 200 marks are obligatory, 162. The power of writing an intelligent report, properly spelt, ought to be obligatory, 234–239. "Modern" education may ensure passing, 190, 192; but does not advocate it to the detriment of classical education, 191. Knowledge of *Fortification* was formerly required, 206; but it was found better to exclude technical matters from the examination, 207, 208. A knowledge of *French* or *German* is very important in an officer, 242–244; but if made obligatory would render it more difficult to obtain officers, 245. Supposes it is absolutely necessary for a naval officer to know French, 247; but as regards the army, objects to increase the difficulty of getting candidates for direct commissions, 249. It was formerly obligatory, 251. Doubts if it could be acquired in two months in a "pension," 278. Almost every candidate goes up in French, 315; which may therefore be considered part of the education of a gentleman, 316; and is very advantageous to everybody, 317. Graduates from the universities are not examined, 202, 205; they are required to have passed B.A., 294. A lower university pass might suffice if the age of admission were assimilated to that for the general public, 295–297, 327, 328. An examination at an university differs from one at a public school in being conducted by general examiners, 326. Candidates examined average 500 annually, 209; of whom hardly 5 per cent. come direct from public schools, 155, 288. Does not classify the other 95 per cent., 194, 195, 197–200. They are from crammers or private schools, 286; but cannot say how many, 306, 307. From "public schools and private tuition" would probably mean from a cramming school, 308. Some come from schools abroad, 196. It is not obligatory on candidates to state where educated, 199. Thirty-one per cent. of candidates fail at each examination, 167, 169, 171, 217, 218, 285. Three trials are allowed, 168, 172; and very few fail altogether, 170. Passing the limit of age is a bar to success, 173. Would reduce the maximum age for candidates, 174–177, except for students from the universities, 178, whom it is an advantage to bring into the army, 179; objects to old ensigns, 331.

Sandhurst. Education at the Royal Military College is under the Council, 422. The College was founded in 1799, 542, and is regulated by a warrant of

NAPIER, Maj.-Gen. WM. C.E.—*cont.*

1808, 545, 546. The original object of the College was to give officers' sons a good general and military education, 423, 460, 543, cheaply, 479, 549; though all cadets were not officers' sons, 478. Approves that system, 455; and doubts the gain by raising, in 1858, the admission age from between 13 and 15, 437–440, 452–454, 477, to between 16 and 19, 426, 509; but the old system could not be reverted to, 462; and Wellington College does not supply its place, 480. Formerly cadets sometimes went from Sandhurst to Woolwich, 547, 548. Military science was always taught, 550. Joined the College as the change was made, 463; saw no distinction between the characters of the old and new cadets, 464–466. Under the present system the College gives professional education to young men prior to joining their regiments, 424, 461, and to all (except from the ranks) appointed to commissions without purchase, 425. Sandhurst now provides officers for Cavalry and Infantry, 551, and perhaps Military Train, 552, 553. About 200 commissions with and without purchase are given annually from Sandhurst, 554.

Thinks the present margin of admission age (16 to 19) needlessly large, 493, 494. Would reduce the limit to between 15 and 17, 431, 445, 451, 495; as a good approximation to 16, the best age for entering Sandhurst, 487. Considers 17 or 18 too old an age for youths to enter a military college, notwithstanding French, Prussian, and American experience, 519, 520. Lowering the entrance age need not lower the examination, 503, 504. Thus to alter the age would not be to return to the old system, 456, 458. Would not allow any pupil to remain after 19, 475. His object would be to obtain younger officers, 432, 433, 459, 488, 489. By not allowing extension of time to university men, 431, 473, would exclude them, 457; as it is prejudicial to discipline to mix young men of very different ages, 434–436, 491. Having an upper and a lower school would not remedy this, 469, 470, though at one time pupils were divided according to age into A and B companies, 482. Cadets would range from 15 to 19, 490, with very few approaching either limit, 492. University candidates are admitted up to 21 for Infantry and 23 for Cavalry, if they have passed responsions, moderations, &c., 426, 509; but this prolongation is to be abolished, 329, 330. Understands there is now a pupil aged twenty-four, 483. Dislikes old ensigns, 331. A Commanding Officer must object to one of 22 joining, 471; though some prefer Sandhurst cadets, 472. An officer should join the army between 17 and 18, 441, 444, 467, when still plastic, 468; and be a captain at twenty-four, 474. Antedating commissions would not effect this, 467.

Prefers nomination with a qualifying examination to open competition, 1155, 1159. Entrance is by nomination, 805; not competition, 806. The entrance examinations are half-yearly, 426, nearly identical with those for direct commissions, 427, being conducted by the same examiners, 429, 517, 518; governed by like principles, 430; and intended as a test of general education, 428. All candidates pass the same entrance examination, 506; for Queen's and Indian cadets it is merely qualifying, 510, 511; for others nominally competitive, but really qualifying, as vacancies always exceed candidates, 507. Nineteen per cent. fail, 512; cannot account for the difference from the per-centage for direct commissions, 513; but, the inducement being a commission without purchase, the candidates come better prepared, 514–516, and are younger, 518. Sons of officers have some advantages, but they let in very few, 481. Would not limit candidates to pupils from public schools, 484, 485; but would require a certain amount of preliminary education, 486. Does not think cadets from public schools are averse to the Sandhurst discipline, 505. Cadets are taught military subjects to give them afterwards an intelligent interest in their profession, 689, 690; they are taught successfully, 691, except the idle cadets, 692; who include nearly all the non-competing, 693, say two-thirds of the whole, 694, or perhaps one half, 707, 757. With Sandhurst at its present size a large proportion of purchase commissions must go to the cadets, 788–790. Irrespective of the commissions given to Queen's and Indian cadets there are non-purchase commissions for about one-third of the competitors, 527, 528. Cadets soon learn their chance of obtaining a non-purchase commission, 757, 758; in fact the entrance examination shows it, 761–763; and work accordingly, 759, 760. The reward is now insufficient and uncertain, 716, 717, 754; which directly discourages industry, 718, 719. All non-purchase commissions, except those given to non-commissioned officers and Queen's or Indian cadets are, however, competed for at Sandhurst; it would not be possible therefore to increase the number

NAPIER, Maj.-Gen. WM. C.E.—*cont.*

under the existing purchase system, 720–724; and cannot say what other prizes could be added, 764. Modes of getting rid of the idlers, 695, 753. To give more commissions without purchase, with a high qualifying minimum, would diminish the idlers, 702, 703; would let those failing in by purchase, 704, 705. If there were no idlers, and the course were two years, there would be four times as many cadets as non-purchase commissions given each half-year, 708. To raise the entrance examination would not diminish the idlers, 709–713; but it is better for the service to have a few well instructed officers rather than many superficially instructed, 714; which may be in favour of raising the examination at entrance and exit, 715. Cannot explain why idlers, intending to purchase, do not leave Sandhurst and go in for a "direct commission," the examination for which is about the same as the Sandhurst entrance, and therefore as that already passed, 765–784. Queen's and Indian cadets merely qualify, 525; and receive commissions without purchase on doing so, 526. They scarcely ever compete, 529, 538, 539, are idlers, and their presence prejudicial to the College, 534, 535. They are certain of commissions, 537; and should receive them, on qualifying, without passing through the College, 536. There are never 40 of them, perhaps 25 to 30, 540, out of 300 cadets, 541. Intervals between examinations and vacations are periods of idleness, 685, 686, 744. Why not abolished, 687, 688, 745–748.

Cadets at West Point and St. Cyr learn thoroughly regimental drill and economy, but are treated as private soldiers, 791; which at Sandhurst is only the case when they are under arms, 792–796. Their organization is military, but not regimental, 797–801. The West Point and St. Cyr cadets are enlisted and liable to court-martial, 802, 803. Sandhurst cadets are nominally under Articles of War, 804. Is entirely opposed to giving cadets commissions, 807–812. A man should learn an ensign's duty before he is paid as an ensign, 813. It would be desirable to increase the minimum of qualifying marks for a commission, but it would decrease the cadets, 814; which is undesirable, 696–700, 814; as it might lower their social status, 749, 752; though the College could be more efficiently worked with smaller numbers, 815, 816, without increased cost to the cadets, 820. There are now 300 cadets, 706; with the same military status as Woolwich cadets, 817–819. A course of military education ought to take two years, 443, 476, 496; but if confined to purely military subjects might be reduced, 502. The present course takes 18 months, 497, 555, reduced by vacations to 13 months at most, 556, 557, which is too short for acquiring a thorough knowledge of the subjects taught, 558–561. Examinations abstract from study four or five weeks yearly, 664; vacations, three months and a week at Easter, 665; would lengthen the course, 701, to two years, 530, 531; therefore increasing it by six months, 498. At one time it was reduced to one year, but it was found necessary to raise it again, 499–501. The object of the course is general education and military knowledge, 725, 726 (not in detail, 729). It is very desirable for an officer, 730; though the subjects may not be necessary to him, 731. Sandhurst's function is to provide officers more highly educated than are needed for the service generally, 732; which it does to the extent of the non-purchase commissions, 765. Priority of appointment by purchase is given to cadets who have passed through Sandhurst, 756. The College was increased in 1862, 787; but the proposal of 1861, that all officers should pass through it, was not carried out, 786. The Sandhurst course differs from that for direct commissions in being chiefly professional, 949–951. Approves the distinction between obligatory and voluntary subjects, 532; and of those subjects themselves, 533, 637. Mathematical knowledge of the majority of candidates for Sandhurst is small, 562. Fortification, military drawing, and military history are not indispensable to an officer, 563. A little Euclid useful, 564; though not essential for his regimental duties, 565, 566; it is a part of a gentleman's general education, 567. Geometry, mensuration, hydrostatics, and logarithms not necessary for a regimental officer, but he is the better for knowing them, 568, 733. Fortification may be of great use to him, 569–571, 734, 735. The knowledge would have been very serviceable before Sebastopol, 572, 573. Vauban's first system is the A B C of fortification, 574; but modern principles are quite different, 575. A partial knowledge might suffice a regimental officer, 576. Military history taught by lecture, 577, 668; time given to the subject, 670, 671; its use to cadets, 578; it includes much detail as to

Napier, Maj.-Gen. Wm. C.E.—*cont.*
organization and movements of armies, 663. No models of battles at Sandhurst, 579, 580. It is useful to visit the theatre of campaign which is studied, 738. Cadets sometimes visit the Continent; but are not sent by the College, 581, 674. Military history can be perfectly taught by plans, 582, 741; which, at Sandhurst, are excellent, 740. Mode of teaching modern languages, 583–587, 672, 673. No provision for teaching military law and practice of courts-martial, 595; should be learnt in the regiment, 598, 610, 728; was once taught at Sandhurst, but dropped as useless, 596–599. It would be impossible to teach regimental economy, 600–602, 607, 727; it should be learnt in a regiment, 605. Company and battalion drill are taught, 603, because it is a military establishment, 604, 605. There is a small battalion of 300 cadets, but they are not treated as soldiers, 608. They are not taught guard mounting, 609, or bivouacking, 611. They never camp out, 612; would not understand lighting fires or cooking rations, 613. They learn, under field fortification, how to put a house in a state of defence, 615. Do not practise writing reports, 616. They learn riding (not thoroughly, 627, 628, 662), and cavalry sword exercise, 617, 626, but not cavalry drill, 618–620. They know little of transport or commissariat duties, 621, or of a subaltern's duties, 622. Cadets join the army with a knowledge of infantry drill, 623, 624, 742, 743. They are not taught to swim, 625. Fencing, shooting, single stick, and gymnastics taught, and some artillery drill, 629–636. A few marks for such subjects might be given in the examination, 667. Officers of line regiments in India have not more responsibility than elsewhere, 639. There is no instruction in Hindustani or Oriental languages, 641. A fair proportion of cadets could make an useful sketch of ground, 647–649. Higher mathematics and higher fortification are voluntary, 650, 651; but permanent fortification obligatory, 652–655. The course at Sandhurst might provide assistant engineers in war time, 656. Plan drawing is necessary, 658. Teaching the mimic duties of soldiers early in life is useless, 666. It is an advantage to an officer to speak a foreign language, 737; but not an absolute necessity, 676; nor likely to be learned at Sandhurst, 736. There are 33 hours study weekly, 677, 678, and sufficient time given to drill, 679, 680; advantages of drill, 659, 661, 681–683. The teaching is in the halls of 15 or 20 cadets, 588–590. Private study with some exception is at cadet's option, 591, 592; under a tree or in his dormitory, 593, 594; attaches little importance to it, 965. Approves of the *répétiteur* system, but it would require more masters, 952–956. The course of study obligatory and voluntary, 521. During the course there are quarterly and half-yearly examinations, marks gained at which count towards the final examination; at the half-yearly examination a qualification is required for passing from one class to another, failing which the cadet is removed from the College, 522. Final examination is competitive; those first on the list obtain commissions without purchase, the remainder by purchase, if they obtain 1,950 marks in the obligatory subjects, of which 1,200 must be in fortification, military drawing, and military history, 523, 654, 669. Subjects same in final as in intermediate examinations, 524. Commissions given generally in order of passing, 826.

The Governing Body, 827–829; their appointment, 832. The Commissioners, 830, 831, 851; who are honorary, 833; their powers, 847–850, 877, 890. The Council of Military Education and the College Commissioners have no connection, 879–889. The Council's powers relate to the studies and are not vague, 923. The professors detailed, 834–836; their appointment, 837, 838; mode of selecting, 839; their disciplinary powers, 840–846. Number of professors cannot be reduced, 854–856; but the company officers are excessive, 857–860. Duties of the adjutant, 861, 909–911; his duty might be taken by the captain of the day, though not without inconvenience, 912–917. Major and Superintendent of Studies, 862–864. Commandant, 865–867. Punishments, 868–872, 918, 919; rustication and removal, 873–877. Questions concerning discipline go straight to Commander-in-Chief, 921, 922. Cannot say how far the proportion of professors to cadets agrees with that in other countries, 878. There is about one professor to 10 cadets, 891, 892; professorships could not well be combined, 893–895; though one man might teach two subjects, 896. Latin and history are now expunged, 896. Professors might fulfil the duties of the company officers, 897, 898; and take cognizance of discipline out of study, 945, 946. Professors are not now allowed to instruct private pupils, 935; they once did, 936, 937. All future professors are to have a consolidated rate of pay, 938–941. Cannot say why subalterns were appointed, 899–901. Duties of the captains and subalterns, 902, 905–907; which might be combined, 908; of the paymaster, 903; who issues cadets' pocket-money, 904; and of the quartermaster, 904. The paymaster and quartermaster perform the duties of the Staff College, 924–926. Before 1858 one officer did both duties, 927, 928, 931; which, however, are now more severe, 929, 930, 932. Previous position of paymaster and quartermaster, 933, 934. The instruction is practically under the second in command, 642; and the drill under the Commandant, 644; which may be bad relatively for the instruction, 646. The division in the government of the education and discipline is bad, 645.

Discipline at Sandhurst not officially under the Council, 975. Questions of instruction and discipline are kept distinct, 1059. It is best to confine the Council to the educational part, 1060–1062. All public houses are out of bounds, 993; and to frequent them is therefore against regulation, 994. Any shop can be put out of bounds, 995. Would give punitive powers to subalterns of companies and to under-officers, 998–1001. Rustication or removal by the Governor is beneficial and should be final without appeal, 1001, 1002, 1006, 1096. Dismissal disqualifies for army service and should be reserved for Commander-in-Chief, 1003–1005. In his time the bounds were nominal, 1007, 1008; but certain specified places were out of bounds, 1009–1013. There was no espionage; but during recreation the serjeants were posted in the villages round to report cadets who entered public houses, 1014, 1015, 1021–1024. The serjeants drilled the cadets and enforced open arrest, 1016; or searched them or their rooms for tobacco or spirits, 1017–1020. Is not aware that any portion of old system remains, 1025. Does not know present duties of serjeants, beyond drilling, 1026, nor why the change was made, 1098, 1099. They have not punitive power, 1028, nor anything to do with discipline, 1029; would report misconduct to the officer, 1027, who is always present at drill, 1030. Formerly serjeants had to do with discipline, 1031, when their evidence against a cadet would be inquired into, 1032. The serjeant was never sworn, 1033. The present punishments detailed, 1034–1036. Cadets not now detained during vacation for punishment as formerly, 1037, 1038. An orderly room is held every morning, 1039, and refractory cadets are brought before the Commandant, 1040, as in a regiment, 1041. For offences during study the professors make written reports, and the Superintendent of Studies inquires into the matter, 1042–1045. Would not increase the powers of professors to punish, 1063. Confronting the cadet with a complaining professor tended to put the latter on his defence, 1064, 1065; but the system has been altered, 1066. The professors had no control out of study, 1067; they now have it and should have had it long ago, 1068. It is not expected of the two company officers to have a thorough knowledge of 100 cadets, for whose individual conduct they are responsible, and to whom cadets would look for guidance in personal difficulty, 1069–1080; nor are they sufficiently with the cadets, 1097. A better acquaintance with the young men is important, 1103. The captains are middle-aged men, 1077. In adjudicating on offences the Commandant would give suitable advice to the cadets, 1094. In arrest there may or may not be physical restraint, 1095. Not aware of a patrol to inspect public houses, 1100. A cadet found in one would get a certain period of arrest, 1101. Close arrest means confinement to dormitory; open arrest confinement to College precincts, 1102. A professor can send a refractory cadet out of his class-room under arrest, 1104. If he disapproved any proceeding he could only suggest alteration to the Governor, 1105. Power of punishment vests in Governor, Commandant, Superintendent of Studies, and captains of companies, 1106; with the Adjutant, 1107. All the cadets live in one building, 1108. The Commissioners do occasionally consider points of discipline, 1109. A half-yearly report of progress and conduct is sent to the parent, 1081, 1082; but it would not keep up a knowledge of the cadet's character, 1083; presumes the Governor gets a return of every punishment, 1085. Is not aware of any minor punishment less serious than arrest, 1086. The chaplain holds his appointment like other army chaplains, 1091; he prepares for confirmations at the College, 1090; cannot say whether otherwise he sees anything of the young men, 1089. The professors sometimes have the cadets to their houses, but their salaries are too small for much in that way, 1069, 1078, 1079. Would establish workshops, 821–823, as a recrea-

tion, 824, 825. The means of ablution for cadets are insufficient, 958–960; and the sleeping arrangements might be improved, 961–964, 966; but does not advocate a separate room for each cadet, 968, 969. The "bunk" system is uncomfortable, 963. The dining rooms and halls of study sufficient, 967. There is a reading room for each company, 970; for recreative reading, not study, 974; besides a room for the corporals, and a room for the under-officers, 971–973. The introduction of billiard and smoking rooms was a mistake, 978. The refreshment department consists of a buffet, with a private dining room and a tap attached, 981, 985; objects to the dining room but not to the buffet, 981. The refreshments supplied, 982; beer not now allowed in smoking rooms, 983, 984. The College authorities control the buffet, 986, 988, which is let to a tenant, 987. The billiard and smoking rooms were established to wean cadets from public houses, 989, on the recommendation of the College authorities, 992; their success has been but partial, 990, 991. Billiard playing is bad for youths, 996, and excessive smoking interferes with their brain and intellect, 997. Does not remember bullying in dormitories, 1046. The younger cadets were put to sleep in the "short passage," 1048. Objects to smoking rooms, 1049, 1050, and to smoking in public places, but would allow it in the woods, 1051. Under proper regulations cadets might see their friends at hotels or inns, 1052. Believes cadets take part in concerts and theatricals, 1053. Under-officers and corporals could once inflict arrest, 1056. Cost of the College, 36,731*l.*, 942; about 120*l.* each for 300 cadets, 943.

Is not in favour of all candidates for commissions passing through Sandhurst, 1110, 1111; that is, through one educational groove; likes variety of training, 1112; the professional teaching gained at Sandhurst would be of little use, 1113. The number of the cadets would be largely increased, 1114, idling augmented, 1134–1136, and discipline more difficult, 1115. Is strongly opposed to any union of Woolwich and Sandhurst, as tending to lower the Woolwich educational standard to the Sandhurst level, and, generally, as impracticable, 1116–1122. Education for the scientific corps should be quite distinct, 1117, 1137–1139. Cadets do not get into Woolwich with a small amount of mathematics, 1123. Sandhurst education is advantageous to an officer competing for the Staff, but it is not a sufficient qualification, 1124–1127; nor is that qualification the primary object of the Sandhurst course, 1128–1130, which is more likely to be to obtain a commission without purchase, 1151. Staff prospects would be an inducement to keep up his knowledge, 1131–1133. The scheme in 1858 for one general Military College fell through in the House of Commons, 1140, 1141. Does not see a disadvantage in the scientific corps getting the cream of the candidates, 1142–1144. A good military education is desirable for regimental officers, but not absolutely necessary for all, 1146. The union of all arms in one college does not obtain in continental armies, but it does at West Point, 1148–1150. The Sandhurst course may give a taste for military knowledge, 1152, and so be of advantage to the army, 1153. Approves of giving exhibitions as prizes to officers, 1154, but not to cadets, 1160, 1161.

Woolwich. Woolwich Academy is to educate young men for commissions in the Artillery and Engineers, 1163. Candidates must be between 16 and 19; are admitted by open competition twice a year. To enter, a candidate must obtain 2,500 marks, of which 700 must be in mathematics, and one-sixth the maximum must be obtained in French, German, or Hindustani, 1164, 1186; English not obligatory, 1165, 1210. The competition is free to any British subject, 1166–1168; it has worked well, 1169, 1170. The Academy is at present in a satisfactory state, and the less it is interfered with the better; but would make the entrance age 16 to 18, 1171, 1172. Would not change the entrance examination, 1173, which is a test of special knowledge, 1174; averse to increasing the obligatory subjects; languages can well be studied during the course, 1175–1185. The examination is on paper, 1187, which fails to detect wrong pronunciation, 1219. Great pains are taken to prevent crammed subjects giving marks, 1188, 1189, 1220; but thinks the difficulty of the examination almost involves cramming, 1218. Mathematics have always had 3,500 marks, 1190. Sees no difference in the class of candidates from those nominated to Sandhurst, 1193. Thinks it best not to continue classical studies after entering the Academy, 1194–1197. Geometrical drawing is absolutely necessary for Engineers, 1198. No distinction has ever been made in the course

between Artillery and Engineer cadets, 1199; any distinction is objected to, 1200. It may be that only 38 per cent. of qualifying candidates are admitted; 47 per cent. fail, 1202, 1203. It would not be practicable to limit the number of candidates according to the vacancies, 1158, 1204, 1205, and to do so would lower the educational standard, 1251. The value of marks at Sandhurst and Woolwich is about equal, 1206; but the Woolwich examination is much more difficult, 1207. Doubts if the Woolwich, Sandhurst, and Direct Commission examinations could be made commensurable, 1208, 1209. English is not taught at Woolwich, 1215, candidates being supposed to be too highly educated to need examination in it, 1211, 1213; a candidate would not be rejected for bad spelling or grammar, 1212. Has not heard complaints of bad spelling, 1214. Latin is an advantage in acquiring modern languages, 1216. Chemistry is very necessary, and is successfully taught, 1213. Thinks the candidates cram in every subject, 1221. Crammers prepare for the Woolwich examination better than the public schools do, 1222–1234. A candidate from a private tutor would have a better chance than one from a public school, 1229; but classics and mathematics cannot easily be crammed, 1230, in an objectionable sense, 1247. Few come from public schools, 1224. Imagines they go for three or four years to a private tutor or cramming school, 1234. The competition cadets are not inferior to their predecessors, 1236. Cannot define the difference between a cramming establishment and a private school, 1237–1241. Preparation for an examination does not always imply thorough education, 1242, 1243. Does not call Wimbledon school private tuition, 1240. Pupils for Woolwich come direct from Cheltenham and Wimbledon, and a few from Marlborough, 1245, 1252, but not from Wellington College, 1246. The voluntary subjects are crammed, 1248; in mathematics there seems to be proper instruction, 1249, 1250.

Describes the obligatory course of study, 1254–1257. The course is five terms, or 2½ years, 1258, with half-yearly examinations, 1259, of two sorts, 1260, carrying on marks to the final examination, 1261, 1268. A cadet failing to pass for promotion from one class to another is put back for one term, and only one such term of grace is allowed in extreme cases of illness, 1261–1265. If a cadet stay seven terms he may not compete for place, and can only pass out at the bottom of the commission class, 1263, 1264. Cadets failing to be promoted after the extra term are removed, 1263. Describes the final examination, 1266, 1267. Cadets at the head of the list have option of joining the Engineers, 1268, of which they almost invariably avail themselves, 1269. Thinks the course of study enormous, but does not know how to reduce it, 1270; has heard that it exhausts cadets, 1271. Hours of study are 4¾ on Saturdays, 6¾ on other days, 1272. Military law is not taught, 1273. Final French examination is not *viva voce*, 1274, nor much harder than at entrance, 1275. There is an excellent gymnasium, 1276. If part of the practical artillery were taught at Shoeburyness the course might be reduced to two years, 1277. A separation of artillery from engineer studies after 18 months would be advantageous, 1278–1280, but the point is disputed, 1295–1297. Good conduct marks, if given, would not count in a competition, 1281; they were formerly given at Sandhurst, but were abolished as bad for discipline, 1282–1287. The final examination is qualifying as far as a commission in the army is concerned, but competitive as to the branch of the service, 1288–1290. Every cadet obtains a commission, 1291, without much delay, 1294. Cadets can scarcely qualify before the fifth term, 1292, though, in a recent case, intermediate class promotion was allowed, 1293. Cadets have a library and workshops, and probably might have pianos, 1298. Does not suppose there is a debating society, 1299. The proportion of commissions in Artillery and Engineers averages two to one, but depends entirely upon vacancies in the respective corps, 1300–1305. Relative position in the final examination probably follows relative position in entrance examination, 1306; but it is not safe to assert that all who come in upon classics go to Artillery, 1307. Very few fail to qualify for either Engineers or Artillery, 1308. Engineer officers after leaving Woolwich go to Chatham for two years to study building and mining, 1309. Would not admit classics into the course because of the strict competition, 1311–1314. If the obligatory mathematics at entrance examination were raised, the study of mathematics might be dispensed with, 1315; but that would be requiring very much from youths of that age, 1316.

NAPIER, Maj.-Gen. WM. C.E.—*cont.*

The Commander-in-Chief is Governor, 1319; but the Lieut.-Governor is in same position as the Governor at Sandhurst, 1318. The government and discipline are vested in Lieut.-Governor, Second Commandant (who is also Inspector of Studies), and captains and subalterns of companies, 1317. The company officers might be reduced, 1320, but the Council has nothing to do with them, 1353, 1354. There are 33 professors and masters, 1322 [enumerated, 1324] for 220 cadets, 1323, the subjects taught being numerous, 1332, 1351. Civilian professors would be obtained as at Sandhurst by the Council, 1328, but the Academy authorities, to some extent, select their own military professors, 1325–1330, but that is merely matter of custom, 1358–1360. The position of professors as to discipline differs from Sandhurst, 1331. Discipline is not under the Council, 1333; but is now satisfactory, 1334, 1344, 1367. Punishments are dismissal (equivalent to expulsion, 1336), rustication, degradation, 1335, restriction from indulgences, and arrest, 1336. Rustication or removal rests with Commander-in-Chief, as Governor, 1337, 1338, 1362, 1363; and is an effectual punishment, 1375, and a severe one, 1376. Sees no reason why the power of prompt punishment should not rest with Lieut.-Governor, 1368–1371. Approves of under-officers having greater disciplinary powers than at Sandhurst, 1339, 1340. There are no non-commissioned officers for such a purpose, 1341, 1342. There are no Commissioners, 1345. The buildings are good, 1346. Professors cannot punish, 1347, but each is aided by a corporal, who is responsible for discipline, 1349. Billiard rooms are being built; is not aware of smoking rooms, 1355, or of an authorised canteen, 1357. Smoking only allowed under the gymnasium, 1356. Outside the grounds Woolwich cadets are smarter than those at Sandhurst, 1361. Presumes the Lieut.-Governor would take notice of pointed failure in the young men's moral conduct, 1364. The military professors hold office for six years, 1372; the limit is good, as promoting emulation, 1374, but the Council may recommend retention for a further period, 1377. Professors are to have regulated consolidated salaries, including their half-pay, 1378, 1379. Professors ought to be allowed to take private pupils who are not cadets of the Academy, 1380. Veterinary science not considered a necessary study, 1381.

The Staff. Not every officer appointed to the staff need be examined, 83. The limitation to officers who have passed the Staff College applies only to General Staff, 1439. More staff officers would be required in war, 1581; and a severe campaign might soon use up the Passed Officers, who are much scattered, 1464–1467. As a rule staff officers should be carefully trained and educated, 1568, 1569; but actual experience in the field is sufficient, 1492, and there is a provision to meet such cases, 1570. Previous training is important when service in the field cannot be had, 1493; and in peace the Staff College should be the only portal to the General Staff, 1571. Gradual increase of Staff would be a natural result of a great war, 1495. It might be important to have qualified officers ready for Staff duties with militia and volunteer forces, 1496, 1545. A knowledge of all arms essential for a Staff Officer, 1535, 1537; it could not be learnt by short attachment to the General Staff at Aldershot, 1536. There are Staff appointments for which deep scientific knowledge is unnecessary, 1539, such as brigade major, 1541. Would not form the whole Staff from the Engineers, 1542; though their education renders it needless for them to pass through Staff College, 1431. A staff officer should not be short-sighted, 1546. Lieutenant-Colonels appointed direct to the Staff are not examined; a Guards' officer appointed brigade major of the Guards would be, 1605. The Personal Staff not required to pass the Staff College, 1607; but are examined, 1608–1610, in an easy test which few fail to pass, 1613, 1614, 1620–1622; if they fail, they may have other chances, 1623–1625. Would abolish those examinations and leave the general unshackled in his choice, 1494, 1611, 1612, 1615–1619. Military Secretaries are not examined, 1626, 1627.

Staff College. In 1858 the Staff College was established, 1476, to educate officers for every branch of the General Staff, 1382, 1541. Open to all arms (except the Engineers) by competition; consists of 30 students, of whom 15 are admitted annually; qualifications for admission, 1383. Adjutants are eligible, 1596. The number probably based on peace requirements, 1580. Certificates given by Commanding Officers to candidates are not, in practice, sufficient guarantee, 1438, 1518, 1519; but cannot devise a better, 1522; nevertheless candidates who come up are fit for the Staff, 1390. Proportion of

NAPIER, Maj.-Gen. WM. C.E.—*cont.*

candidates to vacancies, 1385; slightly diminished of late years, 1386, 1478–1480, because so many Passed Officers are waiting for Staff appointments, 1457, 1576 [more vacancies may soon be expected, 1520, 1521]. A candidate's failure being known in his regiment may deter other officers, 1481, 1482; as also the fact that subalterns cannot get Staff appointments, 1597. Why Artillery officers go to the College, and Engineers do not, 1441–1444. Minor Staff appointments are all given to Passed Officers, but as yet they have not sufficient substantive rank for higher appointments, 1566, 1567, 1606. As time progresses all Staff appointments ought to be reserved for Passed Officers, 1574, 1575; the chances of the utility of the College depending much on Passed Officers obtaining Staff employment, 1572, 1573. Appointments as brigade major should be reserved for them, 1577, and additional appointments created, as instructors in large camps and garrisons, 1578, at home and abroad, 1592, with extra pay, 1579. Cannot say whether an honorary degree might be an inducement to officers, 1585–1591. An officer who could teach fortification, sketching, surveying, and military history, as well as musketry, would be very useful in each regiment, 1472, 1473, and also as an aid to the Engineers, 1475; but cannot say that all who pass the Staff College and Hythe could do this, 1474; further, could not recommend the expense of such a Staff appointment, 1593–1595.

Has no alteration to suggest in entrance examination, of which the object is to test professional acquirements, 1393, 1394. Qualifying minimum, 1384, 1552, 1553. One language is obligatory, 1395. Why there are so many subjects, 1547, 1548, 1551–1553. One-sixth the marks implies a slight knowledge, 1554. Candidates abroad are allowed three hours for each paper, 1440. Why non-military subjects occur (for entrance), 1452; only mathematics and one foreign language obligatory, 1453. To induce the most educated men in the army to compete, the subjects might be increased, 1499–1501. With that view they are 9 already, 1547, 1548, which may lead to cramming, 1549, 1555, 1556, an undesirable result, 1550; but would not reduce the number of subjects, 1551, 1564, 1565. Candidates cannot obtain explanations of their examination papers, 1526, 1527. Has not heard that the answers on natural science are most superficial, 1557–1559. Mathematics may be rated too highly, 1560–1563. Proportion of failures, 1388. To pass, but not in the first 15, gives no prospective claim, 1389.

The course is two years, 1406, without further grace, except for illness, 1407. Details subjects taught, 1396; obligatory subjects, 1399, 1400, have been lately reduced; voluntary subjects, 1401. No marks or rejection for riding, 1397, 1398, 1483, 1484. Intermediate examinations and marks, 1404, 1405, 1408–1411; marks carried on, 1409–1411, 1517. Unless an officer passes the examination at end of first year he has to rejoin his regiment, 1407. Mathematics necessary for a staff officer, 1454, but a deep knowledge not essential for the out-door studies, 1531. The subject need not be taken up, 1403. There is practical instruction in field works, roads and bridges, defence of positions, reconnaissances and surveying, 1412, for all which, except field works, marks are given, 1413–1415. Time limited for field sketching, 1416–1418. English composition practised, but faults would not reduce marks, 1445–1451. No instruction in signals or telegraphy, 1455. Teaching estimation of distances by a horse's pace might be necessary and could be taught, 1460, 1461, 1540. Reconnaissance practised without special limit of time, 1487, 1488; generally near the College, but the last one may extend to the south coast, 1504. Might make distant reconnaissance, and report the same evening, as a test of endurance, 1505. This is not done now, 1506. The extended reconnaisance lasts 8 or 10 days, working every day, 1508, and reporting at the end, 1509, 1510. Reconnaissances examined and marks given by Commandant, 1511, 1513; specimens being sent to the Council, 1512. "Art of War" forms a portion of military history, 1528. Military administration means general organization, 1529. Thorough French an advantage, but not absolute necessity, 1530. Rough marching reconnaissances very important, 1532–1534, as also is military law, 1598; extent to which taught, 1599–1604. Has no alteration to suggest in the course or final examination, 1419, which are satisfactory, 1420. The Council employ their usual examiners at the final examination, except for reconnaissances and astronomy, 1514–1516.

Never heard of a breach of discipline, 1458. The

NAPIER, Maj.-Gen. WM. C.E.—*cont.*

Commandant has the powers of an officer commanding a regiment, 1459. Students never paid anything, 1432–1434, except library and mess subscriptions, 1436; they complain of not having soldier servants, 1435; would not increase their pay, 1436. A student need not keep a horse, but is allowed forage if he does so, 1502; he must have or hire one for his reconnaissances, 1503. Monthly reports on students are forwarded to the Council, 1525. Passing in India in an Indian language no help in passing the Staff College, 1489, 1490.

Commandant reports confidentially through the Governor to Military Secretary on fitness for the Staff of the students who pass out, 1523, 1524. Passed Officers are attached to other arms, 1423; but witness would double the periods of attachment, 1424, 1425, 1429, 1430. The period for each arm was originally six months, 1426; why reduced, 1427. Passed Officers must still pass in a native language before admission to the Indian Staff, 1491. The Council should be informed when Passed Officers are appointed to the Staff, 1421.

The daily cost of a great war might equal 10 years cost of the Staff College, 1497, 1498. The accommodation is ample, 1422, being built for 40 officers, 1462. The professors are appointed on the Council's recommendation, 1583; and could teach more pupils, 1463. Examination returns from Hythe School of Musketry should not come before the Council, 1468, 1469. The Staff College and School of Musketry, being perfectly distinct, should not be united, 1470, 1471.

Artillery advanced class. Is to qualify Artillery officers for scientific departmental appointments, 1628. There are eight students, 1644. Conditions of admission, 1629. Entrance examination, 1630–1632. The course, two years, 1633; subjects studied, 1634. Students visit manufactories, &c., 1635, to study machinery, 1636. Obligatory examinations at end of first and second years, 1637. System works well, 1638, 1643. Paucity of candidates, 1639. Examiners, 1640. Professors appointed by Council, 1641. Passing does not qualify for General Staff, 1646. Doubts if the passed Artillery officer would seek Staff employment, 1647, except in the higher ranks, 1648. There have been in the class officers who had already passed the Staff College, 1649.

Instruction of officers. It would be quite practicable to give line officers the opportunity of acquiring practical military instruction after entering service. Attendance and examinations to be entirely voluntary, and not to affect promotion. Would prefer appointing (from Passed Officers of the Staff College) instructors for large garrisons to having regimental instructors, *App. VII. (A), p. lxxxii.*

ABBOTT, MAJOR-GENERAL SIR FREDERICK, C.B. (Member of the Council of Military Education).

Addiscombe. Was Lieutenant-Governor of the Indian College at Addiscombe for 10½ years, 1652, 1653. One College sufficed for the Indian Army, 1866, 1867. There were 150 students, 1779, 1780. A small college is easier to manage than a large one, 1781. All the subjects were obligatory, 1765–1767, and the study far more severe than at Sandhurst, 1770–1771; but the course was intended to prepare for the Scientific Corps, not the Line, 1772, 1793, though cadets who failed for those corps got Line commissions, 1792, 1794–1796, which was good for the Line, 1870, 1871. Many cadets who failed for the Scientific Corps make admirable officers in India, 1933; they would have been fairly advanced in their studies, 1934. One-third of the cadets entered the Line, 1868. The tone of Indian officers was not worse than of Queen's officers, 1869. Names the military authorities, 1800–1804. The cadets were in divisions, 1805. There were cadet sub-officers and corporals, 1806. Discipline rested entirely with the Lieut.-Governor, 1807; but he could not dismiss without approval of Board of Directors, 1808–1810. Disciplinary powers of Staff officer or Orderly officer, 1811, and of sub-officers, 1812. There were 15 masters and two lecturers, 1813, who had no disciplinary powers beyond their classes, 1814–1817. Would not give such powers to the educational staff, 1818. There was no want of discipline, 1819, 1898, 1899. Cadets entered at from 15 to 18, 1844, 1845; the Court of Directors occupied a position similar to the Sandhurst Commissioners, 1846–1849. Disciplinary arrangements, 1905–1907; censors, 1908–1914. Cadets had each a separate bed place, 1850; a great improvement, 1851. Never heard of evil there from association of cadets, 1852, 1853. The punishments were extra drill and arrest, 1854–1856, 1939; never on bread and water,

ABBOTT, Maj.-Gen. SIR FRED., C.B.—*cont.*

1857; nothing childish, 1858. Considers arrest on honour a valuable moral restraint, 1923, 1924. Objected to rustication, 1859; but found detention for a part of the vacation most effective, 1860, 1861. Cost of education was much the same as at Woolwich, 1862. The serjeants had in his time nothing to do with discipline, 1863, 1904; though previously they had almost entire charge of it, 1902. There were no bounds, 1864, but public houses were strictly forbidden, 1865, 1903. Cadets must be treated either as boys or men, 1935. The Orderly officers inspected the provisions, 1940. Pocket money was nominally limited; debts in the town forbidden, 1941. Once had to search the cadets' rooms, 1942, 1943. There was no espionage, 1944, 1945, only moral influence, 1946. Professors were liberally paid, 1931; and therefore, being first rate men, had great influence, 1932. Military professors still in active service were very exceptional, 2030, 2031. Half-yearly reports were made to parents on educational and moral progress, 1959, 1960. Riding and swimming were not taught, 1961, 1962; fencing was optional, broadsword obligatory, 1963. A military man ought to ride, fence, and swim well, 1964. Trusting boys on honour undoubtedly elevates their character, 1965. Leave was stopped for idleness, 1966. It was difficult to deal with those cadets, who knew they had no chance for the Artillery or Engineers, 1967. Details the hours of meals and study, 1968. The final examination was not to be compared with that now required at Woolwich, 1938. Did not teach practical subjects, as artillery, 1915; classics only nominally, 1916, 1917. Does not think the prizes were much stimulus, 1918–1920. There were prizes for good conduct, 1921; which he considers objectionable, 1922. Time at Addiscombe (after 16) counted towards Pension, 2011; but the Commission was not antedated, 2012. There was not a senior department, 1895.

Direct Commissions. Would not alter the ages for admission to Direct Commissions, but would have a large range for admission to the Army without competition, or passing through a military school, to take in men who had finished their education at college or public school, 1656–1660. The examination works fairly, 1661. Every subject added gives rise to cramming. The number is necessary because lads cannot pass in classics, 1662. Ordinary education of a gentleman is quite sufficient for officers appointed direct to army, 1680. The examination has been reduced from time to time, 1691, and is so easy that a lad who has been at a public school till 16 ought to pass it readily, 1692. Those who fail have had a very imperfect education, 1693. If the standard were suddenly raised, the army would want officers, 1694, and cramming would be increased, 1713. To make French obligatory would increase rejections for a time, 1695. Perhaps two per cent. go up for Hindustani, 1696. Unless the general education of the country be improved, the standard cannot be raised, 1697. The certificate as to moral conduct from the master or tutor of a candidate is of little value, 1700; but candidates from any institution could not be excluded, because a previous certificate thence had been proved wrong, 1698, 1699. The Council, practically, employs regularly the same examiners, 1743, which may help cramming, but to change them would be a worse inconvenience, 1744. History and geography are most easily crammed, 1747, 1748. The so-called sciences as brought up are worthless, 1749; would not object to omit these subjects, 1750. To give non-purchase commissions to the best Direct Commission candidates would only remove competition from Sandhurst to the schools, 1711, 1712; and would send more boys to the crammers, 1736. Crammers specially devote themselves to questions likely to be asked, 1715. Mental training and gentlemanly habits of the utmost importance, 1716. When a boy comes up crammed it is a chance whether he succeeds or fails, 1717.

Public Schools, Private Schools, and Cramming. Very few boys come direct from public schools, 1729; except Cheltenham, 1732, and a few from Marlborough, 1737; less than the head masters' letters led the Council to expect, 1735. At Cheltenham, the instructors in the modern department are established, 1738. Cheltenham College has been for many years very successful with candidates for Woolwich, 1701, 1730, from its modern department, 1731; other public schools might do as well, 1702, if they were not so entirely devoted to classics, 1733. To divide all commissions among the public schools would exclude all youths unable to afford a public school, would encourage imperfect education, and be very unfair, 1704, 1705. In special schools boys work much harder

ABBOTT, Maj.-Gen. SIR FRED., C.B.—*cont.*

than in public schools, 1706; but the fault of the latter lies in their system, and the army gets their idlers, 1707, 1740. These idlers sometimes turn out splendid officers, 1708, 1709, 1739, and any system ought to provide for their admission, 1710, 1713. Many educate themselves after appointment, 1745. Boys from public or classical schools cannot construe Virgil, 1663, 1664. Boys must go to cramming schools, 1665, which often are objectionable from want of discipline, 1666, 1718. Many private schools are admirable, 1667. Public schools, by their inattention to idle boys, are responsible for the cramming system, 1668. To take sixth-form youths from public schools without examination would open the door to all schools, 1669. Could not examine boys locally at their schools, 1670. Boys were found not to obtain a standard even lower than that fixed by head masters of public schools; private schools and cramming schools are not synonymous, 1671, 1714, 1726–1728, 1752. Names the head masters, 1725. Does not think Government inspection of private schools would be of any practical use, 1672, 1674, 1719–1721, 1741, 1742, though some of the worst schools might be excluded, 1722, 1723, 1746. Pupils from public schools ought to be able to pass for the army or for Woolwich, 1675–1677, without special instruction, 1682–1685; they have a better tone than candidates from cramming schools, 1678, 1679, 1690. It is very desirable to get lads direct from public schools, 1751. The head masters have not been communicated with as to so few boys coming from them, 1754, 1755. Separate classes at public schools unnecessary, 1681. Cramming schools have existed for 40 years, 1687, and most of the Addiscombe candidates came from them, 1686, 1689.

Sandhurst. Should regret to see the age for entering Sandhurst below 16, 1756; if lowered at all, would make it a general school for officers' sons, 1757–1759. The admission of University men of 20 makes an objectionable mixture, 1760–1762; but very few such come, 1763. Would abolish the voluntary studies, 1764, 1768, 1769, 1936, 1937. The study suffices for its purpose, 1773. Queen's and Indian cadets are a great disadvantage, 1774; they should be commissioned without passing through the College, 1775. Their removal would be a great benefit, 1949. They are but few, 1952. Objects to the proposal to pass all Line and guards officers through Sandhurst, 1776, 1777; the cadets would have to be at least one thousand, 1782. It is good to draw officers from various educational sources, 1778, and of varied educational status, 1878.

The present object of Sandhurst is to send into the army some officers professionally trained, who may make Staff officers, 1783, 1879–1881, 1953, but many more pass from Sandhurst than can enter the Staff, 1954, which is valuable, 1955; and any limitation of the number of cadets might so far be a disadvantage, 1956, 1957. The Sandhurst education not absolutely necessary for regimental duties, 1882. The great majority of cadets find they have no chance of a commission without purchase, and, having no stimulus, idle, 1784–1786, 1883. Possibly a stimulus might be devised, 1884–1890. It would be a great gain to limit the cadets nearly to the number who were to obtain non-purchase commissions, 1787–1790, 1875. That number being very variable, 1925, 1926. This would be the best remedy for idleness, 1950, 1951. Would not unite Woolwich and Sandhurst, 1791; but keep them quite separate, 1876. The site of each is admirably suited to its purpose, 1877. As a rule Sandhurst cadets could not compete successfully for Woolwich, 1797–1799. Has nothing to do with Sandhurst discipline, 1900, 1901; but objects to the billiard tables, 1820.

The course is one and half years, only extended to two years in case of serious illness, 1947, 1948. To lengthen it to two years would be hard upon cadets intending to purchase, 1821, 1822. Would not teach military law at Sandhurst, 1823, 1824. As regards cadets who purchase, the course is much thrown away, 1825–1827; could not suggest a remedy, 1828. By carrying forward the marks from the half-yearly examinations, continuous study is sought to be enforced, 1958. Does not think that arrest for negligence in study would keep down idleness, 1927, 1928. Professors should report disgraceful conduct, 1929; but not punish it, or notice minor offences, 1930. Would not raise the minimum of mathematics for admission to Sandhurst, unless the College were restricted to candidates for non-purchase commissions, when admission should be by open competition, 1830. The minimum for a purchase commission might be raised a little; but the new system now under trial is better, viz., to exact a minimum each term,

ABBOTT, Maj.-Gen. SIR FRED., C.B.—*cont.*

1831, under penalty of discharge, 1832, 1833. Sees no good in classifying the purchasing cadets, 1834, 1835. Those from Sandhurst are the only Line officers with any special military education, 1836. The army serves much in India, 1837, and the Indian Staff Corps will be officered from British army, 1838. It is, therefore, important to raise the standard of officers' development, 1839, 1840. Hindustani should be acquired in India, not at Sandhurst, 1841–1843. Disapproves the giving probationary commissions to passed cadets; would appoint them at once, 1896, 1897.

Woolwich. Open competition for Woolwich works well, 1969, though originally witness was against it, 1971. The men brought forward by it are superior 1970, 2004. Is not aware of any special strain on health of candidates, 2023. It would be a calamity to reduce the age of admission, 1972; the high standard could not be maintained, 1973. Not more than one or two per cent. of candidates come from public schools, 1974. For the main part of the examination, "cramming" is impossible, 1975, 1976. The course is excellent, though Artillery and Engineer cadets might be separated after two years, 1977, by shortening the course at Woolwich and sending the cadets to complete at Shoeburyness and Chatham, 1978–1983, 2016. This would approximate the French system of a common theoretical school and special schools of application, 2013–2015. The theoretical course should not be reduced for either corps, 2017–2022. Many of the foremost cadets who would prefer Artillery are forced into the Engineers, 1979. Lives near Woolwich, and infers from what he sees that the discipline is good, 1984, 1985. Never met them smoking, 1986. They have just set up billiard tables, 1987. Believes drill instruction is satisfactory, 1988. Mathematics can be properly studied in a crowded hall, if order be kept, 1989, 1990. Doubts the advisability of the cadets studying privately, 1991, 1992, 1996. The répétiteur system is contrary to our principles, 1993, 1994, and prefers ours, 1997. There is no opening at Woolwich for the separate "coach," 1995, 1997. The mathematical course is pretty severe, few fail to obtain the required half of the marks, 1998. The questions may equal those for university honours, 1999. Does not think there is undue forcing of intellectual powers, 2000–2003. The average age of admission is nearly eighteen, 2005. The cadet is nearly 20 when he comes to the very difficult mathematical examination, 2006–2008. These men virtually enter the army at 18, 2009. Would not reduce the standard to gain a year in his entering active service, 2010. The course generally is of fair and increasing severity, with proper precaution for health, 2024–2026. The attainments at Woolwich (specially mathematics) less high than at the Polytechnic, 2027, where, as a rule, the foremost pupils choose the Civil Service, 2028, 2029. At Woolwich one language might be taught instead of two, 2041, 2042.

Staff College. The Staff College does good and satisfactory work, 2032, 2040. The subjects of study might be reduced, 2033; languages should be required for admission, 2035, when Hindustani learnt in India would come in, 2051, and the course should be entirely practical, 2034, 2036. We have not facilities for young Staff officers' practical instruction with troops, 2037. Aldershot gives insufficient opportunity, 2038, 2039. Military law is taught, 2043; sufficiently, witness believes, 2047, 2048. It is very difficult; and could not be taught to young cadets, 2044. The best works on Artillery and Engineering are French, 2045. At Staff College would give up time saved from languages to rapid sketching and reconnaissance, 2046.

British and Indian systems of Staff service are entirely different, 2049, 2050.

It would be unfair to give all non-purchase commissions to officers' sons, and would spoil the tone of education, 1872–1875. Is not in favour of giving military degrees, 1889–1894.

MOSELEY, Rev. CANON, F.R.S., Member of the Council of Military Education.

Inspection of cramming schools. Is the only civilian ever on the Council, 2053–2055. Was previously examiner for admission to Woolwich, 2056–2059. Considers satisfactory the examinations for Direct Commissions and admission to Sandhurst, 2060. The examination for Direct Commissions had to be lowered to a less difficult standard than the public school head masters suggested, 2061–2063, 2089. Few boys come direct from public schools, because those schools are too much given to athletic sports, which renders it necessary

MOSELEY, Rev. CANON, F.R.S.—*cont.*
to go to a private teacher for sake of learning, 2064. Private schools form an admirable sequel to a public school course, if their moral and religious influences are good, 2067, which he cannot say that, as a rule, they are, 2068. Does not doubt that Government inspection of private schools could be practically carried out, 2069–2071. The private teacher would apply to register his establishment and promise to open it to the inspector, 2072, who would especially inquire into moral character and discipline, 2073, and collaterally into the educational qualification of the tutor, 2074. The inspector would visit each school annually at an uncertain time, 2075. Schools disqualified would be struck off list, as several might now be with advantage, 2076. The Council would not put on the register a school whose system they disapproved, 2077, but would not undertake to recommend schools, 2105. Parents would then try to devolve their responsibility of choice on the Council, 2078, 2104, which, however, would be a less evil than the present state of things, 2079. It would be the business of the inspector's life to know the characters of schools; can say by experience that it is practicable, 2080. The system, though imperfect, would raise the moral tone of the schools; the nominations practically rest with the private tutors; schools do not dislike inspection, the majority being probably good, 2081. There are evils to justify the adoption of such machinery, 2082. Some of the schools take only day-scholars, 2083. Would insist that pupils should either be boarders or resident with their own friends, 2084, 2085. It would be still better so to improve public schools as to abolish cramming, 2086. From their advantages, public school boys ought to compete successfully against all others; but witness cannot hope they will do so, 2087, 2088. At the earlier examinations more boys came from public schools, and for Woolwich many from the universities, 2090. A public school is one under the control of a body independent of the schoolmaster; Cheltenham and Marlborough are public schools, 2091, and pass more candidates in than others, 2092, 2093, as also Marischal College, Aberdeen, and certain private schools at Enniskillen and Galway, 2094. There used to be a very successful school connected with Trinity College, Dublin, 2095. Some few come from abroad, 2096, and pass well, 2097. A public school gives great advantages to a boy, 2099. There is a modern side at Cheltenham, 2101. Cramming classes at public schools would be desirable if the boys would attend them; an attempt at Eton failed, 2102; fears the separate cramming establishment is necessary, 2103. The public school boys are deficient in education generally, 2106; boys would not have difficulty in acquiring the minimum of mathematics required, 2107, 2108. Does not think classics could be kept up at Woolwich; the Artillery and Engineer cadets might be separated earlier, 2109. Would direct the Woolwich course to teaching each cadet one military subject thoroughly, instead of trying to make each learn all, and failing, 2110. The mathematics for entrance could not be raised, 2111. Should regret to see the short time now given to mathematics lessened, 2112. A cadet may not really advance in mathematical knowledge; but the examiners' reports are not unfavourable, 2113. If possible, without injustice to others, a student should be allowed marks at the final examination for any classics he had kept up, 2114. Under competition the cadets are socially higher than they were under nomination, 2115. The classical standard is going down, 2116 Public schools do not even teach classics well, 2117.

PORTER, BREVET-LIEUTENANT COLONEL WHITWORTH (Royal Engineers), Instructor in Fortification at Sandhurst.

Sandhurst. Is one of the junior instructors in fortification, 2119; Colonel Adams being the professor, 2120, 2121.

Sandhurst now is a preparatory school for Staff Officers, 2201; the original idea having been to give professional knowledge to a large number of regimental officers, 2202–2204. The training is of little value except to the industrious, 2244. Professors are never consulted as to general reforms, 2232. A Council of Instruction, of the Governor, Superior Officers, and professors, to discuss matters of instruction, would probably do good, 2273. The subalterns of companies are well qualified, 2282. There are six professors of fortification, 2150; all acting independently, 2151, 2152. Professors are nominated by the Council, 2277. Mathematical instruction might all be by military men, 2278. Civilian professors have lower salaries than military, 2249–2252; with equal work, 2253; but they have superannuations. Military men only

PORTER, Brevet-Lieut. Col. WHITWORTH—*cont.*
serve at Sandhurst for six years, 2254. The entrance examination is sufficient for the present object; but if the education is to approach to that of a Staff Officer the entrance qualification might be raised, 2122–2126, 2131. The present examination should be more elementary and searching, 2127, 2130, 2288, 2295. Cadets often have slight knowledge of arithmetic, 2128; though not unacquainted with higher mathematics, 2129, 2296. At entrance a qualification in practical geometry or use of mathematical instruments should be insisted on, 2211. Would not reduce the age to 15, 2132, 2133. The course ought to be extended or the subjects of study reduced, 2134, 2135. Would do away with some of the voluntary subjects, which abstract time from others, 2136–2138; and omit some of the studies, as chemistry and geology, unnecessary for an ordinary officer, 2139–2141. Not all subjects are taught by lecture, 2142. Examines the fortification work of each cadet, 2143. The fortification course is advancing, 2144; and every cadet passes right through it, 2145; well, indifferently, or badly, 2297. Would prefer that cadets who, at the end of first term, are not up to the others should be put back, 2146; but has not suggested this to authorities, 2228; because he sees no probability of it being carried out, 2229–2231. The present system is superficial, 2147, 2148, as regards military subjects, 2298; the cadet being driven through without a groundwork, 2149. Monthly examinations started lately, 2221; carry on marks for commissions, 2223; and are very good, as keeping the cadets up to the collar, 2222, 2223. There is at least a week of most disadvantageous idleness between examination and end of term while examiners are making up marks; does not see how to get over it, 2182–2184; unless the "board-day" be had at beginning instead of end of term, 2185. New systems of fortification are not in obligatory course, but are examined upon, 2205. Whether Vauban's first system is obsolete is much discussed, 2206, 2207; but many fortresses are still modelled on it, as Malta, 2236. Some subjects would be best taught under the professorial system, some under the tutorial, 2208. One rule does not apply to so many subjects; in fortification the professor should be the only lecturer, and the instructors should teach the cadets in class-rooms, 2209, 2210. At present each instructor lectures in turn, 2210; in the lecture hall, 2212; with plans or models, 2213. Knowledge of field fortification would give little insight into permanent fortification, 2286. Learning to swim, or even bathing, not compulsory, 2264. Pontooning and bridging are taught, 2265. There is a mild attempt at the *répétiteur* system; it is a very good system, and is not carried far enough, 2301–2306. The instructors or *répétiteurs* should be under the lecturing professor, 2307, 2308. It would not stop idleness, but produce uniformity of instruction, 2309. There is very little private study, 2153; would not encourage it, 2154. Billiards will not teach gambling, and only objects to the tables in so far that they are shut to the junior cadets, 2176, 2177, 2214–2216. There are to be two tables per company, 2262; which would allow a moderate amount to all, 2270–2272. A man is neither better nor worse for being a good billiard player, 2284. There is no training in billiards at Sandhurst, only an effort to keep the youths from the town tables, 2289–2294. The refreshment room is only bad in so far as cadets stop there drinking, 2176, 2177. Cards are prohibited and punishment follows discovery, 2263. Boating might be made more attractive, 2283. Out of study the cadets are very slovenly, 2178, 2266, 2268, 2269; in great contrast to Woolwich cadets, 2179, 2267. Half the cadets, at least, know that they can pass for purchase, but cannot win a free commission, and therefore are idle, 2155, 2237, 2238. It might be obviated if purchase cadets were gazetted in order of passing or allowed choice of regiments in that order, 2156. The Queen's cadets, as a rule, are idle, and might go up for a direct commission, 2157, 2158. If each cadet had a fair hope of obtaining a free commission there would be an inducement to work; in that case would have severe competition for entrance, 2159, 2160, 2242. Would not shut the army against idle men, 2239; but idleness ought not to be recognized at Sandhurst, 2240. Hitherto idleness has not been punished, 2161–2164. Only knows of one case of a cadet discharged for idleness, 2224; and that was a gross case, 2241. A minor punishment should ordinarily precede discharge, 2225. Classes now vary from 12 to 16 cadets; the idlers are well known, 2310. Increase of the number of free commissions would diminish idling, 2243. Discipline has failed, from attempting to conduct the college on the barrack system, 2311, 2312; too military,

PORTER, Brevet-Lieut. Col. WHITWORTH—*cont.*

2313. The system should be a combination of university and public school, 2314. Professorial discipline is not represented, 2315. The school is treated as a regiment, 2316; the system being carried too far, 2317, 2318; but there can scarcely be an *esprit de corps*, 2321. The captains of companies mix more with the cadets than captains in a regiment with their men, 2322. Objects to a half-yearly inspection by a General Officer; the College is already treated too much like a regiment; the cadets are but youths, 2287. There is no one to whom a cadet would apply if in a scrape which would bring him into collision with authorities, 2255. The chaplain is nearest approach to a superintendent of morals, 2256; but no one is recognized in that capacity, 2257. Thinks the double staff for teaching and discipline most pernicious, 2172. The instructional staff being kept subordinate is bad for discipline, 2319, 2320. Professors have now some limited disciplinary power, which they had not until lately, but not nearly enough; they can put a cadet in provisional arrest, pending the decision of an executive officer, 2165–2170. They ought to have actual disciplinary power, 2171, 2175. Report on a cadet by a professor may be referred to captain of company, 2233; probably his junior in rank, 2234, 2235. Time will increase the disciplinary power of professors, 2281. A professor may see the same class six hours a week, 2258, 2259; which, after one term, would give him a good notion of the cadets' characters, 2260; better than the executive officer, who only sees him out of study, 2261. The professors should officer the companies for instruction and discipline, 2173; having greater opportunity of knowing the characters of cadets than the present captains of companies, 2174. Would give larger disciplinary powers to the professors, 2245, 2248; military and civilian, 2246, 2276; if the latter were carefully selected; would restrict it, however, to Englishmen, 2247. Selection of under-officers is made irrespective of professors by captains of companies, who know nothing of the cadets in study, 2226, 2227. Fewer cadets are qualified for under-officers and corporals than there are posts to fill, 2329–2332. Good conduct can only be tested by the defaulter sheet, 2333–2335. The conduct of under-officers as such as well as mere cadets should be reported on by professors, 2336–2338. Arrest on honour fails unless made compulsory under high penalties, 2180. It worked perfectly at Woolwich, 2181. The relaxation from the former strict discipline was very rapid, 2274. If breaches of discipline were severely met the present system is not too lax, 2275. Would not raise the minimum qualification for purchasing cadets, but would restrict the subjects they study, 2217–2220. Marks ought to be given in the final examination for satisfactorily performing the duties of under-officer and corporal (which necessarily subtract from the time for study), and also for riding, swimming, and fencing, 2323, 2324, 2326, 2327, 2339. Giving priority in commissions to under-officers is scarcely reward enough, 2325. Giving marks for good conduct is a different matter, 2328.

Staff College.

The Staff College does not educate as many officers as it could accommodate and the professors instruct, 2340, 2341; nor is the nation benefited in proportion to the cost, 2342. The entrance examination is ample test of a candidate's fitness, 2358–2360. Officers who have passed the Staff College with high attainments may be unfit for mounted duty, 2356. A man who fails to pass a good examination in riding should be disqualified for a mounted Staff appointment, 2357. The limited number is necessitated by the fact of Passed Officers having a claim to Staff appointments, 2343. If there were adequate reward there would be ample competition, 2344, 2347. Would withdraw the guarantee of Staff appointment from Passed Officers, and give them a pecuniary reward until appointed to the Staff, 2345, 2364. There would then be a larger body of Passed Officers to select from, 2366–2368. The present system would not ensure a competent Staff at the outbreak of a great war, 2346.

Staff.

In the Crimea, Staff officers were scarcely fitted for their post, 2361, 2362. The competition for Staff appointments will not derange the regimental system, 2363. Would still require that every Staff officer shall have passed through the College, 2365. No matter how qualified an officer may otherwise be, he will be better fitted for the Staff by having done so, 2369.

Qualifications of an officer.

A regimental officer should know arithmetic, field fortification, some surveying, military sketching, and speak a foreign language, 2197–2200; something more than an ordinary gentleman's education, 2199. Would not require fortification in examination for direct commissions, as it would be crammed, 2198.

PORTER, Brevet-Lieut. Col. WHITWORTH—*cont.*

Regimental and garrison instruction.

The success of Regimental Instructors would be doubtful; better appoint Garrison Instructors, 2348. An instructor could teach the non-commissioned officers and men field works and rudimentary fortification, 2349. At Sebastopol, officers and non-commissioned officers so instructed would have been invaluable, 2350–2352. Officers who had acquired such knowledge were employed as assistant engineers, 2353. Engineers, wanted elsewhere, had to instruct troops in making gabions and fascines, 2354. Officers who pass the Staff College would, on an average, be qualified for instructors, 2355. Theoretical knowledge is a gain to an officer who has acquired practical experience, 2279, though men beginning as idlers have sometimes shown admirable energy in active service, 2280.

Cheltenham College.

Has a son just passed Cheltenham, and under examinaton for Woolwich, 2186. Selected Cheltenham from the success of its pupils at Sandhurst and Woolwich, 2187, who appear well grounded, 2299, without intermediate cramming, 2188. The school is divided into a classical department, where classics form the main study, and a modern department for mathematics and science, with a little classics; languages taught in both; there is also a junior department prior to the separation; the parent selects the department, 2189–2193. Modern department is not exclusively for the army, 2285. The instruction, tone, and spirit are admirable, 2194–2196.

If large schools taught well, there should be no necessity for crammers, 2300.

HEAVISIDE, REV. CANON, Examiner in Mathematics for the Council of Military Education.

Mathematical examinations.

Has been, since 1858, a military examiner, 2371, 2382. Examines for Direct Commissions, and for admission to and exit from Sandhurst and Woolwich, 2372, 2433, 2474. Examinations for Direct Commissions and for entrance to Sandhurst nearly identical, 2373; and the candidates have about the same mathematical knowledge, 2477, 2478. The object in mathematics is to test general education, 2374. Candidates generally go to private tutors after leaving public schools, 2469; which do not provide the mathematics required, 2375; though it is very little and elementary; some arithmetic, low algebra, and first three books of Euclid, 2376, 2379, 2466, 2482; and any boy, properly taught, ought to pass with ease, 2448. To pass, the candidate must get 200 marks in arithmetic, and 400 in mathematics generally, 2377; 400 in arithmetic only would pass him (as regards mathematics), 2378. Would not raise the minimum, 2483. Public schools might prepare for this examination, but boys there will be idle, and then they go to crammers at the last moment, 2380, 2424, 2425, 2431, 2432. Idling cannot be prevented at public schools, 2470. Some, perhaps most, are well grounded, others merely crammed, 2381, 2468. Young men are better prepared than formerly, 2383, 2446; but the improvement is not an increasing one, nor ever is when the standard is settled, 2384. The mathematical standard was lowered in 1860, and has since remained stationary, 2385. Few fail to pass, 2484. As a rule the candidates are fairly up to the low standard, 2467, 2468; and is surprised to hear they are found too deficient in arithmetic to enter upon elementary fortification at Sandhurst, 2480, 2481. If the marks had to be got in arithmetic alone, many national school boys would obtain them, 2386. The examiners prepare the papers, 2387; and submit them to the Council, 2388, who sometimes suggest alteration, 2389.

Woolwich.

The Woolwich examination is quite different, 2390, 2447; but not above boys of average mathematical ability specially instructed for it, 2449. The average abilities of the candidates are very good indeed; mathematics could not be better learned than has been by many, 2391. The knowledge is not crammed, 2465. The standard has risen, but not in the last three or four years; the examination results are singularly uniform, 2392. For boys of 15 the examination would have to be lowered, 2393, 2394. The candidates have improved in appearance and general bearing, 2395. They show no signs of intellectual strain, 2396. Would omit differential calculus from Woolwich admission examination, and in voluntary subjects require a candidate to obtain a certain number of marks before any count; would like to separate artillery and engineer

HEAVISIDE, Rev. CANON—*cont.*

cadets early in the course, 2397, 2442. Mathematics of a high class being more imperative for engineers, 2398, 2453; though not more so than for *some* artillery officers, 2454–2458; would make it more optional for artillery cadets, 2399, 2459. Would not drop or reduce the mathematical course, but would make it less compulsory, 2400, 2410, 2417, 2460. This would be like having separate classes, 2461. Reports every half year to the Council, 2401. Extracts are published, 2402. The report in 1865 was special, 2403. Examiners do not make general reports except when called for, 2405. A cadet should certainly not drop mathematics after the entrance examination, 2406–2409. To raise the standard for entrance would be to expect more than is reasonable from youths of the age, 2411–2413. The mathematics required for artillery studies is rather a high course, 2414, and mathematics carries such heavy marks that a cadet could scarcely get through the examinations without it, 2415, 2417. "Parkinson's Mechanics" or "Dean Goodwin's Course" would suffice for an artillery cadet, 2416. It is easy examinations for which candidates cram; the more searching the examination, the less cramming, 2417. Cramming imparts knowledge with the least trouble, 2418. Not aware of any injury from preparing for a severe examination, 2419, or from hard reading at mathematics, 2420; but does not see the youths after the examination, 2441. Public schools doubtless offer the best mathematical instruction, but the boys will not work, 2421. Was mathematical professor for 20 years at Haileybury College; boys there from public schools came with little or no mathematical knowledge, 2422; less than from private schools, 2445. Is delicate about recommending instructors for candidates; does not know whence come the youths he examines, 2423.. A public school could scarcely give to mathematics the time necessary to prepare for the Woolwich entrance examination, 2424. Boys from Eton and Harrow must go to a special tutor, 2428, 2429; but youths from Cheltenham come uncommonly well prepared, 2427; and if they can adopt a like system, Eton and Harrow should do as well, 2430, though the best boys at public schools think rather of the universities than of Woolwich, 2450, 2451; whereas at Cheltenham they are more equally divided, 2452.

Sandhurst. In passing out of Sandhurst in mathematics about 13 per cent. barely scrape through; the generality know algebra tolerably to simple equations; the working cadets who strive for free commissions do very well indeed, perhaps four per cent. are nearly as good as Woolwich cadets, 2434, 2435. The course has not been very productive with the idlers, 2436, 2437. In an educational establishment it is not exceptional for half or two-thirds of the pupils to be idle, 2444.

In the Staff College the object of studying mathematics is to obtain mathematical knowledge, without a secondary object, 2438–2440. The Woolwich examinations do not admit of proper comparison with those at Cambridge, 2462–2475. Nor can the Woolwich and Sandhurst examinations (which are so different) have commensurable marks, 2463, 2464. The examinations in mathematics for direct commissions, and for admission to Sandhurst, are about parallel with that for matriculation at University of London, 2472. The six best candidates for entrance to Woolwich would about equal the six best at Trinity College, Cambridge, in the first year, 2473. The men who pass out best from Woolwich would probably have been high wranglers at Cambridge, 2476. The majority of the Woolwich cadets have a natural turn for mathematics, 2479. The only mode of diminishing the time after the Sandhurst examinations, in which the examiners are making up their marks is to spread the examination over the term, instead of taking all subjects at the end, 2485–2488.

GORDON, Rev. OSBORNE, Classical Examiner under Council of Military Education.

Has held office for eight years, 2490.

Classical examinations. Examines in classics for Direct Commissions, Sandhurst and Woolwich, 2491. Examinations for Direct Commissions and Sandhurst are identical; makes them as easy as he possibly can; the men are of quite the same quality, 2492, 2507, 2508, 2511, 2578, 2579; their average attainments being very low, 2497, their ignorance surprising, 2498, 2499; (hands in two of worst Greek specimens, 2500, 2502;) but there are not now so many knowing absolutely nothing as formerly, 2497. The Woolwich examination is higher, and the men generally better, 2495, 2521, 2563; there ancient history and classical literature were formerly tried, but have been given up, 2494. The papers he

GORDON, Rev. OSBORNE—*cont.*

produced are below the average, 2505, 2521; they could not be worse, 2506; of course the writers will not pass in classics, 2504; and the papers are not a test of the men who enter Woolwich, 2503. Bad spelling does not affect the marks, 2509; many who pass in are very ignorant of spelling, 2510. Mathematics being the staple for Woolwich, 2512; would not look for a high classical standard, 2513; but the candidates often pass very satisfactorily, 2514; sometimes they have considerable classical attainments, 2515, 2563, and might take university honours, 2516. Occasionally this happens for the Direct Commissions, 2517. In the easier examinations would limit the subjects to a few easy books, and announce them six months beforehand, 2518, 2519; but would not do so for Woolwich, 2520, which is a higher matter, 2521. Describes cramming for classics, 2522; grammar cannot be crammed, 2523. Has not examined at Oxford for "little go," 2524; but has for a pass degree, 2525. "Pass" men are far better than the Sandhurst and Direct Commission candidates; "little go" men do better because they bring up definite books, 2526; no man comes up for matriculation so bad as the worst of these candidates, 2528. On the average, the matriculation candidates are somewhat better, 2573. The break down is as much in elementary grammar as in translation, 2529; but grammatical knowledge has improved of late years, 2530. Greek grammar is better known than Latin, 2531. Has not examined beyond classics, 2532. Often men who do best in classics do best also in other subjects, 2533. Ancient history was given up (advantageously, 2575), because it was entirely crammed, 2534. Would rather publish the schools whence the failing than the successful candidates come, 2535. It is discreditable to any school to send up men of 17 or 18 unable to pass these examinations, 2536–2538, without a special tutor's intervention; 2609, the fault must lie in want of pains in the teaching, 2580–2582. Great schools do not like keeping boys after 16, unless they give promise of doing them credit, 2539. Should pass a paper with fair marks, which gave the general sense of a passage, though wrong in its grammar, 2540–2542; but many cannot construe the simplest sentence, 2543. Has never felt regret that the candidates should be unable afterwards in the army to keep up classics, 2544, 2561; but encouragement might be given to men with classical tastes to keep up their studies, 2545, 2562, as an aid to modern languages, 2611, and a point of mental cultivation, 2612. Would like to have all examinations *vivâ voce*, 2546; but time is the obstacle, as one examiner could only take 24 candidates a day in one subject, 2547. The examinations betoken low state of knowledge in English schools, 2548; has no means of comparing with foreign schools, 2549, 2583. In the last 10 or 20 years more subjects have been introduced into schools, but classical knowledge has not improved, 2550. Has known 50 per cent. of the men plucked for their "little go," 2551; but has never allowed more than 20 per cent. to fail at army examinations, 2552. Cheltenham and Marlborough send more successful candidates than any other two schools, 2553, 2554; a good many from Rugby; few from Eton, 2555. Cheltenham's success is due to its modern department, 2556, 2600, 2601; which would be a good institution at other public schools, 2557, 2602; speaking in the interest of liberal education generally, 2603–2605; and would not seriously damage the chances of men who changed their minds, and wished to go to Oxford, 2558. Greek only need be absolutely given up, 2606. One third of the men who take up Latin do not bring Greek, 2559. There is but one Greek paper for Direct Commissions and Sandhurst, and two for Woolwich, 2560. In public schools boys study hard or not at all; the desire of knowledge is not strong in the human mind, 2564, 2565. Thinks a great deal of physical science is required from Woolwich candidates, 2566. Oxonians who have passed "moderations" are admitted direct to the army and Sandhurst, 2568, 2569, and are a very desirable class to encourage, 2570–2572; the mixing of older and younger men is an advantage, 2574, 2577, 2593–2599. Would let the "moderations" clear equally for Direct Commissions and Sandhurst, 2576. Does not think foreigners excel Englishmen in classics, 2584; but the Scotch, and especially the Irish boys, are better grounded, 2585–2587, and have a better pronunciation, though a local accent, 2588. A school in Galway sends us good men; Trinity College excellent men, 2587; but an Irish boy of 16 is sharper than an English boy of the same age, 2589, 2590. Considering the time spent on dead languages, the ignorance is amazing, 2591; it may result from pushing boys in public schools prematurely from class to class, 2592. Men will not learn classics,

GORDON, Rev. OSBORNE—*cont.*
2606; and in that view the establishment of a school of modern history at Oxford was a great gain, 2607; as the result has shown, 2608.

VINTER, Rev. F. W., M.A., Professor of Mathematics at the Royal Military College.

Sandhurst. Has been 10½ years Professor at Sandhurst, 2615, having been previously at Woolwich for seven years, 2614–2618, 2665. Is the senior teacher of mathematics; there is but one professor in each subject, 2619. His only control over the mathematical instruction is to advise the masters, ordinarily through the Superintendent of Studies, 2620; but has very little power, 2668; none as regards an incompetent or careless master, 2669, 2670. His opinion is taken, and usually acted on, in almost all mathematical study arrangements, 2621, 2675. Should only communicate with Commandant if Superintendent of Studies were absent, 2671. The cadets are classed by their attainments and progress (rather as their terms than their mathematics advance) from the junior master's class upward to his own, 2622–2624. The apportioning to the classes is made independently of him, 2624. Mathematics cannot be taught by lecture only; varies his mode of teaching incessantly to suit different pupils, 2626; but whether a cadet has completed his course or not he is examined in the whole of it; a cadet has for mathematics 4½ hours or 6 hours weekly; the third section course of practical mechanics and hydrostatics would take a cadet of fair ability a year, 2626, if he knew nothing of it before, 2627. Of the candidates for entrance those most advanced in mathematics are often those who have failed for Woolwich through the superficiality of their reading; the most satisfactory are those with some ability and a moderate but sound foundation, who do most of their work at the College; it is difficult to persuade cadets who have read widely and loosely to be content with a shorter course; many of the best candidates examined for Sandhurst go to Woolwich instead, some to neither place; competing cadets work very hard; their men are better when the admissions to Woolwich are few; the fortification instructors often complain of the badness of the cadets' arithmetic; takes this *cum grano salis;* however, would always assume a cadet's ignorance of arithmetic at starting and teach him accordingly; complains of an examiner who expected better arithmetic, 2630. Private study is desirable, but should be left to cadet's option, 2631; has no authority to require it, 2682; it is permitted, 2683; there might be better opportunities for it, 2632, 2633, 2657. Has no alteration to suggest in the present mathematical course; logarithmic work has been lately added in the first section, 2634; some Euclid and quadratic equations being transferred to the second section, 2635. The change was beneficial, 2636. Cadets had some previous instruction in the instrumental part of mensuration; adopted a plan of simplification by which every triangle could be divided into two right-angled triangles, 2637. The trigonometry and algebra are limited to those parts bearing on an officer's professional training, 2638–2640. Professors have recently had power given them of putting cadets in arrest in or out of study, 2641, 2642; an improvement, but, on the whole, his cadets are well behaved in study, 2643. There is fear that junior instructors, with greater powers, might use them injudiciously, 2644. Cannot say if a professor has exercised his power of placing a cadet in arrest out of study, 2645. Would not act the spy on a cadet; if he recognized a cadet who entered a forbidden house, is under positive orders to report him, 2646. Would let cadets go up for the minimum course of mathematics at end of second term; and, if qualified, let them drop further mathematics unless they purposed competing for free commissions; this would separate the working men from the idlers, 2647; who are those who find out early that they have no chance of free commissions, 2648. Believes idleness is punishable by impositions, 2649. When his cadets idle, he tries to persuade them to work, 2650; often with success, 2651. Should speak in a friendly way to a cadet as to any minor offence before reporting him; if they pledge their honour, the better class rarely break it, 2652. There is some analogy between his position towards his cadets and that of a college tutor to his pupils, 2653. Believes that he exercises a moral influence on the cadets under him, 2654. Finds no difficulty in carrying out instruction in the hall of study; his classes are not large, 2655–2657. A cadet may be taught too much as well as too little, 2656. To omit altogether higher mathematics would be to restrict proficient mathematicians to the Artillery and Engineers, 2659.

VINTER, Rev. F. W., M.A.—*cont.*
The higher Sandhurst course is professionally necessary for understanding military questions of a high character, 2660, 2661, and is a good preparation for the Staff College, 2662; but not high enough for practical use to an artillery, engineer, or Staff officer; there is no differential calculus, 2663; though, during Crimean War, many artillery officers entered not better qualified than the upper Sandhurst cadets, 2664. Salaries of the non-military professors at Sandhurst are lower than at Woolwich, 2666, 2678, and low as compared with public schools, 2667; but the mathematical masters are on the same scale at Woolwich and Sandhurst, 2679. Should receive a written answer to any written suggestion he might make to Superintendent of Studies, 2673, 2674; after reference to the Council if necessary, 2675. Does not, unless exceptionally, communicate direct with the Council, 2672. Would not be responsible for the whole mathematical duties without a much higher salary, 2676; but thinks the professor should have that responsibility if understood from the first, 2677. The professors and masters have as much as they can do, 2680, 2681. Cadets cannot do much mathematics out of study without aid from masters, 2684; but knows no place where students do more work when not under the eye of the master; there is much idleness at universities, 2685. Cadets, as a rule, would not work alone, 2686. The mathematical knowledge of those who obtain free commissions is fair but variable, 2688. The lowest cadets who pass for purchase obtain at least one-fourth marks in the obligatory course, 2689–2691, earned in one subject by one, in others by others, 2693, 2694, which represents a useful amount of knowledge by bringing in the logarithmic work, 2695, a subject badly taught at schools, and found deficient even for the Woolwich entrance examination, 2696. To give the civilian professors and masters care of the discipline would interfere with the military arrangements, 2697, 2698; but they had some disciplinary power at Woolwich, 2720. There are often five or six cadets fit for nothing, and the tone of the place would be improved if they could be knocked off, 2701, quietly, as at Cambridge, 2702, 2703. The discipline difficulty would not apply to military professors, unless it increased their work too much, 2704. The under officers and corporals ought to have more responsibility, and therefore power in preserving discipline, as they have at Woolwich, 2705, 2706, 2719. Is personally acquainted with the system of teaching at Cambridge, 2707, where the private tutors chiefly do the work, 2708. At Sandhurst the mathematical master supplies his place and that of the College tutor, 2709. Two years proved the most satisfactory period for the course, 2710; the cadets acquired an attachment for and pride in the College, 2711; and fathers have for that reason sent their sons, 2712. In the entrance hall there is a list of cadets who have distinguished themselves, 2713; but there is no pure æsthetic decoration to give cadets a pride in the place, 2714. Does not compel cadets to use any special books, except in mechanics, trigonometry, and mensuration, 2716. It is better not to have any precisely fixed course of mathematics, 2717. The instruction is as practical as possible, 2718. There is not the bullying at Sandhurst which used to be the great scandal of Woolwich, 2721. Would give the professors a share in the final examination; would have the names of cadets mentioned publicly who should be worthy of the distinction; mathematical powers of youths frequently do not develop till they are 16 or 17 years old; cadets when in York town should wear strict uniform, 2722, which might indirectly check their going there, 2724.

WALKER, CAPTAIN EDMOND (Royal Engineers), Senior Instructor in Military History at the Royal Military College.

Sandhurst. Has been senior instructor nearly four years, 2726, 2727, 2733. The course in military history described, 2728, 2806, 2807. Would not attempt to teach the whole theory to cadets, 2773, 2774. In some respects the instruction has been gradually improved, 2729. It is by lecture, followed by note study on the part of the cadet, who comes to the instructor for explanation in a difficulty, 2730, 2821. The note study is in the halls of study, 2731; the professor being present, 2732. The instructors are independent of the professor, but all are under the superintendent of studies, 2734. Text-books on the elements of the theory are required, 2735–2737, 2775, 2776, 2779. Two-thirds of the cadets come in with sufficient general education to avail themselves of the special instruction in military history; one-third are deficient in history, geography, spelling, and writing,

WALKER, Captain EDMOND—*cont.*

2738, 2739. There is generally a deficiency in history, geography, and spelling, 2740, 2741, 2821. A cadet passes on to the next division whether he has mastered the previous division or not, 2742, 2743. There is very little idling in his department; the interest in the subject has increased, 2744, 2771, 2805. The cadets show very fair average intelligence, 2745. The very lowest cadets do not improve their powers from first to last; the others do, 2746. The Queen's and Indian cadets need not compete, 2747; and are mostly idlers, prejudicial to the College, 2748. Would double the standard they have to pass, 2749, 2750; requiring them to pass a higher qualifying examination than the cadets for purchase, 2751. Would prefer that arrangement to giving them commissions without passing through the College, 2753. Would like every officer (under 21) to pass through the College, 2754. The system of DirectCommissions damages the College, 2755. Would wish to remove every reason for prejudice against the College, 2756. There are undoubted advantages in drawing men from different sources of education; would take them from all sources, but pass all through Sandhurst, 2757. Men of 16 and 20 may mix without disadvantage, 2758. Would be much against reducing minimum age, and would forbid teaching of military history under sixteen, 2759, 2760. A cadet may pass out after two terms, 2761, which is objectionable, 2762, as lessening the incentive to study soundly, 2763, 2765, 2766. Supposes cadets who so pass out get their commissions more quickly, 2764. Sees no particular object in, or objection to, amalgamating Woolwich and Sandhurst; would let the best Sandhurst cadets go into the practical class at Woolwich, *en route* for the Artillery and Engineers, 2767, 2859–2863. The Sandhurst entrance examination should be more severe; would keep up the present numbers, 2768. There is a sufficient proportion of commissions without purchase, 2769, 2770, as an incentive to work; but if men came to Sandhurst better prepared, a larger number of free commissions would be necessary, 2772. The instruction in military history is sufficiently practical, 2777–2779. Teaches the elements of the theory of war, 2780, and examines cadets in a particular war, 2781, 2782. The examinations are entirely founded on the lectures given, 2784. Would have the questions at Sandhurst more simple than at Staff College, 2783. Tactics can be well taught without experience in the field, and some knowledge of the theory will facilitate entering into manœuvres, 2785, with the aid of the drill taught at Sandhurst, 2786, 2791. Knows little about the Sandhurst drill, 2787, 2788. Tactics and strategy are only briefly touched on, 2789, 2792, 2812, 2813, and the cadets profit thereby, 2814. Knowledge of drill is essential for understanding tactics, 2790. The superintendent of studies can always alter the course or time of any study, 2793. Some such changes are improvements, others very inconvenient to the instructors, 2795, 2801. Professors and instructors should be consulted as to contemplated changes, 2796, 2797. Are within seven or eight miles of Aldershot, 2798; than which there is no better place for seeing tactics practically, 2799; and a class of cadets might be taken there on duty, 2800. Thinks military history, and its connexion with theory, is taught at French, Prussian, Austrian, and Italian military colleges, 2802–2804. Examinations in military history, with marks counting towards commissions, are weekly, quarterly, and half-yearly, 2806. Lectures on ancient campaigns (even Marlborough's) not permitted, 2808. Has gone beyond mere technical instruction, but it has not been approved, 2809. Makes the instruction analytical, 2811. It would be an encouragement if a member of the Council occasionally attended the lectures, App. II. (D.), p. xiv. Thinks the course exercises the memory and makes the cadets reason upon the thing, 2815–2818. The cadet's perception of the lecture is proved by his work on a military sketch, 2818. Dwells much upon military geography, 2819. Would like to teach it on Lavallée's system, 2820. Ordinary history and geography are a very desirable preparatory knowledge, 2822. The professor or instructor combines the duties of professor and répétiteur, 2823, 2824. Sees no gain in dividing the functions, 2825, 2826. Thinks cadets might be more encouraged to study in their rooms, 2825. If so, they should read the same subject in different classes, as in French or German, 2827–2829.

Although the professor could superintend the note study, it does not follow that every instructor could lecture, 2830. A text book is desirable, and preferable to the professor preparing his own lectures, 2929; but knows none quite applicable; McDougall's is the nearest, 2831. Has not used Mr. Chepmell's book, and cannot judge of it, 2832. A text book before adoption should be approved by the Council, 2833, 2834. Does not believe half the cadets idle, some do; almost all work at military history, 2856. As encouragements to study, would give exhibitions to the best cadets, tenable for three years or while ensigns, 2857, 2858. Very much doubts the necessity to an officer of the Woolwich high mathematics, 2861, 2934; and it may interfere with acquirement of other subjects, 2936; but would not lower the study, mathematics being the best mental test, 2935. Would limit the fortification course to field corps, App. II. (D.), p. xiv. Would allow a cadet to take, at his option, high mathematics, classics, or general history, App. II. (D.), p. xiv. Would abolish marks for chemistry and geology, and make attendance on those lectures purely voluntary, App. II. (D.),p. xiv. "Independent study" means that, when particular studies are proceeding, certain cadets are exempted from attendance, and under the name of independent study do nothing but lie on the grass smoking. They are on honour not to break bounds, but under no supervision whatever. The system is bad for discipline and study. Would require cadets not taking up one study during hours of study to take up some other, in good faith, 2885–2891. Cannot say when this system commenced, 2914. To make the cadet prepare beforehand certain work and bring it to the lecture, would make all the studies "independent," 2892; it would diminish the Professor's labour; but change the whole system, 2893, to that of the public schools and universities, 2895. Boys not disposed to work would do nothing, 2894. As regards military history this mode or the present would work well, 2896. Cadets work six hours for four days a week, and four hours and a half on Wednesday and Saturday, 2923; and would scarcely have time for free study, 2897–2899, which witness has heard condemned at public schools as regards mathematics, 2900. The Sandhurst principle is only to work in the study hour, before the professor; but a minority work more just before the examination: few would study mathematics by themselves, 2901–2903, 2924, 2927, 2928. Military history is very popular with cadets, 2911, and teaches them that war is not a hap-hazard thing, 2912. Does not think they prefer it to some other studies because it can be done in a lazy way, 2810. About 30 young men attend a lecture, 2918. One hundred would be a better number, and all lectures should be in the lecture hall, App. II. (D.), p. xiv. It is difficult to lecture with two or three men talking in a corner, a corporal could soon stop it, 2919. Cadets write a paper on the subject of the lecture, and the marks on it count, 2925, 2926. Sees no objection to free study if there be time for it. Thinks the campaign to be lectured on might form previously the subject of reading in the French and German classes, and of topographical study, 2929, 2930. To study a military subject without lectures, involves access to a large library, 2938. Books from which to give suitable lectures are rare, 2920. It would be better for a cadet to master some selected portion of military history than to get up abbreviated barren history and dates, 2921; but the Sandhurst lectures are not abbreviations, 2939. Witness has 61 hours work weekly; has mostly to prepare his own lecture plans, 2872; besides walking to and fro from two miles off, 2873; that is 10 hours a day, besides walking; prepares his lectures from 10 p.m. to 2 a.m., 2875; and practically writes fresh lectures every term, 2913. This is a fair sample of the professors' work, 2876; all work hard, though some may have less home work, 2877. Some had private pupils, but might have had other instructors for them; witness contrived to give his own son one hour's teaching a day, 2878. The professors have now sufficient disciplinary powers, though they would be much helped by under-officers or corporals, 2849. The civilian professors not wearing uniform, while the military professors do, derogates from the authority of the former, 2851. All professors and masters (including those for languages) should be military officers, App. II. (D.), p. xiv. The professors and masters could not, without great increase of strength, take duties of captains and subalterns of companies, 2850, 2871; unless their study work were reduced, 2909. Arrest should always be on honour, as at Woolwich, 2852, 2853. Optional, or limited honour, as at Sandhurst, does not work, 2854, 2855. The link of effective under-officers and corporals is much wanted to preserve discipline in and out of study. Would select the cadets first on the study list (including drill and gymnastics), 2870, for the office (subject to veto by captain of company and commandant), and would encourage them in the important duty by a grant of marks towards the final examination, to be reduced

WALKER, Captain EDMOND—*cont.*

or lost by misconduct or reprimand, 2835–2848, 2869. There are no lance-corporals, 2864. Under-officers and corporals might be made on probation, 2865; there are none in the third division, 2866. Would have corporals from the higher classes to take charge of the junior classes; the promotion of a cadet should be out of his own company, 2868. High standing in studies does not influence appointment as under-officer, 2904, 2905. The senior under-officer may be lowest in the final examination, 2906. Prefers the Woolwich to the Addiscombe system, 2907, 2908. A cadet put in arrest by a professor goes to the guard-room, 2879. It is bad for discipline that any cadets are allowed to go to Aldershot, 2880, 2916. Does not think the Sandhurst cadets less smart than those at Woolwich, though more slack in the ranks, but that occurs in the army generally, 2881; has seen the cadets slovenly dressed, 2882, 2883, but not with coats off, 2884. Should not approve of fines for misconduct out of study, 2915. Oxford students are older and steadier than senior cadets, 2917. It would be good to make Sandhurst the road to a free commission certain, unless forfeited by idleness or misconduct, if the standard were sufficiently high, and the securities for continuous work, 2931, 2933, with a very much higher entrance standard, 2932. The course would be assimilated to Woolwich, with lower mathematics, 2934.

HALE, CAPTAIN L. A. (Royal Engineers), Instructor in Fortification, Royal Military College.

Sandhurst.

Has held his office for 6½ years, 2942. Would either reduce age for admission and keep cadets longer (making it a school without military discipline, 2976-2978), or maintain the age (and the military system, 2979) and reduce the number to those for free commissions, giving them a sound military education, 2947. Is in favour of a smaller college and a higher standard, 3043, 3087, without double government, 3044–3046, 3088; a place of instruction with reduced military organization, under a civilian head if a suitable man could be found, 3049, 3086. Ten years ago the junior department was greatly like a public school, 3026.

Cadets on entering have sufficient general education to take up their studies, but know very little arithmetic and no fortification, 2943–2946, 3009–3011. If head masters of public schools knew that candidates came deficient in elementary knowledge they might produce more forward scholars, 3081, 3082. The course is greatly advantageous to 37 per cent.; 35 per cent. learn something; 28 per cent. nothing whatever, 2948, 3012. Less than one-eighth of army officers derive advantage from Sandhurst, 3013, or one-sixth, 3063, 3064; which may be an advantage to army, 3065. A vast number do not profit, 2949. Two-thirds of the cadets are listless and apathetic, 2950, from their first entrance, 2951, 3039. There is no *esprit de corps*; no leaders to set a tone, 2952; the course is too short for it, 2953. The cadet soon knows if he will be below the free commission list, and, if so, idles, 2954, without punishment, 3095. This evil would be met by reducing the numbers, 2955, and raising the entrance examination, 2956. If cadets were reported on monthly, and punished for idleness they could not pass through without some work; present monthly reports useless, 3080, 3096, and unnoticed, 3099–3102. The Queen's and Indian cadets are as energetic as the others; a good man in study is good out of it, 2960, 3035. Cadets who pass worst have sometimes the best memories, 3109, and show general intelligence, 3110. Attributes the tone of cadets to the system at many private tutors; they would be better from a public school, 3040–3042. The listlessness exceeds that at public schools, 3112; but cannot account for it, 3111. Cadets from private establishments do not come with bad *physique*, 3113. Hospital cases not numerous, 3114. Permission to smoke is nearly unlimited, 3115–3118. The military knowledge of the idler who purchases a commission is very small indeed, 3015. Would diminish idleness by raising the qualification for a purchase commission, 3103–3106. Great idleness should be a bar to obtaining a commission, 3093, though cadets averse to study may have turned out excellent regimental officers, 3079. Cadets are slovenly, because there is not a large town near, 3007. Have a bad name at Aldershot, 3008. Out of the grounds they should be in full dress, 3083, 3084. If military system be retained, to give the students forfeitable rank would improve their tone, 3006, 3050–3052.

Would retain the present studies, 3089. The course is shorter than at most military and civil colleges, 3121.

HALE, Captain L.A.—*cont.*

An extra half-year would make little difference, 3122, but would be in favour of the authority of the senior cadets, 3123. In that case would make final examination higher, 3124. Would prefer three terms to two, 3108. Sees no objection to a cadet passing out after two terms, 3125. Men educated theoretically and wholly practically are not comparable, 3068.

Discipline at Woolwich was far stricter than at Sandhurst; there is more supervision; and there is advantage in the neighbourhood of a large garrison, 3053–3057. Calling the cadets a battalion is of no advantage; they are brought up with false notions of discipline; arrest, on parole or without parole a false system, 3047, 3048. The billiard rooms do not encourage lounging; but drinking and smoking late in the refreshment room destroy energy, 3126. The bad tone is attributable to a few ungentlemanly idle young men; as a rule the cadets are most gentlemanly, 3126*a*. Objects strongly to the captain of a company dealing with any offence committed in study hours, 3003, 3004. Would punish for idleness, 2967, 3092, 3094, as such, 3100, on a professor's report, 2999–3002, simply, 3005, through the Superintendent of Studies and not the Commandant, 2968, 2970. Would combine these two duties, 2971, and nearly entirely those of professors with officers of companies, 2972, 2998, 3022, preferably to having an adjutant, 3085. The tendency is to treat military professors as regimental officers, 2972. The professors might take duties of company officers, except that of subaltern of the day, 2973. The change would be desirable if the military system be retained, 2974; but that system is a failure unless the College be reduced, 2975. Thinks one officer, as an adjutant, could scarcely take continuously the duty of the subaltern of the day, 3097, 3098, which lasts from 6 a.m. to 10 p.m., 2972, 3024. Would not entrust the duty to the serjeant, for fear of bribing, 3025. Was educated at Woolwich, 2957; there the "old cadet" system, bad as it was, helped to maintain discipline, 2958. During an instructor's absence the senior cadet is in charge; but is often unfit, 3060. A month is a short time after which to make a cadet corporal, 3061. With halls as built at Sandhurst, doubts if corporals and under-officers could maintain discipline in study, 2993, 3059. Has had a difficulty only once in maintaining discipline in his class, 2994. That was a case of very bad language, 3027. Swearing is punishable, but should rather reprove than report it, 3028, 3029. Has rarely to exercise his power of putting a cadet in arrest, 2995. The under-officers are not in a position to exercise authority, 2996. At Woolwich they were senior cadets, which gave them prestige. There is a want of indirect supervision, 2997. Corporals and under-officers are appointed by Commandant, on recommendation of captains of companies, 3069; cannot say if Superintendent of Studies be consulted, 3070. The influence of the under-officers is very small; but occasionally a cadet has great power over his fellows, 3034. In selecting under-officers the professor should have a voice as to character; but would not go too much by the study marks, 3035–3038, 3058. Selection without any reference to professors prejudices instruction, 3062.

Sandhurst does not serve its purpose of giving a good military education to officers of cavalry and infantry, 3014, so far as fortification is concerned, 3071. The Professor of Fortification has not general charge of that subject, 2980. The instructors work independently in couples, 2981. The professor should be responsible for the whole instruction, referring to the Superintendent of Studies, 2982. The *répétiteur* system is admirable; was tried and succeeded; but abandoned on personal grounds, as unpalatable to some of the instructors, 2983–2985. Would make the fortification thoroughly practical, confining it to field-works, except for a month at end of last term; out-door work has succeeded well, the cadets liking it best and taking interest in it; the idlers took longer over their work, but the drill was by squads, dismissed as their work was done, 2986–2992, 3019, 3066–3068. If the number were reduced to merely working cadets, and the advanced fortification (needless for cavalry and infantry) cut out, the course need not be lengthened, 2961, 2962. There would be sufficient incentive to industry, as the cadets would take interest in the subject. At present, having to get a whole class through together, he cannot give time enough to each, 2963; therefore the knowledge acquired is superficial, 3072. Whether a cadet understands his first course or not, he must pass on to the second, 2964; a bad system, but unavoidable with classes, 2965, 2966; and he is not disposed to alter it, 3090, 3091. The fortification course is sufficiently practical, 3016, Per-

HALE, Captain L. A.—*cont.*
manent fortification is useful to those who may afterwards pass through the Staff College, 3018. Vauban's first system of little benefit, 3020, and greatly obsolete, 3021. In an attack on fortifications a man, however well instructed from a book, would be at a loss to know his position, 3074, 3075. Sufficient materials for fortification practice are provided, 3076. Practising cadets in strengthening positions might rouse their energy, 3077, 3078. Any increased incentive to learning would be good, 3031. Would like to see obligatory as well as voluntary fortification got up out of study, 3032, 3033. Recent examinations in fortification have been pronounced unsatisfactory; sufficient notice is not taken of the shortness of the terms; the examination is hurried, on account of Woolwich, 3107.

Does not think the professors generally are worked as hard as in the military history section, 3023. The "independent studies" were very bad; there are none now, 3030, or very few, 3119; and those with the idlest cadets, 3120. Private study, taken up weekly, might promote industry, but would confine it to obligatory subjects, 3073.

FARMAR, BREVET-MAJOR WILLIAM ROBERTS, Captain of a Company of Gentlemen Cadets, Royal Military College.

Sandhurst. Has held his appointment nearly eight years, 3128. Has the general superintendence of the cadets in the A Company, 3129, 3130; for the discipline of which is entirely responsible, 3133. A cadet always remains in the same company, 3131, 3132. Adjutant's duties relate to drill and have nothing to do with dormitories; all officers have a general supervision of cadets out of doors, irrespective of company, 3134–3136. Subaltern of the company acts under captain, 3137, except every third day, when he is on duty at the College, 3138. There is a captain of the day, 3139; his duties, 3140; and he goes through the mess halls as in a regiment, 3145, 3146. Witness's quarters close to his company's dormitories, 3141, which he visits frequently, 3143; would be sure to know of disorder, 3142.

An officer is not present during the whole time of mess, 3147; the senior under-officer is in responsible charge, 3148. There are 10 corporals per company, 3149; none supernumerary or lance corporals, 3150. Has been able for the last year to punish for minor irregularites to extent of three days close arrest, 3151, 3154, 3236, 3237; reporting the case to Commandant on Monday following, 3153. For any severer punishment has to refer to Commandant, 3152. A professor's complaint would go to Superintendent of Studies, 3155, 3278; who would punish, 3280; and witness would not take it up unless specially referred to him, 3156–3159; does not think functions of professors and of captains of companies clash, 3277. Discipline is generally satisfactory, 3168, 3177; fairer than in Colonel Scott's time, 3256; and complaints have been much exaggerated, 3169, 3170. Was present at previous disturbance, 3171. The cadets were much excited, 3174, thinking that Sir H. Jones had broken faith with them; an under-officer of witness' company stopped the whole insubordination, 3172, and his conduct was much approved by Commander-in-Chief, 3174–3176. Two or three cadets were sent away, but were allowed to purchase afterwards, 3253, 3254. The civil professors have the same power, but less moral control than military professors, 3162–3167. Professors should look up to Commandant, rather than Superintendent of Studies, as responsible for everything under the Governor, 3160, 3161. At present the authority is too divided, 3235, and professors want *esprit*, 3256; and do not support the company officers, 3282. The Commandant should have the powers of a head of a college at Oxford, 3178, including rustication and dismissal without appeal, 3179–3181, which is not the case now, 3182. At present his action is confined to discipline, 3301; he might with great advantage undertake the duties of Superintendent of Studies, 3298–3300. "Independent study" is a premium on idleness, 3183, and smoking, 3184; resorted to by many cadets daily, 3185, 3186; unsettling others and unfair to parents, 3187. Believes these cadets keep bounds, 3188, 3224–3226; should report one he saw beyond, 3189, 3190.

Recommends for corporals and under-officers from third-term cadets; second-term cadets were tried and failed, 3191, 3238, taking study marks and good conduct together, 3192. Enters everything in defaulter sheet, 3193, 3194. Professors report monthly, for Commander-in-Chief, on cadets' conduct and progress, 3195; would not himself know of a cadet's punishment for inattention, 3196; though a company officer is always present when Commandant punishes or warns, 3197. There is no recognized punishment for idleness, 3198; but in rare and very bad cases his friends have been advised to remove a cadet, 3199–3201. Course is too short to give under-officers much power, 3202; they are too nearly of an age with other cadets, 3203; they have authority enough, 3204. To increase the course to four terms would give them more control, 3239; quite satisfied with them as a body, 3205; the cadets to choose from are rather limited, 3206; the appointment is an object of ambition, 3207. Under-officers and corporals, on passing out, are gazetted first, 3208; not always considered a boon, 3209; means priority of appointment, not choice of regiment, 3210. Cadets often wait for their particular regiment, 3211.

The billiard rooms are a success, the public houses being comparatively deserted, 3212, 3213. The senior cadets exclude the juniors from the tables; the juniors are not allowed in the rooms at night, 3214, 3215; but are by day, if possessing a good conduct decoration earned by being four months clear of defaulter book, 3216 (which also carries additional pocket money, 3217); no cadet can play unless he have the good conduct decoration, 3218. Cadets of all grades frequent the room, 3219. Beer cannot be taken away from the bar, 3220; Witness visits the billiard rooms unexpectedly at night, 3260. Approves of the military organization, 3221–3223, 3231; but sometimes Commanding Officers find Sandhurst cadets too conceited, 3230. In close arrest, cadets may give parole or not; those who do not, break arrest, if possible, 3226. It is a few irregular cadets who refuse, 3227. The alternative should not be given, 3228, 3229. The College has formed a battalion since the present Commandant has been there, 3232, 3233, which would not put instruction in the background, if all were under Commandant, as in Colonel Scott's time, 3234, who held the reins as regards the professors, 3255. His under-officer visits the bedrooms, 3240. There is a corporal or responsible cadet in each room, 3241, who ought to report any case of intoxication, 3242. Open arrest is confinement to College grounds, 3243, 3244; does not exempt from roll call, 3245. A captain of a company can sentence to three days open arrest, 3246. Extra drill is instruction drill, 3247, and not used as a punishment, 3248. Superintendent of Studies (who is also major, 3250) can punish with seven days close arrest; he refers serious cases to Commandant, who can give 14 days, 3249. The Superintendent of Studies, as major, can punish misconduct out of study, 3251, 3252. Should place a cadet using bad language under arrest and report to Commandant, 3257. Quarrels are not decided by fighting, 3258. He and his subaltern frequently go round the College at night at uncertain hours, 3259. The subaltern visits the halls during study, 3261, to see if instructor be there, and make arrangements if he be absent; this should not lower the professor in his cadets' eyes, 3291–3294. There is very little bullying, 3262. Visits his cadets in hospital, 3263. Hours for smoking not limited, but not allowed in dormitories, 3264. Riding instruction is popular and the master well attended to, 3265–3267. In drill, cadets in turn act as company and field officers, 3268, 3269. Never interferes with professors, 3270. Has never met with disrespect from a cadet, 3271. Drunkenness is not common and could not pass unobserved, 3272; the morning punishment report would show it, 3273. Disapproves of fines for swearing, 3274. Mutinous movements might be repressed without difficulty by officers accustomed to regimental command, 3275, 3276. The cadets are as smart as can be expected, 3281; the case at Woolwich is essentially different, 3282.

Cadets learn much of regimental economy; they may in some cases require re-instruction after joining a regiment; the mass of cadets know perfectly the duties of rank and file; the under-officers and corporals could command a company, 3283–3286, 3289. Practically, Commanding Officers are prejudiced against Sandhurst drill, but time does not admit of further instruction, 3287; unless course were lengthened and free commissions given to all cadets of good character, 3288. A cadet who has served in the ranks cannot be expected at once to take command of a company, 3290. Has heard of a cadet being impertinent to a professor, who reported him, 3295; supposes he was punished, 3296; such words would not have been used to a disciplinary officer, 3297.

HALLEWELL, BREVET-COLONEL E. G., Commandant, Royal Military College.

Sandhurst. The object of Sandhurst is to introduce a military tone; eliminate that and it would be best to abolish Sandhurst and trust to public

HALLEWELL, Brevet-Col. E. G.—*cont.*
schools, 3771, 3772. Says nothing against limiting the numbers at Sandhurst to those for whom there are free commissions; but considers that either all line officers should pass through the College or all should enter by direct commissions and the College be abolished, 3379, 3387, 3556, 3773, 3774. To pass all officers through Sandhurst would involve 700 or 800 cadets, with an augmented staff, 3728. To increase cadets would not render discipline more difficult, 3727. Would expand present college, not add others to it, 3729.

Is aware that the College used to be self-supporting, 3622, 3623. Goes into the estimates before the Governor has them to send to War Office, 3624. Assuming the cadets at 300, the average annual cost is 168*l.* 2*s.* 9*d.* for a Queen's or Indian cadet, or 118*l.* 2*s.* 9½*d.* for other cadets, of which one-fourth is for maintenance, and three-fourths for education; this is exclusive of cost of buildings and grounds; for a smaller number of cadets the expense would be greater; details the items, 3510–3514. The charge is necessarily high from the nature of the course; does not think either executive or professional staff could be reduced, except by a combination of the two, 3515–3518. The persons who do duty at Staff College also could not be dispensed with at Cadet College, 3630, 3631. In 1866–7 about 16,000*l.* was paid on behalf of cadets, 3634, leaving about 20,000*l.* to be provided by Government, 3635, or 16,000*l.* if cost of the 20 Queen's and Indian cadets be omitted, 3636–3639. 300 cadets paying each 100*l.* a year and the cost of his equipment would cover five-sixths of the cost of the College; the loss arises from the low payments for officers' sons, 3651–3653a. Without Sandhurst sons of quartermasters, &c. could obtain education enough to pass for direct commissions, 3654; but they would lose an advantage if they had not access to it, 3655–3657. Various officers receive half-pay in addition to college emoluments, 3626–3629. About 190 cadets enter army annually, 3640, but only those who obtain free commissions (35 or 37 per cent.) really obtain great advantage, 3555; the service does not derive money's worth from the military education of half the cadets (say 60) on the "B." list, 3558, 3641, 3643–3645. Nevertheless it is a gain to the army that one-sixth of the officers should enter with some military knowledge, 3658. There is public feeling against Sandhurst education, 3388, and strong prejudice in regiments against the cadets, 3390–3392. Would rather raise the prizes than the qualification for a purchase commission, 3743, by splitting up some of the free commissions into money rewards, 3380–3386; or if the cost to the country of the purchase cadets (6,000*l.*) were divided among those next after the "A." list, it would secure greater efficiency; each cadet should then pay his full cost, 3646–3648. Approves of battalion organization, as a school of regimental instruction; therefore approximates to the utmost the conditions of a regiment of gentlemen, 3345–3348, 3529. The education is not satisfactory; excepting for those who pass out best it is very superficial, and only a system of cramming, 3373, 3374, 3556. The most is not got out of the College for the benefit of the service, 3557.

Unless Sandhurst were made a mere boys' school would not reduce the minimum age for admission; boys should be left at the public schools as long as possible, 3375, 3376. Relatively with present ages of ordinary cadets sees no disadvantage in admitting older men from universities, 3377. Cadets' weekly money is drawn from paymaster by the captains and paid by the serjeants, 3532. Cadets do not run into debt more than at public schools, 3597. Describes the regulations as to pocket money, 3598, 3599. Cadets are always in uniform, except when going a distance on pass; at Aldershot they must wear uniform, 3609. Cadets always wear red on Sundays, and on other days, when blue jacket is under repair, 3751. Does not admit general listlessness among the cadets; but there is idleness among those who intend only to qualify, 3394, 3395. Queen's and Indian cadets tend to foster idleness; would rather give them a sum of money than have them at Sandhurst, 3415, 3416. In four years, six Queen's cadets have been in the "A." lists, 3642. Thinks that to give the cadets military rank would increase Governor's power over them, 3649, 3650.

Commissions should only be obtainable either from Sandhurst or the ranks, 3363; for which purpose would have at Sandhurst a more practical course, 3364, 3365, 3756, striking out mathematics and limiting instruction to strictly military subjects, 3366, 3367, 3730. Other subjects might be learnt, but as extras out of recreation time, 3368, 3369; for the public should only have to pay for professional teaching, 3731; though an officer of

HALLEWELL, Brevet-Col. E. G.—*cont.*
general accomplishments is more useful than one without them, 3732. Three terms ought to suffice for the course, 3378. Sees no objection to cadets, who can pass, leaving after second term, 3492. It would be good to abolish the idle week after the examination; Sir George Wetherall thought so too; the difficulty is that cadets would have to go home without knowing the results of the examination; thinks publication of the results would suffice, 3407–3413. When witness first went to the College private study was discouraged; finding cadets resorted to dodges for having lights in their rooms to work at night, he gave facilities for the reading room being lit till 12 o'clock for work; they are much used by those competing for free commissions; some work to atone for previous idleness; others for the love of hard work, 3416–3420, 3568, 3569. "Independent studies" are no studies at all, 3397, and a very bad system, 3398, 3407; and would abolish them by not allowing any voluntary subjects in study time, 3399–3406; they were introduced by the Council, 3738, 3739.

Cadets now make no progress in languages, 3368. Instruction in military law and regimental economy could be given by officers commanding companies, 3370. Care is taken to teach distinct utterance of words of command, 3758. At the end of each term, about 35 cadets could command companies and five or six could manœuvre battalions, 3759–3762. A cadet though smart at drill may not understand command; under-officers and corporals alone practise that, 3536. Does not hold private examination drills, 3537, 3538, nor see the good of them, 3539. The only approach to regimental duties is inspection of rations and sick by under-officer and corporal on duty, 3540. Cadets are not instructed in picket duties, bivouacking, and subalterns' duties; would like to introduce such practical instruction, 3541. They learn riding school drill, 3542; but not cavalry manœuvres, 3543. There is periodical examination in riding, 3544; but certificates are not given as to it specially, 3545. To ride daily for three months would interfere with the studies, 3757. Cadets are thoroughly instructed in artillery drill, 3546, 3547, and subjected to examination, 3550; they also pass through musketry instruction, 3548, 3549. Fencing and gymnastics are encouraged by prizes, 3551, 3552. Almost all can swim, 3553. Should like to give more time to practical drill. Firing blank cartridge was objected to, as making the cadets' hands shake, 3554. The officer commanding a regiment would never assume that a cadet, on joining his corps, had regimental knowledge; but the cadet might so acquire it at Sandhurst as to be soon dismissed from drill, 3371, 3372.

The "A." list obtain free commissions; the "B." list qualify and may therefore purchase, 3559. The "B." list may furnish as good officers as the "A." list, 3393.

Believes that questions of education and discipline and all matters concerning the College estate come before the Commissioners, 3501, 3502, 3506, who are completely independent of the Council, 3503. Some of them come down with the Commander-in-Chief occasionally to inspect the College, 3504, 3505. Considers the Commissioners well qualified to give opinions, and does not think they can interfere for harm, 3507–3509.

Governor can only rusticate for six months, 3313–3316, pending decision of Commander-in Chief, 3735–3737, and has only lately had that power. It is most important that he should have absolute power of dismissal without appeal, 3317–3320.

Witness has been Commandant 4½ years, 3303. The Commandant has immediate command of Cadet College, entirely under and directly responsible to the Governor, 3304–3306. The studies are under Superintendent of Studies; but that officer is subject to Commandant and cannot make any change without reference to him, 3307, 3308. Should refer to the Governor any change in studies; but in discipline only serious matters, 3309. Can punish up to 14 days' arrest, 3310, 3311. Has not power of rustication or dismissal, 3312; sees no reason why he should not deal with all misconduct; present system might lead to clashing between him and Superintendent of Studies, 3740. Is responsible to Governor for everything connected with cadets, 3741. Cadets consult him privately about their prospects, 3668–3670; but he has no means of knowing their characters generally, 3671. He should not be a local magistrate, 3769.

Superintendent of Studies controls the studies and professors; on parade he is major of the battalion; in all things is completely under Commandant; the relationship works smoothly, 3321–3323.

Captains and subalterns of companies are necessary, 3324. Captains are responsible for whole interior economy

HALLEWELL, Brevet-Col. E. G.—*cont.*

of their companies; their subalterns support them, 3325. Formerly there were no subalterns, 3326; but with present establishment of companies two officers are required for each, 3327. The captains see much of their cadets, 3672; of whom there are about 80 in a company, 3673. They are appointed by Commander-in-Chief, 3674; and should be very specially selected. Is quite satisfied with them, 3676, 3678. Considers it a military post, 3677. Ordinarily the captain would inquire into a charge against a cadet, 3679. His early training specially fits him for the duty, 3680, 3681, 3770. Details duties of captain of the day, 3519, which occupy his whole time, 3520; of other captains, 3521; of subalterns, 3522, 3523. Should be sorry to see changed the custom of visiting cadets in dormitories and at mess, 3524.

Adjutant's duties are chiefly at drill and in the orderly room, and he is absolutely necessary, as a distinct officer, 3335–3338, 3525–3527. Is as necessary as in a regiment, 3528, as the same precision of drill is expected, 3535. Duties of paymaster, and of quartermaster (who is the hardest worked man in the College, 3530), could not be combined, 3533.

There is nothing like religious instruction, the chaplain's only duties strictly being to read prayers and preach; but he exercises great moral influence over cadets, 3493–3497; does not object to his being an army chaplain liable to removal, 3498–3500. Formerly, when cadets were younger, chaplain gave religious instruction, 3703, 3704. The powers of the several officers were approved by the Commander-in-Chief, 3742. Duties of staff serjeants, 3612–3614; would not call for a serjeant's evidence against a cadet, 3615, 3616; serjeants do not exercise surveillance, and have nothing to do with discipline, 3474–3476. Sees no advantage in the serjeants being constables for the surrounding district, 3768. Is quite in favour of making some of the military professors captains of the companies; there are some who have time, 3328–3334. Would not give professors any power over instructors, 3339, 3340. They have now sufficient disciplinary power, 3341; but the civilians have not the moral power of the military professors, 3342. Instruction, as far as possible, should be by military professors, 3343; cadets prefer it, 3344, 3716. Language masters are paid lower than anybody else, 3620, 3621. Always treats professors, military and civil, and executive officers as strictly equal, 3715.

Cadets on the whole are wonderfully well conducted, 3775. Discipline is better than could be expected, 3464. The system is essentially military, 3662; thinks it should be so to the utmost, 3663, 3664; with more severe discipline on the whole than a civilian would exercise, 3665, 3685. Officers or cadets from public schools are most amenable to discipline, 3666. Military rigidity can be reconciled with sympathetic government of young men, 3667. Pickets of third term cadets, to visit the town on Sunday evenings, have answered and done their duty, 3477–3480, 3484. Gives particulars of a disturbance at Blackwater fair in 1864 (there has been none there since), 3481–3483; and of one in October 1867, the published accounts of which were grossly exaggerated, 3484, 3485, 3617–3619. For it, one very smart young fellow was rusticated, and could not come back; three or four were sent off summarily, of whom two returned, 3486, 3487. In the row in 1864 some cadets were disrespectful to their officers, but apologised; disrespect is almost unknown, 3746. Blackwater fair, including preparation, is a source of evil for several days, 3745. The magistrates were asked to look after the photographic vans, 3744. Not allowed to dine at mess at Aldershot without their friends' permission, 3610. The bounds are inappropriate for young men, and have not been lately acted up to, 3611. Study terminates at 5 p.m., 3747, from which time till tattoo there is no roll-call, 3748–3750. On Sunday evenings cadets are regularly paraded, 3750. There is no one specially charged to look after the cadets' moral character, 3700; it does not fall within chaplain's duty except from pulpit, 3702. Cadets are not legally under Mutiny Act and Articles of War, 3787–3789. Never saw obscene writing on the walls at Rugby, 3776–3778, 3780. Such an act at Sandhurst was quite exceptional, 3779. There is no bullying, 3604. Idleness, as such, is not punished; so long as a cadet's idleness does not interfere with the rest of the class, it would be most difficult to punish it, 3488–3491; but parents have been advised to remove idle cadets, as doing no good, 3726. Lateness for roll-call would not be entered in defaulter book unless of constant occurrence, 3767. For falsehood the punishment is isolated close arrest, 3560. Bad language is punished according to its degree, 3561–3563. Ungentlemanlike conduct would

HALLEWELL, Brevet-Col. E. G.—*cont.*

be severely treated, 3564. Intoxication is always recorded; there is far less than is generally supposed. 3765. It would not incur the bad opinion of many, 3705, 3706. Drunkenness would probably be punished with solitary confinement, 3682, and by rustication if repeated, 3683. Drunkenness at a public school would cause expulsion, 3684. Detection in a public house, drinking, would, under recent stringent orders, insure dismissal, 3687, 3688, or rustication, 3448–3451, 3689. By frequenting public houses means sitting smoking or drinking at those in the neighbourhood, 3763. Repression cannot keep the cadets from public houses, 3659, 3688, or proctorial supervision, 3660. Adding the professors for discipline out of study has given additional power, 3661. As regards arrest, introduced optional parole two years ago; it has not answered; parole is not broken, but it is rarely accepted; there is less traditional good feeling in the matter than at Woolwich, 3466–3473. Does not see how to enforce "arrest on honour," 3733, 3734. No punishment for immorality; the hospital shows that cases occur, 3690; but there is for being seen in company with loose women, 3691, 3699. It is a matter in which cadets' ages (averaging over eighteen, 3694) must be taken into account, 3692, 3693; though the offence is unquestionably injurious, 3696–3698. Should not think of reporting such cases to cadets' parents, unless they were very ill indeed, 3701. Sandhurst is under Contagious Diseases Act, 3700. War Office objected to rustication, as punishing parents more than cadets, 3717–3719; the punishment still exists, 3720. Objects to punishment drill in every way, 3752, and very strongly to impositions, 3753, as inapplicable to young officers, 3754, 3755. For a trivial crime the captain can punish up to three days' arrest or drill; more serious offences are brought before Commandant and disposed of by him in presence of accuser and accused, 3349–3351; but, under a recent order, offences in study, if admitted by the cadet, are dealt with by Superintendent of Studies; if not so admitted are referred to Commandant, 3352, 3711–3713. Objects most strongly to any person being punished without having his accuser face-to-face, 3353, 3707–3710, 3714. Until the previous term "conduct marks" were given; each cadet had 100 assigned to him at commencement of term; every punishment diminished the amount; if cadet lost 75 he had a bad mark put against his name to delay his obtaining a commission; if he lost all he was rusticated (which only happened once in witness' time); objected to these marks (which were quite independent of final examination), and approved their abolition, 3354–3361.

Commandant appoints under-officers and corporals, selecting carefully (in consultation with Superintendent of Studies) from the cadets recommended by the captains; chooses those best qualified to command; excellence in study secondary, but would not appoint one notoriously idle, 3452–3454. They can only place in arrest pending superior decision, 3455, and mark for arrest for inattention at parade, 3457. Would strengthen their hands as much as possible, 3458. They are valuable for discipline, if actually placed on duty, 3459. Would encourage hard work in under-officers by giving free commissions to the best, whether in the "A." list at the examination or not, 3460–3463. Off-duty, under-officers and corporals are too completely associated with cadets, 3766.

Provisioning is in the hands of Commandant, aided by quartermaster, 3531. Details the provisions at the several meals, 3587–3590. There is a committee of management, on which the cadets are represented, 3590. Cooked provisions (extra) may be procured from refreshment room, with table furniture, but not wines or spirits, at the cost of the consumers, 3591–3595. Does not see necessity for a private room for each cadet, 3570, 3571. Present rooms are not uncomfortable, 3572; describes the furniture, 3573–3581. Change of linen can be obtained when required, 3582, 3583, and a good bath, 3584, but not in cadet's own room, 3585. Liquor is very rarely taken into dormitories, 3586. The conduct in dormitories is decent, 3565; does not think associated dormitories have a bad effect, 3566. In A. and B. companies there are four in a room; in C. company each has a separate bunk; bunks described, 3567. The new (non-general) bath arrangements are a failure; does not see the need of ablution being private, 3421, 3422. Describes refreshment room arrangements, 3439, 3440, 3442. Beer not allowed in the smoking room, 3441. Is not responsible for cadets' bills with refreshment contractor, but ready money transactions are impossible; keeps an eye on the proceedings, 3596. Cadets some-

HALLEWELL, Brevet-Col. E. G.—*cont.*
times give supper parties, in recreation hours, outside the College, 3600–3603. Sees no gain in limiting the hours of smoking, 3764. A pack of beagles is kept for the cadets, 3605, who hunt twice a week, 3606, partly on the College grounds, 3607. Cadets would not be allowed to join other hunts, because of interference with their studies, 3608. There is a band, 3721. Cadets sometimes study music, 3722; they have a musical and dramatic society, 3723, but no scientific society, 3725, and certainly no debating society, 3724. The recreation rooms rest on the idea that the cadets are young men, 3781, 3782. Proposes to have two billiard tables per company, 3783, 3784, believes them to be favourable to discipline, 3785. All that is done for the cadets is conducive to good, not harm, 3786. Introduced the billiard tables as a counter attraction to those at public houses; play for money is most jealously guarded against; is perfectly satisfied with their action, which is in favour of discipline; first term cadets may now play at public tables, but so they did before, 3423–3429. The bar has also acted well, 3430, 3431. Drunkenness arises from frequenting public houses, 3432. Should much regret closing of either billiard tables or bar; though the neighbouring publicans, who now take shillings where they used to take sovereigns, would be delighted, 3433–3435. The recreation buildings comprise billiard, smoking, refreshment, writing, and reading rooms, with the library; hopes, as funds admit, to provide chess room, music room, and workshops with lathes, 3436. There is a standing library, and books are also obtained from Mudie by the committee, 3437, of which Colonel Addison is president, 3438. Attaches importance to workshops, desiring to provide cadets with as many amusements as possible, 3443. There are two covered racket courts constantly in use, and a fives court less used, 3444–3447.

ADDISON, COLONEL J. E., Major and Superintendent of Studies, Royal Military College.

Sandhurst. Sandhurst was founded mainly as a preparatory school for officers' sons, 3794. It is not now a school for the whole army; but a great boon to officers who obtain a course for their sons at a cheap rate, 3795; while it also provides military education, 3853. The true object of a Military College should be military education, spirit, and bearing, 3876, 3964. No officers possessing a military education enter the army except from Sandhurst and Woolwich, 3874, 3959; while one officer, at least, in four or five should have a good military education, 3875; but, at the same time, does not doubt that foreign officers esteem highly our captains and subalterns, 3957. The course is intended to make an officer more useful throughout his career rather than to educate him for a subaltern, 3947; on barrack duty, 3951. If a war broke out, half the cadets would be ready for service with two months' training, 3951. As an instance of the utility of Sandhurst, witness, after leaving the Senior Department, drew up the measures for defending Cork in case of barricades, 3952. Approves of the military organization of the school; but it is more in name than fact, the captains being analogous to masters of houses, the under-officers to prefects, and so on, 3826–3828. It encourages a military spirit, 3833–3835. Officers from Sandhurst have undergone discipline substantially the same as those from public schools; but the Sandhurst cadets, as a rule, could not afford to go to public schools; and, therefore, if they did not pass through Sandhurst would go to the army direct from inferior training, hence the advantage to these cadets, 3836–3838. Details the changes since 1855 in the Educational system, *App. II.* (*F.*), *p. xix.*

Would limit entrance examination to four subjects, with option of landscape drawing, but would require 2,400 marks to be obtained; at present one-third of the cadets have not sufficient intelligence for their military studies, 3937. This would at first keep away one-third or one-fourth of the candidates, 3938, 3939; though, after a few years, the standard would be worked up to, 3940; by nearly all candidates, 3941; and the remainder might enter army by direct commissions, 3942, 3943; their non-intelligence not interfering with their utility as regimental officers, 3963. One-third of the cadets idle, as they do in almost every public institution, 3812–3814. So that Sandhurst is neither better nor worse in that respect than public schools generally, 3815. Cadets from public schools are a good, well-toned class; but they are very few, 3877. The mental discipline and conduct have more tone from the old public schools than from Cheltenham and Wellington College, 3878, 3879. Traditions of the schools have much to do with this; influence of the head master, through the sixth form, is enormous, 3880; that same desirable influence cannot be had in a military establishment, 3881.

ADDISON, Colonel J. E.—*cont.*

Has proposed to reduce the compulsory subjects to two, fortification and surveying, and to allow a cadet to take up any three of the other six subjects. The idling is great, but not so great as at the Universities; it cannot be stopped because of the low standard for a pass examination, 3791, 3935. Details the educational course, *App. II.* (*B.*), *p.* x. An improved educational system would give the cadets' minds more occupation, 3792, 3936. The course needs concentration; would not allow a cadet to study more than four or at most five subjects at once, 3796. Believes that the course adds to the military usefulness of the future officer, 3797; not in routine regimental duty, but if he come to a position of responsibility, 3798. A more practical course would be of greater use to a regimental officer; but witness would not have it less theoretical, 3799. The excess of masters is due to the number of subjects, 3805; but is averse to their diminution and would merely lessen the number each cadet might take up, 3807, 3934. The only optional studies are physics, geology, and landscape drawing, 3873. Should like to have time to give practical field instruction in military subjects, 3839. Cadets do not learn interior economy of a regiment, 3841; they are taught to drill troops, but to a small extent only, mostly wanting drilling themselves, 3842. Would only object to the cadets making out the orderly room returns on the ground of the time taken from studies and the little benefit accruing, 3960, 3961. Thinks the whole instruction could be undertaken by military men, except, perhaps, in the languages and sciences, 3866; which competent officers of high stamp might decline to teach, 3867, 3868, 3997, 3998. All the practical studies, except swimming, are under witness, subject to the commandant, 3869, 3870. Swimming was taught last autumn; but nearly all the cadets could swim, 3871. Should prefer a course of two years, 3804. The present is too short for so many subjects, 3806. Mathematics will not give tone to a school; military history, fortification, and surveying educate the judgment, 3882. Geology and chemistry should not be neglected as matters of general education; though unlikely to be useful to an officer, 3950. Would not give up permanent fortification, 3966. Believes fair progress is made in languages; exhibits confirmatory statistics, 3999, 4000. Similar statistics of mathematics cannot be compiled, 4001.

The College is, as far as possible, responsible for cadets' moral and intellectual training, 3883, 3884; but the age of cadets and shortness of course diminish the possibility of control, 3946. The discipline is on the whole good, considering the often disadvantageous antecedents of the cadets; almost all come from crammers; out of 320, only 16 came from the nine great public schools, while Wellington College sent 24, Cheltenham 33, and Marlborough one, 3793. The bad tone among many cadets results from their antecedents, 3816–3818, 3993. Disbelieves utterly in a return which shows one cadet in seven to be insubordinate, 3819–3821; but cannot quite explain the large percentage, 3988, 3989. The average has been raised by the large number in 1862, when Jones' Fort was stormed, 3822–3824, 3987. The College would gain greatly if the worst cadets were weeded out, 3822. Military officers in charge of cadets look upon them as entrusted to their care, 3888, 3944; so far as they come in contact with them, 3945. Ninety per company has been about the maximum, 3856; too many for one captain to have personal knowledge of, 3857. Sir George Wetherall's project for combining discipline with instruction, and having more companies with fewer cadets in each was originally witness's; is not sure there are not serious obstacles to it, 3855. Proposed to have six companies under six of the military instructors, responsible for discipline out of study as well as in; the other military and the civilian instructors remaining responsible for discipline in their classes, 3865. There is not much fault to find with present disciplinary system, 3907; but would unite the discipline and instruction, 3829 (avoiding double government, 3967); if the military instructors could find time to supervise the interior economy of the companies, 3830–3832, 3854, 3922–3925, 3968; basing the selection of instructors to command companies rather on the man than the subject of his instruction, 3924, 3933. Is not sure of the effect on cadets, 3925; or of the practicability, 3926. At present military professors have only 18 hours work a week, so

ADDISON, Colonel J. E.—*cont.*

that they could take the discipline as well, 3896, 3901; provided more study work were not thrown upon them, 3982. An instructor could judge best of a cadet's character in the field, but fairly well in the class room, 3897, 3898. The instructor is more likely than the captain to know a cadet's character, 3858, 3907, 3958; but, from different advancement, does not think it would be possible to give the instructor all his own company to teach, 3859. An officer in charge of a company should devote his whole time to it, 3899, 3900. Would divide the cadets into fifties, 3902; which would not cause diversity of discipline, 3903. This would be preferable to having only one company, with one captain and several subalterns, 3904. The particular supervision of conduct could not be distributed among all the instructors, 3971; would entrust it to a selection of military professors, 3972. Professors have now connexion with cadets only in study, 3974; there is no authority answering to the master of a boarding-house at a public school, 3975. The direct supervision rests with captains of companies, 3976. In general position, except as to power of rustication, the commandant corresponds to a public school head master, 3977; having command of the cadets, while the superintendent of studies has duties in the same direction, and the governor has a general influence, 3978. The commandant lives in the College, 3979; and in domestic arrangements captains of companies work under him, 3980. Captains and subalterns do not live in the College from want of accommodation, 3981; which would have to be built, but ought to exist close by, 3983; and might be devoted to professors if not required for company officers, 3984. The quarters of some officers and of professors are too far off, 3885–3887. As regards moral discipline, correspondence with parents is by governor only, 3917, 3918, in a serious case, though the commandant often writes, 3920, 3921; doubts if the captain of a cadet's company would do so, 3919. Under-officers and corporals are selected by captains and commandant, witness being consulted, 3860; on the ground of fitness, 3908; from third term cadets, 3909, 3962; of good character, 3913. The choice would be better if the captain and professor were united in one person, 3861; still more if the professors were consulted in council and they recommended as a body, 3862; the missing link between the cadet and his tutor would be filled up, 3863. The main object of appointing under-officers is to preserve discipline; to give the elder cadets habits of command also enters into the idea of the thing, 3910–3912, 3914–3916. There have been cases of intoxication, but it is not rife, 3990–3992. Insubordination as shown in the returns has a wider meaning than usually given, 3992. The instructor would report misconduct in study time to witness, 3890; who would bring the case forward, 3889. If a whole class went wrong the instructor would probably be to blame; but not in individual cases of grave misconduct, 3891–3894; a kind officer or instructor would warn a cadet before reporting him, 3895. The instructors have now a thoroughly military position; the company officers have only recently had power of punishment, 3905. If each instructor could dictate the punishment there would be too great diversity, 3906. Disapproves of impositions as punishment, 3953–3955. The governor should have absolute power as to indulgences and punishments, 3956; and he ought to be able to remove a cadet without appeal, 3849; which at present he only recommends, 3851; but witness believes Art. 34 of Regulations gives the desired power, 3852. Supposes the difficulty of sending to his friends a cadet whose presence (without a specific offence) is injurious arises from the want of autocracy which places not under Government have, 3843, 3844, 3850; only remembers two instances, 3845. Cricket is not very general, 3994; and there is too much smoking (but that is not peculiar to Sandhurst), 3995; could not limit the hours for smoking without setting spies, 3996.

The military instructors, 15 in all, teach fortification, military surveying, and military history, 3927, 3969. There are 14 civilian professors, 3970. The language masters are good men, but indifferently paid, 3928; the pay being some criterion of social position, 3929. Mathematical instructors are civilians; nearly all wranglers; two clergymen, 3932. An officer exercises influence over cadets, which a civilian cannot acquire, 3933, 3973. At Rugby classical masters teach French and German, 3930. Sees no harm whatever in the professors giving private tuition, 3808, 3809; but believes the Council has not approved of it, 3810, 3811.

Thinks marks should be given in final examination for drill, gymnastics, and riding, 3872. Would raise the Sandhurst qualification for a commission by purchase, 3846; which now exceeds that for Direct Commissions as six to four, though the subjects are the same, 3847; and the Sandhurst standard not nearly sufficient, 3848. The same marks in much higher papers would be satisfactory, 4002.

A first-rate German scholar might be of use as an interpreter, though lately joined, 3948; one who could construct an abattis or stockade would be of great practical advantage, 3949. Cannot say whether officers from Sandhurst try in due proportion for Staff College, 3986; but as regards small proportion among admissions to Staff College, observes that it is only since 1863 that the numbers going out of Sandhurst have been at all considerable, 3800, 3801; and that the small numbers from earlier years show a large proportion at Staff College; even now, Sandhurst does not supply above one-third of the officers of the army, 3802, 3803. Cannot understand 27 Sandhurst officers out of 65 failing to obtain admission to Staff College; attributes it to the low standard at Sandhurst, 3985.

His recommendations as superintendent of studies have been to a certain extent considered, 3864.

Military education generally.

Classical training is a better mental development for a youth than technical military instruction. Would limit technical instruction to the period after being commissioned. Practical instruction should be immediately after joining. After two or three years' service, 100 officers each year might be selected for a year's course at a military college in military science. Would reserve appointments of Aides-de-camp and Adjutants for these officers. Out of the 100 who had passed, 15 a year could be chosen (by competition) for the Staff College. *App. II. (C.), p. xiii.*

DERING, Ensign EDGAR (25th Foot).

Sandhurst.

Entered Sandhurst at 18, direct from Marlborough Grammar School (not Marlborough College), 4008–4010, 4042, having been previously at Wellington College, 4228. After a year and a half left Sandhurst sixth on the list, and obtained a free commission, 4004–4006, 4011; was corporal in his last six months, 4041. Sandhurst is a good place of education, and rendered easier his acquiring an officer's duties, 4012–4014, 4093, also benefited him in his riding, 4094, 4238, surveying and fortification, 4236, 4237. The military organization is advantageous, 4019; cadets consider themselves *quasi* soldiers, 4115. When he joined his regiment, knew a private soldier's duties, 4093, 4177; but not an officer's, 4095. Could not have drilled a company, 4176. An adjutant would prefer for a subaltern an untrained youth from a public school to a half-trained Sandhurst cadet, 4222. A boy from a public school would probably fail in English grammar and composition, 4239, and, perhaps, French, 4240. A cadet can study or be idle as he pleases; there is most idleness and insubordination under the civilians, 4015, 4016, who have less influence than military professors, 4017, 4018. Two-fifths worked hard, three-fifths were idle; some more, some less, 4087, having no inducement to work, as they knew they could qualify and had no hope of obtaining free commissions, 4088. Queen's and Indian cadets were not specially idle, 4089. Cadets lazy in study are not always listless in athletic sports; some are too lazy for anything, 4038–4040, 4250, but not a large proportion, 4251. Fancies incorrigible idleness would be punished, 4166. The requiring a certain standard to be attained each half-year (under pain of leaving Sandhurst) must check idleness, and is a first-rate thing, 4218, 4219. Cadets often borrow money from tailors, 4196–4198; but not from professional money lenders, 4197. Debt in the neighbourhood would be difficult, to any great extent, 4199. Course is too short to have monitors, 4230, who ought to be bigger than those they control, 4231. Cadets are too much of an age, 4232. The want is a disadvantage, 4235; but sees no remedy, 4233, unless under-officers were brought nearer to commissioned officers, 4234. Moral tone not high, 4122, chiefly in consequence of so many coming from crammers, where evil habits are acquired, 4137–4139, 4241; might be improved if the course were longer; but then there should be nothing to learn after joining a regiment, 4123, 4124, 4165. It would be a gain to cadet and the service if course were lengthened a half-year, without cadets losing army seniority, 4173, 4174, 4221. As optional studies, took up geology and chemistry, and German instead of French, 4021, because it was thought well to take up every subject in competing for a free commission, since marks in all count if the qualifying standard be reached, 4024, 4104. The time would be

DERING, Ensign EDGAR—*cont.*

better devoted to a practical military subject, 4105, 4106. Has only obtained a smattering of natural sciences, 4026, but a foundation for subsequent more serious study, 4027. Took up field and permanent fortification, 4028. Too many subjects are taught to be learned thoroughly, 4082, 4083. Chemistry and geology are taught by lecture; surveying is done out of doors; all other studies in classes, 4077. In one of the mathematical studies work would have been impossible from the disturbance, 4078. Surveying and field sketching are taught sufficiently practically; but not castrametation or field-works, 4101, 4102, 4236. German and French are taught simultaneously; therefore a cadet cannot learn both, 4107, 4108. Learnt some German at Marlborough, 4031, 4032, and very little more at Sandhurst, 4030, which arose from laziness, 4034. Cadets do not mind riding being in recreation time, 4223, 4224; but possibly they object to musketry instruction being so taken, 4225. It would be fair to give marks for riding in proportion to the pains taken, 4227. At "independent studies," only those who went in for free commissions worked, 4089–4092. No obstacle to private study, 4084. Study till midnight was allowed for those approaching their final examination, 4086, though to work at night was otherwise illegal, and leave would not have been given except at the end of term, 4203–4205. In examination, proper recognition is given to practical subjects, 4103. In passing out there is no practical distinction between 5th and 25th cadet, 4125; some real distinction would improve educational tone of Sandhurst, 4126, 4129, 4130. It would be a loss to omit the public declaration of the order of merit, 4127, 4128. There is not in the College any public record of a cadet distinguishing himself, 4148, 4149. Professors had no military control, 4133, 4134, or power out of study, 4135; but they helped in the cadet's amusements, 4136. The order depends on the professor, 4079, 4080. Military professors keep the best order, 4081. The relative influence of a military professor and an executive officer would depend on the man, 4188. Military professors see much more of cadets than company officers, 4112. Would combine the two functions, 4113, 4114; it could be done, 4186. Sees no object in an adjutant separate from the company officers, 4167, 4168, but if latter did adjutant's duties it would not render closer their connection with cadets, 4169. It might be useful afterwards if cadets assisted the adjutant in his duties, 4215–4217. Chaplain had no influence, 4189. The tone does not admit comparison with a school where big boys keep little boys in order, 4043. Disgraceful offences were not common; drunkenness happened occasionally, 4044. Not aware of indecent conduct or gambling in the College, 4045, 4046. There was much swearing, 4052, and obscene language in the dormitories, 4053, but never noticed it in study, 4072. There was no drinking at night in "C" company, 4057. Describes a row at York town, 4058, 4059, 4140 (the only one in witness' time, 4065), which was not premeditated, 4060; and which gave way to proper feeling when a College officer appeared, 4061. Did not hear of an attempt to throw the guns into the lake, 4143. This was before Blackwater fair, 4062; there has not been a row at the fair for last three years, 4063, 4064. A skittle alley in College grounds was burnt, 4141, 4142. The row in 1867 would have been more serious had there been anyone to fight with, 4145. An under-officer took a leading part, 4146, 4164 (but his company officers did not know it, 4147), and a corporal was present, 4164. Heard that about the same time an undergraduate was killed in a town and gown row at Oxford, 4144. Insubordination is rather frequent towards the civilian professors, 4066; does not recollect anything like the rising of a class against a professor, 4068, but classes have halloaed and stamped, 4069. The worst case was with a mathematical professor, 4070; tricks upon whom were not frequent, 4071. Cadets who went to public houses would not have mixed with low company there, 4206, 4207. Insubordination would probably stop on the appearance of an officer, 4208–4210. The imperfect tone of the C. company was attributable to three or four individuals, 4132. The course is too short to generate much of the *esprit de corps* of a public school, 4118, 4119; but there is some, 4153, 4154; cannot see how to increase it, 4155. More communication is required between cadets and executive officers; the relationship is too like that of officers and private soldiers, 4037, 4073. The under-officers and corporals would form a link for discipline, 4152. Cadets should be treated more as junior officers, 4076, 4211–4214. Only cadets of bad character habitually would come under moral supervision, 4242–4247. There is not now espionage by the serjeants,

DERING, Ensign EDGAR—*cont.*

4248; does not think their evidence would be taken, 4249. Under-officers had proper influence; but not corporals, 4120, 4150, 4151. They are moderately conscientious in performing their duty, 4121, and very strict on parade, 4170. Under-officers and corporals have power beyond their own companies, 4161–4163. Discipline would be improved if a cadet obtained a substantial advantage by being appointed corporal or under-officer; the priority of gazetting is scarcely believed in; extra marks would not be fair, 4109–4111, 4220. Thinks three companies a better formation than one large one, 4156–4160. The usual proportion of cadets could swim, 4096; there was regular bathing, 4097; but not a swimming master, 4098. Never saw money played for in the College billiard room, and pool was prohibited, 4047, 4048. At the town billiard rooms cadets (especially the juniors) played for money, 4049, 4051; but the stakes were very low, 4050. A cadet could not get more than an hour or two daily for billiards, 4190–4192. Cards were strictly forbidden, 4193, and seldom, if ever, used, 4194; their use would be stopped or reported by the under-officer, 4195. Cadets most likely to care for the workshops would be those whose time was taken up studying for free commissions, 4252, 4253. Food was good and ample, 4099, 4100. It was difficult to obtain clean linen, 4200. Had not such stowage for clothes as at Eton, 4201; but this did not engender slovenliness, 4202. Does not think the associated dormitories had a bad effect, 4054–4056. There is battalion drill daily, 4175. Sword drill was optional, 4178. Musketry drill quite useless, 4179–4181; and the musketry instruction a farce, 4182–4185. Officers from Sandhurst have not more inclination for study than other officers, 4172.

FROST, Reverend GEORGE, M.A.

Cramming Schools.

Lives at Kensington, 4254. Prepares candidates for examinations, chiefly Woolwich, 4255, 4313. Pupils are with him from 15½ or 16 to 19, if not passed before, 4256, 4257, 4265. Finds those from public schools deficient in mathematics, 4259, 4267, 4300, English and the sciences, 4260. Pupils are resident in his house, 4261, with few exceptions, 4290. Describes his hours, &c. of tuition, 4262. The lads work from 8 to 12 hours daily, 4263, 4276. Works them in their weakest subjects, 4264. Deficiency in mathematics attributable to the school; in classics, to the boy's idleness, 4266. Has pupils from all the public schools and from private schools, 4268, 4269. Has not observed disgraceful conduct, 4270; drunkenness, 4271; gambling, 4272; debauchery, 4273; theft, 4274; or bad language, 4275. Recreation from 2 to 4 or 3 to 5, 4277. None at night, 4278. Pupils not allowed to go out, 4279; and easily prevented, 4289. Are well conducted, 4280. Breaches of discipline unknown, 4281. Not more than three hours a day out of witness' observation, 4282. Is particular as to going out, 4283–4285. Lads for Woolwich work harder and higher than others, 4286. There are cramming establishments without discipline, 4287, 4288. There is difficulty in curbing smoking, 4293. Exercises control by keeping the lads actually at work, 4295. Perhaps one-third of his pupils cannot attain Woolwich standard, 4296, 4297; but all with common industry can pass Sandhurst, 4298. Sometimes gives six or nine hours a day to mathematics, 4300; without injury to health, 4308. Marlborough, Haileyborough, Wellington College, or Rossall, good in mathematics; both Harrow and Eton weak, 4301. His chief object is mathematics, 4282; but pupils take up other subjects, 4303. At Woolwich, marks for classics are too high, 4304. His pupils learn French or German, or both, 4305, 4306. The course is shaped with reference to the military examinations, 4307–4310; but teaches all through the proper Cambridge text books, 4309, 4329. Teaches English by dictation and other means, 4311. Has foreign ushers for French and German, 4312. Has now thirty pupils, 4314. The youths for Woolwich are superior in work to those for Sandhurst, 4315–4317. No immorality, 4318. Late hours very rare, 4319. Pupils not out of an evening, 4320, 4321. Preparation of a pupil should last from 6 to 18 months, 4322. Mathematics and languages worked separately, drawing in classes, 4322–4326. Does not work on previous examination questions, 4327–4329. A boy from a public school learns better than one from a private school, 4331. Sees no advantage in being inspected by Government, 4332, 4333; but none could object unless there were something wrong, 4334, 4335. Does not think better results would be obtained from *viva voce* examination, 4336.

MOTT, ENSIGN C. A. (2nd Regiment).

Sandhurst. Left Sandhurst in June 1865, purchasing his commission, 4337–4343, 4384. Previously was at a private school; Eton; and at Mr. Wrigley's at Clapham, 4344–4346, 4349. At the last, was resident for a year and three-quarters, 4347, 4358. Discipline was not very strict, but better than in some establishments, 4348, 4456. Does not think he spent his time to advantage, 4350. Attention was paid to mathematics and history, 4352; but could not keep up classics, 4350; by which chiefly he passed into Sandhurst, 4353, 4354, and should have passed higher had he not gone to Clapham, 4354, 4355. Scarcely hoped to obtain a free commission for want of mathematics, 4356, 4357. Came out lower (72nd) than he passed in, because he could not fall back on classics, 4359, 4463. In the army found no gain from Sandhurst education, 4360, 4462; though he may do so hereafter 4479–4488; but nevertheless is glad to have gone there, 4361. Liked Sandhurst, 4367, 4368, 4476, but less than Eton, 4477. Cadets have pocket money, 4408. Money lenders came occasionally, 4409, 4417. Too many subjects for the time, 4400, 4406. Would confine course to purely military subjects, 4405. Fortification course too short to be remembered, 4398, 4399. Great interest was taken in out-door fortification; but marks for it should be given, 4445–4449; and for riding, swimming, and athletics, 4454. Did not find the riding of much use, 4396. Improved in French at Sandhurst, 4401–4404. Learnt nothing of regimental economy, 4397. Writing reports not taught, 4489. Private study would not be discouraged, 4475. The drill was practical; but was not recognized in his regiment, 4394, 4395: in regiments much needless drill is inflicted on officers from Sandhurst, 4442, 4443. Giving words of command should be more taught, 4444. Cadets had no personal relations with chaplain, 4440, 4441. There was little *esprit de corps*, 4369. Discipline was not very good, 4387, in study, 4388, under the civilian professors, 4389–4393, 4434. The general tone not nearly so high as at Eton, 4362, 4376, 4460, 4461, on account of habits acquired at cramming places. 4365, 4366, 4455–4459. Idlers have greater impunity, 4363, 4364. Cadets from cramming schools often come with venereal disease, 4478. Cadets are treated by their officers too distantly, too much like private soldiers, 4464, 4469; they should be regarded more as subalterns, 4465. There was no one to go to for advice, 4466–4468. Much went on of which the authorities were not aware, 4470, 4471. The captain was more intimately acquainted than the Commandant with the cadets, 4430. The responsible company officer holds the position of the captain of a house at Eton, 4410; but would not caution or lick a cadet, 4411. Eton principles not applicable, 4412. There is nothing analogous to fagging, 4413, 4414. There was neither theft, bullying, nor indecent conduct; but several cases of intoxication, 4377–4383. Cadets obtained spirits from public houses, 4473, 4474. Cadets are likely to duck each other for disgraceful conduct, 4472. A flagrant falsehood would have been held disgraceful, 4425, 4426. In witness' time the officers tried but little to raise the tone, 4427–4429. Describes the disturbance in 1864 at Blackwater, 4385, 4386. Many cadets pass out without becoming corporals, 4422, and without commanding others, 4423, which is an important part of military education, 4424. Under-officers have a certain influence, 4415. There was in each class a corporal or under-officer responsible for order, 4431–4433. Never saw cards played, 4439. No such encouragement to learn swimming as at Eton, 4418–4421. Games not much cared for, 4370, 4407. Billiards in the town for money the chief amusement; scarcely gambling, 4371–4375; stakes low, 4438. No tables then in the College, 4435–4437. Sees no objection to the public method of bathing, 4416.

DASENT, G.W., ESQ., D.C.L., Examiner under the Council of Military Education.

Examinations in English. Has examined in English and general history and English language for Direct Commissions for 15 years, 4490–4492, 4509, 4512, 4513, 4554. When he entered on his duties no test standard was established, 4493. Candidates then showed the greatest possible ignorance, 4494. Not many came from public schools, 4495. There has since been immense improvement, 4496, 4522, 4555, in English more than anything else, 4556, and only seven or eight per cent. now fail to qualify in English and English history, 4497, 4499. The examination is not harder than formerly; objects to very difficult or catch questions, 4498. The examination system has developed education which previously did not exist,

DASENT, G. W., ESQ., D.C.L.—*cont.*

4500. Twelve years ago candidates knew nothing of the English language, 4501, 4502; and made many faults in spelling, 4503. Dictation is not always a criterion of spelling power, 4504. Anyone should pass who has had any education at all, 4505–4507. Would pass any one who makes 200 marks; those who only obtain that minimum usually fail altogether in other subjects, 4508. The minimum never varies, 4510, 4511. Candidates know modern better than ancient history, 4514. Public school men answer in a better and freer way than others, 4515, 4516. Could tell an Irishman by his tenses and moods, 4517. Should expect a good classical scholar to be good also in English and history, 4519. Examines under Civil Service Commissioners for India, 4520. Those Commissioners might take the Direct Commissions examination; but have quite work enough, 4521. It is a pity that our public schools do not attend to English and English history; at Rugby such a course works very well; an examiner should detect "crammed" knowledge and disallow it, 4523, 4524, 4532, 4571. Training colleges are very detrimental to boys' morals, 4524. Public schools ought to send candidates for direct commissions direct, without difficulty, 4525. Does not know, as a rule, whence candidates come, 4526. Thinks English and history could not be subordinated to classics and mathematics, 4527, 4528. In the Indian examinations the marks offered for English almost force it on candidates, 4529; the candidates have risen from 100 to 350, 4530. The proportion who choose English is increasing 4531. Out of 300 candidates in English literature 40 or 50 will have obtained their information very well by reading, 4533. Often detects the use of the same manual by many students, 4534; but less the same crammer, who is generally in the background compared to the text book, 4535. Examines once a year for Sandhurst entrance, 4536. The candidates and examination are the same as for direct commissions, but the youths a little younger, 4537, 4538. Would not pass serious errors in spelling, but sometimes the most distinguished men are incapable of spelling, 4539. Composition has improved, but no great per-centage can be expected to be very clever; no system would pass everybody, 4540. The Woolwich examination is competitive, 4541. Tries not to repeat questions, but fears they recur, 4542. The very best test of ability in composition is to write a good letter with or without a subject given, 4543. Only uses *viva voce* examination for the Indian Civil Service, 4544. Would not introduce it for lower examinations, 4545. Attaches little importance to it except as an auxiliary test; an examiner whose questions are apt to be misunderstood is not fit for his work, 4546–4553. Does not depreciate classics, 4557. In English history 25 per cent. or more are very good (which is an enormous per-centage, 4564); two-thirds do not fail, 4558, 4559. Should consider 750 marks obtained out of 1,000 very good, 4565. The history paper contains more questions than a boy can answer in the time, 4561. The improvement exists, but is not great, 4564. The difficulty in teaching English lies in the imperfect knowledge of the teachers, 4566, 4567. Many boys come direct from Cheltenham, 4568; but a great many come from cramming schools, 4570. A clever boy may be taught as well at a public school as by a crammer, 4569. A boy taken early, and carried through, could learn English and English history by a few hours' study weekly, 4572. Without running down Latin and Greek, would give priority in examination to English history and language, 4573. Latin is, perhaps, the best instrument of education, 4574. In the examination for Woolwich the numbers have increased who choose history and geography, but not those for English, which, *per se*, is dry; would add literature to it, 4575. Fathers try to drive their sons into the artillery, whether they are capable of learning mathematics or not, 4576, 4577.

PRIOR, ENSIGN J. E. H. (80th Regiment), lately a Cadet at the Royal Military College.

Cramming School at Sunbury. Purchased a commission, 4580, after education at Sandhurst, 4579, having been previously at Sidney College, Bath, and for three months at a crammer's (Captain Lendy's) at Sunbury, 4581–4584, 4587, 4616. The cramming was of advantage, 4589; enabling him to gain many marks in special subjects, 4596, and to take a better place than he could otherwise have taken, 4590–4593. Describes the day's work at Captain Lendy's, 4617–4620; there were no punishments, 4624; but good order was kept, 4585; and limits were put on going to London, 4621–4623, 4693; there was no misconduct, 4625; or bad language, 4696. Chief amusements were

PRIOR, Ensign J. E. H.—*cont.*

boating and fishing, 4627; most of the men used to work, 4629. The gentlemanlike feeling was good, 4630. Subjects crammed at Captain Lendy's were useful at Sandhurst, 4705.

Sandhurst. Never had much chance of a free commission, 4605; should have done better to have gone in for a Direct Commission, 4603. Sandhurst was of no advantage to him, 4604, except in drill, 4704, 4766. The Sandhurst instruction is suitable, 4606, and practical, 4632, and there is nothing inimical to study, 4607–4610, 4663, 4664. Would have a better practical knowledge of field-works than if he had not been to Sandhurst, 4703. Learnt fortification (but has forgotten much of it), 4767, 4768, military history, 4769, and surveying, 4770; they were popular, 4771, 4772, 4774. Drill was liked, 4773. Learnt light infantry drill, 4784, and a little shooting, 4785. On picket duty, could, on joining his regiment, have strengthened his post, 4788, 4789. Discipline was very good, 4611, and much drill learned, 4613, which helped after getting a regiment, 4615, 4791. The tone was not altogether studious, but some work hard, 4706. The most influential cadets were the under-officers, if generally liked, 4708. There is a certain pride felt in those who pass well, 4711, 4712. As a rule, athletics not much cared for, 4713. There is a strong *esprit de corps*, 4715. There was no gambling, drinking, or bullying, but much smoking and billiards (not for money), 4636–4640. Was in C. company, 4641. There were one or two cases of illegal combination, 4642–4646. The tone and feeling were right, though a few fellows might be otherwise, 4647–4649. Rich men only wishing to qualify, and Queen's cadets were idle, 4653–4655. Military professors had more influence and were liked better than the civilians, 4656–4659. Cadets liked the place, 4660. The insubordination and misconduct were due to a small number of idle cadets, 4661. Many cadets used their bunks for study, 4662. Supplies of clean linen were issued by housekeeper, 4665. Racket courts and canteen are opened on Sundays, 4666. Canteen inaugurations were at the beginning of term, 4667; new fellows (Johns) were made to stand treat of beer, 4668, or sing coarse songs, 4669–4671, 4799–4805; they were not universal, 4763–4765. Canteen is closed in the evening, 4676; but there is drinking and smoking outside in the public houses, principally in the evening, 4677–4679. At public houses cadets caroused entirely among themselves, 4795, 4796; they played billiards for low stakes, 4797. The College billiard rooms exercised a counter attraction, 4798. Canteen and refreshment room had some effect against the public houses, but not very much, 4741–4743; beer was usually drunk, 4744. Two or three cadets went to bed each night worse for liquor, 4745. On Sundays, cadets are inspected before going to bed, 4746. Could not go out after tea, as dormitories were locked up, 4748. At the half-yearly board dinner there was much jollification and some drunkenness, 4806–4815. Intoxication was common among the new cadets, and did not alter public opinion of the man, 4717–4722, 4794; unless habitual, would not lead to serious punishment, 4726–4728. Falsehood would be looked down upon, 4723. Cadets were orderly at night, 4757–4759. Never saw spirits smuggled into dormitories, 4680; nor knew of an immoral offence, 4681. Fellows have been "toshed" for dirtiness, 4682–4685, 4689, 4690, or ungentlemanly behaviour, 4691. There is some whoring, but not much, 4687, 4688, 4724; generally with the servant maids, 4734. A man would not be thought the worse of for it, 4725, 4735. There were generally about 10 cadets laid up with venereal disease, 4816, 4817. Language was bad, 4694; and gives a low tone to the place, 4697; but all cadets do not acquiesce in it, 4698. Inattention in the ranks was punished with extra drill, 4753, 4754. Arrest on honour was optional, 4755; few accepted it, 4756. In witness' time two or three cadets were removed for misconduct, 4761, 4762. In a private trouble a cadet would go to some officer for advice, 4699, 4700. The officer of the company would warn a cadet he saw going wrong, 4737. Borrowing money from money lenders takes place, 4701, 4702. In hospital, the chaplain often gave religious advice, 4738, 4739. Colonel would write to parents if he thought young men were not doing well, 4740. The military officers treated cadets as gentlemen, 4749; but on parade they were treated as private soldiers, 4750, 4751, without anything degrading, 4752. Had extra drill in his regiment on account of having been at Sandhurst, 4634, 4635, 4775–4783. Cadets would not like smoking to be restricted to the afternoon, 4792. Under-officers were of decided use in maintaining order, 4760.

WHITE, MAJOR-GENERAL H. D., C.B., Commanding a Cavalry Brigade at Aldershot.

Sandhurst and Public Schools. Sandhurst cadets do not make better cavalry officers than youths from public schools, 4819, 4820. The best are Eton and Harrow boys, 4822. The Harrow tone is superior to that at Sandhurst, 4823, 4834. The present Sandhurst course is a mere finishing process, 4855. Has not observed a bad tone among officers from Sandhurst; has seen but few, 4856. There is no ill-feeling towards an officer from Sandhurst, 4826, 4827. A public school education, with modern languages, military history, drawing, and some surveying, would be the best course of study for the army, 4828, 4844–4846. Sandhurst cadets have got on very well in the infantry, 4830, without going to the Staff College, 4831; but such officers would have done equally well without going to Sandhurst, 4832. Sandhurst is not necessary; it is better to be brought up in general than exclusively professional society; free commissions should be competed for at public schools, 4833, 4852–4854, 4882; but does not advocate abolition of Sandhurst, as public schools would be too expensive for sons of poor officers, 4883, 4884; though Cheltenham College may cost less, 4886. When witness was at school public schools quite omitted the special subjects required for the army, 4850. It would be difficult at a public school to teach practical artillery, fortification, and surveying, 4851. An officer straight from a public school, unless he go to the Staff College, is unlikely to acquire scientific military knowledge, 4874–4876; but might be a good officer for a subordinate position without it, 4880, though the more an officer knows the better, 4879. Colloquial French is most valuable to a cavalry officer, 4860, 4861. Riding should be practised daily, 4862, 4863. Saddlery and equipment details could be soon picked up in a regiment, 4864. Sandhurst does not pretend to teach cavalry drill, 4847; but riding was not neglected in witness' time, 4848, 4849. Prefers that a boy should come fresh to regimental drill without any knowledge of it rather than with the smattering acquired at Sandhurst, 4824, 4825, 4842, 4843. Regimental drill is better learned at a depôt than a college, 4858, 4859. Surveying is of the greatest use to an officer, 4829. There is a purely voluntary surveying class at Aldershot, 4841, 4871–4873. It was instituted by the authorities, 4877. Staff College does not provide the cavalry with such good staff officers as were had before; a man now becomes brigade-major for book-learning rather than military efficiency, 4835–4839. Does not think cavalry Passed Officers wait long for appointment, 4840. When staff officers are attached to his brigade for cavalry instruction, employs them in the field as aides-de-camp, 4865–4870.

CAREY, MAJOR-GENERAL G. J., C.B., Commanding an Infantry Brigade at Aldershot.

Officers from Sandhurst. Officers from Sandhurst are much the better for their military education, 4892, 4893, 4896, 4897, 4914, 4939, and become efficient six months sooner than those not so taught and drilled, 4915, 4940, 4941. They have no drill to unlearn, 4894, 4901–4903, 4916; but are rather given to smoking and drinking, 4895, 4904, 4905, which he attributes to the late age at which they are allowed to be at Sandhurst, 4906. Cadets should join the army at 16 or 17, having been a year and a half or two years at the College, 4890, 4891, 4898–4900. Beyond a gentleman's education, every officer should have studied modern languages, military drawing, military history, surveying, and fortification, 4917–4922, 4925, 4928, 4936, 4937. The battalion of cadets was once attached to his brigade for a field-day, and acquitted itself remarkably well, 4952*a*. The discipline of Sandhurst has improved of late, 4907, 4908. Drill ought to be learnt there, 4943. In the field, information acquired at Sandhurst is often of use, 4947, 4948. Many men would

Instruction of officers. study privately for open examinations for staff appointments; cites instances, 4909–4913. The examinations for promotion are insufficient, as including merely drill and court-martial law, 4927. More surveying and field fortification might be required, 4934. It would be desirable that officers should be instructed in field fortification and surveying after joining, 4925, 4926; but doubts giving military instruction in voluntary classes, 4923; though he sees no difficulty in establishing a class for officers of less than a year's service, 4944–4946; and thinks it would be taken advantage of, 4951. Believes Aldershot Surveying Class is pretty full, 4950; an artillery officer instructs it, 4952. Officers go abroad

CAREY, Maj.-Gen. G.J., C.B.—*cont.*

in their leave to acquire languages and military science, and are all the better for it, 4930, 4931. Never in the field found a want of qualified officers for the staff, 4932. Some of the best have never been at the Colleges, 4933.

HERBERT, MAJOR-GENERAL the Right Honourable SIR PERCY, K.C.B., M.P.

Sandhurst *versus* Public Schools.

Was at Eton for three years and entered Sandhurst, in 1836, at 14; whence he obtained a free commission, 4953–4955, 5034–5036, 5101. The entrance examination was then very easy, 4956, 4957; and should not be stiff, 5049. Was not at the Senior Department, 5009. On going from Eton was much struck with low moral tone of conversation and conduct at Sandhurst, 4962, 5037; does not think it is better now, 4963, 5062. Attributes it to the absence of tutorial superintendence, 5038, 5040, 5083, and not to intellectual deficiency, 5049. The want of religious teaching is a scandal to the country, 5084–5086. It is important that every cadet should have a separate room, 5087–5089. The moral tone deters parents from sending their sons, 5077. Attaches no importance to the drill, technically or morally; scholastic discipline would do more good, 5078–5080. The drill acquired is worse than useless; and the duties of a company officer cannot be learned there, 4999, or at any school, 5012. Was, in 1860, made a commissioner of Sandhurst, 4961; names the slight duties of the office, 4964, 4992–4995; for which there is no need, 4991. There are no commissioners at Woolwich, 4996. The Commissioners and the Council do not interfere with each other, 4988, 4989. The Council has little to do with discipline, 4990. The chief authority at Sandhurst has neither position nor authority analogous to the head master of a public school, 5099, 5100. Would abolish the spurious military discipline, and place a civilian of academic distinction at the head, 5048. For tutors very special characteristics are required, 5043; military officers are not suited for moral control of youths, 5045. No doubt teaching should be elastic and sympathetic, rather than rigid, 5046. In witness' time some of the civilian professors were as successful as the military professors, 5047. The Sandhurst system is not good; would change it entirely, 4991, 5013. Military officers are not suited for schoolmasters; the public school system is the only one applicable to military education, 5013, 5044. West Point gives a very good professional education; but all the subjects taught at Sandhurst could be as well taught at a public school, with the additional advantage of tutorial supervision, 5014. Sees no gain in placing soldiers early in life in a separate caste, 5081, 5082; and would abolish Sandhurst, unless it be turned into a public school, with tutors' houses, 5053, 5054. Would have military tutors for military subjects, 5042, 5055; but not necessarily a double staff of tutors, 5056; the moral superintendence of a public school is the great necessity, 5042. There is no necessity for an intermediate school between the public schools and the army; the special knowledge necessary could be acquired in a short time at a private tutor's, 4997, 4998, 5041, 5050. Would like to see the largest possible proportion of officers acquire rudiments of fortification, surveying, and military history, without pressing the mass up to scientific acquirements, 5029. Would encourage public schools to impart these rudiments, desiring thence to procure the greatest possible number of officers; objects strongly to passing *all* officers through Sandhurst, 5030–5033, 5064, 5081. Would give commissions to be competed for at public schools, as encouragement, 5065, 5066. The fortification and military drawing would be easily acquired, 5067, 5069. Very little mathematics would suffice, 5068. Eye-sketching could be learnt in play hours, 5070, 5071; but riding should be practised at home, 5072. Military history could be taught and would be popular, 5073, 5076. In the Direct Commission examination professional subjects should be introduced, if boys from public schools would not be thereby excluded, 5090; such knowledge should be encouraged by priority of commissions, 5091. The head master of a public school should certify to the status of a boy competing, 5092. Under public schools would include a middle-class school, if well carried on, 5093, 5094. Boys from public schools are the most desirable class to encourage, 5095; but would not hinder free commissions being given for good [illegible] examinations, 5096, 5097. A poor officer would lose by abolishing Sandhurst, unless his son were provided with an equally cheap education elsewhere, 5098. The practical education of Sandhurst was useful, but

HERBERT, Maj.-Gen. Rt. Hon. Sir P., K.C.B., M.P.—*cont.*

the subjects could be learned without going there, if there were demand for such learning; as a commanding officer would rather have boys from public schools than Sandhurst cadets, 4965, 5065; who are not at all prepared to take regimental duty on first joining, 4966. On leaving Sandhurst, witness could have set a party of soldiers at practical work in entrenching or rough fortification, 5001–5006. The instruction in surveying has improved since witness' time; elementary knowledge of surveying and fortification is of great use to an officer on attaining high rank, 5007, 5008.

Officers' professional education.

Fifteen years ago officers were much without professional education, 5026–5028; but it is far more disseminated now, 5023–5025. Is in favour of officers' schools for educating them after entering the service; guarding against idlers making them a means of shirking duty, 5058. The instruction could be made compulsory by requiring certain information before promotion, 5059. The attendance of young officers could be managed, 5060. It would give them a pursuit, 5061. Doubts if very intellectually educated men would enter the army during peace, 5051; though a per-centage of such would be a gain to a regiment; the officers of highest tone are those of good families, 5052; but a snob of a boy may turn out a gentlemanlike officer, 5063.

The Staff.

Previous regimental service was invaluable to witness as a staff officer, 4968; who is none the better for high mathematics, 4973, 4975, 5011, as an engineer would be, 4974. Knowledge of embarking and disembarking troops is important to a staff officer, 4976; who should also be able to judge rapidly the nature of a position; every officer should know enough of fortification to throw up a field entrenchment or defend a bridgehead, 4977. Could have done this when he left Sandhurst, 4978; further professional knowledge is not a *sine quâ non*, 5057. Witness was incorporated in the staff from regimental service, 4979, which produced staff officers who were as good as those more scientifically educated, 4980. Recollects an admirable survey made in Bulgaria by staff officers taken from regiments; in the Crimea officers so taken were (with few exceptions) exceedingly capable, 4981, 4982. Greatly prefers selecting regimental officers for staff employment to having a separate staff corps, 4983, 4984; it encourages self-improvement, 4985. It is right to insist on a staff officer knowing French, 4986 (learnt it very badly at Sandhurst, 4987). Selection of regimental officers for staff duty is difficult in peace; but easy on active service, 5019, where favouritism does not enter, 5020. Knows no reason for excluding artillery and engineers from the staff, if accustomed to the command of men, 5021; but has not seen them largely so employed; engineers, however, are generally looked upon as staff officers, 5017. Some most valuable staff officers would have been much better if they had had professional education, 5011. Describes his army service, 4958–4960, 4967–4972.

HORT, COLONEL J. J., Commanding the 44th Regiment.

Sandhurst.

Has commanded a regiment for 12 years, 5107. Left Sandhurst in 1840, after being there 3¼ years, 5108. His best officers come from public schools, the worst from crammers; would rather not have Sandhurst cadets, 5109, who are too old and too learned in drill, 5110, 5111, though very well educated, 5136. Is quite in favour of professional education for officers and its continuance after being commissoned, 5112–5115. Does not find fault with the tone of officers from Sandhurst, 5113, 5148. Given the same moral qualities, the better educated officer will be the more useful, 5114. In the examinations more attention should be paid to handwriting and composition, 5114*a*. Every officer should understand field fortification, reconnaissance, intelligible reporting, languages, and horse management, 5116, with something of permanent fortification, 5145. Would attach a captain-instructor to each regiment (the Lieut.-Colonel not having time for instruction, 5144), and have a more strict professional examination for promotion up to rank of caption, 5117. Would not require professional knowledge from candidates coming otherwise than through a military college; it would be mere cram, 5118, 5119, and therefore objectionable, 5134. Would not have military instruction at public schools, 5121; it would clash with other studies, 5122, 5124; but languages should be taught, 5123. Technical military instruction can be best imparted at a military college, 5125. When witness was at Sandhurst the discipline was generally satisfactory, except as regarded serjeants spying after cadets, 5126. Immorality, insubordination, and intoxication were not rife, 5127. The education he received

HORT, Colonel J. J.—*cont.*

has been of practical benefit throughout his life, 5137; but there should not be more drill than is essential for discipline; regimental matters are best learnt in the regiment, 5138–5143. Knows many officers who have instructed themselves in military subjects, 5128. The establishment of preliminary professional examinations for the staff has been of great advantage to the army, 5130. Text books in military law, fortification, and reconnaissance are much needed, 5144. Languages cannot be usefully acquired without grammatical knowledge, 5146, 5147. Thinks less attention should be devoted at the Staff College to mathematics and more to languages, 5131; has not noticed bad riders coming thence, 5132, where there is ample opportunity for learning equitation, 5133.

SMITH, Colonel JOHN WILLIAM S., C.B., Commanding 1st Depôt Battalion.

Military Education.

Obtained a free commission from Sandhurst, 5152, 5153. Has, since 1856, commanded a battalion, 5151. Has not noticed any difference between Sandhurst cadets and other young officers joining, except that the Sandhurst drill renders them sooner useful, 5155–5159, 5176–5179, 5189, 5190, 5207. The time spent at Sandhurst would be better employed in general education; professional knowledge for a line officer may usually be easily acquired after joining, 5160–5163, 5193, 5208, for which would give increased facilities, 5164. If the examinations were stricter the army would be officered by a different class of men, 5165–5168, 5182–5185, 5199, but would rather have men who made the army their profession, 5186–5188. Attaches more importance to natural qualifications than to science for a line officer, 5170, 5209, though the two combined will nearer approach perfection, 5169, 5171–5174, 5204. Science without the natural qualities is perilous, 5175. Sandhurst and Woolwich are looked upon by military officers as a boon, 5180, 5181; there is very little other need for Sandhurst, 5194. A line officer's duties are not intellectual, 5191. Would only require some elementary drill before entering the army, 5192. It would be a gain to have in each regiment a per-centage of officers more highly trained professionally, 5195–5198. A colonel would value his officer rather for regimental than scientific qualities, 5201. Voluntary examinations would be fairly attended if leading to advancement, 5202; but preference could not well be based on the results, 5203. Witness' Sandhurst education has not benefited him in his line service, 5205, 5206.

CAMERON, Lieut.-General Sir DUNCAN A., K.C.B., Governor of the Royal Military College.

Sandhurst.

Was, in June 1868, appointed Governor, 5212. Governor can make no regulations of his own authority, 5214. Has nothing to do with appointing officers and instructors, 5215; has not direct control of the course of study, which is under Council of Military Education, 5264. Is supreme in discipline, except as regards removal, which must be confirmed by Commander-in-Chief, 5234–5239, who alone can expel a cadet, 5240; has never recommended the expulsion of one, 5241. The Governor has almost enough power, 5302. Governor goes round messes, rooms, and studies without notice, 5276; but would not practically see much of the cadets unless he invited them to his house, 5249–5251.

Sandhurst is a great benefit to army officers of the lower ranks, 5221–5299, whose sons constitute half the cadets, 5290. Attaches no importance to the military tone and drill, but much to the military education which one-third of the cadets receive, 5309–5311; and for which, if of a superior sort, a military college is indispensable, 5312–5320, 5338–5340. Military history and, of course, languages could be taught elsewhere, 5314, 5321. One-third of the French officers of the line are educated at St. Cyr, 5343. There are 214 cadets, 5216, costing on an average 159*l.* a year, 5217, of which two-thirds is for simple education, 5219. The cost of a Queen's cadet is 182*l.*, according to Colonel Hallewell, 5221, the difference being the cost of his books, clothing, and mathematical instruments, 5228. Each cadet not the son of an officer probably costs the country 59*l.* a year besides first outlay on lands and buildings, 5222–5225. The estate pays for itself, by timber cut down annually, 5226, 5227. After deducting payments by parents, the net cost of Sandhurst to the country is about 17,000*l.* a year, 5229–5233.

Would not punish idleness, which, from the few prizes, will always exist; but would make passing more strict periodical examinations a condition of remaining at the

CAMERON, Lieut.-Gen. Sir DUNCAN A., K.C.B.—*cont.*

College, 5292-5294. The second term cadets are idlest and worst behaved, 5295–5298. Has never had a complaint from a cadet's parents, 5300, 5301. It would be far better to give scholarships at other places of education to those who now have Queen's and Indian cadetships or admission at reduced charge, 5304, 5305, requiring them to pass the direct commission examination, 5306–5308. Believes parents of Indian cadets have better means than those of Queen's cadets, 5346; does not suppose the Indian and Queen's cadetships are given on the same principle, 5345. Proximity of Aldershot a great drawback, 5344. Sees no objection to an annual inspection as to discipline, if there were not at the College a general officer of high rank, 5266–5268. With interior structural alterations there would not be difficulty in organizing in subdivisions of 20 or 30 cadets, 5278, under charge of the professors, 5279, 5280. Does not object to imposition of tasks, 5270; but present punishments are not unsuitable, 5271. Sees very little use in the cadets making out states and returns, 5272. Rustication punishes parent more than cadet, 5273; and almost always destroys the chance of a free commission, 5252, 5253; thinks the return of a rusticated cadet has a good effect, 5254. Since he has been Governor, has removed temporarily nine cadets, 5242, six for intoxication with disturbance, one for falsehood, two for disrespect to a professor (speedily condoned), 5243. Six months is the longest period of rustication, which, in last term, is tantamount to expulsion; without preventing entrance into the army, 5244. No notice is taken of disease due to immorality, 5246, 5257, 5259, 5260. Last term there were 12 cases, 5256; punishment would lead to concealment, 5274. Disease occurs among junior cadets, 5258. Medical inspections of cadets are not made, 5261. Disease never notified to parents, 5262. The chaplain doubtless remonstrates with the cadet, 5263. Thinks drunkenness is now very uncommon, 5289. If the term were lengthened efficient corporals and under-officers would be more readily obtained, 5281, 5282. Attaches great importance to the cadets themselves aiding (as under-officers) in maintaining discipline, 5285–5287. There are 50 associated dormitories of four cadets each, and 100 bunks, 5283. An under-officer, corporal, or senior cadet is in responsible charge of each, 5284. Desires that every cadet have a separate room, 5269.

Meetings of officers and professors in matters of education would be good, 5247. Governor sees very little of professors; communication would be through Superintendent of Studies and Commandant, 5248; a practice he would adhere to, 5275. Thinks a military officer of high moral character must be better for intending officers than any civilian tutor can be, 5277. The military professors are excellent; but the civilians not all well qualified, 5328, for managing cadets, 5332. Would leave appointment of professors with Council; but make the appointments on probation, 5329. Men of sufficient character cannot be had for the salaries paid to some of the civilian professors, 5341; but the number of professors could not be reduced, 5342.

Instruction of Officers.

Should much like to see officers' schools established, 5322 (instruction of men is a distinct question), on the Prussian system that a cadet after joining a regiment must acquire certain professional knowledge before obtaining his commission, or before promotion, 5323, 5324. The present promotion examinations are insufficient, 5325, 5326. The change would not deprive the army of an useful class of officers, 5327. In Prussia, the authorities prefer a young man completing his general education, and then building professional instruction on it after entering the army, 5333–5336; but the circumstances of the Prussian army differ from ours at home, 5337.

BARRY, Rev. Dr., Principal of King's College.

Cheltenham College.

Was for 6¼ years Principal of Cheltenham College, 5427. Cramming is to be deprecated, 5428, 5429. Cheltenham pupils, as a rule, find it unnecessary; attributes this to its modern department, which, as an arrangement peculiar to Cheltenham, is co-ordinate with the classical school; there are 300 boys in each, and 100 in a "lower" school, 5430, 5470. In the modern school mathematics is the staple; in the classical school language is the staple; details the system of education, 5430–5432, 5436, 5502, 5533–5535. All private tutors must not be classed as "crammers;" of some the teaching is highly beneficial, 5433. Mr. Southwood could almost always tell whether and where a boy would pass, 5434. Agrees with Mr. Mill, that we weight too heavily the language scale; that where Latin and Greek are taught, French and German should

BARRY, Rev. Dr.—*cont.*

not be, and to some extent *vice versâ*, 5437–5439. Considers that a certain amount of professional instruction might (if necessary, 5547) be grafted on the Cheltenham curriculum, 5440, 5454; under competent military teachers, 5523–5526, as surveying, 5442, fortification, 5443, drill generally, 5445, and perhaps artillery drill, 5444, but not to the extent of four hours daily, 5479, or, indeed, not much beyond extra out-of-door subjects, 5506. Surveying has been tried as a matter of general instruction, and is very popular, 5445. The practical military subjects would trench upon play time, 5544; but not to the extent of isolating the student from other boys, 5545, 5546. Under professional subjects does not include military history, 5480. Military matters could not be taught to the same perfection as in a military college, 5481; but, by teaching the rudiments, the latter would be relieved of a certain amount of work, 5482. If civilians could not teach military subjects, there would not be any difficulty in obtaining suitable military men, 5508, 5509. Does not apprehend any local difficulties in teaching fortification and surveying, 5455–5457. If military education were continued after entrance into the army, Cheltenham could furnish a sufficient foundation, 5554. Believes that manual work helps head work, 5445, 5446. These subjects need not interfere with the development of a liberal education, 5449, 5450, as now taught, 5553. Ages of boys range from 14 to 18½ in the modern department, 5452; in the classical department, somewhat younger, 5472. In the modern department the time applied to mathematics increases as pupils get higher in the school, 5453. The boys work very hard in preparing for Woolwich, 5458. If free commissions were given for competition at Cheltenham, with a stiff examination, the military attainments of the modern school would be raised, 5459, 5460; is in favour of such encouragement, 5461. There is more pressure for admittance to the modern than the classical school, 5471. Prepares candidates for the Indian Civil Service on the classical side, on which languages are always best learned, even when the special teaching is on the modern side, 5473. The two departments mix freely in boarding-houses and playground; but are otherwise almost entirely distinct, 5487, 5488. The modern department gives a modern liberal rather than a professional education, 5489; but the mental training of the *élite* is higher on the classical side, 5490, 5503. It is difficult to obtain scientific teaching of modern languages, 5491; otherwise modern languages should form as good a basis as ancient ones, 5492, 5530. Putting literature aside, the classical teaching of a public school is really teaching English, 5493, 5494. Moral tone of the two departments was equal; but the most troublesome boys were those preparing for military examinations; which witness attributes to the greater development of their animal than their intellectual nature, 5495, 5496. The modern department was not a refuge for the duller boys; nor was there more idleness in it, 5504, 5505, 5522. Found no difficulty in testing English work, 5527–5529. The teaching of English is apt to be less linguistic than that of Latin or Greek; but in a literary point of view it has striking advantages, 5531, 5532. In the modern department a boy has not too many subjects at once, 5536. The first hundred boys would have dropped their Latin, 5537, 5538. Greek was only exceptionally taught, 5539. Does not think there was cramming, 5540. Had it not been for the examinations might have had less subdivisions of the main subjects taught; but would always retain the four elements, language, mathematics, physics, drawing, 5541, 5542. Exercised a certain recommendatory control as to the department into which a boy was put, 5543. The cost of a boy at Cheltenham, excluding pocket money and clothes, is 90*l.* at most, 5462. The boys live in the masters' houses and have excellent accommodation, 5463. provisions as good as at Rugby or Marlborough, 5464 The charge is about the same at Marlborough; rather higher at Wellington College; considerably so at Eton and Harrow; at Rugby, 120*l.*, 5558. The gymnasium at Cheltenham, with racket court, &c., cost 2,500*l.*, 5483. Gymnastics compulsory; swimming generally learnt from choice, 5465. Riding could be arranged for; thinks riding and gymnastics should be required in military examinations, 5467, 5468. A boy preparing for an examination could have extra private instruction at Cheltenham, 5485, and would generally do as well as by going to a private tutor, 5486. The masters are not highly paid, 5559; they are (subject to a temporary exception) appointed entirely by the Principal, 5560. Drunkenness was unfrequent, 5516, 5517, and a small number of cases of disease from immorality came to his notice, 5518. [The town is given to gossip and scandalous stories which have no foundation, 5519.]

BARRY, Rev. Dr.—*cont.*

Military Colleges.

With due reliance on moral influence, intoxication and immorality ought to be kept down without difficulty in a college of 200 or 300 young men ranging from sixteen to nineteen, 5520. Thinks a military head (properly chosen) would be best for a military college, 5521. The peculiar moral influence of the head master of a school appears to be wanting at Sandhurst, where it is especially needed, 5557. The civilian element needs fair play in regard to authority and influence, 5552. Rather than increase the time at a military college, would require professional instruction before leaving a general school, 5548–5550. Speaking generally, with military colleges as they are, the less time youths are in them the better, 5551, 5555; their moral tone is not healthy, 5556.

Public Schools.

Until old enough to enter a special training school a lad's education should be as general as possible, 5436. Probably Marlborough and Wellington College could impart military rudiments as well as Cheltenham, 5497. Advocates a modern department at every great public school, 5498, for those whose bent was towards mathematics or inductive science, 5500, leaving those bent towards language or literature to the classical department, 5501.

Examinations.

In the Indian Civil Service examination cramming has not been effectually defeated, 5474, 5475. Too much stress is laid on subjects which can be crammed, 5476. English composition, history, and literature may take 1,500 marks, while mathematics can only give 1,250; but *all* marks in mathematics count, while those in each of the three English subjects are subject to a deduction of 125 representing the minimum; an English essay deserves good marks, if it pass the ordeal, as betokening thought rather than mere knowledge, 5477. Everything depends on the examiners; but modern languages are very hardly treated, 5478. Woolwich examination exercises a healthy influence on the educational interests of Cheltenham, 5510; without undue pressure on boys, excepting those who have to make up time mis-spent, 5511; the mathematics not at all inordinate, 5512, but might be varied, 5514. In teaching foreign languages, would like foreign masters for composition and English masters for grammar and influence, 5515.

SOUTHWOOD, Rev. T. A. (Head Master, Modern Department, Cheltenham College).

Cheltenham College.

Has been 26 years at Cheltenham College, 5562; whither he went expressly to form a military school, 5563, for imparting military education, 5564, not beyond fortification, surveying, and scientific drawing, 5565–5567, with mathematics, physical science, and modern languages, 5564. The introduction of other subjects of late years has rather crippled the efficiency of the course, 5569. If witness were unfettered, would regulate the course by what is done at Woolwich, 5570; not commencing until a lad was 15, when he would have the foundation of a more general education, 5571, 5572, 5574, in Latin and Greek, 5573. For Sandhurst it would not be a disadvantage to exclude technical subjects from entrance examination, 5575, 5576. Describes the order in which the special studies should come, 5578. The instruction in fortification would be practical; there are about 300 pupils with 20 to 25 masters, 5581. The boys prefer the boarding houses of masters in the modern department, 5582. Boys come from Eton, Rugby, &c., 5583; and very rarely go from Cheltenham to crammers, 5584. Those that do seldom succeed, 5585. His boys feel sure of Sandhurst or the Direct Commission Examination; on last occasion his whole class passed, 5586. Would expect a boy of 15 coming from the classical department to take up a Greek play or Thucydides, 5587–5591. Military surveying and fortification can be taught properly by civilians, 5592, 5608, 5609. Regards the modern department as almost entirely a military college, 5593–5595. From 12 to 15 a year go to Woolwich, 5596. At Woolwich, mathematics might be dropped by those obtaining 1,800 or 2,000 marks at entrance, 5597, 5598. The entrance examination is rather severe, 5599; classics being too highly reckoned, 5600. The mathematical standard excludes dull boys, 5601, but does not cause overwork, 5602. In fortification there are at Cheltenham two civilian instructors, 5603–5606. French is best taught by a classical Englishman; but to prevent boys suffering from foreign prejudice the examiners in French ought to be university men, 5607. Fortification and surveying are taught as well at Cheltenham as at Woolwich, and it is an advantage to have studied them before admission, 5610–5612. The military subjects are taught in school hours

SOUTHWOOD, Rev. T. A.—*cont.*

as part of the regular studies, 5613. With certain additions to the course, Cheltenham could turn out an officer as well fitted for the Artillery as Woolwich could, 5614–5617; and could send (and has sent) candidates to compete at the Woolwich final examination, 5620–5622. A lad entering the army at 18 from Cheltenham has every requisite to enable him to become a good staff officer, if he pursue his military education, 5618, 5619. All lads intended for the army learn fortification and military drawing, 5623, 5624.

BENSON, Rev. Dr., Head Master of Wellington College.

Wellington College.

Has been head master 10 years, 5625, 5626. There are two lines of education; one for the universities, one for Woolwich and Sandhurst, 5627. For the latter, mathematics are more taught, and such subjects as the boys are likely to succeed in at the Military Colleges, 5628; but no technical military instruction, 5629; as too much dividing the attention, 5630, 5631, 5712. Would keep school education general, by excluding technical subjects from Sandhurst entrance examination, 5632. There are 312 pupils in Wellington College, ranging from eleven to nineteen, 5633, 5634; one-third of whom (96) are in military class, 5635, 5645; of whom 40 will try for Woolwich, 5636. The per-centage for Woolwich has risen from 27 to 46, 5639. In five years (during which the school has been growing) 19 have entered Woolwich direct, 33 Sandhurst, and six or seven have had direct commissions, 5640–5644. A young man leaving at 17 or 18 would be well grounded in all elementary subjects of military education, 5646. Subjects taught, 5647. The elements of fortification, surveying, and military sketching could be taught as well by civilian as military teachers, 5648–5654, 5731–5735. Professors and masters are chosen by the head master, 5655, 5656. Queen's cadets are the only boys troublesome for idleness, 5657. The standard of military education would be raised, if free commissions or military exhibitions were given for competition. Wellington College has founded a "Woolwich Exhibition" with good results, 5658, 5676; but these prizes should be open to general competition at a public school standard rather than attached to particular schools, 5659, 5660. Queen's cadetships should be competitive, 5661. If boys stayed to 18 or 19 they could be given a military education, 5662–5666. Sons of officers cost about 110*l.* a year, sons of civilians 140*l.*, 5667. Boys take their meals in the hall and each has a separate room, 5668. Never has complaints of food or accommodation, 5669. There is a growing tendency to complete education in the military class without resorting to private tutors, 5670–5677. There would be considerable difficulty in adopting at Wellington College the Sandhurst system of education, 5671–5674; it would disorganize the whole mental training, 5675, 5697, 5698. The Woolwich technical course could not be given, 5678. Fortification was tried, but abandoned, 5629, 5679–5682. Regards the modern department as mainly, but not entirely, military, 5683–5686. Confidence in it has much increased in last four years, 5687. Thinks the classical side gives the better mental discipline, 5688, 5689. Thinks the number of subjects (five), required in competing for Woolwich, cause mental strain, 5690–5692, 5714; and distraction, 5715; but the mathematics not too severe, 5693. The boys in both departments work equally well, 5694. French and German are taught first by foreigners, intermediately by Englishmen, and finished by foreigners; the latter cannot teach them satisfactorily all through, 5695. Disapproves the English literature required for Woolwich; which is scrappy and admits of cramming, 5696. Considers a modern department a decided advantage in a public school, 5699, 5700, 5711. Drunkenness and disease from immorality are very rare, 5707–5709; as they ought to be when boys are properly governed, 5710. Would not teach military subjects to the prejudice of other more important mental training, 5713. Should object to give more than two hours a week to fortification and surveying, 5734. Woolwich examination has a good influence on Wellington College, 5717; but not that for Sandhurst, 5718. Has no military men as masters, 5719; thinks them undesirable in a civilian school, 5720. How the good conduct medal is given, 5721, 5725–5730. There are 25 to 30 prefects, who are monitors, 5722–5724. Believes the moral tone of Sandhurst to have improved, but to have been unsatisfactory, 5701–5704; from the limited intercourse between masters and cadets, and an infusion of undesirable boys, 5705. There is not the unanimity among the masters which prevails in a public school; the civilian masters have too little influence, 5706.

TEMPLE, Rev. Dr., Head Master of Rugby School (since Lord Bishop of Exeter).

Would not require any technical instruction prior to entering Sandhurst, beyond securing the elements of mathematics, 5737, 5738; allowing the youths to be educated so far as other boys, 5739. Sees no means of preventing cramming, except by directing the examination to the subjects worked in the public schools, 5740. The evil of cramming is that it seeks to impart information too rapidly, 5766. Would rather not have Rugby endowed with free commissions, if boys were required to set aside their classical studies to compete for them, 5741–5745. Should be sorry to be driven to create a modern department, in which classics should no longer form the staple, 5746, 5747. Thinks the instruction of the modern department desirable, but not at classical schools; would rather see new public schools created consisting entirely of the modern (but not exclusively military, 5780, 5781) department; does not believe the two can be worked side by side without prejudice to each other, 5748–5754, 5762, 5763, 5793. The modern side at Wellington College answers; but would answer better, if the classical side were dropped altogether, 5755, 5793, 5794. Neither at Cheltenham nor at other public schools has the modern side the vigour of the classical side, 5756, 5760, 5761. Should prefer that public schools should not undertake technical education; but, nevertheless, would rather have special departments for future officers, than that those officers should cease to pass through public schools, 5757, 5758. Assuming that a public school had a modern department, thinks it should look rather to general culture than special military training, 5764; though the latter could be thoroughly taught if sufficient time were given, 5765, 5766. To give five hours daily for two years to military subjects would greatly interfere with general knowledge, 5770. Boys at Rugby cost, as a total, about 140*l.* a year, 5771; do not come from any special class, 5772, but a considerable proportion are sons of hardworking professional men, 5773. Latin and Greek are not fitted for all intellects, 5774; and there is a tendency to place those too stupid for them in the modern department of a school, lowering the mental average of such department, 5754, 5775–5779. In the "modern" public schools, witness thinks the civilian element should preponderate, 5782. A military college should take lads of 17 or 18 and give them direct professional instruction, 5783. An instructor cannot teach properly unless he have disciplinary power, 5784. The longer the general education of a young man's mind can be continued the better, and thinks the special preparation for the army might begin at a later age than now, 5785–5790. A lad above the average of intelligence would have acquired at 16 sufficient classical knowledge to matriculate at a university; but he could not be a first-rate scholar, 5791, 5792. Is opposed to altering the classical organization of the present public schools, 5799; because they could not impart a modern education nearly so well as other public schools organized for that special purpose, and for the reception of boys who have not a classical bent, 5795–5801. In a military college, as in any other school, unless the head and other masters be appointed for their special educational qualities they will surely fail in the moral government of boys, 5806–5809. A college of 200 or 300 young men could be so governed that drunkenness or immorality should be very rare, 5805. At Rugby drunkenness is very rare and punished as such; immorality would involve instant expulsion, 5802–5804.

STORKS, Major-General the Right Hon. Sir HENRY KNIGHT, G.C.B., &c., Controller-in-Chief, War Office.

Instruction of officers.

There should be a captain-instructor in every regiment, 5811; with higher pay than other captains, 5822; who should have a general superintendence of all regimental institutions, as canteens, schools, &c., 5813. It should be obligatory on young officers to receive professional instruction; and promotion up to the rank of captain should depend on passing qualifying examinations, 5812, 5815, 5820, 5839. The commanding officer would be responsible that the instruction was duly attended, 5854, 5873, 5874. Officers should join the line at 16 or 17, and never (without exception, 5846) later than 20; joining late is inimical to discipline, 5814, 5816, 5864, 5865; and the young officers are generally favourites, 5862, 5863. Is not in favour of military colleges for the line; any such establishment should be a school for boys under sixteen, 5817, 5866. The appointment of captain-instructor would be suitable for officers who had passed the Staff College, 5821. For local examinations would

STORKS, Maj.-Gen. Sir HENRY KNIGHT, G.C.B.—*cont.*

assemble the best board locally practicable, 5823–5825. Does not think this compulsory professional education would exclude many from army; it would be popular, 5826, 5827, 5840, 5875. Does not consider lads of 16 too young for regimental service, 5828–5830. Doubts if the captains-instructors could teach languages, 5831, or have leisure to superintend musketry instruction, 5835–5837; attaches great importance to their teaching military law, in which officers are commonly deficient, 5832–5834. Does not think working pay should be allowed to the men for taking part in field instruction, 5838. Attaches importance to liberal education of officers, 5843; but does not think 16 too early to join, in consequence, 5844. The best come from public schools; would lower or abolish the examination for commissions, 5841, 5842. There is no analogy between our army and foreign armies, 5845. Would not require further instruction than could be had from the regimental instructor, 5847–5850. Would prefer a regimental to a fixed instructor, 5851, 5867. Supposes the uniformity of the course and instruction would be secured by the Council of Military Education, if existing, 5852, 5853. Thinks captain would be sufficient rank for the instructor, 5855. In the regiment he would be useful, 5856. Would have him supernumerary among the captains, as the adjutant is among the subalterns, 5857. Impeding an officer's promotion would depend on the examination and not on the instructor's ideas, 5858. On service, if no instruction were going on, would put the instructor to a company, 5859. Does not think an examining board would do the work intended for the captain-instructor, 5860. Young officers would acquire habits of industry and application, 5861. The number simultaneously under instruction would exceed two or three, 5868. The present papers for promotion examinations are not good, 5869–5871. The length of the course would depend on the officer's capacity, 5872; he being released on passing, 5876. Young officers, recently joined, rarely go on detached duty, 5877, 5879. An officer would be regimentally efficient though under instruction, 5878–5883. Would require subalterns to attend the instruction until dismissed; and would permit other officers and soldiers to attend lectures if they pleased, 5884. Officers joining, of whatever age, must rank according to date of commission, 5885; it may be otherwise in Prussia; but the Prussians have not purchase, 5886. The great want of the army is youth, 5887–5889.

PAULET, Lieutenant-General Lord WILLIAM, K.C.B., Adjutant-General to the Forces.

Instruction of officers.

Education of officers after joining service might be increased, and tested by examinations, 5891; instruction in the military subjects being made compulsory, 5892, on subalterns of less than five years' service, and before promotion to captain. Such instruction is very desirable if military education previous to entering army be not deemed indispensable, *App. VII. (A.), p. lxxx.* The examinations should be by professional men, 5893, under a special board, 5894. Would combine the systems of regimental and garrison instructors, 5895, *App. VII. (A.), p. lxxx*; employing for regiments a picked subaltern, 5896, though a captain would be better, 5899–5901. The professional instruction would not be unpopular, 5897; but every officer before being commissioned should have a certain military education. Would rather have for a young subaltern an Eton boy than a Sandhurst cadet, 5898. On service, the instructor would fall into regimental duty, 5902. A board at military stations might inspire more confidence than regimental instructors, 5903–5907. Officers should be liberally, but not highly, educated, except for staff and scientific corps, 5908, 5909. Should enter the army at sixteen, 5910, 5915; with a public school education, 5916. At garrisons there might be several instructors, with a superior at their head, 5911–5914. Sandhurst cadets think too much of their military knowledge, 5917; but the education there has improved of late, 5918. The great point for a regimental officer is a gentleman's education, 5920. Would allow officers to be examined for the staff without attending any military school or college, 5923–5925, and would appoint those not employed on the Staff as regimental instructors, 5926. Is not a great advocate of the Staff College; many officers join it to avoid regimental service, 5922.

SCARLETT, Lieutenant-General the Honourable Sir JAMES YORKE, K.C.B.

Instruction of officers.

Facilities might be given for officers obtaining instruction after joining the army, 5927; the voluntary acquisition of military science should be encouraged, 5976, 5977; but only practical military surveying and field fortification should be obligatory, 5928; and therefore incorporated in promotion examinations, 5930, for which abstruse knowledge must not be demanded. Such instruction is practicable; but should be instead of ordinary parades and not additional, *App. VII. (A.), p. lxxx.* Would have instructors at various head-quarters and with each regiment, 5929. The regimental instructor should be a supernumerary captain, 5931, 5932, *App. VII. (A.), p. lxxx.*, with captain's pay, but no duty beyond instructing, 5933, 5934, 5944. The present examinations for promotion answer their purpose, 5935, and, in enlarging their range, would increase the competence of the boards conducting them, 5936; with aid from subordinates the captain instructor should have charge of the soldiers' and children's schools, 5937, *App. VII. (A.), p. lxxx.* For instructors at stations would have officers of higher rank and qualifications, 5938. There is often difficulty in finding a qualified successor for an adjutant, 5939. Officers looking to succeed the captain-instructor would help him without pay, 5941. To make compulsory on line officers subjects beyond those required in their duties, would render the service unpopular, 5942, 5943, 5953–5956. Should make the instructor a depôt officer, and not take him upon service, 5945, 5949. Uniformity of instruction must be secured by higher authority, 5946. Does not think the task of instruction could be imposed on the present garrison boards, 5946*a*, 5947. Regimental instructors would be far preferable, 5950–5952. Remembers one captain in his own regiment who would have been a good instructor, 5948. The plan should be merely experimental, *App. VII. (A.), p. lxxx.*

Staff College.

Considers the Staff College beneficial to the army, 5958. Officers sometimes resort thither to avoid foreign service, 5959; cannot suggest any test of *bona fides*, 5960, without invidious selections, 5961–5964. Would allow entrance to the staff, independently of passing the Staff College, to officers who passed before the garrison examining boards, 5965–5967. The Staff College course will not make a good staff officer of one, who has not physical fitness, 5968; which latter is very difficult to test beforehand, 5969, 5970. Does not see how the riding could be better tried, 5979. Passed officers can only be appointed as staff situations become vacant, 5971; but does not know that applications have fallen off, 5972, 5973. Does not put much faith in the commanding officer's certificate as to candidates, 5974, 5981. Has been satisfied with the passed officers who have come under his command, 5975. Thinks a Staff College desirable, 5978; but on service would be glad, as is the present rule, to take a man from a regiment on trial. 5980. A Staff College officer has generally better scientific military knowledge, 5982; but this does not ensure all necessary qualifications, 5983, 5984; and he may be completely unfit, 5989. Thinks Passed Officers have a moral claim to staff employment, 5986; would not approve of taking staff officers from the engineers on the mere ground that they are scientific, 5987, 5988.

GRANT, Lieutenant-General Sir J. HOPE, G.C.B., Quartermaster-General to the Forces.

Instruction of officers.

Would expand Sandhurst, and pass all officers through it, 5990, 6012, 6013, *App. VII., p. lxxx.*; stopping entrance direct from public schools, 6014. Officers' instruction, in purely military matters, including French and German, should (if done regimentally) be made compulsory, 5991, 5997, 6017–6020. But for the expense, would attach a military instructor to every regiment, 5992, 6015, 6016; with higher pay than that of his rank, 6032, 6033. Facilities should be given in garrisons for officers to obtain (voluntarily, *App. VII., p. lxxx.*) technical scientific instruction, 5993; but this would be needless if there were an instructor in each regiment, 6021; from whom the higher instruction would be obtained, 6022, 6023. Of the line, 5 per cent., or two or three in a regiment, would avail themselves of it, 5994–5996, 6024. Sketching a country should be done by eye, with the simplest instruments, and quickly, 5997, 6007. To require a high standard from every regimental officer, would make the service very unpopular, 5998–6000. In

GRANT, Lieut.-Gen. Sir J. HOPE, G.C.B.—*cont.*

the subjects of voluntary instruction there should be a voluntary examination, excellence in which would be recorded in favour of staff employment: but witness would not give any direct money reward, 6001–6006, 6031. Actual service in the field is the only thorough test of a staff officer, 6008–6010. At Sandhurst the formation of good regimental subalterns would be more useful than abstract teaching, 6011. Promotion examinations should be before a committee, with the Officer-Instructor for president or member, *App. VII., p. lxxx.*

Staff College. The Staff College is very good, 6025. It produces many efficient staff officers, 6026; though the test is not absolute, 6027, as a staff officer should have certain physical qualities, which his commanding officer ought to recognize, 6028, 6029.

CODRINGTON, General Sir WILLIAM J., G.C.B.

Instruction of officers. The art of war can only be practically learnt before an enemy; preparation for war is best acquired under the regimental system in camps; practical instruction (as field works) should be obligatory on officers, attendance on lectures being voluntary; would not have examinations, nor make promotions dependent thereon; would have neither garrison nor regimental instructors, except engineer officers attached to instruct in field works, &c., 6037–6039, 6053. Literary study would be an advantage to line officers, but is not essential, 6040, 6044. To learn field fortification is a general regimental duty as a matter of drill; reconnaissance and military sketching less universally necessary, 6041, 6042, 6050–6052. Would limit the promotion examinations to regimental duties, 6043, 6044; and objects to force study upon officers, 6045, 6055. Instruction in field fortification could be given at Chatham; but regiments would have to be moved there for the purpose, and Aldershot would do as well, 6071. A regimental captain-instructor would have many difficulties in the way of exercising a moral influence, 6078. Does not think a board of officers could undertake this regimental instruction, 6079. Greatly approves of men being exercised at trades, as an appendage to drill, 6080. An officer is not highly paid; he does his regimental work well; and it is unfair to expect much more from him, 6081. Officers could not be selected for picket duty; it would depend on the roster of companies, 6082, 6083. Would not have less confidence in an officer because he might not be studious, 6084. Would not insist on a knowledge of French or German from candidates for the army; the education of a gentleman now almost entails it, 6089, 6090. Would not interfere with the current of regimental promotion, on account of the various knowledge or application of officers, 6053, 6054. Sees no objection to there being instructors to help officers willing to learn languages, military history, and surveying, 6056.

Staff. Does not think a Staff College necessary; war is too practical an art for deep scientific knowledge to be of much use in the field; surveying power is, however, rather required in the Quartermaster-General's department; the regiments furnish very good staff officers, 6047, of whom some have given themselves special instruction for the purpose, 6048. Having a Staff College, it is but fair to provide appointments for those who pass through it, 6049. On service there is advantage in being able to take officers from regiments on trial, 6085. In the Crimea the supply from regiments of thoroughly good staff officers never failed, 6086, 6087. The privilege of studying at the Staff College is a boon, 6088. If regimental officers feel that the staff is open to them, many will study voluntarily, 6057. In the field, would not have any examination for the staff, 6058, 6059; but in peace, qualification for the Quartermaster-General's department must be tested in surveying and sketching, 6060, 6064. Staff officers must be selected, 6061, 6062; and would despise accusations of favouritism, 6063. Would not select any who were not competent in languages and riding, 6065–6067. The examinations would be better conducted by one officer than by a board, 6068–6070. In every regiment there are several officers fit for the staff, 6072, and there are many invaluable regimental officers who would not acquire staff qualifications, 6076. However otherwise qualified, a staff officer needs proper temper, and he must have an intimate and *modern* acquaintance with regimental duty; the probable absence of which would be a disadvantage attending a separate Staff Corps, 6077, 6093. A general cannot have on his personal staff a man of whom he is entirely ignorant, 6091. A staff officer may be most valuable, though comparatively uneducated; cites the case of Colonel Waters, 6092.

STEPHENSON, Colonel F. C. A., C.B. (Scots Fusilier Guards).

Instruction of officers. Served on the staff in the Crimea and China, 6094. Would send officers, after a year's service, to Aldershot, Curragh, or Chatham for three or four months' instruction in fortification and engineering, 6095, 6138; making the course obligatory in the infantry, 6100, and a condition of promotion, 6101. Regimental instruction would not answer, 6096, 6097. There might at the larger stations be officers to give practical instruction; there was formerly a good practical system at Chatham, 6098, which would apply to India, 6099. Thinks the proposed course would be popular, 6102; but would not exact too high a test, 6103. All officers in England would be able to attend, 6106, 6107, without more than one or two being away from the regiment at once, 6139. Promotion examinations should be undertaken by a separate board, 6104, 6105. Would have only one examination for the rank of lieutenant, 6108–6112. A report would be made from Chatham how each officer had conducted himself, 6114–6116. Does not think a system of regimental instructors would work well, 6117–6119. Would prefer a very severe test for the staff, based on a thorough regimental knowledge to competition, 6120, 6127–6130; which excludes many valuable men, 6121. For a staff officer, other besides educational qualifications are necessary, 6122. A few staff appointments may be given by favouritism, 6123. The elementary training proposed by witness would lay a foundation for future self-instruction, 6124–6126. Approves of officers entering the army at an early age and learning their work afterwards, 6131, 6132. Has been adjutant, 6133; never found any want of respect between seniors and juniors, 6134. Only the officers need be sent to Chatham; the men could be taught fieldworks elsewhere, 6135, 6136, in a plain working dress, without extra pay, 6137. Officers under instruction would rejoin their regiment if it were ordered on service, 6140.

BAKER, Colonel VALENTINE, Commanding 10th Hussars.

Preliminary education. Does not disapprove of university graduates entering the army as late as they now do, 6144; but prefers an officer to enter at 18 or 19, 6204. Believes University authorities did agree to give a military degree after six terms, 6216. Inconvenience of officers entering at a late age, 6222. Likes university candidates for the army, 6172; but wishes they could take their degree at 19. The sooner after 18 officers enter the better. Giving free commissions or exhibitions for competition at universities and public schools might be carried out; but there would be difficulties, 6174–6176. Thinks the drill and military details taught at Sandhurst should be left until after joining the army, 6145; though there should be previous education in certain military subjects, 6146, *App. VII.* (*B.*), *p. lxxvi.* Is in favour of all officers passing through Sandhurst or the universities, for a short course. Present Direct Commission examinations are of little use, and increase the evil results of cramming, 6147, *App. VII.* (*B.*), *p. lxxv.*

Instruction of officers. Prefers regimental captains-instructors to garrison instructors or the Prussian war schools; the latter arrangement would not answer, 6148, 6179, 6196, 6197; unless the instruction were compulsory, which would be objectionable, 6149. Each instructor would cost about 100*l.* a year in addition to his pay, 6150, 6151. Would appoint one to each regiment, 6152, 6178, *App. VII.* (*B.*), *p. lxxvi.* The instruction should be entirely voluntary, 6155, 6177; by lectures and classes, 6180; with quarterly reports of lectures and attendance, 6156, 6158. The presence of a field officer would not be necessary, 6181. Would not enlarge the present examinations for promotion, 6157; but, when instruction was obtainable, it should be more searching, 6163–6167. At present it is unequally enforced in different regiments, 6215. The inducement to study would be the hope of a superior appointment, for which a good officer would naturally be selected, 6159–6162. To give pecuniary rewards would be very difficult, 6224. The military instructors would raise the whole tone of army education, 6186, which is desirable, 6188. The attendance of young officers on first joining might be compulsory, 6194, for the rudiments of field fortification and sketching, 6195. The instructor could do troop duty and yet superintend education, 6205; but it would be a question whether he should have a troop; there would be no difficulty under the squadron system, and would allow a junior captain or a lieutenant to qualify for instructor, 6206. It would,

BAKER, Colonel Valentine—*cont.*

however, be better that the instructor should not be a troop officer, but a special officer attached, 6207. On service he should be an useful assistant on the general staff, 6208–6210. The instructor should have a special room for his lectures, 6211, 6212. Does not think a garrison board would always be available, 6213. Would put an officer risen from the ranks under the instructor, but could not expect the ordinary qualifications, 6214. Present promotion examinations have done some good, but are too variable, *App. VII.* (*B.*), *p. lxxxvi.* Would open the staff (subject to examination) to officers who have not been to the Staff College, 6182, 6183.

Staff College. Is in favour of the Staff College, 6153; but would make commanding officers' certificates as to candidates much more strict; would let officers qualify partially for the staff before entering the College; would try the students as aides-de-camp at Aldershot, and would give marks for physical qualifications, 6168–6171, 6189–6193, 6203, 6217, *App. VII.* (*B.*), *p. lxxxvi.*, especially riding across country, 6199–6201. Many officers go to the College who never will be qualified for staff employment, 6184, 6185, 6202. Would diminish the students, 6186. It would be excellent to set aside a certain number of staff appointments to be competed for by officers of regiments, leaving the remainder for the Staff College, 6187. Men vary very much in their qualifications for the staff, 6198. Occasional inspection from Aldershot might secure good military riding, 6218; but cross-country riding is very useful 6219, 6220. For want of it at Solferino the Emperor Napoleon was two hours without information of the Sardinians, 6221. We do not sufficiently imitate war in exercises during peace, *App. VII.* (*B.*), *p. lxxxvi.*

HOZIER, Captain H. M. (3rd Dragoon Guards).

Technical instruction. Would pass all line officers through one large military school, where they should acquire technical elements, riding and drill; entering the school at sixteen and the army at eighteen, 6225–6228, 6306, 6310, 6324–6327, as the only road to a commission, 6307; with contingent abolition of purchase, 6308. It would be good if schools would teach technical subjects; it need not curtail general liberal education, 6229, 6230. An officer, after being commissioned, should have the chance of continuing his professional education; not all would avail themselves of it, but some would, 6231, 6247, 6272, 6291, under the English system of making officers no more than serjeants-major, 6232. The propensity for instruction would revive, if promotion, command, and appointments depended on knowing the higher part of the profession, 6233, 6234. The Staff College does not secure this, since the best staff appointments are given to other than Passed Officers, 6235, 6319, 6320. There would be great difficulty in providing regimental or garrison instructors in sufficient number, 6236, 6237; unless it were merely to teach the rudiments, and then the students would probably not be forthcoming, 6238. Elementary fortification should be as compulsory as company drill, 6239, 6240; to be tested by real examination, 6241. It would be very difficult to carry on the instruction of officers after joining their regiments, 6284; if compulsory it could not be enforced; if voluntary it would not be attended, 6286; officers have many amusements, 6315. The drill is no sham, 6287. Examinations would not secure proficiency in military knowledge, 6288; to which our whole system is opposed, 6289. The only course is to insist on instruction before joining and to make the commission the prize for proficiency, 6290, 6293. The Sandhurst education might be much improved, 6294; military instruction is almost limited to those trying for free commissions, 6295. Would not give a commission except on passing a *bonâ fide* thorough examination, 6296; a test which a large portion of the officers would then undergo, 6297–6300, 6329. Would incorporate a minimum qualification with competition for free commissions, 6330–6332. Would insist on every officer having practical knowledge of field fortification, &c., 6301; which now the majority have not, 6302, 6316. A central board might test this knowledge, but would prefer a more practical examination, 6304, 6305. Every officer ought to ride, 6310. Practical military science could be better acquired before eighteen than after, 6311–6314. We ought to have camps of instruction and manœuvre as Prussians do, 6333, 6334; of generally 30,000 men, 6335; we could do so by brigading regulars, militia, and volunteers together, 6336. The present regimental examinations are ineffectual, 6242; could only be rendered effectual by a central board, which would be expensive and difficult, 6243–6245. Regimental captains-

HOZIER, Captain H. M.—*cont.*

instructors would be useful, 6246; and also large garrison schools of instruction, 6248. The instruction must depend on the knowledge of the students, 6278.

Prussian officers. Prussian officers (besides a better general education, 6267) have more professional knowledge than ours, 6250; not so much in drill as in the practical art of war, 6251–6255. They have a Staff College, through which nearly all staff officers pass, 6256, 6257, including most of the aides-de-camp, who are more akin to our brigade-majors, 6258–6261. Prussian officers enter army at eighteen or nineteen, 6262; one-third having passed through cadet schools, the others having served in the ranks as cadets, 6263, 6264. The army is the only profession for the aristocracy, 6265, 6266; but from the officers being universally associated with one profession their intellectual tone is narrowed, 6268. An English public school boy would be better at Latin verses, cricket, and football than a Prussian cadet, but why our commanding officers prefer the former to a Sandhurst cadet is because they want a man to learn drill only, without understanding the higher parts of his profession, 6269–6271, 6277, in which intelligence our troop and company officers and staff officers are inferior to foreign officers, 6273–6276. In foreign armies officers are detached to perform the duties of English aides-de-camp on service, 6279; and are allowed two horses each, 6280. In Prussia, cavalry officers reconnoitre on important occasions under a staff officer, 6281–6283. A commission is a greater prize than with us, 6328.

Staff. Is in favour of all officers passing through the Staff College, before obtaining a staff appointment, 6317; but would allow an officer with his regiment to qualify by passing the final examination, 6318. Does not think there are many officers practically fit for the staff, yet unable to pass a high examination, 6321; but the Staff College ought to teach the necessary duties of a staff officer, 6322. If he knew equally his other work, a senior wrangler would make a better staff officer than anyone less highly educated, 6323.

WALDEN, Viscount, late Captain and Lieut.-Colonel, Grenadier Guards.

General Military School. Has served in India and the Crimea, 6337. Would like all officers to pass through a general military school for boys under 16, if the discipline of foreign military schools could be maintained, 6357, 6409. That discipline may diverge esssentially from English idea, 6392. It must be a purely military school with very severe discipline, 6414. The entrance age as at Harrow; but would not teach military details, 6416; except sketching, drawing, field fortification, &c., 6420, 6421. All teachers should be connected with the army, 6418. Looks to the ultimate object, viz., the best fighting animal, 6417, 6419. The chief gain from the school would be strict discipline, 6422, 6423. Latin, foreign languages, and some mathematics should be taught, 6424. The discipline might, with public support, keep down drunkenness or disorder, 6425; which prevail at Woolwich and Sandhurst, 6426. Would like officers to enter army at 16, serving one year as cadets under training, 6356.

Instruction of officers. In a young man entering the army would require French, some mathematics, and enough Latin to read Cæsar, 6380, 6386; with a certain amount of military history, 6398, 6399. Cadets should be treated in every way as officers, but not have executive duties, 6404, 6405; their instruction would be compulsory, 6400–6402, 6406. Would make instruction in the technical subjects connected with the arm to which an officer belongs compulsory, 6338, 6339, 6343, *App. VII.* (*A.*), *p. lxxxiv.*; and would extend the present promotion examinations up to rank of captain, so as to embrace such subjects, 6340–6342, 6344, 6369; including elementary fortification, outpost duties, &c., 6345; with tactics, strategy, and military law, 6346, 6390, 6391. An officer by study could acquire this in his battalion, without having a regimental instructor, 6347, 6348. Commanding officers of battalions ought to be the instructors for everything, 6387; they are as good officers as can be got under present system, 6389; but could teach better if there were a proper system, 6408. Would have district, but not battalion, instructors, 6349, 6350, *App. VII.* (*A.*), *p. lxxxiv.* The study would not be unpopular, but anything like going to school would, 6351; would merely make the knowledge compulsory, 6352. The same system would apply to India, 6353, 6382, 6385. Would take any qualified officers for instructors, 6354, 6355. There would soon

WALDEN, Viscount—*cont.*

be plenty, 6372. Present promotion examinations are not uniform, 6381; and a failure, 6403. Would substitute district boards of examiners, 6364–6366, for examinations, say, four times a year, 6367; with appeal to Council, 6368; sees no reason why the field and outpost instruction introduced by Lord Fred. Fitzclarence should not now be carried out, 6388. Only those officers who had been instructed in field fortification could undertake to defend a farmhouse, 6395–6397. Foreign military schools give a higher scientific tone than our officers possess, 6358; with same resource and power of endurance, 6393, 6394; as in Prussia, 6359, 6360, 6362, 6363; though our officers have the better physical training, 6361. Quotes instances in the Crimea of officers who had passed high examinations being physically incompetent on the staff, 6373–6379.

CAMBRIDGE, FIELD-MARSHAL His Royal Highness the Duke of, K.G., &c., &c., &c., Commanding-in-Chief.

Council of Military Education.

The principal duties of the Council are with army schools, 5369. The system works very well and there would be no gain in changing it, 5370. Examinations are best carried out by individual examiners, 5371. A central board could superintend local examinations, 6442, 6443. Correspondence on educational matters ought to pass through Commander-in-Chief, because he is *ex officio* President of the Council, 9527.

Military Education before entering the army.

Our officers could not (from social institutions) take to military life so exclusively as foreign officers: believes that the bulk of Prussian officers receive military instruction as cadets at colleges, 5358, 5359, 6478. Doubts if the spirit of the country would allow of our officers joining as cadets, to do non-commissioned officer's or private's duty, 5360. Officers on joining the army should be ready to take their places in it, 6449. A cadet college is necessary to make a man a soldier, 9535, 9536; nor could he in later life so well acquire military science, 9546. The military instruction is of the utmost importance, and should be acquired before entering the army, as it will be impossible to make instruction compulsory afterwards, 5351, 6448, 9554; though every facility should be given for voluntary study 5353, 6428, 6431. The subjects which it is important officers should know are: first, military history, field fortification, and surveying; second, low mathematics and languages, with gymnastics and riding, 5381. Does not see how young officers could be sent abroad to learn languages, 5382.

Sandhurst.

The greatest misfortune for Sandhurst would be to diminish its numbers to those striving for free commissions, thus shutting out the high-toned public school element, 9530, 9548, 9557; which is of infinite advantage to the poorer cadets, 9549. If it were possible without diminishing the number, it would be good to give free commissions to all cadets entering, 9558. To limit the college to those who could pass a severe examination, would shut out the sons of poor officers, as a boon to whom it was partly founded, 5378. Does not see what would be gained: the ordinary run of officers have a fair knowledge of military matters, 5379; possibly poor officers' sons might be compensated by some arrangement with Wellington College or Marlborough, 5380. The loss of Sandhurst would be a great evil, 9555. The entrance examination is too high; not in itself, but because the public schools do not work up to it, 5357. Cadets should enter the army younger, 5352. Final examination for purchase commissions could be raised in its technical, but not in its scientific parts, 6455, 6494.

The Commissioners of Sandhurst could be dispensed with without loss, or retained without disadvantage, 5367; they do not clash with the Council, 5368. Sees no object in giving them more inspectional functions, 5404. Governor of a military college ought to have the large powers of a public school head-master, 5396, 5397; but the Council would perhaps be better able to select efficient professors, as the Governor, (unlike a head-master) would not teach, 5398. The Governor can and ought to recommend the removal of an inefficient professor, 5399, 5400. The drill should be exactly assimilated to regimental drill, 5401. Geology and physics might give way to riding, which is very important: too many subjects are attempted for any to be sufficiently taught, 5407, 5408.

Doubts if discipline at Sandhurst be worse than at other colleges: it could be kept to a high tone, 6453. Every effort is made to check drunkenness and immorality: the billiard and refreshment rooms were established with that object and have had a good effect, 5423. Contagious disease supposed to have been incurred at the College has often been brought from previous localities; parents or guardians should be informed for a long time of it, 5424. Witness has inflicted rustication, but not expulsion, 5383. It would be a great advantage if free commissions could be given as rewards for good conduct as responsible under-officers, 9538. Each cadet should have the conveniences given at a public school; but it is a question of expenditure, 5402. Has not reason to suppose the discipline and studies unsatisfactory; the tone is much improved of late, 5350, 6453. Sandhurst is satisfactory to a great extent; but would extend it, so as to pass all infantry and cavalry line officers through, 5348, 5349, 5374, 6447. The tone would be thereby improved. The public school element is kept away now by the system of direct commissions, 6454; which witness would abolish, 6456. Would wish young men to go direct from public schools to Sandhurst (as a military university, 6449) for military science, 5356, 6456, 6473–6475; and thence to the army as gentlemen and efficient officers, 5406. The Military College should for discipline have, as far as possible, a military and civil system combined, 5362, under military men, 5363; the discipline should, however, be more rigid than at civilian universities, 6451. Cadets should enter at 16 or 17, and join the army at 18, 5364, 6450. Thinks 600 or 700 young men would be at the College at once, 5375, 6450. Discipline would be difficult, but not impossible. Would increase the incentive to study by graduating the prices of commissions to the "B" list of cadets, 5376, 5390, 9530. Idleness could be mitigated, 5377, 9556. The system of graduated purchase would raise both the scientific and moral condition of the College: the great defect now consists in good conduct marks not counting towards a commission, 5405; to make them do so would have the best possible effect, but it is difficult, 5416–5422, 9530. Boys from public schools might enter at 17 or even 18; they need not be the full two years at Sandhurst, if they could pass out earlier, 6476, 6477, 6479, 6487. This would be an English approximation to the Prussian system, 6478. Sandhurst might be largely increased without great increase of expenditure, 6452; but there would be involved a considerable change of plan, 6493. Does not think the number of candidates would diminish. Special classes at public schools would fail, 6496. The payment should be such as to meet the means of the ordinary class of English society; not interfering with rights of poor officers, 6498, 6499, 6501–6505. Would let time at the College count as a commissioned officer, 6500, 9532; if the cadet had been well conducted, 9530. It would be army rank, not regimental rank, 9533; its advantages, 9537. The two years Waterloo rank told most signally, 9547.

Woolwich.

Woolwich works very satisfactorily. Deprecates any separation between artillery and engineer cadets, 9526. Trusts that reference will continue to be made to Commander-in-Chief before dismissal of cadets, 9527. To amalgamate Sandhurst and Woolwich would be most unfortunate for the army, 6444–6446.

Cramming.

"Cramming" is most detrimental: attributes to it whatever bad tone there may be at Sandhurst and Woolwich, 5356. Does not see how private or cramming schools could properly be subjected to Government supervision, 5365, 5366.

Promotion examinations.

Would not have examinations for promotion except in matters immediately connected with the officer's duties, 5354; though they might be extended as far as strengthening outposts or defending houses, which is essential knowledge, 5386, 5387, 6459; and fortification is desirable, 6429; but not necessary for every officer: it should be learned before entering the army, 5355. The promotion examination in fortification and reconnoissance is not sufficiently carried out, 6436. Boards of examination should be formed at the central stations at home and abroad, the garrison instructor being always a member to secure uniformity, 6437; doing the best practicable at detached stations, 6438. This could be done in India, 6471. The promotion examinations should be very strict, failure involving being passed over for a year, 6458: which practically makes the instruction obligatory, 6462. The examination should be final, a rejected officer being allowed, however, to represent his case, 6464, 6465. For examining young officers prefers a station board, 6489. There would be great difficulty in making purchase promotion at a reduced rate the reward of proficiency, 5391, 5392. Does not object to a committee of officers con-

CAMBRIDGE, Field-Marshal, H.R.H. the Duke of—*cont.*
sidering the necessary knowledge for promotion, 5388, 5389. Regards selection of regimental officers for promotion as quite impracticable, 9559.

Instruction of Officers.

Officers' schools are next to impracticable, 5353. Thinks the body of officers would be unfavourable to captains-instructors; so long as officers do their regimental duty efficiently, they could not be forced into classes for instruction by order, 5361. Compulsory instruction would be extremely distasteful, 6463. Many officers who will not study may yet be excellent troop or company officers, 5403. Would give every facility for voluntary classes, 5372; the only one is at Aldershot, because of the difficulty in finding officers to undertake the instruction, 5373. Attendance on lectures must be entirely voluntary, 6457, 6460, and dependent on self-interest, 6461. Does not know what inducements for voluntary study could be held out, 5384, 5385, though increased pay might have its effect, 5415. The names of those passing voluntary examinations could be recorded as a recommendation for possible future advancement, 5393–5395. An officer could be appointed to each regiment to superintend the technical instruction of officers, and the employment of soldiers in trades. Garrison instructors should take part in the promotion examinations, 6430, 6431; but they could not instruct in languages, 6432. The system of regimental instructors would promote study among officers, as it would give opportunity of employing passed officers of the staff college, 6433, 6497. The only expenditure for the mechanism of regimental instruction would be scientific instruments; would make these garrison property, and not move them with regiments, 6439, 6440. Does not think regimental instructors would be unpalatable to commanding officers, 6482, who would not themselves have time for this instruction, though a major might have, 6483. It is the practice at regimental inspections to require several officers to give proof of instruction in field duties, 6484–6486.

Would prefer garrison to regimental instructors, but the scattering of the army might render the latter necessary, 6466; and objection might be taken to long detachment of an officer, 6467, 6468, 6480, 6481. Working men could have slop clothes, as at Shoeburyness, 6469. Hopes the system of instruction for officers would be tried on a small scale at first, and limited to large garrisons. If successful there it could be extended to regiments, the success in which is doubtful, 9528.

Staff and Staff College.

Is satisfied with Staff College, but it is a disadvantage not to be able to appoint to the staff officers who in the field have shown themselves eminently qualified for it, 6434, 6470, a rule rarely broken through, 6492. Several officers have broken down under the hard work of the Staff College, but every officer does not go there for the purpose of hard work, 6472. As regards the commanding officers' certificates as to candidates, sees no other way than to trust to their good faith. Some officers go to the Staff College who might as well not go there, 6435. Doubts if inspecting generals could be relied on for certifying to the fitness of a candidate for the Staff College, 9550, 9551. Would not admit subalterns, 9540, 9541. Objects strongly to any increase in the number of officers passing through, 9531. Complaints that Passed Officers do not obtain appointments are common, 6490, though virtually they are under obligation to the public, 6491. Remembers at Varna the English officers doing, by their riding there, country and road surveying more quickly than the French, 5409. Educational or scientific attainments are insufficient for a staff officer, 5410–5414. If fortification, &c. were in the regulations as part of drill and were taught by the adjutant, and there were garrison instructors, the Staff College might be dispensed with, 9534, 9552. Has every respect for the Passed Officers of the Staff College, but thinks selected regimental officers make the best staff officers, 9529. Officers of regiments could be examined for the staff without passing through the Staff College, but they would be less scientific, 6441. Never knew a good regimental officer break down as a staff officer, 9553. Subalterns would be unsuitable for brigade majors, 9539, 9541, 9543, 9549, though they might be appointed with brevet or local rank, 9542. There are most valuable regimental officers of great experience in marching troops, 9545.

SIMMONS, MAJOR-GENERAL SIR J. LINTORN, K.C.B. (Royal Engineers), Lieutenant-Governor of the Royal Military Academy, and previously Director of the Royal Engineer Establishment at Chatham.

Woolwich.

The results, intellectual and moral, of the system at Woolwich are decidedly good, 6508, 6510, 6512, 6513. Bases his opinion on about 140 young officers who have come to him at Chatham direct from the Academy, 6509, 6628. There may be minor details requiring change, 6514. Would modify the instruction in surveying, 6596. The entrance age for cadets could not be reduced consistently with their requiring the same amount of education, 6605, 6638; they get from Chatham to their engineer duties at from 21 to 23, 6606, 6637, which is not too old, 6639, 6640. In the interest of discipline would not shorten the course, 6553. To separate the artillery and engineer cadets would be disastrous for both services, 6554. Would not to either class diminish the mathematics taught, 6555 6557. For a young officer to come to Chatham overworked from Woolwich is quite exceptional, 6607, 6608; as a rule they are physically fine and athletic, 6609. The artillery used to be almost hereditary, 6610; a fair proportion of artillery officers' sons still enter, 6611. Approves of open competition, guarded by a high educational standard, 6510, for a test examination, 6511. Advised a friend recently to keep his son at Cheltenham for preparation for the Academy, 6515. Is opposed to amalgamating Woolwich and Sandhurst, 6654–6656, 6658.

Chatham.

Was Director at Chatham for three years, 6516. Chatham is the head-quarters of the engineers, and a school of engineering for the instruction of officers and men, all of whom go there on first joining; details the course of instruction, 6517, 6561, and mode of teaching, 6635; no *répétiteur* system, 6636. Instruction is by lectures and classes, 6561, 6563. A class should not exceed 20 officers, 6583; this does not apply to special lectures, 6615. Languages are not taught, 6518; there are lectures on professionally scientific subjects, 6519. The course for officers lasts 22 working months (two years including leave), 6543, 6544, 6634; and is a continuation in the service of the studies at Woolwich, 6520–6522; the time counting as commissioned service, 6523. Has had as many as 80 young officers under him together, 6524. Reckons about 20 cadets annually required for engineers, 6525. Discipline is maintained as in a regiment, 6526–6529; there is no sort of punishment, 6530; the men average 1,200 at Chatham, of whom about 600 are under instruction, 6541; on arrival from foreign service a company comes to Chatham for short instruction, 6542. The officers are in barrack, 6631; separate from line troops, 6632. Accommodation not always sufficient, 6558. They have separate rooms, 6531, and mess together. Other engineer officers come to freshen up their knowledge; also officers and men from other corps for instruction in telegraphy and signalling, 6532. For officers of that description the course lasts two months, 6533. Commanding officers have not objected to their officers coming, 6534, 6535. Such officers had probably reasons for preferring Chatham to the Staff College, 6536; their course does not entitle them to any advantage, 6537. Very few line officers come. They come at their own request; there is no entrance examination, 6569, 6570. The instructing staff is all under the director, who is assisted by a brigade-major, 6538. The leave allowed; discipline could not be higher, 6539. There are five instructors, and five assistants, with 14 staff serjeants, 6540, 6560. The pay of the instructors is scarcely high enough to secure the best men in the engineers, 6579, 6580. Young officers coming to Chatham are very amenable to discipline, 6582; presumes they have acted as under-officers or corporals at Woolwich, 6581. They work hard both at study and athletic sports, 6612. Purely military duties occupy three or four months before studies are commenced; prefers this to the Prussian system, 6642, 6643. The course involves daily about five hours close work, 6629; military duty being then exceptional, 6630. For industry relies on previous habits and on the actual work to be done under penalty of losing leave and time, 6644–6648. Is not satisfied with the examination for officers after the course, 6545. The director reports to Commander-in-Chief on each officer leaving (whether of engineers or not), 6549; but the examination makes no difference to the officer's position, 6546. Line officers underwent an easier examination, 6547. No certificates are given, 6548. Has proposed rewards for good sapping for the Royal Engineers. 6584 There were three depôt battalions at Chatham, 6571; the men of which derived little or no benefit from the engineer establishment, 6572.

Instruction of troops in field works.

The heavy garrison duties at Chatham would be an obstacle to the line troops going through engineering instruction, 6573, 6574; but there is accommodation for three full battalions, 6575. It might be good to send to

SIMMONS, Maj.-Gen. Sir J. Lintorn, K.C.B.—*cont.*

Chatham a few selected officers from other corps; but to pass many young officers of the line through would be useless to those officers and most inconvenient as regards discipline, 6550; while it would involve great increase in barracks, for which the town is an undesirable place, 6559, 6633. It would be an advantage, nevertheless, if every line officer went through the practical course of field work, 6551; which should be done at the large camps, rather than at Chatham, under engineer officers specially appointed as instructors, 6552. At other places sand-modelling could be resorted to, 6584. Engineer officers or non-commissioned officers might be detached temporarily to distant stations to train officers and men in field works, 6624, 6625. In five years, half the regiments in the army pass through Aldershot, 6587. Field works could be taught to officers at camps in four months, 6567, 6595. Such instruction is too much neglected in our army; would make the full course voluntary, but a part compulsory on officers and non-commissioned officers, 6568, 6588–6590, 6593. To learn the use of pick and shovel should be obligatory on every soldier, 6589; but working pay should not be given for mere instructional work, 6617. If there were a compulsory examination in engineering subjects for army officers, would have it rather for promotion to captain than to lieutenant, 6585, 6586, 6601. Models of necessary fortification matters could be supplied at small expenditure to large stations, as Aldershot, 6564; but would be out of the question at barracks where only a single regiment should be quartered; sand-modelling would be a good substitute, 6565, 6566; and would be interesting, 6592, 6626, 6627. A few tools are used, 6600; and a shed half the size of one 120×40 feet would suffice for the sand-modelling of a battalion, 6576. Bridging, &c. could be taught by models at little expense, 6577, 6578.

English soldiers learn field work as quickly as Egyptians or any others, 6618, 6619. Such work develops muscle, 6620; but line officers without practice cannot superintend the men, 6621.

Instruction of officers. English officers are not eager to acquire knowledge, 6622; regimental system stops study, 6623. Officers should be required to study, and should be examined in court-martial law, 6602; as also in field-sketching, but would not allow inability to acquire the latter to bar promotion, 6603; it is readily acquired, 6604. The more officers, generally, can be educated to the qualifications of staff officers the better for the army, 6594. Examinations held at distant stations could not well be *viva voce*; written questions should be too clear to admit of doubt as to meaning, 6613, 6614. It would be good to employ as military instructors in regiments officers in them who had passed the Staff College, 6649; does not think there would be serious social difficulties, 6652, 6653.

Officers should join the line at from 17 to 20 years old, 6641. Eight hours mathematics daily is more than a grown man can stand, repeated frequently, 6616. The Prince Consort, shortly before his death, thought of instituting winter lectures at Aldershot, 6650, 6651. West Point educates many men who do not enter the army; the American war proved, more than anything else, that special instruction is necessary to make good officers, 6657.

FIELD, COLONEL G. T. (Royal Artillery), Inspector of Studies and Second Commandant, Royal Military Academy.

Woolwich. Has been at the Academy three years, 6734. Enumerates the establishment at Woolwich; there are at present 222 cadets, in three divisions, 6660. Admission between 16 and 19 by open competition; for instruction, cadets are in five classes of equal strength; annual charge detailed, 35,006*l.* in all, 6661, of which 3,142*l.* falls on the public, 6662. Contributions of cadets stated, 6663. Indian contribution described, 6749, 6750. Instruction tutorial, partly by lecture, partly by class; hours of attendance detailed, 6664. Entrance examination described, 6665, 6666. Subsequent half-yearly examinations are all competitive and written, 6666, 6667. Maximum marks attainable and minimum required, 6668. All studies compulsory, except that a choice is given between German and Hindustani, 6669. Describes the gymnastics and drill, 6670, 6671; the discipline and punishments, 6672, 6725–6727; amusements, 6673, 6674; the barrack rooms, 6675; a single room each would be better, but objections are not now made, 6689–6693; reading rooms, dining halls, and class rooms, 6676; the arrangements for meals, 6677, 6678. Saturday is a half-holiday, 6679. Lights out at 10.30 p.m., senior cadets 11 p.m. Cadets forbidden to enter houses of public resort in neighbourhood, 6680, 6681, a law very rarely transgressed, 6683–6687; bounds are only as to time, 6682. There is a nice billiard room, 6688. There are 13 subjects of instruction, 6695, 6696, and 34 professors and instructors, 6694, with very similar duties, 6697; the number could not be reduced under existing system, 6761, 6762; 23 is the greatest number of cadets taught by one instructor at one time, 6698, 6760. Lieutenants of companies have nothing to do with instruction, 6699, for which, under lieutenant-governor and inspector, the professors and instructors are wholly responsible, 6700; they maintain order in study through the corporal, 6701. Offences in study are mostly trivial, 6728–6731, 6735–6737. The course is five terms, 6702. Lieutenant-Governor inspects details, 6703. Each cadet has his desk, portmanteau, and separate cupboard, 6704, which is liable to daily examination, 6705. Pocket money ranges by scale from 5*s.* to 3*s.* a week, 6706. Cadets have means for separate ablution, 6707, 6708. Smoking allowed at any time out of study, but restricted as to place 6709–6711. There is no sand-modelling, 6712. 90 to 100 cadets subscribe to the workshops, 6713. For six months cadets attend 10 arsenal workshops regularly, 6714, 6715. Thinks the punishments sufficient, 6716. Nineteen is too old for entrance; would lower limit to 18, and increase requirements in mathematics and geometrical drawing; classics constitute a serious difficulty, 6717–6724, 6763. It is not the practice for Lieutenant-Governor to rusticate without consulting Commander-in-Chief, 6732, 6733. The instructional staff cannot award definite punishment, 6738–6741. Would not give military professors disciplinary power, 6742–6744, though a professor would of course notice a breach of discipline, 6745–6747. Disciplinary officers reside (with exceptions) within the precincts, 6748. Professors are appointed by Commander-in-Chief on Lieutenant-Governor's recommendation, 6751–6753. There was a rebellion eight years ago, 6754. There is some, but not much, venereal disease, 6755, 6756. There are 44 cadets in each class room, but not all taught by one man, 6757–6760.

There might be a "Board of Improvement;" a chapel is much required; would reduce course to four terms and diminish study parades; professors should be responsible for all the teaching in their subjects. Each instructor should have separate room. Except for languages all professors and instructors should be officers. Barrack accommodation is insufficient, *Appendix III.* (*B.*), *p. lv–lvii.*

Is opposed to amalgamating Woolwich and Sandhurst; but would allow Woolwich cadets failing for Artillery to pass to Line, *Appendix III* (*B*), *p. lvii.*

BRUCE, CAPTAIN E. J. (Royal Artillery), Assistant Inspector of Studies, Royal Military Academy.

Woolwich. Woolwich is a very suitable locality for the academy, 6927.

Cadets enter, at an average, from 16½ to 17½, 6879. Average age of all cadets is 19¼ years, 6907, a few cadets are 20, 6908. Sees no difference in mastering study between older and younger cadets, 6880, 6881. Public school boys, direct from highest forms, make the best cadets, if up to entrance standard, 6882, 6883. Would not shorten the course specially for them, 6884. Is satisfied with open competition, 6772. Maximum age for admission might be lowered to 18. Would allow two trials only, with half-marks as a fixed minimum on all subjects taken up; marks from entrance examination to count towards commission or to be carried to first periodical examination, 6773, 6774. Cases of overwork only occasional, 6899; as a body, the cadets are very healthy and strong, 6900. Cadets are more soldiers than students, 6793; something between soldiers and officers, 6848, nearer subalterns, 6915; cannot say if they are under Articles of War, 6796, 6797, but are under military discipline, 6847, which is most important in a military establishment, 6849.

The resident chief should be governor with absolute power of rustication, but not discharge, 6778—6782. One man could not have time to perform duties of lieut.-governor, inspector, and assistant inspector of studies, 6901–6903. In favour of studies and discipline being both under second commandant, 6865, 6866. Lieut-governor has not time for details, 6867; but in principle should be the point of general connection, 6870–6873. Second commandant has time to join in cadets' amusements and drills, 6868; he might happen to think more

BRUCE, Capt. E. J.—*cont.*

of smart drill than of the studies, 6869. Details duties of assistant inspector, 6836–6840. Superior military rank does not involve priority on the educational establishment, 6841–6844. His visitation of studies is very useful, 6919. There should be a council of improvement of professors, under lieut.-governor and inspector of studies, 6769. Does not admit any great difference between powers of military professors and executive officers, 6813; but professors should be limited to teaching, 6814. Some military professors associate in cadets' amusements, 6815. Strongly opposed to combining teaching (except of drill, 6827,) with discipline. Fewer men who punish the better, 6816, 6825–6828. Professors do not know cadets until they pass into their classes, 6893, and see very little of them out of study, 6819, which is desirable, 6820. A military man may attract more attention than a civilian, 6922; but is not sure he would select foreign teachers from military men, 6921. Civilian professors are not allowed to give private instruction, 6890. Professors are responsible for discipline in their classes; but keep order through an under-officer or corporal, 6789. They have no power to punish; but are bound to report anything they see wrong, 6790–6792, 6817, 6892. A military professor could, as an officer, put a cadet in arrest, 6792, 6794, in which respect he differs from a civilian, 6795, though the difference is unimportant, 6891. With optional studies it might be practicable to reduce some professors or instructors, 6771. Organization of studies is, on the whole, good, 6766. Each professor teaches in his own method, 6798, 6799. Lectures not largely used, *viva voce* examinations are better, 6800; cadets' note books are examined and marked, 6801. Preparation out of study is not obligatory, 6802, nor essential, 6803. Private study is optional, 6804; with limit of time as to putting out lights, 6805. Would not allow any private study in subjects beyond the Academy course, 6894–6896. Finds no fault with the teaching, unless in mathematics; cadets might be grouped more, 6806. Would not reduce subjects taught, especially mathematics, 6807. Mathematical studies are not excessive, 6874; are valuable professionally and as mental discipline, 6875. Good mathematicians have greater facility in other studies, 6876–6878. Languages should be taught by foreigners, 6897, 6898; would reduce course to two years, 6775, 6776. Would render voluntary chemistry, applied mechanics, and physics. Marks from all examinations should carry forward, 6768. Artillery and engineer cadets should be educated together, 6769, 6770, 6808–6810, 6923. Would give artillery cadets a six month's course, after leaving Academy, special to themselves, 6767, 6769.

Discipline satisfactory, 6777. Cadets sign a declaration that they will obey orders, 6845; one order is to salute every officer he meets, 6846, to which only a cadet of bad tone could object, 6916; another, to obey professors and masters, 6850–6852. Any officer seeing a cadet do anything wrong ought to place him in arrest or report him, 6853, 6854. Woolwich being a garrison town, cadets are under constant supervision, 6818. In 1864 there was insubordinate combination, 6783. Venereal disease is too prevalent; but has decreased since 1862, 6784–6787. It involves no punishment, 6811, but the cadet would probably be spoken to about it, 6812, by the chaplain and his captain, if an opening presented itself, 6855–6858, 6910. Does not see how to prevent venereal disease, 6909; punishment would probably cause concealment and endanger health, 6914. Cases of drunkenness are very few, 6904, and would probably involve dismissal or rustication, 6905, 6906, which young men dread, 6920. A captain and subaltern have charge between them of 80 cadets, 6829–6832; would rather have one captain over all the cadets, 6833, 6859, 6918, with a second captain as assistant, 6860, 6862. The company officers know what their cadets are doing; though less intimately than college tutors, 6834, 6835. A captain has leave of absence very rarely, 6861. Captains are supposed to be selected as the fittest men to be had, 6911; they are responsible for the moral welfare of the cadets, 6912. Officers are always ready to advise cadets on all points, 6863. Communications to parents would ordinarily be through Second Commandant, 6913. Under-officers and corporals have responsible duties analogous to orderly officers, 6917. Corporals or responsible cadets of classes are selected from the classes immediately above, 6821–6824, 6885–6888. Each cadet should have a separate room, 6788. Approves of the facilities given for billiards and smoking, 6864.

Is not in favour of amalgamating Woolwich and Sandhurst, 6924–6926.

BRACKENBURY, CAPTAIN HENRY (Royal Artillery), Professor of Military History, Royal Military Academy.

Woolwich. Acquainted with Academy for seven years, 6928–6931. Is essentially different from a civil college, 7020. Would limit it to technical subjects, 6947, 7051; as a School of Application, *App. III.* (*A.*), *p. liii.*, and would not educate line cadets with those for scientific corps, 7033, 7034.

Candidates should have as long for general education as possible, 6936, 7050, 7051; and commence technical subjects at from 18 to 19, 6937. Approves of open competition; but not of present style of entrance examination, 6935, 6982, *App. III.* (*A.*), *p. liii.*; which feeds cramming schools, 6991. Would exclude from it experimental sciences as crammers' subjects, 6934. Mathematics not practical enough, 6965–6967. Sandhurst and Woolwich crammers are very similar, 6994. Every cadet on entrance should have a colloquial knowledge of French, 7029, 7030. Cadets should be commissioned officers from date of entrance, 6949, 6950, 7051.

Would shorten course by abolishing mathematics and languages as compulsory subjects, 6938, 6959, 6968, *App. III.* (*A.*), *p. liii.*; 18 months should suffice for artillery cadets, 6939, 6940. Six or seven subjects at once too much for any man, 6958, 6960–6963; would be better if divided into courses, 6976. All Woolwich subjects are obligatory, 7005. Engineers require much higher education than artillerymen, 6963. Would separate their studies after one year, 6964. Teaching should be by lecture, with previous study and subsequent examination by the instructor, on the *répétiteur* system, cadets being left to free study, 6955, 6972–6974, 6990; choosing to some extent their own subjects, 6977, 6978. Sees no danger in thus approaching Oxford system, 7015, 7016; progress is always checked by examinations, 7017. Would make great difference in mathematics between artillery and engineer cadets, 7031, 7032; they are carried too far for the artillery, except for those with a special bent for it, 6932, 6933, 6948; to a needless waste of labour, 7013, 7014. Elaborate surveying not necessary for artillery, 6979, 6980. Sand-modelling useful, 6981. Cadets' ignorance of geography is astonishing, 6985, 6986; it is best taught with history, 6987, 6988. Cadets take eagerly to military history; witness examines their notes after every lecture, 6975, 7011; it is taught with direct reference to the art of war, 6983, 6984, 6989. His lectures are on particular campaigns, 7003; not farther back than Napoleon, 7007, 7008; a printed syllabus is distributed beforehand, 7006. Uses Colonel Chesney's outline maps, 7012. A large number of cadets benefit, 7004. Gives one lecture a week to each class, 7010. Time too short for much on transport and supply, 7009.

Would dispense with second commandant and two out of the three captains, 6941; enlarging the power of Lieutenant-Governor, 6942–6944, 7000. Would reduce the professors, 6945, 6946. Subaltern officers have insufficient power, 7039; their nomination rests with Deputy Adjutant General of Artillery, 7040, 7041. Quartermaster should be young and active; paymaster should have whole payment of cadets; combining paymaster and adjutant a mistake, 7049. Professors and officers should retire at sixty; young men are much better than old ones, 7046–7048. Lieutenant-Governor should consult more the professors and instructors, 6953, 7018; who ought to have a voice as to suspension of study; witness has been seriously inconvenienced by such suspension, 7011.

Discipline not very good, 6951, 7037; especially formerly, 7035, 7036. Tone moderately loyal now to the authorities, 6996. Would abolish minor punishments and treat cadets as officers; punishments are not uniform, 6997–6999. Arrest on honour used to be evaded, 7000, 7001; but is now properly kept, 7002. Would continue arrest, but abolish punishment drill, 7002. Summary dismissal should scarcely bar all entrance to the army, 6992, 6993. Agrees mainly with Major Stuart's pamphlet, 7023–7027. Would only treat cadets as soldiers on drill, 7028. Objects to parades, 7020, 7021, except for genuine drill, 7022; they worsen discipline, 7038. Parades not under an officer's eye are a farce. Under-officers and corporals have no real authority with the older cadets, 6995, 7039, 7043, 7044. Under-officers and corporals ought to have more privileges than the old cadets, 7042, 7045. Sees no gain in giving professors disciplinary powers, 6954; it would be undesirable, 7019, 7020; they have none now, 6956, 6957. Some civilian professors cannot keep order, 6970; it would not do to give them disciplinary power, 6971.

Artillery advanced class not satisfactory, 6969.

OWEN, LIEUTENANT-COLONEL C. H. (Royal Artillery), Professor of Artillery, Royal Military Academy.

Woolwich. Connected since 1856 with academy as assistant instructor, instructor, and professor, 7052–7054.

Woolwich possesses special advantages for artillery instruction, 7199; and such instruction could not be so well imparted after joining the service, 7200, 7201, 7204, 7205. The arsenal course takes the last term, 16 or 17 weeks, 7202, 7203; and is of great advantage to engineer cadets, 7204, 7205. Entrance examination is severe, 7186; but has observed very few instances of overwork, 7187, 7188. Would limit trials for admission to three, 7055, 7056, or four, 7130–7139; and let the marks obtained at entrance, in languages, classics, and pure mathematics, count in final examination, 7057, 7107, 7108, 7164, 7191. A candidate should know elementary pure mathematics before entrance, and learn mechanics, natural philosophy, and machinery at academy; one language to be indispensable, 7058, at entrance, its study optional afterwards, 7174. Ordinary public school course would not qualify, *App. III. (A.), p. l.* Objects to some cramming schools as disreputable, but some are very good, 7093–7095. Cadets have more general knowledge than formerly, *App. III. (A.), p. l.* Entrance examination should show bent of a cadet's mind, 7167. Would give four scholarships for excellence, to be held during residence, 7066–7068. Age for admission should be 16 to 18: course two years, *App. III. (A.), p. l.*

Cadets have sufficient time for general reading, 7189; but that should be left till after leaving Woolwich, 7190. Everything gives way to meals and recreation, 7140; cadets are pampered, 7142, and overfed, 7183–7185.

Executive officers and professors are in excess, 7069, as compared to an ordinary school, 7151; only to be reduced by reducing number of compulsory subjects, 7070, 7071, by which one-third might be dispensed with, 7072, 7073. Would keep separate the disciplinary and instructional staffs, but give them better opportunities for common action, 7059. The professors require disciplinary power, though some actually exercise it, 7074–7080, 7085–7087. Witness would not put in arrest a cadet whom he saw misconduct himself in the town; a rare case, 7081–7084. Professors are rarely consulted as to changes of study, 7116. Looks upon the assistant inspector as the inspector's deputy, 7117. Sees no utility in his visits to the classes, 7118, 7119. It would be sufficient to give professors power to inflict slight punishment, 7120; twenty four hours arrest, 7143, not to be entered against cadet, 7144–7146.

There are too many subjects to get up in the last term, which depreciates all, and especially artillery study. Sufficient time is not allowed for that branch, 7115. It is important that the teaching should be in classes, where all are doing the same thing, 7113. Objects to the artillery studies given at Woolwich to young officers just joined, 7114. Artillery and engineer cadets should go through precisely the same course, 7063–7065, 7166. Half the instruction of cadets is practical in the field, 7111, 7112. Practical and theoretical classes are now in the same barracks, 7147; a disadvantage, 7148. If again separated, it would be a great improvement, 7149, 7150. Would confine higher mathematics to those showing special aptitude, 7062, as a voluntary subject, 7165. Languages might be left as optional studies, if required at entrance, 7109, 7110. Doubts if languages can be acquired at Woolwich, 7175. There is very little battalion drill, 7177; would increase it, 7178. There is no direct religious instruction, beyond a Bible class, 7194–7197. The different religions of cadets might make it difficult, 7198.

The academy is in fair condition, 7060, 7193. Insubordination has died out, 7061. Tone of cadets exceedingly good; immensely improved from former times, 7163, 7192. Preserving discipline depends on an officer's personal qualification; but he must be supported, 7173. Cadets are unsteady on parade, 7121, 7163; probably from the large number of useless parades, 7122. Describes insubordination in the matter of General Wilford, 7088–7092. Would not record trivial offences, 7168. There is no solitary confinement now, 7169; it might sometimes be advantageous, 7171. Rustication not objectionable, but it may foster a cadet's idleness, 7181, 7182. Does not think three captains necessary, 7179, 7180. Discipline-officers not responsible for study parades, but for those at meals, 7123, 7124. Senior captain exercises superintendence and does not take turns of duty with other captains, 7125. Employing a corporal in a class in which he is not working, is good for discipline, but bad for himself, 7126; but in first term or two

OWEN, Lieut.-Col. C. H.—*cont.*

such a course is indispensable, 7127, 7128. Would increase power and privileges of corporals, and require from them efficient performance of their duty, 7096–7098. Corporals do not do their duty, and there is laxity of discipline in classes, 7152–7162.

The cases of Woolwich and Addiscombe do not admit of comparison, 7099, 7100. Amalgamation of Sandhurst and Woolwich would be detrimental to the education for the scientific corps, 7101–7103, besides creating jealousy from the greater rapidity of promotion in the line, 7104–7106, *App. III. (A.), p. l.*

CUNYNGHAME, LIEUTENANT H. H. S. (Royal Engineers).

Wellington College. Was educated at Wellington College, modern side, 7222, 7223, for 5½ years, 7264; the special education there was a decided advantage, 7224, 7321; gained many prizes there, 7225, but wanted more time for Mathematics and French, 7265. Boys on the classical side pass into Woolwich high, but not so high in final examinations, 7322, as classics do not then count, 7323. The modern side did not make any separation in the school, 7324, 7325.

Woolwich. Entered Woolwich before he was eighteen, 7226, which is about the best age, 7227. Entrance examination is superficial and allows of cramming, 7220. Witness crammed, 7221, for 12 months with a private tutor, 7230, having six hours daily at mathematics, 7330; having had at Wellington College three or four, 7331. Individually learns better with a tutor than in a class, 7332. Crammers do great harm to the moral tone, 7274–7276, by neglecting athletics, 7277. Knew a little French, 7228; learnt at Wellington College, 7229. At entrance to Woolwich did not take up classics, 7304, having abandoned the study three years before, 7305. Would allow marks for classics to carry on, but not for other subjects not taught at Woolwich, 7306. Entered Woolwich thirteenth, 7266; was not overworked in preparation, 7267. Quitted Woolwich Academy four months ago, 7206, first in final examination, 7209, by about 1,300 marks, 7210; obtained a good conduct sword, 7211, and a gold medal for higher marks, 7212, 7213. Was a responsible under-officer, 7208. Is now at Chatham, 7207. The subjects are too many: there is not time for a thorough knowledge of all, 7214–7219, 7300. Would make voluntary—French, higher mathematics, German, or Hindustani, the sciences, practical drawing, mechanics, free hand drawing, 7217, to afford time for general study, 7273. Studies are better mixed up, than classed by time, 7301. Would give more time to artillery subjects, 7302. Would not separate artillery and engineer cadets, 7303. Thinks the obligatory mathematics should stop short of differential calculus, 7269, 7270. There is no time for general study, 7271, especially in the last year 7272. The engineers want high mathematics more than the artillery, 7326; by making it voluntary the men for the engineers would take it up and the hard work would pay, 7327, 7328. Eight hours a day at mathematics is too great a strain, 7293. French is a very valuable acquisition for an officer, 7294, 7295. Instruction in classes and by lecture have both their advantages, 7242. Lectures are good, provided the pupil master the subject himself, 7243, 7244. The idle cadets could scarcely be made to work at lectures, 7296, 7297. Discipline is well maintained, 7231, 7238, and tone gentlemanlike, 7232. Cadets would support a punishment they thought just 7233. Discouragement of study has died out, 7234. Bad language not more than might be expected, 7235. Would not give civil professors power of punishment, 7236; the respect shown them depends on themselves, 7237. There were no instances of flagrant insubordination, 7249. Allowing beer and coffee at all times has greatly diminished intoxication, 7282, 7283. There is no limit to the beer a cadet may call for; never saw the power abused, 7307. As regards offences with women, the tone was far lower than in a public school, 7284, 7285. Spoke to chaplain once or twice, 7250. He visits cadets in hospital, 7252; but not otherwise, 7251, 7287. Cadets, who choose that line, could be religious without hindrance, 7288; the chaplain should be young and energetic, 7289. There was a strong feeling in favour of keeping arrest, 7308–7310. Should be against putting all the cadets under one captain, 7311–7313, 7318, 7319. Cadets would respond to advances from their officers, 7314, 7315. No personal supervision of morals, 7279, 7280, which, however, could be introduced, 7281. As under-officer, witness has advised cadets; advice well received but rarely acted on, 7316, 7317. A link and adviser between cadets and authorities is wanted, 7320,

CUNYNGHAME, Lieut. H. H. S.—*cont.*

As an under-officer, only experienced different treatment from other cadets on parade, 6253. Would decidedly increase power of under-officers, 7254, 7255. Would not separate corporals at meals and quarters from other cadets, 7290–7292. Non-military parades should be reduced as much as possible, 7298, 7299, except for junior terms, 7329. There are now four cadets in a room, 7239. Was fed well, 7245, not too well, 7246; within limits, cadets regulate their own supplies, 7247; had cold dinners in summer, 7248. Passed the Military course at Chatham in 71 days, 7256, 7257; it is strictly practical, 7258. The result was tested by a Garrison Board, 7259; if unsatisfactory would have been sent back for another month, 7260. This military course is a rest after the hard work of Woolwich, 7262, 7263, which is severe in last year, 7268.

NUGENT, LIEUTENANT W. A. (Royal Engineers).

Woolwich. Now at School of Engineering, Chatham, 7334. Left Woolwich Academy 16 months ago, 7333, having been corporal for two last terms, 7335. Was satisfied with his career there, 7380, though the increase of knowledge is not very great, 7387–7389. The life is pleasant; but cadets have no character to keep up, 7452; it would be better if they were treated less as private soldiers and more as officers, 7453–7460.

Before going to Woolwich was two years at Geneva and two at Mr. De Burgh's, a cramming school in Dublin, 7336, 7337, where more discipline was maintained than at most places, 7338, and the tone was fairly good, 7339. Knew French and German before he went up, 7340. Passed in 21st, 7343; passed out ninth, 7344. Thinks entrance examination fair, 7345; but marks for classics high, 7346–7350. The trials allowed are not too many, 7351, 7352. Satisfied with course and teaching, on the whole, 7392; but practical geometry is carried further than can be useful, 7354. The time just suffices to go through the subjects by working well, 7355. The course is not too severe on health, if cadet be well prepared before entering, 7356, and the work is not more than can be managed, 7394. Would not omit any compulsory subjects, 7384–7386. Would keep artillery and engineers together, 7369, even in mathematics, as those best up in the subject go to the engineers, 7390, and the subject therefore divides the men, 7419. Machinery sketching should be more practised, 7357. Perspective is a voluntary subject, 7439, and is not indispensable for machinery drawing, 7438. Classics constitute good education; but cannot give opinion as to carrying on the marks for it, 7440, 7441. French and German, especially the former, are necessary for an engineer officer, 7442. Mathematics not well taught; except by Mr. Crofton, 7399; and there were not instructors enough, 7401. Lectures would be preferable to tutorial instruction for mathematics, 7377. Does not think questions after lectures would cause more attention to be given, 7436, 7437. The riding instruction was beneficial; but insufficient to make good riders, 7425-7427, or to teach training, saddling, bridling, or shoeing, 7443–7448. Gymnastics sufficient; prizes given for it, 7428. As much instruction is given as well could be in field sketching and fortification, 7431–7433. Passed five *bonâ fide* examinations; from which marks in some subjects carry on to final examination, 7359, 7360. Private study is not encouraged, 7392. First term cadets might be allowed, with advantage, to have lights till 11 p.m., 7393, 7422, 7423. About half the cadets would try to discourage study, 7365-7368.

Discipline much improved under General Ormsby, who treated the cadets as gentlemen, 7361–7363. There was not much insubordination; cannot answer as to immorality, 7364. There was some drunkenness at the end of terms, 7409, 7410; not much untruthfulness, 7411, or venereal disease, 7414, 7417; no bullying, 7412; arrest scarcely ever broken, 7413. Venereal disease did not involve punishment, 7415, nor general reprobation, 7416. Discipline much depends on the under-officers and corporals, 7370, 7403, whose authority he would decidedly increase, 7371, 7402. Under-officers could award extra drill and arrest, 7402. They are selected by seniority, if of good character, 7404, 7430. Never heard of an under-officer promoted against his wish, 7405, 7429. They could, but did not, exercise power out of doors, 7406–7408. Would not separate those of the second class from the rest at meals; the first class mess separately, 7435. There is not much *esprit de corps*, 7420. Four thousand parades during the course; discipline would not lose by abolishing the minor parades, 7421, 7434. There is no one to whom a cadet would go for private advice, 7424. Did not receive advice from chaplain unless he asked for it, 7378; but believes chaplain visits the hospital, 7379.

NUGENT, Lieut. W. A.—*cont.*

Professors only exercise authority in study, 7372; would not give it them out of it, lest civilian masters should fail to act impartially, 7373, 7418. Civilian professors have the same respect as military, because they have the Inspector of Studies to back them up, 7374, 7375; but the military professors taught better, 7400. In the first half of last term had 1½ to 2 hours for recreation, 7395; but the drill gives enough open air exercise for health, 7396. Cricket and football were played, 7397; but there was not boating, 7398. There is gas throughout, 7450; never heard it complained of as hurtful to eyes, 7451.

SYLVESTER, J. J., Esq., F.R.S., Professor of Mathematics at the Royal Military Academy.

Woolwich. Has been connected with Woolwich Academy for 13 years, 7462. It groans under double government, 7467, office of inspector of studies and second-commandant should be combined with that of lieutenant-governor, 7468, 7469, 7480; with not more than the present assistance, 7479. The lieutenant-governor is too exalted to exercise a moral influence, 7470; colonel is sufficient rank for him; there are too many executive officers and too many subordinate employés, 7474, 7485, 7493, *App. III.* (*A.*) *p. xlvii.* Would give more opportunities for private study, 7463–7465; by diminishing the class-room study, 7466, as at Universities, *App. III.* (*A.*) *p. xlviii.* Cadets work very hard, but are not overworked; those entering are very intelligent and not crammed in mathematics; at some training schools bad habits are acquired, 7471. Cadets admitted by open competition are better in knowledge, industry, and tone, than their predecessors, *App. III.* (*A.*) *p. xlvii.* More mathematics should be exacted at entrance examination, and course at the Academy limited to subjects, having direct bearing on professional studies, 7472, *App. III.* (*A.*) *p. xlvii.* Eight hours a day at mathematics must be quite a maximum strain; but the Academy study does not approach that, 7473. His instruction is all tutorial, 7476; should be more useful if he lectured and summarised, 7477; with subsequent questioning, as at Universities, 7478. Mathematics in the evening is very objectionable, *App. III.* (*A.*) *p. xlviii.* The Academy is most fortunate in its present Inspector and second-commandant, 7480. The professor should have general control of the mathematical studies; but should also instruct the highest class, 7481, 7482. In class the majority are well conducted; three or four are noisy, knowing beforehand that they will not pass the examination, 7483. The mathematical department is not stronger in instructors than necessary, 7486, and is badly paid, *App. III.* (*A.*) *p. xlviii,* No serious reduction could be made, 7487, 7488, 7492. Generally, the proportion of instructors to instructed is large, 7491. Professors act very little together; does not know by sight all the instructors, 7494. Professors have only assembled once, to discuss change of hours, 7495; Lieut.-Governor ought to have been present, 7496. Such meetings would be advantageous in promoting *esprit de corps*, which has increased of late, 7497, 7498, *App. III.* (*A.*) *p. xlvii.* The variety of subjects taught involves the large number of instructors. Some cadets cannot get through without additional help from private teachers, 7499. Cadets have complained that they are worked too hardly, and have always an examination impending, 7500. Would retain same mathematical course for Artillery and Engineer cadets; *App. III.* (*A.*) *p. xlvii.* Should be glad to see more of cadets than he now can, 7501. The immense majority treat him with respect, but there are some cadets of a lower stamp, 7502. In a case of gross rudeness, by caricaturing, the civilian professors were not vindicated as they should have been by the military officers, 7503–7505. Objects to amalgamate Woolwich and Sandhurst; *App. III.* (*A.*) *p. xlviii.*

MILMAN, LIEUTENANT-COLONEL G. A. (Royal Artillery), Captain of a Company of Gentlemen Cadets, Royal Military Academy.

Woolwich Academy. Was formerly subaltern of a cadet company, 7507. There are printed rules for everything, and they are not deviated from, 7573. Men with good preliminary education are wanted for Artillery and Engineers, 7592; classics should therefore count at entrance, 7593, and a modification of the marks gained might count afterwards, 7642, 7594, in the final

MILMAN, Lieut.-Col. G. A.—*cont.*

examination, 7596. Cadets think it hard classical marks are not carried on, 7595, and boys from public schools are deterred from competing, in consequence, 7597, 7598. Age for admission should be 16 to 18 with only two trials, *App. III.* (*A.*) *p. li.* Does not think the entrance examination in mathematics need take in differential and integral calculus, or be very high. Mathematical talent, when present, will develope later, 7616, 7617. Looks upon cramming establishments as existing under rule of supply and demand, 7510. Total number of cadets is 222, 7623. Since 1863 hospital returns have much diminished, 7625, owing to improved food and treatment, 7626. The seniors have lately been allowed to work late in their own rooms, 7650; which answers well, but would not extend the hour beyond twelve, 7651, 7652. In the large class rooms, where there are at once 40 cadets and three instructors, the numbers create confusion, 7531–7535, 7576–7579. It is a good thing for officers to know classics, 7644; but they need not keep them up, 7645. Cadets have already to qualify in 12 or 13 subjects; another could not be added, 7643. A knowledge of French, German, and Italian very important, 7645. The total classical marks would be one-eleventh of the whole at the final examination, 7599, 7600. Recommends the Répétiteur system, *App. III.* (*A.*) *p. li.* It is very important to induce officers to work after becoming officers, 7652.

Looking to the very fair tone of morality and discipline among the cadets, cannot admit that cramming establishments, as a rule, cause very bad habits, 7527. Cannot say what proportion come from public schools, but the general tone and bearing are very satisfactory, 7528. Though there is less *esprit de corps* than formerly (from the Artillery becoming so large a corps, 7622) it still exists; cadets are happy; there is very little vice and immorality, and what there is takes place when they go to friends in London, 7624. Thinks the drills and out-door practical work need improvement, 7529. There are not too many military parades; the parades for study are unimportant, 7530, 7543, 7580, and not likeiy to be confused with parades for real exercise, 7544. There might be a distinction between drill parades and general parades. Cadets are less steady on parade than formerly, but they drill well, 7545, 7546. Though unwilling to sacrifice important principles of discipline, young men may be kept too strictly, 7581, 7582. Would not separate Artillery from Engineer cadets, *App. III.* (*A.*) *p. li.* Cannot recommend any alterations as to privileges or disabilities, 7583, 7584. Difficulties arise principally from individuals, 7585. The captains see too little of cadets, rarely except on parade; but should feel bound to speak to one going on wrongly, 7618, 7619, 7648, or to communicate privately with his friends, 7620. Doubts the sympathy between cadet and his captain; but thinks he would go to him if wanting advice, 7621. It is a question whether, for discipline, one captain, with a second captain and three subalterns, might not be more efficient than the present plan of three companies, 7511, 7554, 7555, 7638. Five executive officers is the least practicable number. Association of the officers in the cadets' games has a good moral effect, 7512. Would make the Vice-President of the Council the immediate authority to decide questions of studies, and would give Lieut.-Governor absolute power to remove (but not to dismiss) a cadet, 7536. The Lieut.-Governor should be at the head of discipline and education, 7537, with plenary power, 7538. The Inspector of Studies ought to be *ex officio* second-commandant, to take the Lieut.-Governor's place when absent, but should not, as a rule, interfere in the military discipline, 7556, 7557. He might not be the senior officer, 7558; but he is always a lieut.-colonel, 7560. One officer, aided by an adjutant, could not perform the duties now devolving on Lieut.-Governor, Second Commandant, Inspector of Studies, and Assistant Inspector of Studies, 7601, 7602. The pay-master's duties are now too responsible to be performed by the captain of a company, 7561, 7562. There ought always to be a paymaster and adjutant, 7563; in one person, 7567; but sees no necessity for a separate adjutant, 7564–7566; who communicates the second commandant's orders to captains of companies, 7568; but has nothing else to do with the drills, 7569, 7570. Would have a Board of Improvement, as in the École Polytechnique, &c., consisting of some of the professors and military officers, to remove the line of demarcation between the professional and military elements, 7508, 7520. The board should be consultative, with second commandant as *ex officio* president, 7509. Thinks it would tend to harmonious working, 7521. Supposes the Lieut.-Governor could form such a board; but doubts

MILMAN, Lieut.-Col. G. A.—*cont.*

if he would, 7573–7575. Would put one or two professors on boards of all kinds, as of recreation, &c., 7539. There is no reason to dissociate them from the cadets, 7540. Engineers may be employed in military and professional branches, 7541, 7542. Would not combine instructional and disciplinary powers in the same person; if combined, more professors would have to be appointed, 7517. Is strongly against the proposal, 7518, 7519. Professors are now responsible for discipline in their classes, but can only put cadets in arrest, 7639. Not disposed to give further power to them or subalterns, 7640. There is now a reference to the Inspector of Studies, 7641. If professors were put in disciplinary charge of cadets, their own cadets could scarcely compose often their classes, owing to the rapid passing from one subject to another; military training is of great importance, 7603. A professor taking out a class for surveying, &c., would know the cadets better than their captain, 7649. The instructors ought to be appointed by the Lieut.-Governor (he being a general officer), and rigidly selected, the appointments being regarded as among the highest in the Artillery, 7513–7516, 7631, 7634; as at present they are not regarded, 7635. Concludes that a candidate for appointment would bring to bear all the interest he had, 7632. Dislikes appointing on testimonials, 7633. Does not know how civilian professors are selected, 7637. Is decidedly opposed to any amalgamation of Woolwich and Sandhurst, 7522, as lowering the standard of education for the scientific corps, and introducing an element of idleness, 7523–7526. The army would not like having the lowest cadets, though they do not always make the worst officers, 7547.

Artillery Studies. Disapproves the Artillery Studies Department; the young officers learn very little; Woolwich is not a good place for them, 7586, 7587. They have just had hard mental strain at the Academy; would attach them to batteries in England with only easy military work for eight months or a year; afterwards should pass them through a short practical course at Shoeburyness, where a demi field battery might be stationed, 7588. Young Engineer officers at Chatham have easy work at first; attaches the utmost value to practical artillery instruction; felt the want of it in Crimea, 7589. Thinks the Shoeburyness course is too long, and would prefer summer months, 7590. The Militia Artillery adjutants went through it very well, 7591. For staff officers the Repository Course is too detailed, 7613.

Staff College. Has been examiner at the Staff College, 7548. The knowledge there of Artillery was not high; the examination in it seemed a farce, 7549, 7550, 7604–7610, 7614; but in practical out-door fortification there was considerable knowledge, 7551; and the Passed Officers might teach others the lower parts of fortification, 7552. There was no want of diligence, 7553. The students should be attached to an Artillery brigade at Aldershot for practical instruction, 7611, 7614. The present instruction is needlessly technical for a Staff officer, 7612; and the examination admits of cramming, 7615. General principles of artillery action are what he wants, 7629; not the management of a gun, 7630.

NICOLSON, Lieutenant F., Royal Artillery.

Passed from Academy last December, 7653; as senior Artillery officer of his year, 7654. Is now for three hours daily passing through the officer's course at the Repository in heavy gun drill, and at the Riding School, 7655–7659, 7818; attends two lectures a week on military law, 7658. The instruction will last as long as witness shall remain at Woolwich, 7819. The course is intended to be thoroughly practical, 7801. Is still at ordinary riding school work, having had a year of it at the Academy, 7735, 7736. Has sword drill, 7737; does not know whether he will have post practice, 7738. Taught nothing of managing young horses, 7739; or of veterinary matters, 7741. Supposes he will have to practice saddling and bridling, 7740. Has not done any pontooning, 7742, 7802; or construction of bridges, 7803. There is no examination, 7820; but concludes the course must be gone through to the satisfaction of the captain in charge, 7821. Expects for next three or four years to be learning his practical work and drill, 7714; but not to be sent to Shoeburyness unless he goes in for a special class or course, 7715.

Artillery Studies.

Woolwich Academy. Liked the Academy, 7660. Cadets were gentlemanly, 7661; regulating their tone almost entirely themselves, 7797, 7798. Tone, on the

NICOLSON, Lieut. F.—*cont.*

whole, satisfactory, and better than at any other place of the sort, 7707. Language not more coarse than at other large institutions, 7799. Found the moral tone better than he expected, 7758, 7759. Very little drunkenness, and that mainly among the juniors, 7760. Habitual drunkenness would cause a cadet to be looked down upon, 7761; but not immorality with women, 7762; of which there was much, 7763; though not more, perhaps, than elsewhere, 7764. Drunkenness, if known, would be punished, 7765, 7766; immorality would not be known, 7767. There is no attention to the cadet's religious welfare, 7768. Saw little of chaplain, except at prayers; did not know him personally, 7676. On a disturbance the general opinion would have been against delinquents, if they had behaved in an ungentlemanly way, 7704–7706. *Esprit-de-corps* is inferior to that of a college or public school, 7769; but much increased lately, 7693. Discipline was very well maintained, 7674, 7675. Drills and minor parades are not a grievance, 7700, 7701; but discipline would not suffer by the abolition of minor parades, 7800. There are no bounds, 7804, 7805. The town is distant a quarter of an hour's walk, 7806. There are in the town no places of dissipation beyond billiard rooms, 7807; no night houses, 7808; and very small opportunities for dissipation, 7809. Saw very little of Lieutenant-Governor, 7702. Second commandant seemed practically governor, 7703. There is no community of feeling between cadets and their company officers, 7795, 7796. No authority is seen sufficiently for personal attachment to him to be formed, 7770; and officers and professors see very little of the cadets at their houses, 7781.

Objects to give professors any power of arrest, 7790–7794; or authority, 7677; 7678, 7683. They can instruct the corporal to put a cadet under arrest, 7679. Witness was a corporal, 7681; had sufficient power, 7682, 7683; and much practical influence, 7684. A civilian professor could not be trusted to maintain discipline, 7771. It would upset the whole system (which works well now) to mix military and school arrangements, 7772. The respect for a civilian professor depends on the man, 7773. A professor has now the means of keeping discipline in his class, 7774, 7775. A room to oneself is much more comfortable, 7685, 7686.

Cadets work too hard before and at Woolwich to have a taste for reading in their leisure, 7755–7757. Is not a smoker, 7743; but quite a fourth of the cadets are, 7744. A cadet may not smoke in his room, but is not limited as to time, 7745, 7746. Was well satisfied with the food, 7689. The amusements were racket courts, billiards, cricket, football, and workshops, 7690–7692. Approves of having a billiard room, 7747, 7748. Woolwich is very superior to Sandhurst, 7694; but Sandhurst has once beaten at cricket, 7695. A cadet can go to London every Saturday and Sunday, 7810. Going to the Alhambra is common, 7811; but rather from the houses of friends in town than from the Academy, 7822. Nearly all cadets who go to London go to see friends or relations; for first three terms a written invitation must be shown, 7814. If there be nothing against a cadet, leave is given as a matter of course, 7815, 7816; from Saturday afternoon till Sunday evening, 7817. It would be impossible for a cadet to go up to London without leave, 7823.

Not much overwork among candidates for Woolwich, 7753. Did not take up classics for entrance, 7667. Passed in fifth, from Mr. Brackenbury's at Wimbledon, without requiring a crammer, 7668–7671, 7673. Would not confine to pure mathematics the mathematical entrance examination, 7776; which at present is too low, 7777; and the questions are not very searching, 7780; but there are catch questions, 7778; which facilitate cramming, 7779. Too many subjects are compulsory, and time wasted in again going into things studied before entrance, 7662, 7663. Would make voluntary advanced practical geometry, natural philosophy, one language and landscape drawing, 7664. French, and either German or Hindustani are now required. A cadet who knew nothing of German before entrance would not learn it at the Academy, 7665, 7666. Objects to private study, there is enough without that, 7687, 7688. Work is best done in class under the professors, private study would lead to idleness, 7708, 7711; and the studies are such that help is constantly needed, 7712. The Military History Course tends to give an interest in the subject, but doubts the immediate use to student. 7719, 7720. Approves of educating Artillery and Engineers together, 7696. Did not notice any cadets suffering from overwork, 7754. Work not too severe; but hard enough, especially last six months, 7716. The most

NICOLSON, Lieut. F.—*cont.*

useful studies are fortification, artillery, surveying, and chemistry, 7717.

Passed out first in Artillery, 7672. The cadets who pass high sometimes prefer Artillery to Engineers; witness did, 7697–7699; because he thought himself better suited for artillery work, 7749, 7750. To carry the classical entrance marks to final examination would prevent the best mathematicians obtaining appointments in the Engineers, for which they are the proper men, 7782–7784, 7788, 7789. The classical cadets may complain of the present arrangement, but it is their own fault, 7785–7787; and they have had their advantage in getting in by their classics, 7824–7826.

An officer has means of continuing his studies by going in for Staff College, Advanced Class, or Long Course, 7713.

Wimbledon Private School.

At Wimbledon, except for very young boys, classics were optional, 7721–7724, 7727, 7728; English, generally, and history being the substitute, 7725. A strong point there was Mathematics, 7726; three or four hours a day of it, 7751, 7752. Took up French and German, 7729; having learnt both at Wimbledon and previously, 7730; but not abroad, 7731. The languages were taught by natives, 7732, 7733. An Englishman who knew them would teach better, 7734.

STRANGE, CAPTAIN T. B. (Royal Artillery), Instructor in Gunnery, Royal Military Repository.

Was at Lucknow, 7933; but not in Crimea, 7932.

Woolwich.

Would reduce limit of age for entrance as a cadet in Woolwich Academy from 19 to 18; two years course would suffice, if well employed; fortification should be more taught by modelling in sand; all instructors should be military; and the Academy more a school of application, 7862, 7863. Cramming schools narrow and deteriorate lads every way; would have more liberal education before entering, or at, Academy, and increased military instruction (having foundation at Academy) after entering army, 7858, 7859. Cadets should not waste time over non-essential subjects for which they have no talent; would carry credits of marks through from entrance to end, including those for classics; high mathematics should be obligatory for Engineers, 7860. Practical artillery is better learnt after entering the service, 7861. The surveying instruction could not be reduced, 7929. Too much time is given to mathematics and obsolete fortification plates; future fortification is a fine field for inducing thought, 7930. More drill and more class study are wanted in artillery; the practical course has been in a measure done away with, 7874. Thinks it best that theoretical and practical study should be divided; very high power is required for theory, 7875–7878; but the drill instructors are connected with the discipline, 7879; for which the very best men are desirable, 7880. Does not think the discipline conducive to habits of military obedience, 7854; the officers in charge have too little power, and therefore, influence, 7856. In his time, corporals had power which would now be thought great for a subaltern officer, 7857. Much of the discipline should be entrusted to under-officers and corporals, 7888; it is not so now, 7889. Would count an officer's army service from date of becoming corporal; reduction would then be real punishment, 7887. Objects to adjutants, as interfering with the personal influence of company officers over their men, 7901. The Artillery principle is that officers instruct everybody under their charge; refers almost every defect in instruction to departure therefrom, 7902; so that drilling by the adjutant must depreciate the company officers before the cadets, 7903. The Academy is intended to produce, not cadets, but officers, 7904; and should therefore be conducted on the principles of the Artillery service, 7905. The officer commanding a company teaches drill practically, as much as a professor theoretically, 7890; and is responsible for cadets' drill and discipline, 7891; which duty is better done by a man with nothing else to do, 7892. There is nothing to hinder the most intimate relations, except the diffusion of influence among so many cadets, 7893. Would prefer to three companies, as now, the battery organization of one captain, one second-captain, and three subalterns; there would be uniformity of punishment, 7894, 7895. Influence of company officer on his cadets was formerly enormous; now it seems small, 7896; perhaps from the inspector of studies and second-commandant being brought into one, 7897. Would not fear true military spirit at the Academy, 7908. By high tone would understand obedience, self-sacrifice, and self-control, with

STRANGE, Captain T. B.—*cont.*

the usual military virtues, 7909, 7910. Tone of public schools is overrated, 7911; but, even if not, much more is required in a military establishment, 7912; and parades, drills, and discipline are essential, 7913. Paymaster's duties might be undertaken, as formerly, by one of the captains; though there are more clerk's work and money responsibility, 7899, 7900.

Artillery Studies. Every officer should have a year of practical instruction at Woolwich and Shoeburyness, 7864, 7865. Sees no practical difficulty, except want of quarters at Shoeburyness, 7866, 7867, 7883. Young artillery officers immediately after leaving the Academy are required to come to witness for about three months before joining their brigades, 7828–7833; has no final examination, but overlooks the officers throughout their instruction, 7834. From 20 to 22 are under him at once, 7835. When they leave, are attached to batteries at Woolwich, 7836, 7837; for regimental instruction, 7838; and come to witness in spare time, 7839, 7840; for three months more, 7845. Endeavours to teach the artillery duties of a siege-train or garrison, 7841; including mechanical appliances, 7842. The officers know well the campaigns studied in the Academy; but doubts if they ever read military history for themselves, 7843. The severe mental discipline of the Academy has given a distate for immediate further study, 7844. Doubts if the propensity to study often revives, 7845,7873. On joining, officers have very limited practical, without great theoretical, knowledge of artillery, 7346, 7847. Their military discipline is lax, 7848, generally; but it is, perhaps, part of a national change in that respect, 7849; there is want of self-discipline, they question orders, 7850–7852; but they behave as officers and gentlemen, 7853; and work well with witness, though they would work more retentively, if professional knowledge brought advancement, 7872. A young officer goes through a course of military law, and is examined in it before promotion, 7870. On emergency, officers from the practical course or the Academy might be taken for active service, 7881; so that it might be an advantage to give them as much practical education as possible while still cadets, 7882. The young officer at Shoeburyness would have little to do with company discipline, 7884; but that would not matter, 7886; as he would have a long time as subaltern to learn it in, 7885. As a stimulus for young officers, would make choice of brigades depend on report of director of artillery studies, *App. III. (A.), p. liii.*

Artillery Officers generally. The Artillery promotion examination is a farce. Before promotion every officer should pass a course at School of Gunnery and Royal Laboratory, and then be examined at Woolwich or Shoeburyness. Every officer should first serve five years in a garrison battery and then be transferred to a field battery to learn both lines of duty. Commissaries of Ordnance ought to be educated artillerists. Removing artillery stores from artillery charge is a great injury to the regiment, and may lead to disaster. It is futile to educate artillery officers, if the openings for professional ability are closed, 7868. There is not sufficient incentive to work, 7869. The pay is not in question, but the promotion very slow relatively with other arms, 7871; average age of obtaining rank of lieutenant and captain is much later in scientific corps than the line, 7914; so that the man of least attainments gets soonest the larger pay, 7915, 7916; and the Artillery is, as regards pay, on a worse footing than the Line, 7919, 7920. Cannot compare promotion in scientific corps with that of a non-purchasing officer in the Line, 7917, 7921. Engineers are highly paid, while Artillery pay scarcely exceeds that of Infantry; pay follows promotion: it would be good to accelerate promotion in Artillery and Engineers, 7918. Slowness of promotion is general in Artillery; in the Line, confined to those who cannot purchase, 7922. As a rule, officers value their knowledge for what it will produce, 7906, 7907.

Staff College. Has had Passed Officers of the Staff College under instruction, 7923. Their time at Woolwich should be longer, and not in winter, 7927. They are not themselves satisfied, 7928. Does not attempt to make them Artillery officers; but to show them what may be demanded from Artillery, 7924. Their qualifications for acquiring instruction are high, 7925; but Artillery instruction at the Staff College should be by an Artillery officer, 7926. Witness has not means for teaching Field Artillery movements; but a Passed Officer from Staff College, if he had not studied artillery there at all, might acquire both branches, including a short laboratory course, in six months, 7934; though fortification could scarcely be studied at Staff College without entering on subject of artillery, 7935. An inspecting general is not fit to review Artillery if obliged to apply to his staff for advice; but many would be better for doing so, 7931.

STRANGE, Captain T. B.—*cont.*

LEFROY, MAJOR-GENERAL J. H. (Royal Artillery), Director-General of Ordnance.

Amalgamation of Woolwich and Sandhurst. Was employed, in 1856, to draw up a general scheme of Military Education, 7936, when it was in contemplation to amalgamate Woolwich and Sandhurst, 7937, of which measure he is no longer in favour. Competition for admission to Woolwich has altered the conditions, 7938. Objects, because Woolwich education would deteriorate, and the united college would be too large for instruction or discipline, 7945; but that would not apply to 400 cadets only, 7946, if the Sandhurst system were totally departed from, 7947. There would always be the drawback that the young men intending to compete for scientific corps would separate from those for the line and for purchase, and so render general instruction difficult. The joint system worked thus at Addiscombe, 7948, 7953, 8003. Does not apprehend ill-feeling among the cadets, 7950, 7951, 7970, 7971. His scheme (of 1856) contemplated schools of application, which would have increased the expense; but Woolwich and Sandhurst united would be more economical than at present, 7955. Young men in a college should be under the same stimulus, 8003.

Sandhurst. If Sandhurst were maintained all the cadets should have a hope of obtaining free commissions by examination, 8004, which would improve discipline and diligence, 8005.

Woolwich. Attaches great importance to the proximity of Woolwich Academy to the Arsenal, 7939. The instruction at Woolwich is too uniform, cadets should work up to their special talents; after third term Artillery and Engineer instruction should be separated, 7940, 7941, 7964; the separation depending on the aggregate marks gained in three preceding terms, 7965. Cost of education at the academy is rather excessive; attributable to artificial system and to number of subjects taught. In other respects it is not costly, and the country gets its money's worth, 7956, 8014. By a different distribution of time the masters might be advantageously reduced, 8014. Does not think the Paymaster necessary, 7957–7959, 7993–7995. The Assistant Inspector of Studies is rendered necessary by the distribution of studies, 7960. His seniority does not enter into his position towards the professors, 7962. Does not see necessity for so many as three companies, 7961. Professors are not sufficiently trusted or independent, 7962; sees no necessary distinction between professors and company officers, 7963. Would release professors from much of their present work, and give them general supervision of studies, 7978. Desires, that on entry as a cadet, a young man shall have considerable scholarship, 7969. Approves of entrance examination, 7990. Cramming does not come in in mathematics, but in history, geography, and languages, in which it is hard to avoid catch questions, 7991. Would group the studies and allow cadets to choose in which group to make progress. There should be no taking of places in the last year, 7972, unless among those pursuing similar studies, 7973. Would require every cadet to begin all the purely military subjects; but would not compel him to pursue those for which he had obviously no aptitude, 7989. The want in the scientific corps is a few men of special talent in each subject, rather than many with a nominal knowledge of all the subjects, 7977. It is a pity that those who have taken up mathematics should not pursue it, 7974–7976. The time given to artillery study is insufficient for artillery cadets, more than enough for engineer cadets, 7992. Engineers learn building construction after they go to Chatham; fortification for artillery students is not sufficiently practical with reference to actual British fortresses, 7996, 7997. Concurs in carrying on to final examination marks gained in classics at entrance, 7966; that knowledge betokening a liberal education (which is what is wanted) and being as worthy a qualification for artillery and engineers as any subject except mathematics, 7967, 7968. Would have a classical class and professor for reading military classical works, 8006. Good classical scholars are a clear gain to any branch of the service and should be encouraged, 8007. The worst bane of officers is vacuity of mind, frivolity, and the absence of definite intellectual taste, 8008. There was not, in the time of witness, any person

LEFROY, Major-Gen. J. H.—*cont.*

of whom moral supervision of cadets was expected, 8009. Violations of decency, if not offences against discipline, were completely condoned, 8010. Control was exercised by individuals, but simply as personal influence, 8011. Believes that now the chaplain considers it his duty to exercise a moral influence, 8012. Governor should always be a military man, 8013.

Artillery Advanced Class.

Suggested, in 1861, the Advanced Artillery Class, to encourage officers to keep up and progress in artillery science, 7942. The class is highly successful and will realize its object if the Passed Officers are duly and early selected for the appointments for which they have qualified, 7943, 7979, 7983. It will be filled by comparatively young men, entrance being competitive, 7980. The last class presenting itself shewed a falling off, 7981, 7982. The reward is not certain enough, 7983, 7985; though most of the Passed Officers have received appointments, 7984. There are about 70 or 75 appointments for which the education qualifies, and if the five year rule were strictly applied to all there would be ample encouragement, 7986. It is the less evil to confine these appointments to the men who have passed the special class, 7987, 8001; not, however, admitting that the education gives an absolute claim to employment. The General Order of 2nd November 1863 promises to this effect, 8000. We are not dealing with appointments in the field, 8002. The course is not too long and, coming after Shoeburyness, the officers combine theory and practice, 7988; believes the course to be a good one; the professor is indefatigable and able, 7998, 7999. Lectures on military administration are given to this class, 8015, and to the Staff College; the subject is too much neglected in all military education, 8016. How to feed the troops is not very important to a regimental officer, but most essential to a Staff Officer, 8017.

YOUNG, LIEUTENANT COLONEL C. F. (Royal Artillery), Director of Artillery Studies.

Artillery Advanced Class.

Was formerly instructor in artillery at Woolwich Academy, 8019. Artillery Advanced Class is under him, 8020, having been instituted five years ago; the Department of Artillery Studies was revived some years back; its object, 8021. The Advanced Class is limited (advisedly, 8076), to eight for a two years course; in the present class there are but six, 8023. It resembles in some respects the Staff College, 8029. Constitution and course detailed, *App. IX. (A). cvii.* Cannot say that commanding officers have objected to their officers joining; but the class is looked on with suspicion, as leading to nothing; the Commander-in-Chief has, however, decided to give a preference to officers from the class for first appointments of a scientific nature, 8024. The usefulness of the class cannot be increased unless more appointments be opened to the officers. There are many such appointments in India; and officers of Indian brigades should be encouraged to pass through the class, 8101. The course is adapted to draw out excellence in any one particular subject, 8106, 8107. Would rather officers came home from India to these classes than form like ones there, as reading mathematics is trying work in a hot climate, 8053. The number for the Advanced Class could be spared, 8056. Each brigade is in India for ten years, 8055.

Candidates are required to send in medical certificates, 8084. Knows no reason for the course being unpalatable; except for its severity, without certainty of advancement, 8079. Candidates come voluntarily, 8081; never remembers the course being taken to avoid other duty, 8080. There is a severe competitive examination at entrance, involving higher mathematics, chemistry, and physics; and an examination at end of first and second years, 8026, 8047, thoroughly searching, 8028, by independent examiners under the Council, 8027, 8049. Rejections are few, numbers competing being small, 8049. The work for the Advanced Class is very severe, 8044; and a large body of officers could not be expected to go through it, 8043; nor would it be desirable, 8056. The students attend five hours daily, and must read in the evening, 8045. The majority work very hard; the present class is inferior to the two previous classes, 8046. In the manufacturing course, the students go thoroughly into details of manufacture and construction of machinery; their instruction in chemistry and war stores is practical, 8050, 8052; the class does not take up fortification, 8051. The cost per student is great; but hard to arrive at, 8077. Final examination is competitive, 8127; and names are published in order of merit, 8128. In the last, the marks were very high

YOUNG, Lieut.-Colonel C. F.—*cont.*

and satisfactory; examiners all independent, 8025, 8129. The class would benefit if Passed Officers were entitled to a foreign tour, 8124. The employment hitherto given to Passed Officers has been sufficient, 8048. But there are not enough appointments to encourage competition for the class, 8096–8100. Passed Officers would only be employed in positions for which they had shown special qualification, and therefore should not shut up the avenues of advancement to every other officer, 8082. Their appointments, so far, have given satisfaction, 8083. The professor of mathematics is eminently qualified, 8078.

Woolwich Academy.

Cadets should join earlier and pass to the service younger, and be commissioned at 18 while still studying, 8086, 8087. The instructors should be military to a greater extent, 8087; the cadets attend to them better than to civilians, 8088; in such establishments abroad professors and masters are usually officers, 8089, 8117; they are always so at West Point, 8118. There should be no distinction in regard to disciplinary power between military professors and disciplinary officers, 8090, 8091. Would separate artillery and engineer cadets at Woolwich from the first, but the engineer officer should know something of artillery before joining at Chatham, 8041.

Department of Artillery Studies.

Describes the classes, 8030. The officer commanding a brigade selects each year a captain or subaltern for the long course at Shoeburyness, 8031; and as a preliminary they come to witness for a three months' course, 8032, 8033. The classes do not correspond to the engineer class at Chatham, which is for officers just joined, 8039. Would not assimilate them, for artillery officers are more inclined to book work after some years' service than on just leaving the academy, 8040, 8042, 8108; but young officers cannot have too much practical work on first joining, 8108. Details the instruction given to officers from Staff College, 8060. Their time should be three months, commencing in May or June, 8061–8064; a very short time with the cavalry would then suffice, 8062. Practical instruction must be close to the Arsenal, 8065, 8066. The seat of witness' labours is at the Royal Artillery Institution, 8067; a self-supporting institution established by artillery officers for the prosecution of scientific pursuits, 8068–8070. There are always volunteer classes there, 8071, 8072. For six or eight months after joining, young artillery officers, whether for Indian brigades or not, are collected at Woolwich for instruction, 8073, 8130, 8131; but not under witness except for two lectures weekly on military law, 8074, 8132, 8133, which they seem to like, 8108. The arrangement is advantageous, 8075. Examines the answers of artillery subalterns in their examination before promotion; officers have been rejected, 8114. The test is by no means nominal, 8115. The board of examination is composed as in cavalry or infantry; the instructor of gunnery is usually on it, as most likely to appreciate the vast number of artillery drills, in which a senior officer is very likely to be rusty, 8116. Foreign tour of artillery officers has of late years been formed of older officers, 8102; was omitted from estimates of present year, 8103; supposes on account of the expense, 8104, viz., 300*l.* a year, 8105. The cessation is a loss, 8119; the foreign tour gave important information to the country; the tour should be connected with the Department of Artillery Studies; not with Advanced Artillery Class, 8120. Officers selected by Adjutant-General, 8121; field officers and captains (not subalterns, except that they are now getting so old, 8122, 8123). The original grant was to enable the director to take abroad a class of young officers, 8125.

Shoeburyness.

Officers desire to go to Shoeburyness; certain appointments (as instructors of gunnery) are open to them after passing the course, 8034; and every officer should pass it who has the opportunity, 8057. There were formerly short course classes at Shoeburyness, who did not come to witness beforehand, 8035. The instruction is very desirable but not absolutely essential. Neither the accommodation at Shoeburyness nor the convenience of the brigades would allow of all officers passing through; the long course class consists of 20 officers and 40 non-commissioned officers, 8036, 8037. Every encouragement is given to undergo the course, 8092. There are good practical officers who have not gone through the course; it is less necessary for field service; but all-important for managing the recent heavy guns of position, 8038. There is no more practically useful school for an artilleryman than Shoeburyness, 8057. A similar school might be established in the Punjaub, if not too hot; officers from Indian brigades often give up their leave, to go to Shoe-

YOUNG, Lieut.-Colonel C. F.—*cont.*

buryness, 8058, 8134, 8135. Complete batteries go for practice and instruction, 8086. Firemasters' classes have been volunteers, 8093. Short course classes and Shoeburyness gunnery classes occasionally volunteers, occasionally detailed, 8094. An officer of any artillery brigade is liable to be sent, 8095. All artillery officers should pass through Shoeburyness, if the capabilities of the place could be increased, 8109. Every officer would be glad to do so, without reference to any examination, 8110. The commanding officers of brigades would, however, be unwilling to spare their officers, 8111, 8113. Opportunity might be found of sending almost every officer before he became captain, 8112. All officers and men going abroad (and many stationed in England) pass through Shoeburyness, 8126.

BRACKENBURY, CAPTAIN C. B. (Royal Artillery), Assistant Director of Artillery Studies.

Woolwich.

Was formerly instructor of artillery at Woolwich Academy, 8137. Instruction of cadets and young officers should be suited to their peculiar capacities, 8140, 8266. Mathematics are too generally insisted on, 8141, 8210; the faculty not being essential even to an engineer, certainly not to an artilleryman, 8142. The bulk of officers of artillery and engineers are devoid of the mathematical faculty in a high sense, and except in very few cases are never called upon to use it, 8143. Would limit the obligatory mathematics to solution of simple artillery and engineering problems; it is a pity to attempt to carry an inferior man farther, 8144, 8206, 8266. Would not require from engineers the artillery manufacturing course, 8145; nor from artillery elaborate fortification plates, 8146. While at the Academy, artillery and engineers should have the same course, 8147; say for 18 months, 8148; the obligatory studies being reduced, 8149, 8212; and selected for their practical value, 8213. Would not object to the continuance of classical studies at Woolwich, but it is not a practical subject; would encourage passing in classics for entrance; mathematics may be crammed in a year; classics develope intellect, 8261–8263, 8270; but the development should be before coming to Woolwich, when candidates should be 18 or 19 years of age, 8264, 8266; the practical studies there develope common sense, 8265. On the present system the real mathematicians get into the engineers, 8211. After a certain time would give cadets provisional commissions and leave them free to study or not, 8174; only converting those into permanent commissions on their passing an examination (supplemental to the Woolwich final examination) after they had joined the army, 8175–8177. Would reduce course by one year, *App. III. (A.) p. lii.* The Academy might be a school with the first classes in the regiment for its university; or its candidates might be drawn from the education of the whole country, and it might itself be the university; prefers the latter course, but even then should make officers study in their regiments, 8185. Would assimilate minor matters of discipline to a civil university, 8186; applying free study to everything taught by lecture, adopting the university system, 8267; encouraging it as much as possible, and testing results by examinations, 8227. All the mathematical professors, except one or two, might be reduced, 8206; as might nearly half the professors; two instructors in the same class disturb each other, 8207. Professors are too weak influentially, 8206, 8208. They should be called into Council for the government of the institution; the Lieutenant-Governor should have increased power; would reduce the military staff, having only one captain; the subalterns should have the right of confining a cadet to barracks for three days, 8209. There is no reason for giving a military professor at Woolwich less authority than another officer of like rank, 8224; but to put the professors in charge of general discipline would lower them in cadets' eyes, 8226; though the discipline in study could be left to them, assisted, if need be, by senior cadets, 8228. At the Academy there are many professional books which could well be read in French, 8199. The useless petty parades cause any want of discipline, 8225.

Department of Artillery Studies.

Many classes in connexion with artillery studies are under him, 8138; as also officers from Staff College who come to Woolwich for instruction, 8139. Professional instruction should be continued after the cadet becomes an officer (the greatest desideratum), 8150; immediately, as aptitude for study soon disappears, 8269, 8270. Has now a class of very intelligent young officers in military law, 8151, fresh from the Academy, 8152. All studies as officers should be practical, 8154. Officers from Woolwich appear well

BRACKENBURY, Captain C.B.—*cont.*

disciplined, and are certainly intelligent; some complain they have so little to learn, 8156, 8210, 8238; but it has all been new ground except languages and mathematics, 8239. The artillery classes are distinct from the advanced class, 8157; are of absolute necessity, 8158, and properly conducted, 8159. Militia and volunteer artillery officers should come for instruction in batches instead of singly. Staff College officers come in the spring, when they cannot see artillery in the field, and their time is too short, for artillery is a very large subject, 8160. They should come in May and stay three months, 8161, 8162. About 125 officers come under instruction annually, 8163, by order of Adjutant-General, 8164, 8165. They come in batches, as appointed to artillery and engineers; would connect the Academy and these classes, 8166, and would pass every officer leaving the Academy through, 8167. Tests the students each day, 8168; but that is a matter for his personal decision, 8169, 8170. There is nothing to certify, 8171, and the officers after instruction join their brigades, 8172. None escape the lectures on military law; but would like to see the studies carried farther, 8173. Lectures on various subjects are already given to selected and volunteer classes, 8178, 8179. A lecturer should be added on the Art of War, *App. IX. (A.) p. cvii.* At the Academy would reduce the manufacturing course to lectures; would continue, after becoming an officer, riding, military law, military history, strategy, and tactics; should learn details of equipment, 8201. Cadets after passing for officers have usually six weeks or two months leave; should then remain in Department of Artillery Studies for six months or until next batch joined, and then go to Shoeburyness for six months, to complete a years training, 8202. The year would include the arsenal course, 8203, 8205; which must be at Woolwich, as Shoeburyness is also best for drill, 8203.

Advanced Artillery Class.

Objects to making high mathematics compulsory for advanced class, 8214. A man of real mathematical talent is out of place in the army, where the practical man is wanted; the best mathematician is rarely the best practical officer, 8215, 8216. The class does not work as well as formerly; officers are too old, and too few come up, 8217, 8218. Objects to the system of obliging everybody to attain a certain standard, 8219, and would develop in each student his particular talent, 8220. There is too much school-boy desk work, *App. IX. (A.) p. cvii.*

Staff College.

The Staff College students are of very diverse qualities, 8180; in mental capacity they average the same as the army generally; in attainments rather better, 8181. As a rule the best men in the Artillery do not go up for the Staff College, though some of the best men in the army do, 8268.

General education of candidates; practical education of officers.

All general education should be attained before entering the army; subsequent military education being entirely practical, 8182–8184. Direct commission examination only sufficient if there be subsequent instruction, 8222. Would prefer young men entering cavalry and line without any special education, supposing they received a military education afterwards, 8223. Would abolish Sandhurst, and allow young men to be of the country until they actually enter the line, for which no previous technical education is necessary, 8187–8189, 8253–8255. If Sandhurst were retained merely for the sons of poor officers, they might take a poor place in the army, but by their exertions could better it afterwards, 8221. Would offer military scholarships or exhibitions of 50*l.* or 100*l.* a year to be competed for at public schools, as an inducement to clever boys to choose the army, 8190. Free commissions so offered would be a great boon; some of the civil endowments might be so used under Act of Parliament, 8191–8193. This is entirely the system recently adopted in Austria, at the cost of the State; but there is a greater saving on the old military schools, 8194, 8195. Foreign nations (except France, which is stationary) are throwing over military schools for theory, and imparting practical military instruction after age of 18; this is quite the case in Prussia, 8196–8198. In Austria, under the system since 1866, a young man is nominated to a Commission, his friends make him a small private allowance; at entrance (or within a year thereof) he must pass an examination in German, history, geography, and low mathematics; having been six months or a year with his regiment, learning practical soldiering, he goes to a divisional school for two years to study military science and has to pass a severe examination—too severe, witness thinks, 8230–8236. Something like this might be adopted by us to prevent officers leaving off study after appointment,

BRACKENBURY, Captain C. B.—*cont.*

8237. Attributes the dislike to subsequent private study to the small inducement to it given when a pupil, 8240; would allow a pupil a considerable margin of leisure to use or abuse, 8241. Many races in Austria are born horsemen, 8244. Hungarian cavalry and artillery horses are as well cared for as ours (except having bad saddles), and can march half as far again, 8245–8248. It is astonishing what knowledge the Austrian officers acquire, especially of physical geography (as fords, &c.); but does not hold their examination up as an exact model for ours; the Italians in 1866 did not know the rivers of Venetia, 8249–8251. The more brains an officer can bring to bear on a military question the better, 8252. Young officers could be instructed in military history; it might be necessary to collect them, 8256; not in colleges but in garrisons or regiments, and there should be regimental instructors to whom they could go for help; but the young men should continue their military duties, 8257–8260. The want of the army is encouragement for intellect; would not pay ordinary officers well, they always come in plenty, but would offer good prizes for real talent and energy, 8270. Former Education Commission proposed to encourage languages by attaching to embassies abroad for a year or two artillery officers who were linguists, 8243. To learn a language colloquially is very easy if taught very early, 8199; the the faculty, 8242, 8243.

FORD, CAPTAIN A. (Royal Artillery), late a Student in the Artillery Advanced Class.

Artillery Advanced Class.

Passed the Artillery Advanced Class in 1868, having been two years in it, 8272, 8273. Went into it in the hope of obtaining a scientific appointment, 8274; which he has not done, 8275. Had to apply for his commanding officer's leave to enter, 8276, which he obtained without difficulty. Had to obtain a certificate of regimental proficiency being in a field brigade, that implied riding) and a medical certificate, 8277, 8278. Competed with eight other officers in a tolerably severe preliminary examination, 8279–8282, for eight vacancies, 8283; seven succeeded, 8281, the eighth excluded by incapacity, 8284. Decidedly approved the course of study; could not otherwise have obtained the information; enjoyed it; the want of appointments for those who pass will prevent men coming forward, 8285–8287, 8290. His brother officers did not object to his absence, 8288. It was necessary to take up every subject, 8289. Has not rejoined his regiment, having taken part in scientific experiments, 8291. There were examinations at end of first and second years, 8292, 8293; had to get a minimum in each subject and ·6 of the aggregate, 8294; students were placed in order of merit, 8295; the class has caused study in the Artillery; many officers would compete if there were any certainty of appointment afterwards, 8296, 8297. Opening the Staff College has also benefited the Artillery, 8298. Prefers the present plan of an officer serving some years with the regiment before he joins the class to his joining soon after leaving the academy, 8299–8301. With one exception, the first class soon obtained appointments; the second has only obtained one temporary appointment, 8302.

FRASER, REVEREND A. C., Chaplain at the Royal Military Academy.

Woolwich.

Has been chaplain at Woolwich between 22 and 23 years, 8303, 8304. Reads prayers morning and evening, 8305; in the cadets' hall; visits the hospital; has a weekly evening service, 8306. Is honorary librarian and has general religious supervision of the company; acts where he can; has a weekly voluntary religious class of 8 to 12 cadets, not in his specific duties, 8307, 8324. On Sundays has a very meagre evening service (about to be curtailed) in the hall, 8308. Has lately, as a distinct duty, been attached (with great advantage, 8315; as increasing his prestige, 8360;) to the garrison church; has acted under great disadvantages, 8309. There is no church or chapel specially for the cadets; they are paraded and marched to the garrison church in the morning, 8310–8314. The cadets' attendance at two services a day is compulsory. When he was appointed he was under a distinct impression that a chapel was promised; but it has never been built, 8315–8324. Has had 50*l.* a year for his duty at the garrison church, but the War Office has just terminated the connexion, and he will again be without church or congregation, or the possibility of performing efficiently a chaplain's duties, 8316, 8317. The cadets' seats in the garrison church are not convenient; they are lost in that great congregation, and need a religious establishment for themselves; there is no establishment of the kind in England without a chapel, 8318. Can only preach on Sunday in the hall, 8319, 8320; where the cadets dine and breakfast; attendance compulsory; no music; no mixed congregation; no accessories to devotion, 8321. His principal opportunities of conversing are at the hospital and in his voluntary class, 8322, 8323. The religious and moral tone of the academy has much improved of late years; some years ago volunteers for religious instruction would have been impossible; improvement attributable, *inter alia*, to greater age and intelligence of cadets, 8325, 8356, 8357. Many cadets are very religious, 8329. It is not easy to initiate religious intercourse with individual cadets, 8326; but finds them amenable to advice and reproof (most so in the hospital), 8327. Can visit them in their rooms when he likes; does not do so much, 8328; but would not be received with coldness or incivility, 8329. Has intercourse with them as librarian, 8330. Does not mingle in their sports, 8331. Is too old for cricket, 8332. Nearly all the cadets have been confirmed; some are Presbyterians, some Roman Catholics, 8333. There is a Presbyterian minister in the garrison, 8334; he does not visit the Presbyterian cadets, 8335; nor does the Catholic priest come to the Academy; these cadets attend their respective churches, 8336. There is far less venereal disease than formerly, 8337; in fact it is very rare indeed, 8362; attributable to improved means of recreation and enforcement of bounds, 8338. Should speak, if opportunity offered, to a cadet in hospital who came there by his own indiscretion, 8361, 8362. There are bounds of time, not of locality, 8339, 8340. Cadets, if under punishment, may not pass the enclosure, 8341. Not allowed at night after certain hours to go into the town without leave, 8342; but in the day time may go where they choose, 8343. Public-houses are forbidden, 8344, 8345; and a billiard room, but then they have their own, 8346. His religious duties occupy very little time; the library keeps him very much, 8347. The chaplain ought either to have a chapel for the 700 people belonging to the Academy, or his functions might be combined with those of garrison chaplain; he ought to be a chaplain to the forces attached to that sphere of duty, 8348. There are three chaplains at Woolwich to St. George's church, and one is coming for a new district; witness makes five, 8349, 8350. The subaltern officers and captains associate freely with the cadets, 8351; but there is not a particular officer to whom each cadet would look for guidance on private matters, 8352–8354. To have a College chapel would be a great improvement, 8355. The want of it goes towards accounting for the lack of *esprit de corps*, 8358; which is improving, however, as the building is beautified and high associations are promoted. Cadets are worked too hard; hours are excessive; the institution too much a place of toil, 8359. There are two reading rooms, 8363; not the place for religious talk; must avoid appearing to sermonize, 8364. A riding school may do well for divine service if no better can be had, not otherwise, 8365.

LACY, COLONEL T. E., Commandant of the Staff College.

Was formerly (until 1865) Superintendent of Studies at Sandhurst Cadet College, 8367, 8368.

Staff College.

Is satisfied with the operations of Staff College, 8369. The object is to educate for every department of military administration in its widest sense, 8408. Military subjects are now studied in much greater variety than in the days of the old senior department, 8573. The Staff College has most certainly promoted a desire for education among young army officers, 8497; but if it promised no more than the education it gives, there would be little or no competition to join, 8482. There are 15 vacancies yearly, 8577; but marine officers come as supernumeraries, 8578. If full, the College would hold 40 students, 8536–8540. The vacant quarters are partly utilized, 8571, 8572. Almost every candidate before examination goes for special instruction, 8549. In all he is absent from his regiment about three years, 8550, 8551. About 15 candidates out of 28 obtain entrance, 8579, 8580. A candidate should come with languages at a high standard, and should not have to study their grammar at the College, 8398, 8452. If officers came up well prepared in general education the course might be more professionally practical, 8565, which would be a great improvement, 8566. The Commanding Officer's report not greatly to be relied on, 8587; but cannot say that Commanding Officers are jealous of their officers going to the College; some are proud of it, 8379, 8426–8428. Their certificate

Lacy, Colonel T. E.—*cont.*

ought to be more stringent, 8370; for the efficiency of that preliminary test is the key of the whole system, 8371, 8372, 8374. The College ought to have first-class material only to work upon, without having itself to sift the qualities, 8373. The Commanding Officer's certificate should be amplified, 8422, 8423, and strengthened by the report of a Board, 8424; possibly of three senior officers of regiment, 8425. It should be pointed out if the candidate be not a good regimental officer, 8429. It would be a hard duty for the Commandant to have to reject students for physical disability, 8471; a previous acting appointment on the Staff would answer the purpose excellently, 8472, 8504; the time occupied being the only objection, 8473; a month would be ample, 8505. Competition is an important mode of admission, 8444. Officers might in peace be nominated for education at Staff College instead of competing, but he does not advocate it, 8498, 8499. Failures to pass at the examinations are rare, 8470. Does not think entrance examination hard, 8547; and attributes failures to competition, 8548. The object of the College should be to perfect a student in what he already knows; therefore admission examination should be more searching, 8399, 8449. Would alter optional subjects of admission examination so as to admit more men of liberal and special education, 8382, 8445–8447; would include classics and general history, 8383, 8448; and would pass an officer for great proficiency in one subject with a moderate knowledge of others, 8561–8563. Military geography at entrance does not include specially that of the United Kingdom, 8554; but no officer should present himself at all without a competent knowledge of that and more, 8555–8557; and he is simply examined in the geography of other countries, 8558. With an advanced entrance examination the course might be reduced to one year, 8375, 8376; without giving up any subjects now taught, 8432; but has no decided opinion about it, 8437. During course would encourage student to turn his attention to the studies for which he might have a special bent, 8384. To impart in a foreign language instruction in professional subjects would require the instructor to be a perfect linguist, 8400, 8401. The professor of military history has an allowance for travelling on the continent, 8542, 8543. It would be an advantage if a class of students travelled during vacation with a professor; it is a matter of expense, 8544–8546. The instruction in military history supplies what is necessary for English composition and military correspondence, 8552, 8553. Every Staff Officer is benefited by a knowledge of history, general and military, and geography, 8409. The Commissariat is an important part of a Quartermaster-General's business, 8410. Railway and sea transport are the principal part of the section of military administration, 8411; but are taught in theory only, 8412–8414. Ambulance, military train, commissariat, and the accessories of military organization, are taught by lecture and examination in the same department, 8389–8391, 8394; which of all departments is almost the most important, 8392. More attention might be given to recent improvements, as railways, telegraphy, &c., and the instruction should be more practical, 8393, 8415–8417, 8564. Would keep up classics as mental cultivation, 8404. Geography, physical and political, a most important subject for a Staff Officer, 8405, 8406. Doubts if an Austrian officer can know all the fords in the empire, 8407. Time is wasted in line-drawing, 8442, 8452; an art candidate should bring with him, 8443, 8450. Would reduce the instruction in languages, 8433. Practical instruction is given in laying out a camp, 8568, 8569; but not as to details, 8570. An increased allowance (190*l.*) has been applied for to teach the senior half of the students more practical reconnoitring, 8483–8485. Geological and experimental sciences were originally taught by evening lectures only, 8436. Instruction in sketching on horseback would be desirable, 8438–8440. Students ride twice a week throughout the course, 8464, 8465, for an hour at a time, but the lessons might be better distributed, 8466. Students not taught to work locomotives, 8467. The Regent's allowance of 170*l.* is granted in aid of mess funds, 8541.

Students are not so well off in allowances as with their regiments, 8531, 8532. In the old senior department each student paid 30*l.*, 8533, and students might pay something now, 8534; but it would exclude certain poor officers, 8535. Many students are led by natural ambition to visit continent, 8395. Students have no personal expense, 8396. One-fourth to one-third are married, 8479. Makes a monthly return of

Lacy, Colonel T. E.—*cont.*

the application and attendance of students, 8581, 8582. No difficulty with regard to discipline, 8574; never had a case of drunkenness, 8575; disputes among students very rare, 8576. Some students are very rarely on horseback, they have not horses, 8441; having a difficulty in keeping them, 8474. Government should give the means of keeping horses and require them to be kept, 8475–8477. The servant's allowance is totally inadequate, and officers of small means are able to join, 8478. Students bring their own servants, 8529, non-regimental, 8530. The library is much used for private reference, 8486; the subscription (3*l.*) to it on entrance, is the only charge against students, 8487. Perfectly satisfied with the domestic arrangements of the College, 8567.

After admission, would substitute classification for personal competition for marks, 8380, 8381, 8435, 8453, 8491, 8559. Passed Officers would be classified by marks, though the marks would be secret, 8435, 8492; would make examiner produce his marks to justify his placing, 8454, 8455. Marks may lead to unequal justice in all subjects, 8434. It is better not to make mention of a student's extraordinary proficiency, 8488–8490. Formerly officers not educated at the College could compete at the final examination, 8462; as the system was abandoned, supposes it did not answer, 8463. Is bound to report confidentially on the general fitness of Passed Officers, 8430, 8431, 8500, 8502, 8503, 8584–8586, once at the end of the course, 8501, 8583. Supposes an adverse report would affect future appointment, 8586. It would take a General Officer, to whom a Passed Officer might be attached, a long time to say if he were fit or not for the Staff, 8387, and would be an obnoxious duty, 8388. Would increase the Passed Officer's time with other arms, 8377, which was diminished to shorten their absence from their regiments. However he does not go to learn details so much as the general system, 8402; to attend a field day at a large camp would help him more, 8378, 8403. The attachment too short, and ought always to be in summer, 8480, 8481. It is desirable to attach Passed Officers to Chatham, except for the loss of time, 8560. Does not think Passed Officers consider they have a claim upon the nation, 8385. A considerable proportion have had Staff appointments; some pass as subalterns when still ineligible, 8386, 8397, 8456–8458. It is no grievance that the personal Staff is not open to them, 8493, 8494. One Passed Officer is generally recommended at each final examination for the topographical department, 8495. A Staff appointment should be less a reward for labour than a recognition of fitness, 8459. Would restrict Staff appointments to Passed Officers, and officers of proved ability in the field, 8460, 8461. But the time is not fixed yet for such restriction, 8496. Men who prefer a studious to an active life might be well adapted to certain Staff positions, 8418, 8419; but they ought to combine field efficiency, 8420, and to be able to take active duty, 8421.

Is perfectly satisfied with Commandant's position in relation to Governor of Sandhurst, 8506. Details Adjutant's duties, 8514–8517, 8519–8522. There is not a Quartermaster, 8518. There is but one non-commissioned officer, 8526, the Quartermaster Serjeant, 8527, and the Quartermaster Serjeant at Sandhurst could not take his duty, 8528. A Board of Study on the spot might be useful, 8507. Educational branch is entirely controlled by Council, 8508; and recommendations of Commandant in matters of study pass through Governor of Royal Military College to the Council, 8509–8511. Sees no advantage in his reporting direct to Council, 8512, 8513. Professors cannot be reduced without reducing the subjects, 8523; although in the old senior department a professor might give instruction in more than two subjects, 8524; but the officers who passed through were not so carefully instructed, 8525.

Hamley, Colonel E. B., C.B. (Royal Artillery), Member of the Council of Military Education.

Was professor of military history at the Staff College for six years, 8591, 8592; has left it five years, 8622.

Staff College.

Staff College is on the whole a great benefit to the army, 8682, 8683. None should enter it who are not above average army level, 8605; as some, who now pass through, are not, 8604, 8629, 8684; but candidates are not smatterers, 8663. Commanding Officer's certificate of physical fitness can never be more than a trifling guarantee, 8645–8648; he may sometimes certify to a candidate's fitness for the Staff College in order to be rid of him, 8594; would therefore supplement his certificate by the report of an

HAMLEY, COLONEL E. B.—*cont.*

independent board of officers on the candidate's regimental qualifications, as proved by practical examination, 8593, 8595-8599, 8654-8658; which could not be tested at the college, 8649; attaches great importance to this suggestion, 8603. Horsemanship could be easily tested, if important at that stage, 8600. The commanding officer would certify to mental and moral attributes, 8615, 8618, 8652, the commandant of the Staff College certifying to fitness of character and physique after one term there, 8616, 8617, 8635, 8651; having ample means of doing so, 8636, 8637. Talents not supposed to exist may be developed under trying circumstances, 8620, 8621. The commanding officer's certificate would be for admission merely, 8653. To test each candidate under a general officer would be too cumbrous, 8634. Would not give power of accepting or rejecting a candidate to the college authorities, 8650. Would retain competition in the present subjects for entrance, 8612, 8613. Students, during their course, should be employed as staff officers, 8609. Recent alterations in the instruction have been improvements, 8623; but it might be made more practical, 8624. Would not subject students to the Chatham course, 8625; they learn sufficient engineering as it is, 8626. The course could not well be reduced to one year, without cramming, 8659; even if languages, geology, and chemistry were omitted, 8661; unless entrance examination were greatly raised, when sufficient candidates might not compete, 8662. It would be an improvement that languages should be studied before entrance instead of at College. *App. XI.* (*A.*) *p. cxix.* To teach subjects in a foreign language would be an undesirable complication, 8664. Administrative instruction (as railway transport—not commissariat, sick transport, &c., which are already provided for) requires more attention; should be taught by actual experiment, 8606–8608, also telegraphy, *App. XI.* (*A.*) *p. cxix.* Field reports and reconnaissance should be taught on horseback, 8665, 8666. Time is an important element in reconnaissance, 8667. Transport by rail, a very important study, 8670, 8671; practically, 8672. Tonnage, and stowage in transports already taught, 8673, 8677; not usually a very pressing matter, 8674. Failures at Varna were from want of material, 8675; without appliances, must depend greatly on the sailors, 8676. Students are taught how to form encampments, 8627; and, if a brigade came to the place, could be exercised practically, 8628; which would be better than sending them to a brigade, 8679–8681. Languages not absolutely necessary to be studied at Staff College, 8660. Students should keep horses, 8633; those at present attached are only for use in riding school, 8641; they come from several regiments, 8668. It is preferable that horses should belong to students rather than be public property; the students should use them and hunt, 8642–8644. Would substitute classes for personal competition in the final examination, 8610, 8611, *App. XI.* (*A.*) *p. cxx.* Passed Officers are not attached to other arms for a sufficient time, 8639, 8640. Any test as to staff qualifications after passing the college would lower its character, 8601; and be objectionable, 8638. The college authorities have no means of indicating who among Passed Officers would be inefficient on the Staff, 8686; but the commandant does report on such matters, 8689, 8690. A General's report in time of peace would be a bad criterion of an officer's powers in war, 8688. It would be difficult to obtain a trustworthy certificate as to physical efficiency of a Passed Officer from a general officer, unless specially selected for his capability of doing so, 8631, 8632. A Staff officer must be the better for passing the Staff College, 8630; though some who pass have not all the qualities for Staff officers, 8685. They should be appointed to Staff according to their special qualifications, *App. XI.* (*A.*) *p. cxx.*

Council of Military Education.

The Council works thoroughly well as it is, 8691, 8718. The work is divided into departments, each member taking one, and conferring with his colleagues on points out of routine; the work is uncertain in amount, 8701. Council meets daily, 8702. and has always some work to do, 8703. Discipline is not under the Council, 8695. The members are military, 8705, with a tenure of five years, 8722; except one civilian, 8706, who was appointed before tenure of office was limited, 8723, 8724. The civilian member has 600*l.* a year, 8720, 8728; has been a long time member of Council, and of different educational establishments in the kingdom, 8721. He does not attend constantly; papers requiring his opinion are sent to him occasionally, and he comes to London for the nine examinations for admission to army or colleges, 8707–8709, 8725, 8726; but he attends oftener

HAMLEY, COLONEL E. B.—*cont.*

than that, 8710; perhaps a dozen times a year, 8719; but cannot say exactly, 8727. There are memoranda which require daily the signature of all members not on leave, 8711. There are a secretary and eight clerks, 8712, 8713, for general duties, 8714. The Commander-in-Chief is *ex officio* president, 8716, and would attend if required; but has not been hitherto requested to do so, 8715. Communications from college authorities to the Council pass through the Military Secretary, 8692. Positive recommendations of the Council in matters of study are almost invariably attended to, 8693. Recommendations for the Secretary of State go through the Commander-in-Chief. Neither Horse Guards nor War Office causes obstructions, unless on grounds of expense, 8694, 8717; nor is there any other inconvenience than a little loss of time, 8695.

Woolwich.

The Woolwich Academy works very well at present, 8614.

Professors.

Generally the Council selects professors, 8696; but at Woolwich on the recomdation of the Lieut.-Governor, 8697. Professors are selected after a public call for candidates (the competition being more open at Sandhurst than Woolwich), 8730; recommended to Commander-in-Chief, and presently confirmed, 8698. Dismissal of an incompetent professor is very difficult; as regards civilians there are no means of doing it; military men are appointed only for six years, and the appointment need not be renewed, 8699. The Council should have power to remove an incompetent man on the advice of the college authorities, 8700. A claim to promotion from instructorships to professorships would not be admitted, 8729; but seniority is a fair ground for promotion if competency go with it, 8731–8733.

SCHAW, CAPTAIN H. (Royal Engineers), Professor of Fortification and Artillery at the Staff College.

Staff College.

Has been five years at Staff College, 8736, having been previously an instructor at Chatham, 8737. Would make Commanding Officer's certificate on a candidate more distinct and categorical, and supplement it by the report of a committee of senior officers of the regiment, 8738, 8739, 8742, 8747, 8755, 8756. These replies should not be absolutely binding, 8745, 8746; but the admission of the candidate would depend on the Commander-in-Chief, 8748, 8749. The certifying officers should not be below field officers for fear of discord in the regiment, 8755, 8756. The Commanding Officer's certificate, if categorical, ought to be sufficient, 8757, 8758; suggests alterations in the certificate, 8759. Sees no objection to a Commanding Officer naming successively in his confidential reports to his District General the officers in the regiment fitted for the Staff, 8760–8762. Would test an officer's physical fitness for the Staff before, rather than after, he passes through the Staff College, 8740. Would give students a greater choice of subjects, 8741; and work each in his peculiar line of talent, 8763, 8771. The time is too much broken up, *App. XI.* (*A.*) *p. cxxvi.* Staff Officers should be selected for employment according to the peculiar talents called into play in each appointment, 8777; some very good officers have a great genius for languages and not for anything else, 8772, and languages may be most useful to a Staff Officer, 8773, whose duties are very various, 8776. Doubts the expediency of instructing in fortification in a foreign language, 8764. It would be a great advantage for a few students to have a regular tour abroad to study fortification, 8765; the expense need not be very great, 8766. Every student should be mounted, 8743, 8744, 8767. The College might maintain a set of horses for the students, 8768, who often have difficulty in providing their own, 8769, 8770. As a rule, the course might be shortened to one year, 8778–8780, by omitting some subjects (as languages, which cannot well be acquired at the College, 8783), requiring part for entrance, and by shortening the compulsory studies in fortification and artillery, 8782. It would be inconvenient if officers stayed for varying times, 8784. After leaving, Passed Officers should go to Chatham for engineer instruction, *App. XI.* (*A.*) *p. cxxvi.* Would classify Passed Officers in each subject, and give honours in each, 8750, doing away with personal competition, *App. XI.* (*A.*) *p. cxxvi.* It would be good for the service that an officer should know a good deal of a few subjects rather than a smattering of a great number, 8751–8753, 8775, with only a qualifying examination in necessary matters, 8754, 8774. About 20 per cent. of Passed Officers are not fully fit for the Staff, 8785.

ADAMS, MAJOR C., Professor of Military History at the Staff College.

Served 13 years in Austrian army, 8788–8790; commanded a regiment in the British German Legion, 8791; and has been Instructor in Military History at Sandhurst, 8792, 8793. The certifying to a candidate for the Staff College should be thrown upon his Commanding Officer as a stern military duty, 8795–8798; he only can be the judge, 8821, 8826. Would restrict the instruction, 8799; languages are most important, but not to be acquired at the College. Would require one at entrance, and subsequent study should be in the country itself, 8800–8803; strongly opposed to personal competition by marks, 8804; but in favour of granting honours in the several subjects, 8805, 8806. Passed Officers could be classified, 8828. Would attach Passed Officers to the Staff at camps, 8807, to qualify for peace Staff duties, 8809, 8810; at the College they learn war duties only, 8809, 8833. The course is not too theoretical, provided Passed Officers are allowed subsequent opportunities of acquiring practical knowledge, 8813. Practical duties are studied best in camp, 8816; and such practice is much needed, 8819. Would add six months to the course for telegraphy, railway transport, and modern appliances, 8814, 8815. Distinctly against shortening the course; it took him 10 years to learn very little Military History, 8817, 8818. Some, but not most, of the students are very able men, 8823, 8824; some are scarcely up to the positions they may have to occupy, 8825. Would not allow any subjects beyond those compulsory, 8829, 8830; or competition in more than one, 8827. Austrian Staff education is excellent, 8831; it is essentially war training, 8833, of long standing. The skill of the operations in Italy in 1848 and 1849 could not have been exceeded, 8834. The Staff College is too young yet for the system to have been fully matured, 8832, *App. XI. (A), p. cxxii.*

Staff College.

Sandhurst. Would restrict the studies: substitute pure military history for the strategy now taught under that name. Professors should not be interfered with, except by the Governor. Admission age should be 14 to 16. Course, 2 years. Deprecates union of disciplinary and educational functions. Amusements and luxurious food should be restricted in favour of study. The system prior to 1857 was admirable, *App. II. (A), p. vii.*

TWISDEN, REVEREND J. F., M.A., Professor of Mathematics at the Staff College.

Staff College. Has held his present office since 1858, having been for seven years before at the Cadet College (Sandhurst), 8836, 8837. Obtaining admission to the College does not prove an officer's abilities or acquirements, 8895. Students enter with insufficient mathematics, 8838, 8869; doubts if the minimum could be raised, 8839, 8870. Mathematics not now required, 8893. Would make a certain course of mathematics a compulsory study, 8840–8842, 8878, without which surveying, fortification, and artillery cannot be properly studied, 8843, *App. XI. (A), p. cxxi.* Would encourage further voluntary study, especially practical astronomy, 8844. Mathematics might be dropped when the compulsory course was accomplished, 8882, or after entrance, if the proper standard were attained, 8883, 8885, having then more time for other studies, 8884. Examinations should be independent of the professors, 8847, 8861, 8873, except in chemical manipulation and instrumental astronomy, 8875. Details the mathematical examinations, 8848. The two final examinations are at Christmas, 8849. No marks for the first and third term examinations, 8850; but there are for the second term examination, 8851, after which an officer may, but never does, continue his mathematics, 8852; he would more probably take astronomy, 8853. Witness examines in astronomy, 8854; but other mathematics examined independently, 8855. Subject to exceptions, a single examination at the end of the course is the best test, 8857, 8858, 8874. Now, students may make so many marks in the course as to be certain of passing at the final examination, 8872. There would be intermediate professional examinations, but not to carry on marks, 8879, 8880. Allowing languages to be dropped after first year is very undesirable, 8859. The marks given should not be communicated to the students, 8860, 8861. It is most objectionable to give marks for notes at lectures, 8862, 8876. A military engineer's education cannot be obtained at any college in two years, 8864. Cannot say how far their course runs level with that for engineers, 8865; or if astronomy be required in actual service, 8866. Sir George Murray was in senior

TWISDEN, REV. J. F.—*cont.*

department at Sandhurst, 8867; and believes astronomy was in the course of study there, 8868. Elementary mathematics have been omitted from the course since the Staff College was formed, being insisted on at entrance, 8871. The practical work of the senior class is perhaps comparatively small, 8877. In computing marks would deduct a given number from the total made in each subject, the remainder only counting, as in the Indian Civil Service examinations, 8886–8889. Thinks an aggregate minimum more fair than a minimum in each subject, 8845, 8846. Passed Officers might be classed instead of placed, 8881. A man of education of the most moderate ability may, if he apply himself, pass the College in two years, 8890–8892.

JONES, CAPTAIN E. MONCKTON (20th Foot), Professor of Military History, Royal Military College.

Was in Prussian service, 8896; passed Staff College, 8897, 8898; where he has also been Adjutant, 8899, 8920; and still sees much of it, 8901. Has acted on the Staff in India, 8970*a*.

Staff College. Staff College has caused in the army study and competition in the military art, 8966, 8967. Passed Officers benefit by the instruction, 8968–8970. Adjutant's office may be most important in arresting evil, 8921. His duties are correspondence and records, 8922; too confidential for a clerk to do, 8923; though the Commandant might himself do the confidential work, 8924. The selection of first-rate men for the Staff of the College is very important, *Appendix XI. (A), p. cxxviii.* Candidates for Staff College should be required to be with their regiments a considerable period immediately before examination, to prevent them going to a crammer's, 8904; which they now do, *sub rosâ*, 8905; and which is a great evil, 8906. Each candidate should understand riding, 8909; and French, 8910, 8911. Commanding Officers and Field Officers of a regiment should certify definitely as to a candidate's fitness for Staff; and Commander-in-Chief would decide as to his admission to the College, 8945–8951. Commanding Officers in their half-yearly reports might name all officers fit for the Staff, and no candidate should be admitted who had not been twice so reported, 8952. Would have no need to study mathematics at the College; therefore a higher minimum for entrance, 8907, 8908. The intermediate examinations are valuable to the teachers, as showing the students' needs, 8916. On the whole, prefers independent examiners, 8917. Carrying on marks to final examination is bad, 8918; making the work superficial, 8919. Classes better than individual competition for final examination *App. XI. (A), p. cxxvii.* Officers might be charged for their course at the Staff College, but not enough to bar their coming, 8934, 8944; the boon they obtain is considerable, 8935; it might shut out some poor officers, 8941. Every student should be mounted, and all reconnaissance work done on horseback, 8936, 8937. Does not think the College living more costly than with a regiment, 8939; except as regards servants, 8940. The servant's allowance is inadequate, 8938. Would institute a Staff Corps for Passed Officers, 8912, 8928; to go into at their option, 8914; for various Staff duties, 8913. Regimental Commanding Officers, if ever selected, might come from it, (after due notice of so great a change, 8954,) as in Prussia they do from the Staff College, 8915. Prejudice in France is against a Staff Corps, 8929. Objects to Passed Officers having extra pay in their regiments, 8931. Sees no special object in their doing regimental duty, 8932. Staff instruction should qualify an officer to undertake any section of Staff duties, 8961–8963. Many officers have acted on both the Adjutant-General's and Quartermaster-General's Staff, 8964. Every Staff Officer ought to have the qualifications of a Passed Officer, but he need not have passed through the College, 8925, 8926. Would like, however, all Staff Officers to do so; the education of a Staff Officer ought to be higher than could be given in a war school, 8927. Officers do not go into the army to support themselves, 8943. An officer does not like being purchased over, 8953. Regimental commemorative dinners, like ours, could take place in Prussia, 8955, 8956; where the mess system exists, 8957. Duelling is rare in the Prussian army, 8958, 8959; though common at the universities, 8960.

WALKER, CAPTAIN ALBERT L. (99th Foot), late a student at the Staff College.

Staff College. Has been 12 years in army, 8991; has not passed through Hythe, 9041. Passed out fourth from Staff College last year, 8971–8973. Derived benefit from the course, 8974; having applied himself

WALKER, CAPTAIN ALBERT L.—*cont.*

chiefly to strictly military subjects; omitted mathematics, and took up only one extra subject, 8975. Passed in French, just failed in German, 8976, 9008. In mathematics only did the short course, which is absolutely necessary for surveying and fortification, 8977. Has not joined his regiment, 8989. The College tends to produce study in the army, 8974, 9000–9002. Having been at Sandhurst made his work for admission easier, 8996–8999; one must go to a crammer to make sure of passing, 8998. Cramming is an unavoidable result of competition, 9070–9072; it helps the candidate greatly, 9073–9077; does no particular harm, 9078; except occasionally, 9079; and is the only way of getting the knowledge together, 9080, 9081. Students should provide horses, 9015. The students have their private servants, 9060. Cavalry pensioners as servants would not be sufficient boon to cover the expenses, 9061–9063. Officers would think more of future position than of expenses at the College, 9064. The College costs a man 100*l.* over his pay, 9067, 9068; at the very least, including preparatory cramming, 9069. Too much advantage is given to those who study mathematics beyond military needs, 9003–9007. It is necessary, however, for the topographical department, 9006. Would not teach languages at the College, but would require a knowledge of one in candidates for admission, 9009–9011. There was theoretical instruction in embarking and disembarking troops, 9012; none in railway transport, 9013. A good reconnaissance must be by mounted men, 9014. Men who cannot ride will never be taught at the College; men who can, have their time wasted in the riding lessons, 8985–8988. Riding should be required for entrance, 9018. Does not object to *manège* instruction, 9017; but to the way it is carried on, 9016. The Commandant might report on a student's riding, if he saw him, 9040. The professors should not give marks, 8982, 8983. The system of marks is bad, 9023. Examiners mark unequally, 9024. Officers sometimes neglect military subjects to obtain marks in languages, 9025–9027. Competition causes overwork, 9029–9033. High place in mathematics may ensure high place in final list, 9034, 9035. Astronomy counts above everything, 8978. Dislikes personal competition, and would divide Passed Officers into two classes, arranged by regiments, with a note against a name of excellence in any special subject, 8979–8981, 9036–9039, *Appendix XI. (A), p. cxxx.* Examiners should be independent, 8984. Passed Officers have not certainty enough of Staff employment, 9054–9056. All general and personal staff appointments should be reserved for them, 9056, 9057. Knows no other advantage open to them, 9058. Their expenses at the College might be lightened; but would not give them extra pay, 9059. The present examinations for the Staff are not carried out, 9065, 9066. Thinks the system of paid Regimental Instructors would be very difficult to carry out, 8990; few men could be found to take the post, 8992, 9021; witness would not; we are not yet ready for the system, 8993, 9020, 9050; though we may be eventually, 9051. Officers would either be indifferent or hypercritical, 8994, 8995, 9019, 9046. If the promotion examinations were strictly carried out, officers might be glad of the instruction, 9028, 9048, 9049. The Instructor of Musketry gets little attention from officers, 9021, 9022, 9042–9045. The adjutant is listened to because his work is practical, 9047. Garrison or Camp Instructors should be tried before regimental, 9052, 9053.

Regimental Instructors.

BARKER, MAJOR G. D. (64th Foot), Deputy Assistant Quartermaster-General at Portsmouth.

Staff College.

Passed in 1866 first out of the Staff College, 9083; and in consequence obtained a Staff appointment, 9087. Previous service, 9084. Derived great advantage from the time passed at Staff College, 9085, of which institution he quite approves, 9088. More attention should be given to practical subjects, 9086. Riding should be better taught and might come into entrance examination, 9097, 9098, 9130, 9131. An officer ought to know how to manage an untrained horse, 9158. In languages would have instruction more colloquial and examinations more *viva voce*, 9099–9103; or a language might be required in the entrance examination and not carried into the course, 9139. A man should go grounded in languages, 9144. Embarking and disembarking troops profitably taught, 9146, 9147. Railway transport not taught, 9148. Would not reduce mathematics, 9149. Time is lost in lecturing on details of Military Administration and Legislation, 9133; some of the lectures would be better printed, 9134. The Commanding Officer's certificate of a man's fitness for the Staff should be made more definite, stringent, 9089–9091, and categorical, 9132. At present unfit officers are sent to the College, 9106. Candidates should have eight years' regimental service, 9092, 9093; and would then remove restrictions as to rank for Staff officers, 9113, 9114. Thinks the limiting competition to one officer per battalion bad; and excluding battalions with two officers already on the Staff worse, 9094, 9095; but it is inconvenient to strip a regiment of officers, 9151. The Commandant might well report after a time on the fitness of a student for the Staff, 9107; but it would be an extreme case if removal ensued, 9162. The power of removal for unfitness does now exist, 9163, 9164. There would be difficulty in the field officers of a regiment combining to certify a candidate's fitness, 9122. An independent board would be better, with a Staff officer on it, 9123–9125. The inspecting general might also report upon candidates, 9150. Field drawing should be required at entrance, 9157. The minimum for entrance is too low, 9138. Most candidates now go to crammers, 9165, 9166; at an expense, 9168, 9169. Camp or regimental instruction might to some extent render it unnecessary, 9167. The adjutant or some disciplinary assistant to Commandant is necessary, 9104, 9105. The expense at the College slightly exceeded that with a regiment, 9140, 9168; had his own horse, 9141; cavalry pensioners as grooms would be very desirable; servants are the great expense, 9142, 9143. In final examination is individually in favour of personal competition; but passing by classes might lead to less jealousy, 9108. Now, a man will look more to the marks than the benefit a subject will give him, 9109. Approves the present system of giving marks during the course, 9110, 9111. There is inconsistency in requiring a student to take up a subject and not requiring him to obtain marks in it, 9135, 9136. Would rather raise than lower the qualifying minimum, 9137. Would require the personal Staff to pass the whole course of the College, 9112, 9126, 9127, 9152–9154; though high science is not needed in an aide-de-camp, 9156, 9160, 9161. Would make brigade-major a step in promotion to the divisional Staff, 9155. The Staff College certificate has of late been much recognized in India, 9129. At camps would prefer a school of instruction to Regimental Instructors, appointing instructors to detached regiments, 9115. The office of Regimental Instructor would be well looked upon, 9116, 9117. The average but not the bulk of officers from the Staff College would be qualified for the post, 9118–9120; all, perhaps, if the certificate were modified, 9121. Some officers might never be able to attend a Garrison Instructor, 9128. Appointments to the Staff should be by selection from graduates of the Staff College, *App. XI. (A), p. cxxiv.*

BARKER, MAJOR G. D.—*cont.*

BARING, LIEUTENANT EVELYN (Royal Artillery), Student at the Staff College.

Staff College.

Instruction might be much improved, 9173. Final examination should not be competitive, or, if competitive, all officers should compete in same subjects; would prefer to grant honours in special subjects, 9174, 9175, the names being published in order of seniority, 9176, 9177. Instruction should be far more practical, 9178. Mathematics is studied beyond any practical use to a Staff officer, 9179; though only for the sake of qualifying for the Topographical Department in London, 9180, 9220, for which witness cannot believe it necessary, 9181, 9221, 9222. The marks in it count in competition, 9182, which is some inducement to take it up, though the Topographical Department is a greater, 9183. Geology might be done away with; telegraphy ought to be taught; chemical analysis is time wasted, 9184. Military administration is studied only one hour per week, 9186; not nearly enough, 9185. There are three examinations in it each year, 9187. Commissariat is touched upon, but not railway transport, 9188. Administration of sick and wounded very little taught. Officers cram for the examinations; writing essays, as in military history, would be more effective, 9189. Nothing can be more important to a Staff officer than military administration, 9190. Schemes of defence are not sufficiently practised, nor with proper rapidity, 9191, 9211. They are excellent as far as they go, but insufficient, 9192, 9193. Out-door work insufficient; eye-sketches and road-making too infrequent, 9194. Not all who pass a good examination will make good Staff officers, 9195, 9196 (2); nor all who are very good at drill, 9245–9247.

The Staff College, imperfect though it be, is far better

BARING, Lieut. EVELYN.—*cont.*

than none. It is almost the only road to theoretical knowledge of military science; and in the American war almost all who rose to eminence were men of theoretical knowledge, principally from West Point, 9196 (1), comparing them, that is, with good regimental officers, 9213. The certificate of Commanding Officer (in which witness has no confidence, 9199, 9229) will never be a good test of a candidate's competence, 9200, but would not do away with it, 9201; the confidential Report of the College commandant on each Passed Officer is better. Admission should continue by competition, as obviously excluding favouritism, 9196 (2 and 3). The College is unpopular, because there is not sufficient assurance that Passed Officers will be preferred for Staff appointments, 9196 (4), 9244. The personal Staff should pass through the College, 9196 (5), which would largely increase the appointments attainable, 9197. If the personal Staff passed through would increase the admissions to 30 a year, 9196 (5), 9198. Is aware that confidential reports have long existed and been used, 9202, 9203. On service, a Staff officer ought to be chosen from those who have passed the College, 9204, 9205; but only on probation, 9206. Too much detail in fortification is taught; Staff officers should not be half-bred Engineers, 9207–9209. It would be good to send officers abroad, but not to fortresses, 9210. For admission a fair knowledge of one European language would be better than a smattering of two or three, 9214. Simple geometrical drawing is not in the examination; but almost all officers know it, 9215, 9216. Living at the College is a little more costly than with a regiment. Every officer ought to keep a horse, but neither groom nor allowance is granted; some mode of giving grooms cheap should be adopted, 9217–9219. There would be less bad riding, 9223. The expense now deters men from keeping a horse, 9224.

A preliminary practical trial of a candidate on the staff of a General Officer would be a useful test of efficiency, if the general would report freely, 9225, 9226, 9228; there would be less difficulty with the Commandant of the Staff College, 9227. Would not shorten the course, 9230, but would have less examinations; they foster cramming, 9231. No marks should be given at the College; the passing should depend on independent examiners, 9232, 9233. Instead of the Artillery course at the College, a Passed Officer should go to Shoeburyness for a month, and to a field battery for the same time, 9234. To have passed the examinations for the Artillery leaves much to learn for the Staff College, 9235. Pontooning and bridging are well taught, 9236; but not enough of it, 9237. A year or two more service might be required from candidates, 9238. Beginning at books again after ten years is irksome, 9239. It might be good to teach officers specially for the Adjutant-General's Staff or Quartermaster-General's Staff as elected, 9240. Many of the best officers do not offer themselves, 9241. If an officer could prove thoroughly his competence in the Staff College course, he should not be compelled to pass through the College, but that is scarcely possible, 9242, 9243. Languages should either be more thoroughly taught or not at all; in the latter case the officer being sent abroad to learn one and his expenses paid in proportion as he acquired the language well, 9248.

LENNOX, Colonel W. O., C.B., V.C. (Royal Engineers), Instructor in Field Fortification, School of Engineering.

Survey Class.

Was on the Staff at Aldershot for three years and a half, 9250, and superintended the Survey Class, 9249. The officers learned surveying (without theodolite), the course was one month, afterwards extended to two, 9251, which was a fair time to start an officer on the way for self-improvement, 9254, 9255. Many officers passed through, 9252, 9253. The popularity depended on commanding officers, 9256. The students being detached from regimental duty threw heavier work on others, 9257. The students worked zealously, with some exceptions, 9258, 9259. The instruction was only in surveying, 9260. Field sketching and field works might have been taught similarly, 9261. Would be glad to see the system extended and systematised, 9263, 9264. Would prefer garrison to regimental instructors for such subjects and spade drill, 9262, 9283, 9284. There would be no practical difficulty, 9267. In-

Engineering Instruction.

struction in engineering should be under Commanding Engineer, 9264. Would extend the utility of Chatham by instructing regiments in field works and siege drill. The Army is very deficient therein, 9265; and modern artillery demands increased skill, 9291, 9292. A candidate for the Staff should have

LENNOX, Col. W. O.—*cont.*

some training at Chatham, 9266. A regimental instructor would not as yet find enough pupils, 9268. The system should be universal, 9269–9271. Two months would be enough for survey, and 12 for the whole course, 9273. Would relieve the officers from regimental duty, as an encouragement, 9272; and would take any officer applying, 9287; officers without aptitude would not apply, 9288, 9289. Instructors at the principal stations would inoculate the Army with the system, 9286. Would have one or two sieges at Chatham every year, instructing three or six regiments in the work. An Engineer general should command the district, 9274. The regiments should undergo this instruction as part of duty, 9275; but the further study of officers in engineering works should be voluntary, 9276. It is desirable to introduce more communication between the Line and Engineers, 9290, 9293. Considers the Staff College unnecessary; the required knowledge may be gained by the officer himself, and tested by examinations, 9277–9280, 9294–9296. An instructor who could tell him what to study would be an assistance, 9282. A course of instruction for the Staff could be as well carried out in India as at home, 9281. High mathematics (as calculus and conic sections) not needed for a Staff officer, 9296, 9297. Two years at the Staff College would not make an officer an engineer, 9285. Would like all officers encouraged to come to Chatham to learn the work there, 9297. The extra staff and expense would be very little, 9298, 9299.

WARDE, Major-General Sir E. C., K.C.B., Royal Artillery, Commanding the Woolwich District.

Artillery Officers.

Young artillery officers after leaving the Academy are for six months under his observation, 9301, undergoing preliminary instruction, 9302, before joining their batteries. The system works admirably, 9303, and is analogous to the instruction of Engineers at Chatham, 9327. Would extend the period to 12 months, 9304. There should not be any regimental difficulty. Without this sojourn at head-quarters it is difficult to impart discipline, 9305; and practical teaching is best given after the officer is commissioned, 9326. The age for joining the Service should be limited to 19, 9306, and the Academy from 15 to 17. Raising the age was the worst thing for the Service, 9307, 9324*a*, 9325. It would be an immense advantage to reduce the qualification, 9308. The competitive system spoils general education, 9309. If less depth but more thorough knowledge in a subject were required, it might be better, 9328–9331; mathematics is over studied, 9310. Would do away with competition for the Academy, 9316, and admit on a qualifying examination, 9317, in the proper subjects of a liberal education, including classics, 9311–9313. Advantage of classics, 9314, 9315. Candidates would be nominated to some extent by interest, 9318; they were not formerly almost all sons of artillery and engineer officers, 9319. Artillery officers are undoubtedly worse in point of discipline than formerly, 9320, 9332. Expects the same is the case with the Engineers, 9323. There might be difficulty in reverting to the old system, 9321. The Academy ought to be the best school for discipline, 9324.

FORSTER, Lieutenant-General William F., K.H. Military Secretary to the Field Marshal Commanding-in-Chief.

Sandhurst.

Sandhurst College well adapted to its purpose, 9334. Idle boys cannot be eliminated, 9335. Would be most nearly overcome by requiring periodical progress to a certain standard with alternative of leaving, 9336. Would graduate the rewards and allow the best cadets for purchase to obtain commissions at a lower rate, 9337. For zeal and good character would allow a commission to date from period of becoming a cadet, 9338; this would fill the College, 9402. If the prize were a commission certain, a high standard of discipline and education could be insisted on, 9339, for the prize would be a great one, 9343, 9344. When witness was a cadet, the College was aristocratic and discipline excellent; officers could remain six months after being commissioned, 9340; but the cadets were younger than now, which was better, 9399. There was then a great demand for officers, 9388, 9389. The more difficult the examination, the less people will send their sons, 9341. No non-purchase commissions are now given except to Sandhurst cadets, 9401. The Governor of Sandhurst would disapprove a half-yearly inspection of discipline by an inspecting General Officer, 9403, 9404. Language might be insisted on for admission to Sandhurst and the Staff College, 9405.

FORSTER, Lieut.-Gen.,—*cont.*

There is no regulation to prevent the French master at Sandhurst instructing colloquially, 9406–9408. An officer ought to know a foreign language, 9345, though few do, 9348. It must depend on the prize held out whether men will go abroad to learn one colloquially, 9346, 9347. It would be necessary to prevent abuse if Passed Officers of the Staff College were allowed to go abroad for the purpose, 9348. Military instruction might be continued to officers after joining the service, 9349, strictly voluntarily, 9350, 9390, 9391. Does not think more could be made compulsory than is required for the examination on promotion, with strategy and military drawing added, 9351, 9352. The promotion examination on becoming captain requires fortification and reconnaissance, 9353, 9354, though vaguely, 9355. If the questions are not stringent enough they are returned to the regiment, 9418. Officers sometimes fail and are passed over, 9392, 9393. Thinks instructors for regiments would take, 9357, 9430; but would begin gradually, 9431; and would not appoint them unless sufficient officers were willing to be instructed, 9357; wherein would lie the difficulty, 9384; sees no social obstacle, 9417. The appointments being prizes, emulation would arise, 9358. Examinations beyond Captain are not required, 9359. Uniformity in the examinations is very desirable, 9360–9362, *App. VII. (A), p. lxxx.* Doubts if, for garrison or regimental instructors, officers could be found who could or would teach languages, or enough to teach fortification and military drawing, 9372–9375. The stations for garrison instructors, 9376–9380. The supply of qualified instructors would increase as time went on, 9381, 9382. The officers appointed would marry, which would be bad, 9383. A stationary appointment is a great lure, 9385. Regimental and garrison instructors should be both tried, 9386, 9387. Doubts if, in a riot, any regiment would find itself destitute of officers who could strengthen a bridge or defile, 9410.

Instruction of officers.

Staff College.

The Staff College, though not greatly better than the former senior department, 9368, is an excellent institution, and a man with the knowledge there gained is better than a man without it; but there are physical qualities which would make a good Staff officer without the Staff College's aid, 9363–9367, 9409, *App. XI. (A), p. cxvii.* The Commanding Officer's certificate before admission to Staff College ought to be strictly enforced, 9394–9397. It might be strengthened by other opinions, 9419–9423. If the certificate consisted of answers to categorical questions supposes the Council would decide on the admission of the candidate, 9424–9428. The Commander-in-Chief gets an elaborate report on each officer passing the Staff College, 9398. Staff appointments may be given to officers who have shown Staff capacity in the field, 9369. Captains who have passed the Staff College all, sooner or later, obtain Staff employ, 9370, 9371. Ambition among officers means desire for a high post, 9411, 9412. Engineers require more scientific knowledge than the Staff, 9413. The knowledge of a candidate for the Staff must be tested, 9414. Officers who have prepared themselves by special studies for the Staff should have a preference, 9415, 9416. Reasons why one Staff College student per regiment is the limit, 9429.

PEEL, LIEUT.-GENERAL THE RIGHT HONOURABLE JONATHAN.

Military Education.

To make all youths intended for the army pass through one military school would not answer in war time, though it might in peace. If first commissions were not purchased, all candidates might pass through a military school, 9432, entering at 13 or 14, and subsequently passing to special colleges, for the different arms, 9463. Has no decided opinion about it 9464, 9465. It is a great advantage to obtain younger sons of country gentlemen for the army, 9463. Examination for admission to general military school should be general; from it to the military colleges technical, 9466. Liberal education should be continued, 9467. Woolwich course to remain as now, 9468; but the cadets to enter younger and to stay longer; the present system fosters cramming, 9469. The Woolwich entrance examination s a test of general capacity, the final of professional knowledge, 9472, 9473. Public school education ought to render cramming needless, 9470, 9471.

Instruction of Officers.

Would make examination for promotion perfectly obligatory, and would let an officer elect to pass a higher standard as a candidate for the Staff; such a Passed Officer might be selected for the Staff without a Staff College at all, 9433. The examiner should be independent of the regiment, 9445,

PEEL, Lieut.-Gen.—*cont.*

as a garrison board, 9459. The compulsory examination for promotion should be merely in regimental duties, 9434. A commanding officer neglects his duty who does not instruct all his officers how to defend positions, 9435. Good regimental instruction is preferable to any previous technical knowledge, 9437. Has recommended for regimental officers greater instruction in military law and evidence, 9438. For feeding or transporting his men a young officer would depend greatly on the quartermaster; his position is delicate, 9439–9443. An administrative instructor in a regiment would be an advantage; but the responsibility for instruction should rest on Commanding Officer, 9444, 9446. The second major might act as instructor, 9447, but it would not matter which officer so acted, 9453, 9454, with a small additional pay, 9448, 9449. Regiments may be at stations where garrison or camp instruction cannot be had, 9450; and it would be difficult to detach an officer for instruction, 9460. We have had good Staff officers without special extra knowledge, 9451, 9452. The inspecting generals might certify to the fitness of the officers recommended for Staff College, 9457, 9458.

The Council of Military Education works well, 9436. States the reason why he appointed Canon Moseley to the Council, 9455.

STRATHNAIRN, GENERAL THE RIGHT HONOURABLE HUGH, LORD, G.C.B., G.C.S.I., &c., Commanding the Forces in Ireland.

Instruction of officers.

Practical instruction in fortification, &c. after entering the army is most desirable and perfectly feasible; field fortification, applicable to cavalry and infantry, is indispensable for officers and should form part of military education, 9474. Examination of officers for promotion is, in regulation, less extended than it ought to be in practical subjects, and, in practice, is a dead letter; from the instruction being theoretical instead of practical, and from the relaxation of examining boards, finds on inspection that officers (including commanding officers, 9478) cannot perform simple evolutions or understand their object; there is some improvement lately; inspecting Generals should *name* the movements to be performed; would have successive (compulsory, 9495) examinations up to rank of lieutenant-colonel; strategy is more neglected than any other subject, in great measure owing to its non-inculcation in our books of instruction; quotes instances; every reverse we have had may be traced to neglect of simple strategy; is a great advocate for the cultivation of field sketching as a most important adjunct of reconnaissances, without which war cannot be carried on, 9475, 9482. As a remedy would introduce strategy or object into books of infantry, cavalry, and artillery evolutions; British officers, above other nations, have inherent military qualifications; the improved instruction should be organized under seven heads: I. Simple strategy; II. Combined movements of the three arms, tactical and strategical; III. Hill warfare, camp organization, field duties; IV. Field fortification; V. Military administration; VI. Geographical strategy; VII. Military morale. Artillery, infantry, and cavalry words of command should be assimilated as far as possible, and infantry words be shortened; hill warfare is a most difficult operation of war; a text book of field fortification should be drawn up; is not in favour of entrenching positions as a rule; geographical knowledge of the country, people, and resources of possible theatres of war of the utmost importance; the *morale* of soldiers should be well attended to; drills should be short, active, and intelligent; gives detailed illustrations on all the foregoing points, 9476, 9520, 9521. For securing the instruction of officers would rely not solely on the opinion of the commanding officer, but also on the half-yearly inspection reports made by him to superior authority, 9477. Would not have in the regiment an officer specially responsible for the instruction; quotes an instance in which a commanding officer could not defend a barrack, 9478. The regimental powers of an officer should be judged by the ascending series of superior officers through whom the half-yearly report on him reaches the Commander-in-Chief; that report should cease to be confidential; regimental excellence should be a sure road to Staff promotion; incompetence should be removed from service while yet young, 9480, 9522, 2523. Cavalry ought to be taught to jump obstacles and fences; officers ought to be practised in correspondence and telegrams, 9491. Regimental officers should be required to have a certain knowledge of army administration, 9492 Regimental instruction should be systematic, not voluntary; anticipates great difficulties in having captain-

STRATHNAIRN, General LORD.—*cont.*

instructors in regiments, even if qualified men could be found; details the means he has adopted for instructing regiments, 9493. Officers should in turn be moved from stations where they cannot obtain instruction to stations where they can; Commanding Royal Engineers might give certificates to officers who had qualified in field fortification and field sketching; attachment for less than six months to another arm is useless for instruction, 9494. Would open the Staff to first-rate regimental officers (among whom are many adjutants) without passing through the Staff College, 9496, 9524. Candidates for the army should have professional instruction; but the first examination should not be too difficult, or cramming will come in, 9497. If a candidate distinguished himself in one or two subjects, would not reject him for failure in the others; nothing is more profitable in the army than varied talent, 9498. It is an anomaly to interdict military subjects and to encourage physics and natural science, 9502. Is not in favour of increasing Sandhurst; but would arrange for national military education to be given at public schools; also approves the old system of sending boys abroad to study languages and the military art, 9503, 9504. The present competitive system gives military promotion for literary merit, often on the opinion of non-military judges; witness would take military excellence as the criterion for promotion, the judges being the General officers conducting operations or inspecting corps, 9505; the half-yearly reports being an aid to the Commander-in-Chief in selecting officers, 9506. Does not think heart-burning would occur in the army if promotion were made by selection at the Horse Guards on the basis of real merit and efficiency, 9507. Sees no objection to regimental promotion by selection; but the higher rises the state of military education the less necessity would there be for selection, 9508. The proposal to convert regimental pioneers into regimental sappers was excellent, 9511. Has not found the scientific knowledge of artillery and engineer officers interfere with the efficient performance of Staff duties, 9515, 9516. There would be greater security that a candidate for the Staff College were fit for the Staff if he were so reported twice successively by the inspecting officer, 9517; his judgment and intelligence being reported on as well as mere knowledge of drill, 9518, 9519. Would not return in any way to the Sandhurst senior department, 9525.

Staff College. Considers the Staff College a failure, 9483. The instruction is too theoretical, not leading in strategy to practical efficiency, which can only be acquired in a camp of instruction; languages, as taught, would fail to be useful in the "intelligence department;" objects to mis-spent time in acquiring sciences of no military use; would abolish the College on its present footing, 9484. Practical ability is sacrificed there to theory and sciences useless in war, 9485. The certificate given to a candidate by his commanding officer is a sort of form, 9487. Frequently officers who marry or do not wish to go to India have recourse to the Staff College; if the College were reconstituted with a course of one year only (two years is far too long) by eliminating useless subjects would, as a reward, allow an officer to go there who should be frequently and favourably reported on by his commanding officer and the inspecting General at the half-yearly inspections; discipline, as a study, is neglected at the college, 9488. If a really efficient college for military instruction were established in England it would be good to introduce one, if not more, of a similar nature in India, 9490.

WALROND, THEODORE (Secretary to the Civil Service Commissioners).

Examinations: Cramming. The Civil Service Commissioners could examine for entrance to Woolwich and Sandhurst, 9561. They attempt to maintain uniformity in qualifying examinations by means of permanent examiners, 9562, 9570; of whom there are two, 9563; university men, 9565; their salaries, 9564. They were found to be a necessity, 9583. Occasional and special examiners called in as required, 9566–9569, in whom witness has never observed a tendency to display their own knowledge, 9630. Doubts if they will ever entirely counteract cramming, 9571–9573. The treatment of examination papers, 9574, 9584, 9585. There are two Commissioners; one being paid, 9575, and having most work, 9576, but not too much, 9577. Thousands are examined every year, 9578, 9579. The fees of occasional examiners are assessed by the permanent examiners, 9580, 9581. The staff for home Civil Service examinations; Indian examinations altogether separate, 9582. There is

WALROND, THEODORE.—*cont.*

usually full employment, but not just now, 9586. Except for Indian Civil Service, examinations are *viva voce* only when a colloquial knowledge of a language is demanded, 9587, 9588; it is the best test, 9589; gives an instance, 9590. The Foreign Office alone demands colloquial knowledge of French, 9591; it nominates three competitors for each vacancy, 9592. At a recent examination for Indian forest service very few candidates had colloquial knowledge of French or German, 9593–9595. Accent difficult to acquire in this country, 9604. The public will after a time learn the method of a permanent examiner, 9596, 9614; therefore they often get papers set by occasional examiners, 9597. In competition, by deducting from the marks of all the number representing competent knowledge, 9598, candidates (satisfactorily, 9637) cease to gain by superficial knowledge of a subject, and therefore take up fewer subjects, 9599, 9635. Why mathematics was excepted, 9605–9608, and the result of excepting it, 9612, 9623–9625. Five subjects are usually taken up, 9600, 9626; but no subjects are obligatory, 9627. Why the number of subjects was not limited, 9636. Breaking down of health in these examinations very infrequent, 9638. Cramming and, still more, luck render literature and history difficult subjects to examine in, 9601, 9602. Examiners in foreign languages are natives, 9603. Subjects most easily crammed are those comprising matters of fact, as natural sciences, history, geography, 9609–9611, 9618, 9619. Cramming least applies to languages, 9609, and only partially to mathematics, 9606, 9607. There is always danger of an examination merely testing the knowledge of the moment, 9617. In more advanced examinations "cram" is eliminated, 9620. Very ill-qualified candidates rarely come up, 9621; but in competition the successful candidate is often very superior to the others, 9622. *Viva voce* examinations best check cramming, 9628; practised in every subject for Indian Civil Service examination, 9629. In qualifying examinations the reports are not by marks but by epithets, as "good" or "bad," 9631, 9632. Boys often sent to crammers to test their chance of passing, 9633; sees no harm in that, 9634. Greek and Latin are advantageous subjects to take up, 9639.

ARMSTRONG, COLONEL J. W., C.B., Deputy Adjutant-General in Ireland.

Instruction of officers. It would be quite possible to give officers obligatory instruction after entering service, in military law, outpost duties, surveying, and field fortification. There should be periodical examinations, failure barring promotion. There might be regimental instructors, and also instructors at large stations. *App. VII., pp. lxxxiii., lxxxiv.*

Staff College. Results of Staff College not altogether satisfactory. Best officers in Army do not enter; rewards too doubtful; return to regimental service distasteful. Commanding officers certificates sufficient, if signed in their integrity. As a rule Passed Officers are not efficient Staff Officers. *App. XI., pp. cxvii., cxviii.*

CARDEW, CAPTAIN G. M. (67th Foot), Deputy Assistant Adjutant-General, Dublin.

Staff College. Approves of system of admission which brings in best officers in the service; but it should be obligatory to obtain half marks in each subject taken up and to have seven years' preliminary service. Commanding Officer's certificate sufficient if carefully given. Would shorten course to 12 or 18 months; omit some examinations; print the lectures, and curtail plan drawing. Practical subjects are sufficiently considered; but field sketching and surveying should have more time. Though there may be errors in detail, the principle of the Staff College is right, and Passed Officers are likely to be efficient on the Staff. Would open Personal Staff to Passed Officers; give each student 2*s.* a day to cover cost of living; Passed Officers to wear a distinguishing badge; would abolish competition in final examination; examiners should be independent; instructors in military subjects to be changed periodically; examinations half-yearly, failure to involve dismissal. Passed Officers to be attached to each of the other branches for four months at least. *App. XI. p. cxxviii.*

CLIFFORD, COLONEL THE HONOURABLE, H. H., V.C., Deputy Quartermaster-General.

Instruction of officers. It would be possible to instruct officers after appointment in fortification, military history, surveying, drawing, languages, mathematics,

CLIFFORD, COLONEL—*cont.*

with attendance and examinations quite voluntary. Officers under instruction should not be exempted from any military duty; promotion not to depend on the examinations; but those examinations to be considered. Prefers garrison instructors. *App. VII., p. lxxxiii.*

Staff. Would have one general Military College through which should be entrance to all arms. The Staff should be selected from regimental officers of 8 or 10 years' service, who should be formed into a Staff Corps and employed on the Staff as long as efficient. The five years' rule is bad for Staff Officers and also for the service; and it is a great discouragement for officers to qualify for Staff employ and then to find no appointments open. The system of admission to the Staff through Staff College is not good and does not necessarily bring the best officers; physical and moral attributes more important in a Staff Officer than mere intellectual qualifications. Several officers who have passed the Staff College are proving themselves efficient Staff Officers. *App. XI., p. cxvii.*

COLLEY, MAJOR G. P., Brigade Major, Western District.

Staff College. Staff College works fairly well; though the examination unnecessarily favours scientific as opposed to practical knowledge, and knowledge of his own duty is the only thing which does not help an officer to get in. Practical officers are not now fully represented on Staff; but their prejudice against passing through the Staff College is wearing off. The only way to render trustworthy the Commanding Officer's certificate is to require him to give specific reasons for recommending an officer. Military administration, principles of drill, and tactics require more attention; physical sciences less. Subjects should carry marks in proportion to their importance to Staff Officers. Artillery instruction should be omitted from course and given at Woolwich; practical instruction in working of the three arms should be afforded at Aldershot. Opportunities should be given for visiting foreign camps of instruction. Establishment of Staff College has resulted in an increase of military education among officers, and in gradual provision of a body of men for the Staff superior to what could otherwise be had. On the other hand, selection for the Staff has been much stopped; and the training is too much directed to Quartermaster General's department. Popularity of Staff College would be much increased if all Passed Officers were allowed forage for a horse, so as to be able to take extra Staff appointments at any time. Number of students might be increased; there would be more selection for Staff. Every officer on the termination of a Staff appointment should serve a year in his regiment before being eligible for another. Candidates at each examination should be reduced, by selection, to 20 competitors. The key of success is that the College should provide highly trained officers; from these the Staff must be appointed by rigid selection; merely passing not to give a right to Staff employ. *App. XI.* (*A.*), *pp. cxxii–cxxiv.*

CREALOCK, CAPTAIN J. NORTH, 95th Foot.

Staff College. I. The Staff College system has reasonably succeeded. The College is almost a necessity, but minor changes may be required. II. Places in final examination should be by classes and not by competitive marks. Too many subjects are included, making knowledge superficial and endangering health. Course should be one year, with 20 to 40 admissions yearly. Details numerous proposed changes in the studies. Previous service of seven years, or two years as adjutant, to be required from candidates. Present certificates by Commanding Officers to be rigidly carried out, with verbal improvements. Passed Officers to serve two months at Woolwich, studying artillery science, then five and a half months at Camps of Instruction in practical Staff duties. Afterwards the Staff Officers to whom they have been attached should report on them; and, if satisfactory, the officers should be finally passed, with right of wearing in full dress a small aigrette as in Prussia. Pecuniary assistance to be given to these officers to visit continental armies. *App. XI.* (*B.*), *pp. cxxx–cxxxiv.*

DE LA WARR, MAJOR-GENERAL THE EARL (late 21st Fusiliers).

Instruction of officers. Instruction for officers could be introduced, but would bear no fruit proportioned to the labour and difficulty of working it. The present field exercises, if properly conducted, would provide instruction in simple field works. If military schools for officers be established, attendance must be obligatory; the knowledge to be imparted is not required for *all* officers of the unscientific branches. The instruction will be useless unless there be examinations; but is wholly averse to examinations before promotion. The more frequent exercise of the power of removal for proved incapacity would answer better. Before a Field Officer obtains command of a regiment, he should be required to manœuvre it skilfully before a superior officer. Objects both to garrison and Regimental Instructors. *App. VII.* (*A.*), *p. lxxxii.*

DE LA WARR, MAJOR-GENERAL—*cont.*

ELRINGTON, COLONEL T. R., Commanding 4th Battalion, Rifle Brigade.

Instruction of officers. Professional instruction of officers would be practicable; attendance should be quite voluntary. There should be examinations, but promotion must not depend on them. Would have Garrison Instructors at large stations. *App. VII.* (*A.*), *p. lxxxiii.*

ELWYN, COLONEL T. (Royal Artillery), Commandant and Superintendent, School of Gunnery.

Shoeburyness. The object of the School of Gunnery is to ensure completeness and uniformity in the instruction of artillery in the use of their weapons, by supplying all brigades with trained officers and men who shall instruct their comrades. Annually about 20 to 25 officers and 40 non-commissioned officers go through the "long course" of 12 months. Every three months other 33 non-commissioned officers pass through the "short course." In all, there rejoin each brigade annually one officer and two non-commissioned officers highly instructed, and eight non-commissioned officers well qualified to assist in instruction. In addition some batteries are always under training as a body. Squads of Militia Officers and non-commissioned officers occasionally undergo a three months' course. About 700 Volunteer artillery assemble annually for a week's competitive firing, during which time they are under instruction. There is also an experimental establishment. Believes the system to be well devised and to work well. The full benefit will not be felt until the trained officers reach the higher ranks. *App. X.* (*A.*), *pp. cxiii–cxvi.*

FEILDING, COLONEL THE HONOURABLE W. H. A., Assistant Adjutant-General, Dublin.

Staff College. Objects to the system of admission to Staff College. Every candidate should have been a captain with his regiment for a year. The discursive examination makes officers mere smatterers; would classify subjects for study according to section of Staff duty aspired to. Progress should be tested by quarterly examinations, with removal in case of failure. Students should be allowed every latitude as to attending lectures, &c., and be treated like men seeking their own advancement. Practical operations are not sufficiently taught. The College has been of great advantage to the Army, but would be of more, if Passed Officers were appointed to those situations which fit them best. The Commandant should have very special qualifications (detailed p. cxx., § V.). Would put in Staff Corps Officers, who had served five years, and especially distinguished themselves, on the Staff; captains being granted brevet majorities. An officer of the Staff Corps should be attached to each regiment to instruct young officers in military science. *App. XI.* (*A.*), *p. cxx.*

FLETCHER, LIEUTENANT-COLONEL H. C., Scots Fusilier Guards.

Instruction of officers. Would pass infantry officers through a practical compulsory course similar (*mutatis mutandis*) to the engineer course at Chatham. Field works should be taught by actual operations in the open. Examinations for promotion in these practical subjects should be qualifying, not competitive. One officer would suffice as instructor for field works and musketry. *App. VII.* (*A.*), *p. lxxxiv.*

GALLWEY, COLONEL T. L. (Royal Engineers), Director, Royal Engineer Establishment, Chatham.

Chatham. Object of School of Military Engineering is to afford officers and men of the engineers sound practical instruction in military and civil engineering. Admission is from Woolwich. Details Staff, numbers under instruction, subjects of course. The instruction leaves little to be desired. The accommodation is miserably deficient. An "engineer institution" similar to that at Woolwich for the artillery is needed. *App. VIII.* (*A.*), *pp. ci, cii.*

GRIFFITHS, CAPTAIN L. (Royal Artillery), Instructor in Fortification, Royal Military College.

Sandhurst. Too many subjects taught. Labour of instructors not economized. Halls of study too small. Promotion from class to class should depend on progress in the studies. Fortification course too long, and not practical enough; would omit permanent fortification. Instructors should have been cadets previously, and should pass through a probation; their term should be more than six years. Arithmetic and the first book of Euclid are all the mathematics needed for practical fortification. With reduced subjects age for admission should be 16 and upwards, and course three or four terms. A good instructor only needs moral authority. Would not combine the instructional and disciplinary staffs. Monthly reports of conduct, if properly acted on, ought to suffice to repress idleness. Steps are needed to prevent cadets from incurring debt. The policy of the refreshment and billiard rooms is doubtful. Discipline and manners are improving. Under officers and corporals should have greater rewards open to them. Would supply Woolwich and Chatham by the best cadets from Sandhurst, through which all army aspirants should pass *App. II.* (*A.*), *pp. ix, x.*

HORNBY, REVEREND J. J., D.D., Head Master of Eton.

Eton. The "Army Class" has been successful in preparing boys for ordinary Army examinations, and has done good in the school. Is limited to English composition and modern history. Averages 25 boys, who must be over 16 years old; and are excused weekly two repetition lessons in the usual course. If higher examinations had to be prepared for, might not be hostile to a system of bifurcation. *App. V.* (*B.*), *p. lxiii.*

HORSFORD, MAJOR-GENERAL SIR ALFRED, K.C.B.

Instruction of officers. Practical Military Instruction of officers practicable. Submission to course should be optional; but if once commenced further attendance compulsory. Examinations half yearly, but not now to affect promotion. For four or five years Regimental Instructors would be desirable; afterwards Brigade or Divisional Instructors. At large stations there should be professors of continental languages. *App. VII.* (*A.*), *p. lxxxi.*

JONES, MAJOR ALFRED S., V.C., Adjutant of the Staff College.

Staff College and the Staff. The present system does not secure the admission of the best men for the Staff. Thorough regimental efficiency should be indispensable. Commanding officers' certificates cannot be relied on. Would require one language from candidates, eliminate languages from course and reduce it to one year, commencing 15th July. Riding drill should be daily until "dismissed." Military Administration to be learnt from a text book, rather than lectures. Reconnaissances to be made rapidly, as in the field. All students to keep horses. Classification of students to be substituted for competition. College only to be open to officers in home regiments. Commandant should employ one student as Staff Officer, by weekly roster, Adjutant being abolished. *App. IX.* (*A.*), *p. cxxiv.*

MANSFIELD, GENERAL SIR WILLIAM, G.C.S.I., Commander-in-Chief in India.

Instruction of officers. Considers that practical military instruction is already imparted in regiments. Approves the examination for promotion to Captain; but would deplore regimental promotion being made to hinge on purely educational tests. Would therefore not have study for officers made compulsory. Would substitute cadets *in statu pupillari* for ensigns; and for them would have Regimental Instructors, taken from effective captains or lieutenants. Would allow infantry officers to undergo voluntary courses in Artillery at Woolwich, and Engineering at Chatham. *App. VII.* (*A.*), *p. lxxviii.*

ROBERTSON, COLONEL A. C., Commanding 2nd Battalion, 8th Foot.

Would have admission to Army from age of 20 to 23, ranging graduates according to age not by order of joining. Would not require any test examination for direct commissions by purchase from youths who had been six years at a Public School, or one or two at a French *Lycée* or German Gymnasium, and the remainder at a Public School. High attainments are not needed for a company officer. Would encourage officers, after fully learning drill, to acquire special knowledge. A special Military School collects non-studious youths together, with bad result. Sandhurst, if retained, should

ROBERTSON, COLONEL H. C.—*cont.*

be limited to completing education of young men selected by competition, for non-purchase vacancies. Objects to the non-uniformity of the present promotion examinations; details principles which should be adopted therein. Would grant officers extra pay for special attainments. Affiliate with the Staff all officers reaching a certain standard. Select for Staff appointments the officers most distinguished by abilities, attainments, and service. *App. VII.* (*B.*), *p. lxxxvii.*

RUSSELL, MAJOR-GENERAL D., C.B., Commanding South-eastern District.

Instruction of officers. Military instruction of officers is practicable in military science, history, and law. Attendance obligatory in "*petite guerre*," voluntary in "*grande tactique*." Examinations do not afford a fair test. Each officer to prove his progress yearly. Wilful neglect of instruction to put promotion in question. Prefers regimental instructors. Officers from Staff College are more fitted for instructors than for Staff duties. Library and models to be formed in each regiment. *App. VII.* (*A.*), *p. lxxxi.*

SHUTE, COLONEL CAMERON, Commanding 4th Dragoon Guards.

Instruction of officers. Doubts feasibility of extending practical instruction of officers. Would send from each regiment an officer to Staff College for a four-months' course, passing which, with first-class certificate, should qualify for Personal Staff. Has found the chief want of officers to be Military Drawing. *App. VII.* (*A.*), *p. lxxxiii.*

STUART, MAJOR W. J. (Royal Engineers), Instructor in Fortification, Royal Military Academy.

Woolwich. Would prefer admission by limited competition. Examination should defeat cramming and test sound knowledge. Would require a higher qualification in pure mathematics, geometrical drawing, French, and German. Pure mathematics, French, and German should not be studied at Academy. There might be professional reading in foreign languages. Marks for classics are too high. Age for admission should be from 17 to 18½, with two trials only; course two years. Would introduce the répétiteur system; and free study. Every Instructor should have a separate room. There should be a good model room. Instructors should be mostly military, and the appointment should be deemed important. Woolwich should be a preliminary School of Application leading to Chatham and Shoeburyness. Would separate Artillery and Engineer cadets before final term. The head of the Academy should be Governor, with full powers. There is no need for three companies. Professors, &c. have powers enough. Discipline should be strictly enforced. Would not amalgamate Woolwich and Sandhurst. *App. III.* (*A.*), *p. li.*

WILSON, LIEUTENANT-COLONEL JOHN J. (Royal Engineers), Professor of Fortification, Royal Military Academy.

Woolwich. Would limit candidates to two chances. Would require a higher entrance standard in geometrical drawing, practical geometry, and mathematics. Open competition has, on the average, produced better men. Limit of age should be 16 to 18½. Discipline is good. Course should be two years, with six months additional in case of failure. The time given to physical science might be reduced. Is opposed to voluntary subjects of study. Objects to any division of Artillery from Engineer cadets. Would not give professors disciplinary charge of cadets. Opposed to union with Sandhurst; which would lower the Woolwich standard. Would weed out inefficient cadets by an examination at end of first or second term. *App. III.* (*A.*), *p. xlviii.*

WOOLSEY, MAJOR O'B. B. (Royal Artillery), in charge of Survey Class at Aldershot.

Instruction of officers. Practical military instruction could be imparted to officers. Compulsory attendance would be useless and mischievous. Higher standard of knowledge should be required in examination for promotion. Examinations to be conducted on a uniform system under a Staff Officer; and to be strictly enforced. Regimental Instructors would not answer. Garrison Instructors would be useful at large stations. *App. VII.* (*A.*), *p. lxxxv.*

Survey Class, Aldershot. Details formation, constitution, and course of Survey Class, *App. VII.* (*G.*), *p. c.* It would be an improvement if the Class were located under same roof as Prince Consort's Library, *App. VII.* (*A.*), *p. lxxxv.*

ANALYTICAL INDEX

TO THE

REPORT, EVIDENCE, AND APPENDIX;

ALSO TO

A SEPARATE VOLUME ON FOREIGN MILITARY EDUCATION.

N.B.—In the following Digest, references to Arabic numerals have relation to the numbered questions in the Minutes of Evidence, roman numerals to the pages in the Appendix.

For the sake of brevity, educational establishments are designated by the name of the place where situated. Thus, unless the context clearly point to another meaning,—

"Addiscombe"	will mean	the late East India Company's Military College at Addiscombe.
"Chatham"	„	the School of Military Engineering at Chatham.
"Sandhurst"	„	the Royal Military College for cadets at Sandhurst.
"Shoeburyness"	„	the School of Gunnery at Shoeburyness.
"Woolwich"	„	the Royal Military Academy at Woolwich.
"The Council"	„	the Council of Military Education.

Note.—The recommendations of the Royal Commission are printed in black type.

I.—*Generally.*

Placed under the Council of Military Education in 1859. *App.* I. (A.), *p.* ii.

Addiscombe, Hon. E. I. Company's Military College at—*cont.*

Was to prepare for the Scientific Corps, *Abbott*, 1772, 1793; though about one-third who failed for those corps went to the line, *ib.* 1868, 1870, 1871, 1792, 1794–1796; many of them making admirable Officers, *ib.* 1933, 1934. Cost of education, *ib.* 1862. Hours of meals and study, *ib.* 1968. No Senior Department, *ib.* 1895.

Union of Cadets for Line and Scientific Corps in one College rendered uniformity of educational system difficult, *Lefroy*, 7948–7953.

Comparison with Woolwich impossible, *Owen*, 7099, 7100.

II.—*Court of Directors.*

Position, *Abbott*, 1846–1849.

III.—*Staff.*

Military authorities named, *Abbott*, 1800–1804. There were 15 masters and 2 lecturers, *ib.* 1813. Orderly

ADDISCOMBE, HON. E. I. COMPANY'S MILITARY COLLEGE AT—*cont.*

III.—*Staff*—cont.

Officers inspected provisions, *ib.* 1840. Professors were well paid, *ib.* 1931, and had great influence, *ib.* 1932. Military Professors in active service were rare, *ib.* 2030, 2031.

IV.—*Admission.*

Age for, *Abbott*, 1844, 1845.

V.—*Cadets.*

There were 150, *Abbott*, 1779, 1780; in divisions, *ib.* 1805. Sub-Officers and Corporals, *ib.* 1806. Each had a separate bed place, *ib.* 1850, 1851. Never heard of evil from cadets associating, *ib.* 1852, 1853. Pocket money: town debts, 1941. Once had to search cadets' rooms, *ib.* 1942, 1943. Half-yearly reports to parents, *ib.* 1959, 1960. Idlers, *ib.* 1967. Time (after 16) counted towards pension, *ib.* 2011; but the commission was not antedated, *ib.* 2012.

VI.—*Discipline.*

Rested with Lieut.-Governor, *Abbott*, 1807; but he could not dismiss, *ib.* 1808–1810. Powers of Staff Officer or Orderly Officer, *ib.* 1811; of Sub-Officers, *ib.* 1812. Masters and Lecturers had no power beyond their classes, *ib.* 1814–1817. There was no want of discipline, *ib.* 1819, 1898, 1899. Disciplinary arrangements, *ib.* 1905–1907. Censors, 1908–1914. Punishments, *ib.* 1854–1861; Arrest on honour, *ib.* 1923, 1924. Serjeants had once charge of discipline, *ib.* 1902: but nothing to do with it in witness' time, *ib.* 1863. No bounds, *ib.* 1864. Public houses forbidden, *ib.* 1865, 1903. No espionage, *ib.* 1944, 1945; only moral influence, *ib.* 1946. Leave stopped for idleness, *ib.* 1966. Prizes for good conduct, *ib.* 1921, 1922.

VII.—*Course of Instruction.*

All subjects taught were obligatory, *Abbott*, 1765–1767: study more severe than at Sandhurst, *ib.* 1770, 1771. Hours of study, *ib.* 1968.

VIII.—*Specific Studies.*

Riding and swimming not taught, *Abbott*, 1961, 1962. Fencing optional, broad sword obligatory, *ib.* 1963. Practical subjects not taught, *ib.* 1915; classics only nominally, 1916, 1917. Prizes not much stimulus, *ib.* 1918–1920.

IX.—*Examinations.*

Final examination not to be compared with the present one at Woolwich, *Abbott*, 1938.

ADJUTANTS:

Often difficult to find a qualified successor, *Scarlett*, 5939.

Objects to, as interfering with influence of Company Officers over their men, *Strange*, 7901.

Are attended to, because their work is practical, *A. L. Walker*, 9047.

ADMINISTRATION, MILITARY:

Nothing more important to a Staff Officer, *Baring*, 9190.

Too much neglected in all military Education, *Lefroy*, 8016.

[*See also*, SANDHURST, XI. 4; STAFF COLLEGE, VIII. 1.]

AGE FOR FIRST COMMISSIONS: *see* OFFICERS, II.

AIDES-DE-CAMP: *see* STAFF, IV. 2.

ALDERSHOT:

Insufficient for Staff training, *Abbott*, 2038, 2039.

Drawback to Sandhurst, *Cameron*, 5344.

Would do well for instruction in Field fortification, *Codrington*, 6071.

Sandhurst Cadets have a bad name at, *Hale*, 3008.

Sandhurst Cadets not allowed to dine at, without their friends' permission, *Hallewell*, 3610.

In five years, half the regiments in the Army pass through Aldershot, *Simmons*, 6587. Winter lectures at, proposed by late Prince Consort, *ib.* 6650, 6651.

7 or 8 miles from Sandhurst, *E. Walker*, 2798; no better place for seeing tactics practically, *ib.* 2799; but prejudicial to discipline of Sandhurst cadets to go there, *ib.* 2880, 2916.

Survey Class: *see* SURVEY CLASS.

AMBITION:

Among officers, means desire for a high post, *Forster*, 9411, 9412.

ARTILLERY, ROYAL:

Used to be almost hereditary, *Simmons*, 6610: fair proportion of artillery officers' sons still enter, *ib.* 6611.

Officers who joined from Woolwich, 1858–1867. *App.* XIII. (A.), *p.* cxlvii.

Attaches utmost value to practical instruction: felt the want of it in Crimea, *Milman*, 7589.

Mathematics not essential to, *C. B. Brackenbury*, 8142: and bulk of the officers devoid of the faculty, *ib.* 8143. Would not require from Artillery Students elaborate fortification plates, *ib.* 8146.

During Crimean War many officers entered not better qualified in mathematics than the upper Sandhurst cadets, *Vinter*, 2664.

Practical artillery best learnt after entering the service, *Strange*, 7861. The principle is that officers instruct all under their charge, *ib.* 7902.

Best works on, are French, *Abbott*, 2045.

Drills so numerous that senior officers are likely to be rusty, *Yonug*, 8116.

[*See also* OFFICERS, III.]

ARTILLERY ADVANCED CLASS, WOOLWICH.

I.—*Generally.*
II.—*Professors.*
III.—*Candidates.*
IV.—*Admission*
V.—*Students.*
VI.—*Course of Instruction.*
VII.—*Examinations.*
VIII.—*Passed Officers.*

I.—*Generally.*

Note on the Institution of, *App.* IX. (C.), *p.* cviii.

Correspondence connected with origin of, *App.* IX (D.), *p.* cix.

Original regulations for, *App.* IX. (E.), *p.* cxii.

Under Council since 1864, *App.* I. (A.), *p.* ii.

Instituted five years ago, *Young*, 8021. Somewhat resembles Staff College, *ib.* 8029. Commanding-officers do not object to their Officers joining: but class is looked on with suspicion as leading to nothing certain, *ib.* 8024: constitution and course detailed, *ib. App.* IX. (A.), *p.* cvii.

Suggested, in 1861, by witness as encouragement to officers to keep up and progress in artillery science, *Lefroy*, 7942. The class is highly successful and will realise its object, if Passed Officers obtain early the appointments for which they have qualified, *ib.* 7943, 7979, 7983.

Object, *Napier*, 1628. System works well, *ib.* 1638, 1643.

Has caused study in the Artillery, *Ford*, 8296. Prefers present plan of an officer serving some years with his Regiment before he joins the class to joining soon after leaving Academy, *ib.* 8299–8301.

Works less well than formerly; officers too old: too few come up, *C. B. Brackenbury*, 8217, 8218.

Not satisfactory, *H. Brackenbury*, 6969.

II.—*Professors.*

Professors, *Napier*, 1641.

The professor is indefatigable and able, *Lefroy*, 7999.

Professor of mathematics eminently qualified, *Young*, 8078.

Some of the professors of the Military Academy and Department of Artillery Studies should be incorporated in the Staff, Report p. 25, 48.

III.—*Candidates.*

Number of candidates, &c. [1864–1868]. *App.* XIII. (H.), *p.* clxiii.

Paucity of, *Napier*, 1639.

Medical certificates required from, *Young*, 8084. Come voluntarily, *ib.* 8081; not to avoid other duty, *ib.* 8080. Witness entered in the hope of obtaining a scientific appointment, *Ford*, 8274. Obtained Commanding Officer's leave to join, without difficulty: had regimental and medical certificates, *ib.* 8276–8278. Brother Officers did not object to his absence, *ib.* 8288.

IV.—*Admission.*

Present regulations, *App.* IX. (F.), *p.* cxiii.

System of admission, *Napier*, 1629.

Entrance examination very severe and competitive, *Young*, 8026, 8047; thoroughly searching, *ib.* 8028, by independent examiners, under Council, *ib.* 8027, 8049. Rejections few, competitors being not numerous, 8049.

ARTILLERY ADVANCED CLASS, WOOLWICH—*cont.*

IV.—*Admission*—cont.

Nine competed for eight vacancies: examination tolerably severe; seven succeeded; eighth excluded for incapacity, *Ford*, 8279–8284.

V.—*Students.*

Will be comparatively young, *Lefroy*, 7980. The last class presenting itself showed a falling off, *ib.* 7981, 7982. The reward is not certain enough, *ib.* 7983, 7985.

Students, *Napier*, 1644. Some have already passed Staff College, *ib.* 1649.

Limited to eight, *Young*, 8023, advisedly, *ib.* 8076. At present there are but six, *ib.* 8023. Majority work very hard: present class inferior to preceding, *ib.* 8046. Cost per student is great; but difficult to arrive at, *ib.* 8077.

VI.—*Course of Instruction.*

Two years, *Young*, 8023. Work very severe, *ib.* 8044. Five hours' attendance daily, and evening reading, *ib.* 8045. Manufactures, machinery, and chemistry thoroughly practical, *ib.* 8050, 8052; no fortification, *ib.* 8051. The course is adapted to draw out excellence in any one particular subject, *ib.* 8106, 8107. Can only be unpalatable from its severity and uncertain reward, *ib.* 8079. A large body of officers could not be expected to go through such severe work, *ib.* 8043, 8044: nor would it be desirable, *ib.* 8056.

Course, *Napier*, 1633, 1634. Students visit manufactories, &c., *ib.* 1635, 1636.

Not too long: and coming after Shoeburyness, the officers combine theory and practice, *Lefroy*, 7988: the course is good, 7998. Lectures on Military Administration are given, *ib.* 8015.

Witness decidedly approved the course of study, *Ford*, 8285–8287, 8290. It was necessary to take up every subject, *ib.* 8289.

Objects to making high mathematics compulsory, *C.B. Brackenbury*, 8214; and compelling everybody to attain one standard, *ib.* 8219, instead of developing the special talent of each, *ib.* 8220. Too much desk work, *ib. App.* IX. (A.), *p.* cvii.

Less prominence should be given to high mathematics, Report, p. 25.

VII.—*Examinations.*

Entrance, *Napier*, 1630, 1632. Examinations obligatory, *ib.* 1637. Examiners, *ib.* 1640.

Examinations at end of first and second year by independent examiners, *Young*, 8026–8028. Final examination competitive, *ib.* 8127: names published in order of merit, *ib.* 8128. Last examination very satisfactory: examiners all independent, *ib.* 8025, 8129.

Were at end of first and second years, *Ford*, 8293: had to get a minimum in each subject and six in the aggregate, *ib.* 8294: personal competition, *ib.* 8295.

Personal competition should cease, Report, p. 25, 48.

VIII.—*Passed Officers.*

Passing does not qualify for General Staff, *Napier*, 1646.

The class would benefit if entitled to a foreign tour, *Young*, 8124. Employment hitherto given to, sufficient, *ib.* 8048; but there are not enough appointments to encourage competition for the class, *ib.* 8096–8100. Would only be employed in positions for which they had shown special qualification, *ib.* 8082. Appointments, so far, have given satisfaction, *ib.* 8083.

Most have received appointments, *Lefroy*, 7984. There are 70 or 75 appointments for which the education qualifies, and if the five-year rule were strictly applied to all, there would be ample encouragement, *ib.* 7986. It is the less evil to confine these appointments to men who have passed the special class, *ib.* 7987; not admitting, however, that the education gives absolute claim to employment, *ib.* 8000. This dealing is not with appointments in the field, *ib.* 8002.

Commander-in-Chief has decided to give a preference to Passed Officers for all first appointments of a scientific nature, *Young*, 8024. Utility cannot be increased unless more appointments are opened to officers; there are many suitable in India; officers of Indian brigades should be encouraged to pass through, *ib.* 8101.

ARTILLERY ADVANCED CLASS, WOOLWICH—*cont.*

VIII.—*Passed Officers*—cont.

Witness passed in 1868, *Ford*, 8272; has not obtained an appointment, *ib.* 8274. The want of appointments prevents men coming forward, *ib.* 8286; many otherwise would, 8296, 8297. Has not rejoined his regiment, *ib.* 8291. Earliest class soon obtained appointments, with one exception: second class has only had one temporary appointment, *ib.* 8302.

Certificate should not give an absolute claim to employment, Report, p. 25, 48.

ARTILLERY DRILL:

All battalions should be exercised in, Report, p. 47.

ARTILLERY FOREIGN TOUR:

Of late years of older officers, *Young*, 8102. Omitted from this year's estimates, *ib.* 8103, 8104. Cost 300*l.* a year, 8105. Cessation a loss; would not connect it with Artillery Advanced Class, *ib.* 8119, 8120, but with Department of Artillery Studies; officers are selected by the Adjutant-General, *ib.* 8121–8123. Original grant was to enable young officers to go abroad, with Director of Artillery Studies, *ib.* 8125.

ARTILLERY INSTITUTION, ROYAL:

Self-supporting institution established by Artillery Officers for prosecution of scientific pursuits, *Young*, 8068–8070. Always volunteer classes there, *ib.* 8071, 8072.

ARTILLERY STUDIES, DEPARTMENT OF:

I.—*Generally.*
II.—*Students.*
III.—*Course of Instruction.*
IV.—*Examination.*

I.—*Generally.*

Established 1850, *Young*, *App.* IX. (B.), *p.* cviii.

Young officers, immediately after leaving Academy, are required to come for about 3 months before joining their brigades, *Strange*, 7828–7833.

For young officers for six months after leaving Academy, *Warde*, 9301, 9302, 9327. System works admirably, *ib.* 9303. Would extend period to 12 months, *ib.* 9304, 9305. Practical teaching is best after the officer is commissioned, *ib.* 9326.

Revived some years back: object, *Young*, 8021. Classes described, *ib.* 8030. Officers, &c. for the long Shoeburyness Course come to him for three months previously, *ib.* 8031–8033. Does not correspond to Engineer School at Chatham, *ib.* 8039. Would not assimilate them; for Artillery Officers are more inclined to book-work after some years service, than on just leaving the Academy, *ib.* 8040, 8042, 8108. Is carried on at Artillery Institution, *ib.* 8067.

Distinct from Artillery Advanced Class, *C. B. Brackenbury*, 8157; absolutely necessary, *ib.* 8158; properly conducted, *ib.* 8159. Would connect with Woolwich Academy, *ib.* 8166, and pass every officer leaving it through, *ib.* 8167. There is nothing to certify, *ib.* 8171, and officers after instruction join their brigades, *ib.* 8172.

Disapproves: young officers learn little; Woolwich not a good place for them, *Milman*, 7586, 7587.

Objects to system, *Owen*, 7114.

To be systematized, Report, p. 48.

II.—*Students.*

From 20 to 22 are present at once, *Strange*, 7835; afterwards go to batteries at Woolwich for regimental instruction, *ib.* 7836–7838, coming to witness in spare time, *ib.* 7839, 7840, for three months more, *ib.* 7845. On joining have very limited knowledge of artillery, *ib.* 7846, 7847. Discipline lax generally, *ib.* 7848–7852; but behave as officers and gentlemen, *ib.* 7853; and work well, *ib.* 7872. Might on emergency be taken for active service, *ib.* 7881.

Militia and Volunteer Officers should come in batches, *C. B. Brackenbury*: 8160. Staff College Passed Officers should come in May and stay three months, *ib.* 8161, 8162. About 125 come under instruction annually, *ib.* 8163; by order of Adjutant-General, *ib.* 8164, 8165, in batches as appointed to Artillery and Engineers, *ib.* 8166.

Officers from Staff College, *Young*, 8060–8064. Firemasters' class all volunteers, *ib.* 8093.

Report of Director might govern the allowance of choice of brigades, *Strange*, *App.* III. (A.), *p.* liii.

Students to be placed under the immediate charge of the Director, Report, p. 48.

ARTILLERY STUDIES, DEPARTMENT OF—*cont.*

III.—*Course of Instruction.*

Will last as long as the officer remains at Woolwich, *Nicolson*, 7819. Is intended to be thoroughly practical, *ib.* 7801. Has sword-drill, *ib.* 7737; will probably have to practise saddling and bridling, *ib.* 7740. Taught nothing of managing young horses, *ib.* 7739, or veterinary matters, *ib.* 7741. Has not done any pontooning or construction of bridges, *ib.* 7742, 7802, 7803.

Arsenal Course must be at Woolwich, *C. B. Brackenbury*, 8203.

Practical Instruction must be close to the Arsenal, *Young*, 8065, 8066.

Every artillery officer should have a year of practical instruction at Woolwich and Shoeburyness, *Strange*, 7865; quarters at Shoeburyness are wanting, *ib.* 7866, 7867, 7883. Overlooks officers throughout their instruction, *ib.* 7834. Endeavours to teach artillery duties of a siege train or garrison, *ib.* 7841, including mechanical appliances, *ib.* 7842. Has no means of teaching Field Artillery movements, *ib.* 7934. Young officer goes through Course of Military Law; and is examined in, before promotion, *ib.* 7870.

Has now a very intelligent and well-disciplined class in Military Law, *C. B. Brackenbury*, 8151, 8156, 8210, fresh from the Academy, *ib.* 8152; the studies should be all practical, *ib.* 8154. The officers complain sometimes they have so little to learn, *ib.* 8156, 8238; but, except mathematics and languages, it is all new ground, *ib.* 8239. Would like to see studies carried farther, *ib.* 8173. Lectures on various subjects already given to selected and volunteer classes, *ib.* 8178, 8179. Would include riding, military law, military history, strategy, tactics, details of equipment, *ib.* 8201. Course lasts six months or until next batch joins, *ib.* 8202. None escape lectures on Military Law, *ib.* 8173.

Young artillery officers have two lectures on Military Law weekly, *Young*, 8074, 8132, 8133, which they seem to like, *ib.* 8108.

Riding is ordinary riding-school work, after a year of it at Academy, *Nicolson*, 7735, 7736.

A Lecturer required on Art of War, *C. B. Brackenbury*, *App.* IX. (A.), *p.* cvii.

Witness tests the students every day, *C. B. Brackenbury*, 8168–8170.

No examinations; but course must be gone through to satisfaction of captain in charge, *Nicolson*, 7821.

Has no final examination, *Strange*, 7834.

To have passed for Artillery leaves much to learn for Staff College, *Baring*, 9235.

IV.—Examination.

Should be required at end of Course, Report, p. 48.

AUSTRIA:

I.—*Military System.*

II.—*Military Education.*

I.—*Military System.*

Staff reorganized somewhat on British system,* *p.* 385, 388.

Appointment and promotion of officers,* *p.* 387, 388.

Officers of Landwehr,* *p.* 389.

II.—*Military Education.*

General principle to build on a sound general education,* *p.* 349.

List of schools,* *p.* 351–355, 389.

Cavalry Brigade Schools for officers,* *p.* 390.

Proposed reorganization,* *p.* 355.

Course of instruction in the several Military Schools,* *p.* 378–385.

Annual expenditure,* *p.* 390.

Staff education is excellent, *Adams*, 8831. It is essentially war training, *ib.* 8833, of long standing. The skill shown in 1848–9 in Italy could not have been exceeded, *ib.* 8834.

Offers to competition at the general schools military exhibitions or scholarships, at State expense, *C. B. Brackenbury*, 8194, 8195. Throws over military schools for theory and imparts practical instruction after 18, *ib.* 8196–8198. System detailed, *ib.* 8230–8236. Cavalry and artillery horses admirably cared for, *ib.* 8244–8248. Austrian officers acquire an astonishing knowledge of military subjects, especially physically geography, *ib.* 8249–8251. Colloquial knowledge of languages universal, *ib.* 8200.

Doubts if an Austrian officer knows all the fords in the empire, *Lacy*, 8407.

Military history taught at military colleges, *E. Walker*, 2802–2804.

AUTOCRACY

Not attainable in places under Government, *Addison*, 3843, 3844, 3850.

B.

BAVARIA, *Military Education.*

List of establishments,* *p.* 397.

Cadet Corps,* *p.* 397.

War School,* *p.* 401.

Artillery and Engineer School,* *p.* 402.

War Academy,* *p.* 403.

BAYONET:

A most important weapon, *Strathnairn*, 9476.

BILLIARDS:

A man is neither better nor worse for playing well, *Porter*, 2284.

BRIDGING:

Could be taught by models at little expense, *Simmons*, 6577, 6578.

BRIGADE MAJOR: *see* STAFF III.

BUNKS:

Bunk system uncomfortable, *Napier*, 963.

C.

CADETS, ARMY:

Officers' first year should be as cadets under training, *Walden*, 6356; treated as officers, but without executive duties, *ib.* 6404, 6405. In this state instruction should be compulsory, *ib.* 6400–6402, 6406.

Would substitute, for ensigns, *Mansfield*, *App.* VII. (A.), *p.* lxxviii.

Spirit of the country would be against, *Cambridge*, 5360.

CAMBRIDGE

Private tutors chiefly do the work, *Vinter*, 2707, 2708.

CAMPS OF INSTRUCTION:

We should have, as the Prussians have, *H. M. Hozier*, 6333, 6334. They generally assemble 30,000 men, *ib.* 6335. We could do so by brigading together the regulars, militia, and volunteers of a district, *ib.* 6336.

CHATHAM, SCHOOL OF MILITARY ENGINEERING AT:

I.—*Generally.*

II.—*Staff.*

III.—*Students.*

IV.—*Course of Instruction.*

V.—*Examinations.*

I.—*Generally.*

Head quarters of Engineers, and a school of instruction for officers and men, *Simmons*, 6517. Engineer officers, other than juniors, come to freshen up their knowledge; also a very few officers and men from other corps for telegraphy and signalling, *ib.* 6532, 6569. The line troops at Chatham derive little benefit from, *ib.* 6572. Deprecates passing many line officers through, *ib.* 6550, 6559, 6633.

Object of the school: admission: details of staff, course, &c. Accommodation deficient, *Gallwey*, *App.* VIII. (A.), *pp.* ci. cii.

Officers' accommodation, halls of study, and lecture room should be improved, Report, p. 25, 47. Instruction of Line Officers generally at Chatham undesirable; but a small class might be formed, ib. 47.

II.—*Staff.*

All under the director, assisted by a brigade-major, *Simmons*, 6538. Numbers, *ib.* 6540, 6560. Pay of instructors scarcely sufficient, *ib.* 6579, 6580.

* Reports on Foreign Military Education, in a separate volume.

CHATHAM, SCHOOL OF MILITARY ENGINEERING AT—*cont.*

III.—*Students.*

Officers as a rule physically fine and athletic, *Simmons*, 6609. Sometimes 80 together, *ib.* 6524. Line officers do not become entitled to any advantage, *ib.* 6537. Leave allowed, *ib.* 6539. Engineer students work hard at study and at athletic sports, *ib.* 6612. For industry, previous habits and the actual work which must be done relied on; penalty for failure, loss of leave and time, *ib.* 6644–6648. Director reports on each officer leaving, *ib.* 6546, 6549. Men average 1200, of whom 600 are under instruction, *ib.* 6541. A company arriving from foreign service comes for short instruction, *ib.* 6542. Officers are in barrack, *ib.* 6631; separate from line troops, *ib.* 6632. Accommodation not always sufficient, *ib.* 6558. Officers have separate rooms, *ib.* 6531; and mess together, *ib.* 6532. Discipline as in a regiment, *ib.* 6526–6529; there is no sort of punishment, *ib.* 6530. Discipline could not be higher, *ib.* 6539. Students very amenable to discipline, *ib.* 6581, 6582.

IV.—*Course of Instruction.*

Course detailed, *Simmons*, 6517, 6561; mode of teaching *ib.* 6635, by lectures and classes, *ib.* 6519, 6561–6563. No répétiteur system, *ib.* 6636. A class should not exceed 20 officers, *ib.* 6583, except for special lectures, *ib.* 6615. Languages not taught, *ib.* 6518. Lasts two years, including leave; and is a continuation of the Woolwich studies, *ib.* 6520–6522, 6543, 6544, 6634; time counts as commissioned service, 6523. For line officers course lasts two months, *ib.* 6533. Before studies commence, purely military duties occupy three or four months, *ib.* 6642, 6643; the subsequent study involves daily about five hours' close work, *ib.* 6629, military duty being then exceptional, *ib.* 6630.

Objects of two-year course, *Napier*, 1309.

Synopsis of instruction at in 1868, *App.* VIII. (*B.*), *p.* ciii.

A rest after hard work of Woolwich, *Cunynghame*, 7262, 7263. Passed the military course in 71 days, *ib.* 7256, 7257, strictly practical, *ib.* 7258.

Young engineer officers have easy work at first, *Milman*, 7589.

Engineers learn building after they go to Chatham, *Lefroy*, 7996.

Formerly a good system of practical instruction for the line existed, *Stephenson*, 6098.

To make it a regimental school for field fortification would involve regiments being moved there, *Codrington*, 6071.

Would extend utility by instructing regiments in Field Works and Siege Drill, *Lennox*, 9265. A candidate for the Staff should have some training at, *ib.* 9266. Would have sieges every year, instructing regiments in the work. An Engineer General should command the district, 9274, 9275. All officers should be encouraged to come to see the work, *ib.* 9297. Extra work and cost very small, *ib.* 9298, 9299.

Road-making (with special reference to mountainous countries) should be taught, Report, p. 47.

V.—*Examinations.*

No entrance examination, *Simmons*, 6570.

Examination before garrison board, *Cunynghame*, 7259.

If unsatisfactory, student would be sent back for another month, *ib.* 7260.

Not satisfied with Final Examination, *Simmons*, 6545, Makes no difference in officers' position, *ib.* 6546. Easier examination for line officers, *ib.* 6547. No certificates given, *ib.* 6548.

CHATHAM GARRISON:

Accommodation for three full battalions, *Simmons*, 6575; but garrison duties too heavy to allow of much engineering instruction, *ib.* 6573, 6574.

CHELTENHAM COLLEGE:

I.—*Generally.*
II.—*Junior Department.*
III.—*Classical Department.*
IV.—*Modern Department.*

I.—*Generally.*

Boys come direct from, *Abbott*, 1732. There is an established Modern Department, *ib.* 1738. Very successful for Woolwich, *ib.* 1701, 1731.

CHELTENHAM COLLEGE—*cont.*

I.—*Generally*—cont.

Cadets from, not so good in tone as from old Public Schools, *Addison* 3878, 3879. Sent 33 cadets out of 820, *ib.* 3793.

Pupils do not need cramming; 300 boys in each department and 100 in lower school, *Barry*, 5430, 5470. The two departments mix freely in boarding houses and playground; but are otherwise distinct, *ib.* 5487, 5488; their moral tone equal, but the most troublesome boys were those preparing for military examinations, *ib.* 5495, 5496. Principal exercises a certain recommendatory control as to department in which a boy is put, *ib.* 5543. Cost of a pupil, including clothes and pocket-money, 90*l.* a year at most, *ib.* 5462. Boys live in masters' houses and have excellent accommodation, *ib.* 5463. Provisions good, *ib.* 5464. Gymnasium &c., cost 2,500*l.*, *ib.* 5483. Gymnastics compulsory, swimming usually learnt from choice, *ib.* 5465. Riding could be arranged for, *ib.* 5467. A boy preparing for examination could have private instruction, *ib.* 5485, 5486. Masters are appointed entirely by principal and not highly paid, *ib.* 5559, 5560. Drunkenness infrequent, *ib.* 5516, 5517; a small number of cases of disease from immorality, *ib.* 5518. Woolwich examination exercises a healthy influence, *ib.* 5510, 5511.

Many boys come direct from, for examination, *Dasent*, 4568.

Very successful with its candidates, *Gordon*, 2553, 2554, in consequence of its modern department, *ib.* 2556, 2600, 2601.

Sends boys for Woolwich entrance examination uncommonly well prepared, *Heaviside*, 2427; its boys are intended about equally for Woolwich and the Universities, *ib.* 2452.

Is a public School, *Moseley*, 2091; successful with its candidates, *ib.* 2092, 2093. There is a modern side, *ib.* 2101.

Candidates from, very successful, *Napier*, 189, 390; without aid from crammers, *ib.* 300, 1245, 1252.

Has a son just passed through, *Porter*, 2186; its pupils successful at Woolwich and Sandhurst, *ib.* 2187; without intermediate cramming, *ib.* 2188. They appear well grounded, *ib.* 2299. Instruction, tone, and spirit are admirable, *ib.* 2194–2196.

Advised a friend to keep his son at, rather than with a crammer, in preparation for Woolwich, *Simmons*, 6515.

May be cheaper than other Public Schools, *White*, 4886.

II.—*Junior Department.*

For young boys, before the parent has selected the Classical or Modern Department, *Porter*, 2190–2192.

III.—*Classical Department.*

Classics the main study, with modern languages, *Porter*, 2189–2193.

Ages a little younger than in Modern Department, *Barry*, 5472. Candidates for Indian Civil Service prepared on classical side, where languages are best learned, *ib.* 5473. Gives the highest mental training, *ib.* 5490, 5503.

IV.—*Modern Department.*

Studies; Mathematics and science (with a little classics), and modern languages, *Porter*, 2189–2193; not exclusively for the Army, *ib.* 2285.

Coordinate with classical department: mathematics the staple; system of education, *Barry*, 5430–5432, 5436, 5502, 5533–5535, 5541, 5542. Head master could generally tell if, and where, a boy would pass in an examination, *ib.* 5434. Some rudimentary military instruction could be ingrafted on this system if necessary, *ib.* 5440–5445, 5454–5457, 5479–5482, 5506–5509, 5523–5526, 5544–5546, or if military education were continued after entrance into the army, Cheltenham could furnish a sufficient foundation, *ib.* 5554; without interfering with the liberal education now given, *ib.* 5449, 5450, 5553. Ages of boys range from 14 to 18½, *ib.* 5452. Time applied to mathematics increases as pupils get higher in the school, *ib.* 5453. Boys work very hard in preparing for Woolwich, *ib.* 5458. Military attainments would be raised if commissions were given for competition, with a stiff examination, *ib.* 5459, 5460. Such encouragement is desirable, *ib.* 5461. More pressure for admittance to modern than classical side, *ib.* 5471. Gives modern liberal education, *ib.* 5489. Is

CHELTENHAM COLLEGE—*cont.*

IV.—*Modern Department*—cont.

not a refuge for dull and idle boys, *ib.* 5504, 5505, 5522. A boy has not too many subjects at once, *ib.* 5536. The first hundred, or so, would drop Latin, *ib.* 5537, 5538. Greek taught exceptionally only, *ib.* 5539. No cramming, *ib.* 5540.

Regards it as essentially a Military College, *Southwood*, 5563–5567, 5593–5595, which design has been somewhat crippled by the introduction of other subjects, *ib.* 5569. If unfettered, would regulate the course by the Woolwich programme, *ib.* 5570; not commencing until a lad, at 15, had acquired general education, *ib.* 5571–5574, 5587–5591; order of the studies, *ib.* 5578. Fortification taught practically by two civilian instructors, *ib.* 5581, 5603–5606, as well as at Woolwich, *ib.* 5610–5612. There are 300 pupils with 20 to 25 masters, 5581. Boys prefer the houses of masters of the Department, *ib.* 5582; boys come from Eton, Rugby, &c., *ib.* 5583; very rarely go to crammers, *ib.* 5584; those who do very rarely succeed, *ib.* 5585. The boys feel sure of passing for Sandhurst or Direct Commissions; at last examination his whole class passed, *ib.* 5586. From 12 to 15 go annually to Woolwich, *ib.* 5596. Military subjects taught in school hours as part of regular studies, *ib.* 5613. With some additions to the Course, could turn out an officer as well fitted for the Artillery as Woolwich could, *ib.* 5614–5617, and could send (and has sent) candidates to the Woolwich final examination, *ib.* 5620–5622. All lads intended for army learn fortification and military drawing, *ib.* 5623, 5624, and an officer entering from Cheltenham has every requisite for pursuing his military education, *ib.* 5618, 5619.

Has not the vigour of the classical side, *Temple*, 5756, 5760, 5761.

CHELTENHAM TOWN:

Gossip and scandal are rife, *Barry*, 5519.

CHEMISTRY:

Very necessary for Scientific corps, *Napier*, 1213.

Unnecessary for an ordinary officer, *Porter*, 2139–2141.

CIVIL SERVICE COMMISSIONERS:

Might take Direct Commission examinations; but have work enough, *Dasent*, 4521.

Could examine for entrance to Woolwich and Sandhurst, *Walrond*, 9561.

Permanent Examiners, *Walrond*, 9563–9565, 9570, 9583, 9596, 9614. Occasional examiners, *ib.* 9566–9569, 9580, 9581, 9597, 9630. Commissioners, 9575–9577. A separate staff for Indian Civil Service Examinations, *ib.* 9582. Usually there is full employment, *ib.* 9586. Native examiners for foreign languages, *ib.* 9603. Maintenance of uniformity, *ib.* 9562. Treatment of the papers, *ib.* 9574, 9584, 9585. Thousands are examined annually, *ib.* 9578, 9579. *Vivâ voce* examinations, *ib.* 9587–9590, 9628, 9629. Public will learn the method of a permanent examiner, *ib.* 9596, 9597, 9614. "Cram" eliminated from more advanced examinations, *ib.* 9620. Very ill-qualified candidates rarely come up, *ib.* 9621; but there are great differences among candidates, *ib.* 9622. In qualifying examinations, reports by epithets (as "good") not marks, *ib.* 9631, 9632.

Should conduct examinations for Direct Commissions, and for entrance to Sandhurst and Woolwich, Report, p. 13, 31.

CLASSICS:

Literature aside, learning classics is really learning English, *Barry*, 5493, 5494.

Develop intellect, *C. B. Brackenbury*, 8261–8263; but the development should be before entering a military school, *ib.* 8264.

Would expect a good classical scholar to be good also in English and history, *Dasent*, 4519. Does not depreciate, *ib.* 4557.

"Cramming" in, described, *Gordon*, 2522; grammar cannot be crammed, *ib.* 2523. Grammatical knowledge increased of late years, *ib.* 2530. Greek grammar known better than the Latin, *ib.* 2531. Best men in classics often the best in other things also, *ib.* 2533. Should pass, with fair marks, a classical paper which gave general sense of a passage though wrong in its grammar, *ib.* 2540–2542. Many candidates cannot construe simplest sentence, *ib.* 2543. Has never regretted inability of army officers to keep up their classics, *ib.* 2544, 2561; but those, with a taste that way, might be encouraged to do so, *ib.* 2545, 2562, as an aid to modern languages, *ib.* 2611, and a point of mental cultivation, *ib.* 2612. One third of the men who take up Latin do not take Greek, *ib.* 2559. Foreigners do not excel Englishmen, *ib.* 2584; but Scotch and Irish do, *ib.* 2585–2588. Considering time spent on them, ignorance is amazing, *ib.* 2591; possible cause, 2592. Men will not learn classics, *ib.* 2606.

As worthy a qualification for Artillery and Engineers as any subject, except mathematics, *Lefroy*, 7967, 7968. Good classical scholars a gain to any branch of the service, *ib.* 8007.

It is good for an officer to know, *Milman*, 7644; but needless to keep up knowledge, *ib.* 7645.

The standard is going down, *Moseley*, 2116.

Upheld in education, *Napier*, 190–192. Undesirable at Woolwich Academy, *ib.* 1194–1197, 1311–1314.

Constitute good education, *Nugent*, 7440.

Not suited to all intellects, *Temple*, 5774.

Advantages of knowing, *Warde*, 9314, 9315.

COMMISSARIAT:

An important part of Quartermaster-General's business, *Lacy*, 8410.

How to feed the troops not very important to a regimental officer, but most essential to a staff officer, *Lefroy*, 8017.

Little knowledge of duties learnt at Sandhurst, *Napier*, 621.

COMMISSARIES OF ORDNANCE:

Ought to be educated artillerists; removing artillery stores from artillery charge injures the regiment, and may lead to disaster, *Strange*, 7868.

COMMISSIONS, FIRST:

Return of, by and without purchase, 1858-1867, *App.* XIII. (A ii.), *p.* cxlvi.

Number granted to non-commissioned officers, 1858–1867, *App.* XIII. (A ii.), *p.* cxlvi.

Number of free, very variable, *Abbott*, 1925, 1926.

To give all to sons of officers would be unfair, and would spoil the tone of education, *Abbott*, 1872–1875.

Should only be given on passing a *bonâ fide* thorough examination, *H. M. Hozier*, 6269; a test which a large portion of the officers could then undergo, *ib.* 6297–6300, 6329. Would incorporate a minimum qualification with competition for free commissions, *ib.* 6330–6332.

Age for, *see* OFFICERS, II.

COMPETITION, OPEN:

Prefers nomination, with qualifying examination, *Napier*, 1155, 1159. No difference socially between Woolwich competition candidates and Sandhurst nominated ones, *ib.* 1193; or their Woolwich predecessors, *ib.* 1236.

Renders cramming inevitable, *A. L. Walker*, 9070–9072. Causes overwork, *ib.* 9029–9033.

CORRESPONDENCE:

Officers ought to be practised in, *Strathnairn*, 9491.

COUNCIL OF MILITARY EDUCATION:

I.—*Generally.*
II.—*Personnel.*
III.—*Duties.*
IV.—*Relations with Secretary of State and Officer Commanding-in-Chief.*

I.—*Generally.*

Historical notice, *App.* I. (A.), *p.* i.

Correspondence as to formation and extension of powers, *App.* I. (B.), *pp.* ii–vi.

System works well; no gain in changing it, *Cambridge*, 5370.

Works thoroughly well as it is, *Hamley*, 8691, 8718.

Works well, *Peel*, 9436. Why the civilian member was appointed, *ib.* 9455.

Supposed to work up to public schools, *Napier*, 313, 314; occasional communication with them would facilitate this, *ib.* 333.

II.—*Personnel.*

Composition, *Napier*, 8, 9. Commander-in-Chief is *ex officio* honorary president, *ib.* 103, 137, 140; is occasionally consulted personally, *ib.* 105, 138; but never comes to the office, *ib.* 69. If he were not Commander-in-Chief, the president would take his share of the work, *ib.* 139. The working members *ib.* 68, 70; their salaries, *ib.* 49. Tenure of appointment, *ib.* 12–21, 45. The secretary, *ib.* 67, 131–133. The clerks, *ib.* 85, 86. Appointment of members,

COUNCIL OF MILITARY EDUCATION—*cont.*

II.—*Personnel*—cont.

ib. 106; their attendance, *ib.* 56–58, 60, 64; and vacations, *ib.* 61, 62. The civil member, *ib.* 53–55, 88, 96–98. Members have separate rooms, *ib.* 65; their meetings, *ib.* 66, 76, 84; and discussions, *ib.* 28–30, 33, 78. Have no *Agenda* paper, *ib.* 77.

Military members, *Hamley*, 8705, 8722. Civilian member, *ib.* 8706, whose tenure is not limited, *ib.* 8723, 8724; his salary, *ib.* 8720, 8728; length of service, 8721; his attendance only occasional, *ib.* 8707–8710, 8719, 8725–8727. There are memoranda daily requiring signature of all members not on leave, *ib.* 8711. A secretary and eight clerks, for general duties, *ib.* 8712–8714. Commander-in-Chief is *ex officio* president, *ib.* 8716; has not been called on to attend, *ib.* 8715.

Is the only civilian ever on the Council, *Moseley*, 2053–2055.

A Director-General of Military Education should be substituted, Report, p. 13, 31.

III.—*Duties.*

Not aware of any general Regulations, *Napier*, 71, 127–130. Duties described, *ib.* 10, 92; their increase, *ib.* 128–130; and distribution, *ib.* 75, 79, 93, 94. Work is chiefly with Army Schools, &c., *ib.* 59, 87, not much correspondence about the Colleges and general education, *ib.* 74, 134–136. Does not control discipline of the Colleges; merely inspects studies, *ib.* 27, 117. Examines by means of Examiners, *ib.* 11. Collectively recommends Examiners and Professors for appointment, *ib.* 22, 31, 32, 115, 116, but has not power of appointing, *ib.* 32, 114. Such recommendations are never overruled; though in other matters their advice sometimes is, *ib.* 37–41, 113, 123–125. Criticizes Examination Papers, *ib.* 43, 44. One member at least present at every admission examination, *ib.* 89–91. Has little to do with Hibernian School, *ib.* 95. Responsible for education at Sandhurst, *ib.* 422. Powers extend to studies and are not vague, *ib.* 923.

Do not clash with Commissioners of Sandhurst, *Percy Herbert*, 4988, 4989. Have little to do with discipline, *ib.* 4990.

Principal duties with Army Schools, *Cambridge*, 5369.

Divided among members, *Hamley*, 8701. Meets daily, *ib.* 8702 and has always some work, *ib.* 8703. Discipline is not under it, *ib.* 8695.

Sometimes suggest alterations in Examination papers, *Heaviside*, 2389.

IV.—*Relations with Secretary of State and Officer Commanding-in-Chief.*

Is their adviser in matters concerning Military Education, *Napier*, 35, 118, 119. Reports are addressed usually to the Commander-in-Chief, *ib.* 23–26, 72, 73, 104; occasionally, but rarely, to the Secretary of State, *ib.* 80–82, 109, 120; though the Secretary of State can communicate directly with the Council when he pleases, *ib.* 121, 122, 126. Questions of principle must be settled by Secretary of State, *ib.* 108–111. To authorize action a letter must be signed by Military Secretary, *ib.* 112. No gain in making it a Horse Guards or War Office Department, *ib.* 36; but it could not be independent of the Commander-in-Chief, *ib.* 34, 107.

Communications from College authorities pass through Military Secretary, *Hamley*, 8692. Positive recommendations of Council in matters of study almost invariably attended to, *ib.* 8693. Recommendations for Secretary of State go through Commander-in-Chief; neither Horse Guards nor War Office obstructs, unless on grounds of expense, *ib.* 8694, 8717; nor any other inconvenience than a little loss of time, *ib.* 8695.

Correspondence ought to pass through Commander-in-Chief as *ex officio* president, *Cambridge*, 9527.

COURTS MARTIAL:

Practice of, not taught at Sandhurst, *Napier*, 595–599; should be learnt in the Regiment, *ib.* 598, 610, 728.

[*See also* MILITARY LAW.]

CRAMMERS:

For Sandhurst and Woolwich are very similar, *H. Brackenbury*, 6994.

Injure moral tone, *Cunynghame*, 7274–7276, by neglecting athletics, *ib.* 7277.

No need for, if Public Schools taught well, *Porter*, 2300.

CRAMMING:

History and Geography most easily crammed, *Abbott*, 1747, 1748. Crammers specially devote themselves to questions likely to be asked, *ib.* 1715. It is a chance whether a crammed boy succeed or fail, *ib.* 1717.

Evils induced by system, *Baker*, *App.* VII. (B.), *p.* lxxxvi.

To be deprecated, *Barry*, 5428, 5429.

Most detrimental; creates any bad tone at Sandhurst and Woolwich, *Cambridge*, 5356.

An Examiner should detect and disallow, *Dasent*, 4524, 4532. Often detects use of same manual by many students, *ib.* 4434, 4435.

In classics, *Gordon*, 2522; not practicable in grammar, *ib.* 2523.

The more searching an Examination, the less the cramming, *Heaviside*, 2417. Cramming imparts knowledge with the least trouble, *ib.* 2418.

Does not occur in mathematics; but in history, geography and languages, *Lefroy*, 7991.

Candidates usually go to Private Tutors, *Napier*, 155, 288; for special subjects, *ib.* 156, 157. Nature of examination causes cramming, *ib.* 274; is bad educationally, *ib.* 386, and should be stopped, *ib.* 387. Crammers may foresee the style of questions to be put, *ib.* 399; but cannot know the questions themselves, *ib.* 398. Nearly all candidates who fail come from crammers, *ib.* 193. Cramming for Woolwich, *ib.* 1188, 1189, 1219–1234, 1247. The mixing in one paper of the obligatory and non-obligatory parts of a subject may be in favour of, *ib.* 405–415. Classics and Mathematics cannot be crammed, *ib.* 1230, 1247.

Fostered by present age for entering Woolwich, *Peel*, 9469; ought to be rendered needless if Public Schools did their duty, *ib.* 9470, 9471.

Evils of, *Strathnairn*, 9497.

Only preventible by directing examinations to the subjects worked in Public Schools, *Temple*, 5740. Its evil is that it seeks to impart information too quickly, *ib.* 5766.

A sure result of competition, *A. L. Walker*, 9070–9072.

Cannot be entirely counteracted, *Walrond*, 9571–9573, 9617. Mode of defeating in Indian Civil Service Examination, *ib.* 9598, 9599, 9635, 9637. Cramming applies to literature and history, *ib.* 9601, 9602. Subjects most easily crammed, *ib.* 9609–9611, 9618, 9619. Applies least to languages, *ib.* 9609; only partially to mathematics, *ib.* 9606, 9607. Boys often sent to crammers to test their chance of passing, *ib.* 9633, 9634.

CRAMMING SCHOOLS:

Boys work harder than at Public Schools, *Abbott*, 1706. Want of discipline, *ib.* 1666, 1718. Government inspection of no practical use, 1672–1674, 1719–1721, 1741, 1742; though the worst schools might be excluded, *ib.* 1722, 1723, 1746. Have existed for 40 years, *ib.* 1687, and most of the Addiscombe cadets came from them, *ib.* 1686, 1689.

Very detrimental to morals, *Dasent*, 4524. Many candidates come from, *ib.* 4570.

Nature, regulations, and tuition of Mr. Frost's at Kensington described, *Frost*, 4254–4336. There are some schools without discipline, *ib.* 4287, 4288. Sees no good in Government inspection, *ib.* 4332, 4333; but none could object, *ib.* 4334, 4335.

Worst officers come from, *Hort*, 5109.

Exist under rule of supply and demand, *Milman*, 7623. As a rule, do not cause bad habits, *ib.* 7527.

Bad habits acquired at, *Mott*, 4365, 4366, 4455–4459. Cadets from, often come with venereal disease, *ib.* 4478. Witness was for 1¾ year at Mr. Wigley's at Clapham: should have passed into Sandhurst better, had he gone direct from Eton, *ib.* 4344–4355, 4358, 4456.

Are in and around London, *Napier*, 290, 366. Low tone of discipline and morals, *ib.* 289, 291, 335–338; in some, boys are allowed to be out all night, *ib.* 369, 378, 379. Members of Council are sometimes asked to recommend, *ib.* 339; witness always refuses, *ib.* 340. Teach children better than Public Schools, *ib.* 304; especially for Woolwich, *ib.* 1222–1234. Cannot define a cramming school, *ib.* 1237–1241. From "Public School and Private Tuition" probably means from a Cramming School, *ib.* 308.

Some are objectionable; some very good, *Owen*, 7093–7095.

CRAMMING SCHOOLS—*cont.*
Sunbury (Captain Lendy's) described: favourably, *Prior*, 4582–4587, 4589–4593, 4616–4630, 4693, 4696, 4705.
Every way narrow and deteriorate lads, *Strange*, 7858.

CRIMEA:
Embarking horses at Varna. Difficulty was from lack of materials, *Hamley*, 8675.
Staff officers were scarcely competent, *Porter*, 2361, 2362. Men instructed in field works and rudimentary fortification would have been invaluable, *ib.* 2350–2352. Engineer officers wanted elsewhere had to instruct troops in making gabions and fascines, *ib.* 2354.

D.

DE BURGH'S, MR., SCHOOL; *see* DUBLIN.

DEGREES, HONORARY:
As inducement to officers to compete for Staff College, *Napier*, 1585–1591.

DEGREES, MILITARY:
Not in favour of, *Abbott*, 1889–1894.

DETENTION:
During a part of vacation, an effective punishment, *Abbott*, 1860, 1861.

DIRECT COMMISSIONS EXAMINATION; *see* EXAMINATIONS, II.

DIRECTOR-GENERAL should be substituted for the Council, Report, p. 13; acting under and directly responsible to the Secretary of State, ib. p. 31.

DISCIPLINE:
A small college is easier to manage than a large one, *Abbott*, 1781. Would not give disciplinary power to the Educational Staff, *ib.* 1818.
There is a national change towards laxity, *Strange*, 7849.
Foreign discipline may diverge essentially from English ideas, *Walden*, 6392.

DIVINE SERVICE:
A riding school may answer for, if nothing better can be had; not otherwise, *Fraser*, 8365.

DRAWING, GEOMETRICAL:
Indispensable for Engineers, *Napier*, 1198.

DRAWING, MILITARY:
Not indispensable to an officer, *Napier*, 563.

DRILL:
Regimental drill is no sham, *H. M. Hozier*, 6287.
For soldiers should be short, active, and intelligent, *Strathnairn*, 9476.
Knowledge of, essential to understanding tactics, *E. Walker*, 2790.
Prefers a boy for regimental drill, without previous knowledge of it, *White*, 4824, 4825, 4842, 4843. Regimental drill better learned at a Depôt than a College, *ib.* 4858, 4859.

DUBLIN (MR. DE BURGH'S SCHOOL):
More discipline than at most such places, *Nugent*, 7338: tone fairly good, *ib.* 7339.

DUBLIN, TRINITY COLLEGE:
Sends excellent candidates, *Gordon*, 2587.
There used to be a School in connexion with, successful for Army examinations, *Mosely*, 2095.

E.

EDINBURGH HIGH SCHOOL:
Does not count as a Public School, *Napier*, 203, 204.

EDUCATION:
I.—*Generally.*
II.—*Of youths about to become Officers.*
III.—*Place of Education.*

I.—*Generally.*
Unless it improve generally, the standard for Direct Commissions cannot be raised, *Abbott*, 1697.
School education should be kept general, *Benson*, 5632. Would not teach military subjects to prejudice of more important mental training, 5743.
Examination system has developed education which did not previously exist, *Dasent*, 4500.
Knowledge in English schools low, *Gordon*, 2548. Grammatical knowledge improved of late, *ib.* 2530. The army candidates sent up are, in large proportion, a discredit to any school, *ib.* 2536–2538. Not improved in last 10 or 20 years, *ib.* 2550. In the interest of liberal education generally, a Modern Department would be a good institution at all Public Schools, *ib.* 2603–2605.
Candidates for Sandhurst and for Direct Commissions are better prepared than formerly, *Heaviside*, 2383, 2446; but the improvement is not increasing, *ib.* 2384. In an educational establishment, it is not exceptional for half or two-thirds of the pupils to be idle, *ib.* 2444.
The standard for Direct Commissions Examination had to be reduced as low as possible, or officers could not have been procured, *Napier*, 46–48, 210–212. Candidates are now better prepared than before the standard was reduced, *ib.* 219, 220. More attention paid, in Schools, to Natural Sciences. *ib.* 421. Fortification, as taught in schools, mere rubbish, *ib.* 206, 207. To make French obligatory would increase difficulty of obtaining officers, *ib.* 245, 249. French part of the education of a gentleman, *ib.* 316.
Approves the old system of sending boys abroad to study languages and military art, *Strathnairn*, 9503.
The longer general education can be continued the better. *Temple* 5785–5790. Acquirements of an intelligent lad of 16 estimated, *ib.* 5791, 5792.
General society more beneficial than exclusively professional, *White*, 4833, 4852–4854.

II.—*Of youths about to become Officers.*
Sums voted for, and actual expenditure on, 1858–1867, *App.* XIII. (A. i.), *p.* cxlvi.
Classical training develops the mind better than military technical instruction. Would limit latter to periods after joining the army, *Addison, App.* II. (C.), *p.* xiii.
There should be, in certain subjects, military education before entering the army, *Baker*, 6146.
Until old enough to enter a special training school, a lad's education should be as general as possible, *Barry*, 5436.
Standard would be raised, if free commissions and military exhibitions were open to general competition, at a Public School standard, *Benson*, 5658–5660.
Candidates should have as long as possible for general education, *H. Brackenbury*, 6936, 7050, 7051.
Military instruction of the utmost importance: should be acquired before entering the army, *Cambridge*, 5351. All Line Officers should pass through Sandhurst, *ib.* 5348, 5349, 5356, 5374, 6447, 6449, 6454–6456, 6473–6475; and enter army as efficient officers, *ib.* 5406.
A military college indispensable for, *Cameron*, 5312–5320, 5338–5340.
Public School system only one applicable, *Percy Herbert*, 5013, 5044. No object in making soldiers a separate caste early in life, *ib.* 5081, 5082; or in having an intermediate school between Public Schools and the Army: any special knowledge could be acquired at a private tutor's, *ib.* 4997, 4998, 5041, 5050.
Technical military instruction best imparted at a Military College, *Hort*, 5125.
Technical instruction should be insisted on before joining, and a Commission the prize of proficiency, *H. M. Hozier*, 6290, 6293. Practical military science better acquired before 18 than after, *ib.* 6311–6314.
Was employed in 1856 to draw up a general scheme, *Lefroy*, 7936; which contemplated Schools of Application, and would have increased expense; *ib.* 7955.
Would regret to see knowledge limited to what is indispensable for routine duties, *Napier*, 259. The State has a right to expect the education of a gentleman, *ib.* 260. Arithmetic necessary, *ib.* 258: first four rules indispensable, *ib.* 221–233: but ought to know fractions, proportion, and interest, *ib.* 266, 267, 272. Advantage of understanding Euclid, *ib.* 268–271.; also French and German, *ib.* 242–244. The Sandhurst course is very desirable for an officer, *ib.* 730; though the actual subjects taught may not be necessary, *ib.* 731. Would regret to see all candidates for Commissions pass through Sandhurst, *ib.* 1110, 1111: that is, through one educational groove; likes variety of training, *ib.* 1112. Professional training gained at Sandhurst would be of little use, *ib.* 1113. A good military education desirable for regimental officers, but not absolutely

EDUCATION—*cont.*

II.—*Of youths about to become Officers*—cont.

necessary for all, *ib.* 1146. Ought to take two years, *ib.* 443, 476, 496, 498; but if confined to purely military subjects might be reduced, *ib.* 502. The present Sandhurst course takes 18 months, *ib.* 497. It was once reduced to a year, but had to be raised again, *ib.* 499–501.

Before joining, an officer should have a certain military education, *Paulet*, 5898. Officers should be liberally, but, except for Staff and Scientific Corps, not highly educated, *ib.* 5908, 5909. The great point for a regimental Officer is a gentleman's education, *ib.* 5920.

American war proved above everything that special instruction is needed to make good officers, *Simmons*, 6657.

Would only require before entering army some elementary drill, *Smith*, 5192.

Liberal education of officers important; but 16 not therefore too early for joining, *Storks*, 5843, 5844.

No technical education necessary before a boy enters a military college, *Temple*, 5737–5739. Might begin at a later age than now, *ib.* 5785–5790.

Ultimate object to make the best fighting animal, *Walden*, 6417, 6419.

Neither exceptional ability nor extensive reading should be exacted from every candidate for the Line, Report, p. 13.

[*See also* PUBLIC SCHOOLS, II. 4.]

III.—*Place of Education.*

Not obligatory on candidates to state, *Napier*, 199.

EGYPTIANS:

Aptitude for fieldworks, *Simmons*, 6618.

ENGINEER INSTITUTION:

Needed at Chatham, similar to Artillery Institution at Woolwich, *Gallwey*, *App.* VIII. (A.), *p.* cii.

Would add to the working power of School of Engineering, Report, p. 47.

ENGINEERING:

Best works are French, *Abbott*, 2045.

ENGINEERING INSTRUCTION:

Should be under Commanding Engineer, *Lennox*, 9264. Army very deficient in, *ib.* 9265: while modern artillery demands increased skill, *ib.* 9291, 9292. Officers' instruction, beyond siege works with their regiments, should be voluntary, *ib.* 9276. It is desirable to introduce more communication between Line and Engineers, *ib.* 9290, 9293.

Should be applied to all battalions, Report, p. 47.

ENGINEERS, ROYAL:

A staff officer should not be a half-bred Engineer, *Baring*, 9207–9209.

Mathematics not essential to, *C.B. Brackenbury*, 8142: and the bulk of the officers devoid of the faculty, *ib.* 8143. Would not require from them the artillery manufacturing course, *ib.* 8145. The Engineers at present get the real mathematicians, *ib.* 8211.

Require much higher education than artillery, *H. Brackenbury*, 6963.

Require more science than the Staff, *Forster*, 9413.

High mathematics imperative, *Heaviside*, 2398, 2453.

High mathematics desirable, *Percy Herbert*, 4974. Generally looked upon as Staff Officers, *ib.* 5017.

Eligible for employment at Woolwich Academy, *Milman* 7541, 7542.

Not required to pass through Staff College for Staff appointments, *Napier*, 1431. Cadets from Woolwich go to Chatham for two years, *ib.* 1309.

Line officers with a knowledge of field works were employed in Crimea as Assistant Engineers, *Porter*, 2353.

Join duty from Chatham at 21 to 23, *Simmons*, 6606, 6637, not too old, *ib.* 6639, 6640. About 20 cadets required yearly, *ib.* 6525. Has proposed rewards for good sapping, *ib.* 6584.

Highly paid, *Strange*, 7918.

Education for, not to be obtained anywhere in two years. *Twisden*, 8864.

Officers who joined from Woolwich, 1858–1867. *App.* XIII. (A. ii.), *p.* cxlvii.

Engineers not to be exempted from Staff College examination, Report, p. 49.

[*See also* OFFICERS, IV.]

ENGINEERING, SCHOOL OF MILITARY, *see* CHATHAM.

ENGLISH LANGUAGE, LITERATURE, AND HISTORY:

Finds no difficulty in testing English work, *Barry*, 5527–5529. The teaching is apt to be less linguistic than that of Latin or Greek; but it has striking advantages, *ib.* 5531, 5532. An English essay, if up to the ordeal, deserves good marks, betokening thought, *ib.* 5477.

12 or 15 years ago candidates showed the utmost ignorance, *Dasent*, 4494, 4501–4503. There has since been great improvement, *ib.* 4496–4499, 4522, 4555, 4556. Examination is not harder than formerly, *ib.* 4498. Could not be subordinated to classics and mathematics, *ib.* 4527, 4528, 4573, Composition has improved, *ib.* 4540: the best test is writing a good letter, *ib.* 4543. Difficulty in teaching English lies in the ignorance of the teachers, *ib.* 4566, 4567. Could be learnt (if taken early) by a few hours' study weekly, *ib.* 4572. Out of 300 candidates, 40 or 50 will have obtained their information well, by reading, *ib.* 4533.

Its being obligatory keeps back public school candidates, *Napier*, 252.

ENNISKILLEN:

Schools at, successful in Army examinations, *Moseley*, 2094.

ETON:

Weak in mathematics; *Frost*, 4301.

Few candidates from, *Gordon*, 2555.

Ought to prepare boys for Woolwich, as well as Cheltenham, *Heaviside* 2430: but now its boys must go to a special Tutor, *ib.* 2428, 2429.

"Army Class" described: successful, *Hornby. App.* V. (B.), *p.* lxxiii.

An attempt at a special class failed, *Moseley* 2102.

Counted as a Public School, *Napier* 201.

With Harrow, furnishes the best cavalry officers, *White*, 4822.

EUCLID:

A little, useful to an officer, *Napier*, 564; though not essential for regimental duty, *ib.* 565, 566, is part of a gentleman's general education, *ib.* 567.

EXAMINATIONS:

I.—*Generally.*

II.—*For Direct Commissions.*

III.—*For Promotion.*

[*See also* ADDISCOMBE, IX.: ARTILLERY ADVANCED CLASS, VII.; CHATHAM, V.: SANDHURST, XII.: STAFF COLLEGE, IX.; WOOLWICH, XIII.]

I.—*Generally.*

Best carried out by individual examiners, *Cambridge*, 5371. A central board could superintend local examinations, *ib.* 6442, 6443.

Objects to very difficult or catch questions, *Dasent*, 4498. No great percentage will be very clever. No system would pass everybody, *ib.* 4540. Questions recur almost inevitably, *ib.* 4542. Would not introduce *viva voce* generally, *ib.* 4545. Attaches little importance to it except as an auxiliary test, 4546, 4551.

If *viva voce*, would not give a better result, *Frost*, 4336.

Should all be *viva voce*, *Gordon*, 2546; but time would not allow it, *ib.* 2547. Never allows more than 20 per cent. of candidates to fail, *ib.* 2552.

Does not know whence candidates come, *Heaviside*, 2423.

Examination papers criticized by Council, *Napier*, 43, 44. One Member of Council, at least, present at every admission examination, *ib.* 89; of which there are nine or ten yearly, *ib.* 90. Woolwich examination takes a fortnight, others a week, *ib.* 91. The nature of the examination causes cramming, *ib.* 157, 274; but crammers cannot know beforehand the questions to be put, *ib.* 398; though they may know their general style, *ib.* 399. Examiner always present to explain any doubtful question, *ib.* 275, 276. Publication of questions not necessary; but an advantage to candidates, *ib.* 401. Examination papers submitted, before printing, to Council, *ib.* 402, 403, who know the total marks, but not the marks per question, *ib.* 404. Mixing of obligatory and non-obligatory part of a subject in one paper may be in favour of a crammed candidate; their separation might be an improvement, *ib.* 405–415. Difference between an examination at a University and one at a Public School, *ib.* 326. Doubts if examinations for Woolwich, Sandhurst, and Direct

EXAMINATIONS—*cont.*

I.—*Generally*—cont.

Commissions could be made commensurable, *ib.* 1208, 1209.

Examinations of a military character should be under control of Director-General of Military Education, Report, p. 31.

II.—*For Direct Commissions.*

Historical notice of examinations, *App.* IV. (A.), *p.* lxviii.
Original regulations for, *App.* IV. (B.), *p.* lxix.
Regulations of 1857, *App.* IV. (C.), *p.* lxx.
Present regulations, *App.* IV. (D), *p.* lxxi.
Numbers examined and failed [1858–1867], *App.* XIII. (A iii.), *p.* cxlvii.
Candidates from Public Schools, *App.* XIII. (D.), *p.* clix.
Examinations and results [1865–1868], *App.* XIII, (D.), *p.* clix.
Per centage of failures in several subjects [1858-1867], *App.* XIII. (D.), *p.* clix.
Candidates who have failed three times during last four years, *App.* XIII. (D.), *p.* clix.
Would not alter age; but would have as large a range of candidates as possible, *Abbott*, 1656–1660. Examination works fairly, *ib.* 1661. Every subject added augments cramming; lads cannot pass in classics, *ib.* 1662. Ordinary education of a gentleman sufficient, *ib.* 1680. Examination has been reduced, *ib.* 1691, and is very easy, *ib.* 1692. Those failing are very imperfectly educated, *ib.* 1693. If the standard were suddenly raised, the Army would want officers, *ib.* 1694, and cramming would be increased, *ib.* 1713. To make French obligatory would for a time increase rejections, *ib.* 1695. Perhaps two per cent. go up for Hindustani, *ib.* 1696. Standard cannot be raised unless education generally be improved, *ib.* 1697. The certificate from master or tutor is of little value, *ib.* 1698–1700. Would not object to omit easily crammed subjects, *ib.* 1750. To give Non-Purchase Commissions to best candidates is unadvisable, *ib*, 1711, 1712, 1736. Mental training and gentlemanly habits are of the utmost importance, *ib.* 1716. Could not examine boys locally at their schools, *ib.* 1670.
Of little use: encourages cramming, *Baker*, *App.* VII. (B.), *p.* lxxxvi.
Riding and gymnastics should be required, *Barry*, 5467, 5468.
Only sufficient, on the supposition of subsequent instruction, *C. B. Brackenbury*, 8222.
Would abolish, *Cambridge*, 6456.
Would not insist on French or German, *Codrington*, 6089, 6090,
Any one, with any education at all, should pass the English examination, *Dasent*, 4505–4511.
Identical in regard to classics with Sandhurst entrance examination and the men of the same quality, *Gordon*, 2492, 2507, 2508, 2511, 2578, 2579. University candidates admitted direct, *ib.* 2568, 2569, 2576; a desirable class to encourage, *ib.* 2570–2572.
Would stop admissions except through Sandhurst, *Grant*, 6014.
Nearly identical with that for admission to Sandhurst, *Heaviside*, 2373. Candidates for both have similar mathematical knowledge, *ib.* 2477, 2478. The object in mathematics is to test general education, *ib.* 2374. Mathematics very elementary and low, *ib.* 2376, 2379, 2466, 2482, and any boy properly taught ought to pass with ease, *ib.* 2448. The mathematics required, *ib.* 2377, 2378, 2386. Would not raise the minimum, *ib.* 2483. Capabilities of candidates, *ib.* 2381, 2468; better than formerly, *ib.* 2383, 2446; but the standard does not rise, *ib.* 2384. Mathematical standard was lowered in 1860, *ib.* 2385; candidates, as a rule, come up to it, *ib.* 2467, 2468, and few fail to pass, *ib.* 2484. The examination papers, *ib.* 2388, 2389, about parallel to matriculation for University of London, *ib.* 2472.
Would introduce professional subjects, if Public School boys would not be thereby excluded, *Percy Herbert*, 5090; encouraging such knowledge by priority of commissions, *ib.* 5091. Headmaster of a public school should certify as to a boy competing, *ib.* 5092.
Would not require professional knowledge; it would be mere cram, *Hort*, 5118, 5119, and therefore objectionable, *ib.* 5134. More attention needed for handwriting and composition, *ib.* 5114*a*.

EXAMINATIONS—*cont.*

II.—*For Direct Commissions*—cont.

Is satisfactory, *Moseley*, 2060. Had to be lowered below standard suggested by headmasters of Public Schools, *ib.* 2061–2063, 2089.
Conditions and nature, *Napier*, 141, 280; object, *ib.* 151, 260, 279, 310, 420; deliberately made non-technical, *ib.* 207, 208, 309–312, 332; is quite satisfactory, *ib.* 165, 166. Standard fixed after conferring with Public Schools, *ib.* 152–154, 255, 263, 277, 318, 319. It is very low, *ib.* 281, and has been reduced as low as possible, *ib.* 46–48, 210-216. Examiners were desired not to be so strict, some years ago, *ib.* 282, 284. Examination not competitive, *ib.* 241; and questions neither difficult, *ib.* 240, nor alarming, *ib.* 397. Compulsory subjects, *ib.* 157. Minimum of marks, *ib.* 160. Subjects which would pass a candidate, *ib.* 158, 159, 164, 187. Some candidates obtain 6,000 marks, others fail for want of 1,500, *ib.* 261, 262. Young men incapable of acquiring mathematics would be excluded, *ib.* 273. Many marks given to Natural Sciences to make the admission as wide as possible; with less subjects there would be less successful candidates, *ib.* 416-419. Specific mathematics required, *ib.* 161. Euclid not compulsory, *ib.* 256. English language, *ib.* 162, 234-239. Fortification formerly required, *ib.* 206: also French, *ib.* 251: if now obligatory, French would increase difficulty of obtaining officers, *ib.* 245, 249. University graduates are not examined, *ib.* 202, 205, 294. Number of candidates annually, *ib.* 209; percentage direct from Public Schools, *ib.* 155, 288. Remainder not classified, *ib.* 194, 195, 197–200, but are from crammers or private schools, *ib.* 286, 306, 307; some from abroad, *ib.* 196. 31 per cent. fail each time, *ib.* 167, 169, 171, 217, 218, 285. Three trials allowed, *ib.* 168, 172; very few fail altogether, *ib.* 170. Passing limit of age is a bar to success, *ib.* 173. Would reduce maximum of age, *ib.* 174–177; and increase the minimum of qualifying marks, *ib.* 696–700, 814.
Would not require fortification; it would be crammed, *Porter*, 2198.
Would not require any test for purchase from youths who had six years at a Public School, *Robertson*, *App.* VII. (B.), *p.* lxxxvii.
If stricter, the officers would be a different class of men, *Smith*, 5165–5168, 5182–5185, 5199.
Would lower or abolish, *Storks*, 5841, 5842.
Should not be too difficult, *Strathnairn*, 9497. If a candidate distinguished himself in one or two subjects would not reject him for failure in others, *ib.* 9498. It is an anomaly to interdict military subjects and to encourage physical science, *ib.* 9502.
Would require French, some mathematics, Latin enough to read Cæsar, with a certain amount of military history, *Walden*, 6380, 6386, 6398, 6399.
The system injures Sandhurst, *E. Walker*, 2755.

Should be conducted in London by Civil Service Commissioners, Report, p. 13, 31, 43: ages 17 to 20: subjects and marks, ib. p. 43. Candidates to be offered commissions in order of merit: only three trials, ib. p. 44.

III.—*For Promotion.*

1. Line.
2. Artillery.

1.—Line.

Historical Notice, *App.* VI. (A.), *p.* lxxiv.
Circular first establishing, *App.* VI. (B.), *p.* lxxiv.
Circular of 1858, *App.* VI. (C.), *p.* lxxvi.
Present regulations, *App.* VI. (D.), *p.* lxxvi.
Number examined and failures [1858–1867] *App.* XIII. (F.), *p.* clxii.
Have done some good; but are too variable, *Baker*, *App.* VII. (B.), *p.* lxxxvi. Would not enlarge, *ib.* 6157; but would make more searching, if instruction were attainable, *ib.* 6163–6167. Unequally enforced in different regiments, *ib.* 6215.
Would limit to matters immediately connected with duty, *Cambridge*, 5354, which would include strengthening outposts, *ib.* 5386, 5387, 6429, 6459. Are not sufficiently carried out in fortification and reconnaissance, *ib.* 6436. Boards of examination should be formed at large stations, with the Garrison-Instructor on it, for uniformity, *ib.* 6437, 6438. Could be carried out in India, *ib.* 6471. Would practically make instruction obligatory, *ib.* 6458, 6462. Examination should be final, *ib.* 6464, 6465. Prefers a station board, *ib.* 6489. A committee

EXAMINATIONS—*cont.*

III.—*For Promotion*—cont.

1. Line—*cont.*

might consider what knowledge is necessary, *ib.* 5388, 5389.

Insufficient at present, *Cameron*, 5325, 5326.

Insufficient, merely including drill, and court-martial law, *Carey*, 4927; more surveying and field fortification might be required, *ib.* 4934.

Would limit to regimental duties, *Codrington*, 6043, 6044. Better conducted by one officer than by a board, *ib.* 6068–6070.

Objects to; except that before a field officer obtains command of a regiment he should be required to manœuvre it skilfully before a superior officer, *De La Warr, App.* VII. (A.), *p.* lxxxii.

Strategy and military drawing might be added, *Forster*, 9351, 9352. Fortification and reconnaissance are vaguely required, *ib.* 9354, 9355. Questions are returned to regiment, if not stringent enough, *ib.* 9418. Officers sometimes fail and are passed over, *ib.* 9392, 9393. Examination beyond captain not required, *ib.* 9359. Uniformity much needed, *ib.* 9360–9362.

Should be before a Committee, with Officer-Instructor for president or member, *Grant, App.* VII., *p.* lxxx.

Should be more strict, *Hort*, 5117.

A central board might test practical military knowledge; but would prefer a practical trial, *H. M. Hozier*, 6304, 6305. Present examinations ineffectual, *ib.* 6242; could only be rendered effectual by a Military Board, which would be expensive and difficult, *ib.* 6243–6245. With equal knowledge of other work, a senior wrangler would make a better Staff Officer than anyone less highly educated, *ib.* 6323.

Approves for promotion to captain, *Mansfield. App.* (A.), *p.* lxxviii.

Should be by professional men, under a special board, *Paulet*, 5893, 5894.

Should be perfectly obligatory, in regimental duties merely, *Peel*, 9433, 9434, before independent examiners, *ib.* 9445, as a Garrison Board, *ib.* 9459. An officer might elect to pass a higher standard as a Candidate for the Staff, *ib.* 9433.

Non-uniformity of, objectionable, *Robertson, App.* VII. (B.), *p.* lxxxvii.

Not a fair test. Each officer should yearly prove his progress; wilful neglect of instruction putting promotion in question, *Russell, App.* VII. (A.), *p.* lxxxi.

The present examinations answer their purpose, *Scarlett*, 5935; in enlarging their range, the competence of the conducting boards should be increased, *ib.* 5936.

If in engineering should be at the step lieutenant to captain, *Simmons*, 6585, 6586, 6601. Should be examined in court-martial law, *ib.* 6602, and field sketching, *ib.* 6603, 6604. Cannot well be *vivâ voce* at distant stations; written questions should not admit of doubt, *ib.* 6613, 6614.

Would not exact too high a test, *Stephenson*, 6103. Should be undertaken by a separate board, *ib.* 6104, 6105. There should be but one examination, for rank of Lieutenant, 6108–6112.

Would assemble the best board locally practicable, *Storks*, 5823–5825. Impeding an officer's promotion would depend on the examination, not the instructor's ideas, *ib.* 5858. Present examinations not good, *ib.* 5869–5871.

By regulation, too restricted in practical subjects; in practice, a dead letter. Would have successive compulsory examinations up to rank of Lieutenant-Colonel, *Strathnairn*, 9475, 9495. A certain knowledge of Army Administration should be required, *ib.* 9492.

Should be extended to embrace technical subjects, *Walden*, 6340–6342, 6344, 6346, 6369, 6390, 6391. Present system not uniform, *ib.* 6381, and a failure, *ib.* 6403; would substitute district board of examiners, *ib.* 6364–6366, examining quarterly, *ib.* 6367, with appeal to Council, *ib.* 6368.

Higher standard necessary, should be on a uniform system, under a Staff Officer; and strictly enforced, *Woolsey, App.* VII. (A.), *p.* lxxx.

Should be rigidly enforced, and the sections on field fortification and reconnaissance extended; should be conducted by a Board, partly orally, partly from sealed questions sent from Military Education Office, Report, p. 27. The examination should be additional to the special one within two years after joining, ib. p. 45.

2.—Artillery.

Is a farce; before promotion every officer should pass a course at Shoeburyness and the Laboratory, and then be examined at Woolwich or Shoeburyness, *Strange*, 7868.

Answers examined by director of Artillery Studies; officers have been rejected, *Young*, 8114; the test not nominal, *ib.* 8115. Constitution of Examining Board, *ib.* 8116.

EXAMINERS:

Recommended for appointment by Council of Military Education, *Napier*. 22, 31, 32, 37–41, 113, 115, 116, 123–125. Mode of selecting, *ib.* 142–145. Tenure of appointment, *ib.* 42; Council glad to keep good examiners, *ib.* 303. List of examiners, *ib.* 148–150; employed in rotation, *ib.* 146, 147, paid by fees, 50–52. Crammers become acquainted with an examiner's style, *ib.* 305; it might be advantageous often to change examiners, *ib.* 305, 400. Not in official communication with Public Schools, *ib.* 334.

Report half-yearly to Council, *Heaviside*, 2401; extracts are published, *ib.* 2402. Make general reports only when called upon, *ib.* 2405.

The same are regularly employed. *Abbott*, 1743; helps cramming, but frequent change would be a worse evil, *ib.* 1744.

Unfit for their work, if their questions are apt to be misunderstood, *Dasent*, 4549–4553.

A portion of the examining body should be changed periodically, Report, p. 13; no examiner holding office for more than four years, ib. 31.

EXHIBITIONS, MILITARY:

Would offer for competition at Public Schools, *C. B. Brackenbury*, 8190; as in Austria, *ib.* 8194, 8195.

Would give, as an encouragement, to best cadets from Sandhurst, *E. Walker*, 2857, 2858.

Approves as prizes for officers, *Napier*, 1154; but not for cadets, *ib.* 1160, 1161.

F.

FENCING:

A military man ought to fence well, *Abbott*, 1964.

FIELD SKETCHING:

Is readily acquired, *Simmons*, 6604.

Is a great advocate for cultivating, as an important adjunct of reconnaissance, *Strathnairn*, 9475, 9428.

Note on, as practised in France and Prussia,* *p.* 583.

FIELD WORKS:

Should be taught by actual operations in the open, *Fletcher, App.* VII. (A.), *p.* lxxxiv.

Men instructed in, would have been invaluable at Sebastopol, *Porter*, 2350–2352. Officers who had acquired knowledge of, were employed as Assistant Engineers, *ib.* 2353.

Every Line officer should pass a practical course of four months, *Simmons*, 6567, 6595, at a large camp, under Engineer officers specially appointed as instructors, *ib.* 6552. At other places, sand modelling would be resorted to, *ib.* 6584. Engineers could be temporarily detached to distant stations, *ib.* 6624, 6625. Instruction in, too much neglected in our army; full course should be voluntary, but a part compulsory on officers and Non-Commissioned officers, *ib.* 6568, 6588–6591, 6593. Pick and shovel should be obligatory on every soldier, *ib.* 6589, without working pay for mere instruction, *ib.* 6617. Models could be supplied to large stations, *ib.* 6564, but not to single regiments; sand-modelling a good substitute, *ib.* 6565, 6566, and interesting, *ib.* 6592, 6626, 6627. A few tools necessary, *ib.* 6600. A shed half the size of 60 × 40 feet sufficient for a battalion, *ib.* 6576. English soldiers learn field work as quickly as others, *ib.* 6618, 6619; it developes muscle, *ib.* 6620. Line officers cannot superintend without practice, *ib.* 6621.

All battalions should be exercised in, Report, p. 47.

[*See also* FORTIFICATION.]

* Reports on Foreign Military Education, in a separate volume.

FOREIGN ARMIES:
No analogy with British, *Storks*, 5845.

FOREIGN MILITARY SCHOOLS:
Give a higher scientific tone than our officers possess, *Walden*, 6358–6360, 6362, 6363, with equal resource and endurance, *ib.* 6393, 6394; but less physical training, *ib.* 6361.

FOREIGN OFFICE:
Three candidates nominated for every vacancy, *Walrond*, 9592.

FOREIGN SCHOOLS:
Some few candidates come from, and pass well, *Moseley*, 2096, 2097.

FORTIFICATION:
Study of, educates the judgment, *Addison*, 3882.
Elements can be as well taught by civilian as military teachers, *Benson*, 5648–5654, 5731–5735.
Desirable, but not essential, for every officer, should be learned before entering army, *Cambridge*, 5355.
Useful to Sandhurst cadets who afterwards pass the Staff College, *Hale*, 3018. Vauban's first system is of little benefit, *ib.* 3020; and greatly obsolete, *ib.* 3021. In an attack, book instruction would not prevent a man losing himself, *ib.* 3074, 3075.
Elementary knowledge of great use to an officer on attaining high rank, *Percy Herbert*, 5007, 5008.
Text book needed, *Hort*, 5144.
Knowledge of not indispensable to an officer, *Napier*, 563; but may be very useful to him, *ib.* 569–571, 734, 735; would have been serviceable before Sebastopol, *ib.* 572, 573. A partial knowledge might suffice, *ib.* 576. Vauban's system, *ib.* 574; differs from modern principles, *ib.* 575. System of instruction at Sandhurst, 615, 650–656, 670, 671. As taught in schools, mere rubbish, *ib.* 206, 207.
Vauban's first system, is it obsolete? *Porter*, 2206, 2207. Many fortresses still modelled on it, as Malta, *ib.* 2236. Knowledge of field fortification would give little insight into permanent fortification, *ib.* 2286.
Can be properly taught by a civilian, *Southwood*, 5608, 5609.
Future fortification is a fine field for inducing thought, *Strange*, 7930.
Field fortification indispensable for officers, and should form part of Military Education, *Strathnairn*, 9474. A text-book should be drawn up. Is not in favour of entrenching positions, as a rule, *ib.* 9476. Commanding Engineers might give certificates to officers who had qualified in, *ib.* 9494.
Only those officers who had been instructed in field fortification could undertake to defend a farm house, *Walden*, 6395–6397.

Examinations,* *p.* 140.
Subsequent employment of Passed Officers,* *p.* 146.

VIII.—*Public Schools.*

Note on the French Lycées,* *p.* 585.

FREE STUDY:
Would allow a pupil a considerable margin of leisure to use or abuse, *C. B. Brackenbury*, 8241.
Has heard condemned at Public Schools in regard to mathematics, *E. Walker*, 2900.
[*See also* SANDHURST, X. 5; WOOLWICH, XI. 4.]

FRENCH:
Mode of teaching at Wellington College, *Benson*, 5695.
Very valuable acquisition for an officer, *Cunynghame*, 7294, 7295.
Very important to an officer, *Milman*, 7645.
Very important to an officer, *Napier*, 242–244; but to make it obligatory (as it formerly was, *ib.* 251) would diminish candidates, *ib.* 245, 249. Absolutely necessary for Naval officers, *ib.* 247. Doubts if it could be acquired in two months in a "Pension," *ib.* 278. Almost every candidate goes up in it, *ib.* 315. Part of the education of a gentleman, *ib.* 316; and useful to everybody, *ib.* 317. Is not aware whether it is now taught at all Public Schools, *ib.* 246. To make it obligatory on candidates would diminish those from Public Schools, *ib.* 253. Thorough knowledge useful but not indispensable to a Staff Officer, *ib.* 1530.

* Reports on Foreign Military Education, in a separate volume.

FRENCH—*cont.*
Very necessary to an Engineer officer, *Nugent*, 7442.
Best taught by a classical Englishman; examiners being, at the same time, University men, to prevent foreign prejudice, *Southwood*, 5607.
Colloquial knowledge only demanded by Foreign Office and Indian Forest Service, *Walrond*, 9591. Few acquire it with good accent, 9593-9595, 9604.
Colloquial knowledge most valuable to a cavalry officer, *White*, 4860, 4861.

G.

GALWAY:
A school in, sends good candidates, *Gordon*, 2587.
Schools at, successful in Army examinations, *Moseley*, 2094.

GENERAL MILITARY COLLEGE:
With a college for all line officers, discipline would be difficult, but not impossible, *Cambridge*, 5376.
Would have one, for entrance to all arms, *Clifford App.* XI., *p.* cxvii.
Would pass all Line officers from sixteen to eighteen through one large military school for technical elements, riding, and drill, *H. M. Hozier*, 6225–6228, 6306, 6310, 6324-6327, as the only road to a commission, *ib.* 6307, with contingent abolition of purchase, *ib.* 6308.
Would like all officers to pass through, as boys under 16, if severe discipline could be maintained, as in foreign military schools, *Walden*, 6357, 6409. Must be purely military, *ib.* 6414. Entrance age as at Harrow, but not to teach military details, *ib.* 6416. Subjects to be taught, *ib.* 6420, 6421, 6424. All teachers military, *ib.* 6418. Chief gain would be strict discipline, *ib.* 6422, 6423, 6425.
To make all youths pass through would not answer in war time. But if first commissions were not purchased all youths for the army might enter a general school at 13 or 14 and pass subsequently to special college for the different arms, *Peel*, 9432, 9464, 9465. Admission examination should be general; examination for exit to colleges technical, *ib.* 9466. The youth's liberal education to continue at the School, *ib.* 9467.
The scheme for a general college fell through in 1858 in Parliament, *Napier*, 1140, 1141. The union of all arms in one college only obtains at West Point, *ib.* 1148–1150.
Collects non-studious youths, with bad result, *Robertson, App.* VII. (B.), *p.* lxxxvii.
Not recommended, Report, p. 23.
[*See also* SANDHURST, I. 3.]

GEOGRAPHY:
Knowledge of country, people, and resources of possible theatres of war of utmost importance, *Strathnairn*, 9476.
Desirable as preparation for military study *E. Walker*, 2822.
Easily crammed, *Abbott*, 1748: *Walrond*, 9609–9611.

GEOGRAPHY, MILITARY:
Prefers Lavallée's system, *E. Walker*, 2820.

GEOGRAPHY, PHYSICAL:
Highly studied by Austrian officers; Italian officers deficient in knowledge of, *C. B. Brackenbury*, 8249–8251.

GEOLOGY:
Unnecessary for an ordinary officer, *Porter*, 2139–2141.

GEOMETRY;
Not necessary for Regimental officer; but he is the better for knowing it, *Napier*, 568, 733.

GERMAN:
Very important to an officer, *Milman*, 7645: *Napier*, 242–244.
Necessary to an Engineer officer, *Nugent*, 7442.

GRAMMAR:
Cannot be crammed, *Gordon*, 2523.

GREEK:
Grammar better known by Army candidates than the Latin, *Gordon*, 2531.
An advantageous subject to take up, *Walrond*, 9639.

GREENTREE, CAPTAIN:
Has been secretary to the Council of Military Education from the first, *Napier*, 131–133.

GUNNERY, SCHOOL OF: *see* SHOEBURYNESS.

H.

HAILEYBURY:
Good in mathematics, *Frost*, 4301.

HARROW:
Weak in mathematics, *Frost*, 4301.
Ought to prepare boys for Woolwich, as well as Cheltenham can, *Heaviside*, 2430; but now its boys must go to a special tutor, *ib.* 2428, 2429.
Counted as a public school, *Napier*, 201.
With Eton, furnishes best cavalry officers, *White*, 4822.

HIBERNIAN SCHOOL:
Council has but little to do with, *Napier*, 95.

HILL-WARFARE:
A most difficult operation of war, *Strathnairn*, 9476.

HINDUSTANI:
Should be acquired in India, not at Sandhurst, *Abbott*, 1841–1843. Perhaps two per cent. of candidates for Direct Commissions go up for, *Abbott*, 1696.

HISTORY:
Easily crammed, *Abbott*, 1747.
Candidates know modern, better than ancient, *Dasent*, 4514. In English history 25 per cent. (a great percentage, *ib.* 4564) are very good; two-thirds do not fail, *ib.* 4558, 4559. 750 marks out of 1,000 would be very good, *ib.* 4565. The paper on history has more questions than can be answered in the time, *ib.* 4561. There is improvement; but not much, *ib.* 4564.
Ancient history found to be entirely crammed, *Gordon*, 2534.
Now expunged from Sandhurst Course, *Napier*, 896.
Liable in examination to cramming and luck, *Walrond*, 9601, 9602.
Desirable as preparation for Military Study, *E. Walker*, 2822.

HISTORY, MILITARY:
It took witness 10 years to learn a very little, *Adams*, 8817, 8818.
Educates the judgment, *Addison*, 3882.
Can be taught elsewhere than at a Military College, *Cameron*, 5314.
Knowledge of, not indispensable to an officer, *Napier*, 563. Utility at Sandhurst, and mode of teaching, *ib.* 577–580, 582, 663, 670, 671, 740, 741. It is useful to visit the theatre of a campaign under study, *ib.* 738.
Doubts the immediate use to a young officer, *Nicolson*, 7720.
Doubts if officers read for themselves, *Strange*, 7843.
Text-book required, *E. Walker*, 2831–2834, 2929. Teaches that war is not a haphazard thing, *ib.* 2912. Books from which to give suitable lectures are rare, *ib.* 2920. It is better for a cadet to master some selected portion of military history than to get up abbreviated barren history and dates, *ib.* 2921.

HONOUR:
Valuable result of trusting to a young man's, *Abbott*, 1923, 1924, 1965.

HONOURS:
Might be granted in special subjects, *Baring*, 9174, 9175.

HORSES:
Well cared for in Austria and Hungary; can march half as far again as English, *C. B. Brackenbury*, 8244–8248.

HYDROSTATICS:
Not necessary to a Regimental officer; but he is the better for knowing, *Napier*, 568, 733.

I.

INDIA:
Army serves much in, *Abbott*, 1837.
Staff College certificate recognised in, of late, *Barker*, 9129.
Study for the Staff could as well be carried on as at home, *Lennox*, 9281.
To pass for a native language in, no help in going through Staff College, *Napier*, 1489, 1490; and an officer who has passed Staff College must still pass in a native language before admission to the Indian Staff, *ib.* 1491.

INDIA—*cont.*
Instruction in field work and engineering necessary, *Stephenson*, 6099.
If a really efficient College for Military Instruction were established in England, one, if not more, of like nature might be introduced in India, *Strathnairn*, 9490.
Many appointments in, suitable for scientific artillery officers, *Young*, 8101. Too hot for an Advanced Artillery Class, *ib.* 8053. The few officers required could be spared to go home for instruction, *ib.* 8056. Each artillery brigade goes to India for 10 years, *ib.* 8055. School of Gunnery might be established in the Punjaub, if not too hot, *ib.* 8058, 8134, 8135.
System of Artillery Instruction as adopted at home should be applied to India, Report, p. 26; also that of Garrison and Regimental Instructors, with increased strictness in examinations for promotion, ib. p. 28, 46.

INDIAN ARMY:
One College sufficed for, *Abbott*, 1866, 1867. The tone of officers as good as in Queen's Army, *ib.* 1869. Time at Addiscombe (after 16) counted towards pension, *ib.* 2011.

INDIAN CIVIL SERVICE EXAMINATION:
Cramming not defeated, *Barry*, 5474–5476. Relative marks for English and mathematics, *ib.* 5477. Modern languages hardly treated, *ib.* 5478.
The marks offered for English almost force it on candidates, *Dasent*, 4529. An increasing proportion choose it, *ib.* 4531. Candidates have risen from 100 to 350, *ib.* 4530.
Mode of deducting a minimum for marks on each subject, *Twisden*, 8886, 8889.
Treatment of marks to defeat cramming, *Walrond*, 9598, 9599, 9635, 9637. Mathematics treated differently from other subjects, *ib.* 9605–9608, 9612, 9623–9625. Five subjects usually taken up, *ib.* 9600, 9626. No subjects obligatory, *ib.* 9627. Why subjects are not limited, 9636. Break down of health very rare, *ib.* 9638.

INDIAN STAFF CORPS:
Will be officered from British Army, *Abbott*, 1838.

INSPECTING GENERALS:
Might certify to fitness of officers recommended for Staff College, *Peel*, 9457, 9458.
Not fit to review artillery, if obliged to their Staff for advice; but many would be better for it, *Strange*, 7931.

INSPECTIONS:
Inspecting Generals should *name* the movements to be performed, *Strathnairn*, 9475.
Several officers are required to prove instruction in field duties, *Cambridge*, 6484–6486.

INSTRUCTION OF OFFICERS:
I.—*Desirability and Necessity of Professional Education.*
II.—*Expediency of a Course of Instruction: attendance: examinations.*

I.—*Desirability and Necessity of Professional Education.*
Historical notice of proposals for Instruction of Officers, *App.* VII. (C.), *p.* xci.
Existing regulations for Instruction of officers, *App.* VII. (F.), *p.* xcix.
Officers from Sandhurst are the only Line officers with any special military education, *Abbott*, 1836. The average of education ought to be raised, *ib.* 1839, 1840.
None with military education enter the Line except from Sandhurst, *Addison*, 3874, 3959: while one in four or five should have it, *ib.* 3875; but nevertheless does not doubt the esteem expressed by foreigners for our officers, *ib.* 3957. A first-rate German scholar, though just joined, might be of use as interpreter, *ib.* 3948; one who could construct a stockade or abattis of great practical advantage, *ib.* 3949.
In exercises during peace we do not sufficiently imitate war, *Baker*, *App.* VII. (B.), *p.* lxxvi.
Staff College almost only road to theoretical knowledge, *Baring*, 9196 (1).
Practical man wanted; not a high mathematician, *C. B. Brackenbury*, 8215, 8216. General education should be before entering Army: subsequent military education should be entirely practical, *ib.* 8182–8184. Would prefer young men entering Line without any special education, supposing a military education afterwards, *ib.* 8223, 8187–8189, 8253–8255. The more brains brought to bear on a military subject the better, *ib.* 8252.

INSTRUCTION OF OFFICERS—*cont.*
I.—*Desirability and Necessity of Professional Education*—cont.
Officers could not take up military life so exclusively as foreign officers, *Cambridge*, 5358, 5359.
Beyond a gentleman's education, every officer should have studied modern languages, military drawing, military history, surveying, and fortification, *Carey*, 4917–4922, 4925, 4928, 4936, 4937. Officers go abroad in their leave to acquire languages and military science, and are all the better for it, 4930, 4931.
Art of war can only be practically learned before an enemy: practical instruction is best imparted in camps under the regimental system, *Codrington*, 6037–6039, 6053. Some regimental officers acquire special instruction for Staff duty, *ib.* 6048; many will do so, if they feel that the Staff is open to them, *ib.* 6057. Many invaluable regimental officers would not acquire Staff qualification, *ib.* 6076.
Doubts if in a riot any regiment would be destitute of officers who could strengthen a bridge or defile, *Forster*, 9410.
To require a high standard from every regimental officer would be very unpopular, *Grant*, 5998–6000.
Theoretical education and wholly practical education are not comparable, *Hale*, 3068.
Very little professional education 15 years ago, *Percy Herbert*, 5026–5028; more disseminated now, *ib.* 5023–5025. Doubts if very intellectually educated men would enter army during peace, *ib.* 5051; though a percentage of such would be a gain to a regiment, *ib.* 5052. Every officer should know elementary fortification, *ib.* 4977; further professional knowledge not a *sine quâ non*, *ib.* 5057. The largest possible proportion should acquire rudiments of fortification, surveying, and military history, without the mass being pressed up to scientific acquirements, *ib.* 5029.
Quite in favour of professional education, and its continuance after being commissioned, *Hort*, 5112, 5115. With the same moral qualities, the better educated officer is the more useful, *ib.* 5114. Subjects every officer should understand, *ib.* 5116, 5145. Many officers instruct themselves in military subjects, *ib.* 5128.
Military subjects now studied in greater variety than formerly, *Lacy*, 8573. Promoted among young officers by establishment of Staff College, *ib.* 8497.
An artillery officer may continue his studies by going in for Staff College, Advanced Class, or Long Course, *Nicolson*, 7713.
Theoretical knowledge is a gain to one who has acquired practical experience, *Porter*, 2279, 2280.
High attainments not needed for a company officer. Would encourage officers, after fully learning drill, to acquire special knowledge, by extra pay and affiliation to Staff on reaching a certain standard, *Robertson*, *App.* VII. (B.), *p.* lxxxvii.
Chief want is military drawing, *Shute*, *App.* VII. (A.), *p.* lxxxiii.
English officers not eager to acquire knowledge, *Simmons*, 6622, 6623. Should be required to study, *ib.* 6602. The more officers generally have the qualifications of Staff officers, the better for the army, *ib.* 6594,
Attaches more importance to natural qualifications than science for a Line officer, *Smith*, 5170, 5209; the latter without the former perilous, *ib.* 5175; combined, an approach to perfection, *ib.* 5169, 5171–5174, 5204. A percentage in each regiment more highly trained would be a gain, *ib.* 5195–5198.
Finds at inspections that officers, including commanding officers, cannot perform simple evolutions or understand their object; some improvement lately, *Strathnairn*, 9475. Instances a commanding officer unable to defend a barrack, *ib.* 9478. Candidates for army should have professional instruction, *ib.* 9497.
As a rule officers value their knowledge for what it will produce, *Strange*, 7906, 7907.
Knowledge of technical subjects should be required before promotion, *Walden*, 6338–6346, 6352, 6390, 6391.

II.—*Expediency of a Course of Instruction: Attendance; Examinations.*
Practical instruction should be given immediately after joining the army. After two or three years' service

INSTRUCTION OF OFFICERS—*cont.*

II.—*Expediency of a Course of Instruction: Attendance: Examinations*—cont.

100 officers should be selected annually for a year's course in a military college, and 15 of these should be chosen for the Staff College, *Addison, App.* II. (C.), *p.* xiii.

Obligatory quite possible. Examinations should be periodical, and failure should bar promotion, *Armstrong, App.* VII., *pp.* lxxxiii., lxxxiv.

Should be entirely voluntary, *Baker*, 6155, 6177; by lectures and classes, *ib.* 6180; with quarterly reports of attendance, *ib.* 6156. Presence of a field officer not necessary, *ib.* 6181. Might be compulsory for young officers just joined, *ib.* 6194, for field fortification and sketching, *ib.* 6195. There should be a special room for the lectures, *ib.* 6211, 6212. Inducements to study, *ib.* 6159–6162. Difficult to give pecuniary rewards, *ib.* 6224.

The great desideratum is to continue professional instruction after becoming an officer, *C. B. Brackenbury*, 8150, immediately, as aptitude for study soon disappears, *ib.* 8151, 8269, 8270. All studies should be practical, *ib.* 8154. Something like, but not an exact copy of, Austrian system might be adopted to prevent officers leaving off study after appointment, *ib.* 8237, 8249. The dislike to study attributable to small encouragement given to a pupil, *ib.* 8240. Military history might be taught, the officers being collected not in colleges but in garrisons or regiments, *ib.* 8256–8260; and continuing their military duties, *ib.* 8256–8260.

Officers' schools next to impracticable, *Cambridge*, 5353; instruction could not be forced upon officers, *ib.* 5351, 5361, 6448, 6554; if compulsory, it would be extremely distasteful, *ib.* 6463. Some excellent officers will not study, *ib.* 5403. Would give every facility for voluntary classes, *ib.* 5353, 5372, 6428, 6431. Attendance must be quite voluntary, *ib.* 6457, 6460, based on self-interest, *ib.* 6461. Does not know what inducements to study could be held out, *ib.* 5384, 5385; increased pay might have its effect, *ib.* 5415; names could be recorded for possible future advancement, *ib.* 5393–5395, 6431. Knowledge necessary in officers, *ib.* 5381. Only expenditure or mechanism would be scientific instruments, which should be garrison property, *ib.* 6439, 6440. Objection might be taken to long detachment of officers, *ib.* 6467, 6468, 6480, 6481. Soldiers working could have slop clothes, as at Shoeburyness, *ib.* 6469.

Would like to see officers' schools established, *Cameron*, 5322, on Prussian system, *ib.* 5323, 5324. The change would not shut out an useful class of officers from the army, *ib.* 5327.

Instruction after joining in field fortification and surveying is desirable. *Carey*, 4925, 4926; but doubts success in voluntary classes, *ib.* 4923. Sees no difficulty in establishing a class to be attended by officers of under one year's service, *ib.* 4944–4946; thinks it would be taken advantage of, *ib.* 4951.

Possible; with attendance and examinations quite voluntary, without exemption from any military duty, *Clifford, App.* VII., *p.* lxxxiii.

Instruction in field works should be obligatory in camps on all ranks, under engineer officers temporarily attached for the purpose, as a matter of drill, *Codrington*, 6037–6039, 6041, 6050–6053. Sees no objection to there being instructors to help officers willing to learn languages, military history, and surveying, *ib.* 6056; but attendance on the lectures should be voluntary, *ib.* 6037–6039. Literary study, though an advantage in an officer, is not essential, *ib.* 6040, 6044. An officer is not highly paid, and does his regimental work well; it is unfair to exact much more from him, *ib.* 6081, in the way of forced study, *ib.* 6045, 6055. Would not interfere with regimental current of promotion, because of officers' various knowledge or application, *ib.* 6037–6039, 6053, 6054.

Fruits would not repay the labour; if established, attendance must be obligatory, with examinations, *De La Warr, App.* VII. (A.), *p.* lxxxii.

Practicable; with attendance quite voluntary and examinations, on which, however, promotion should not depend, *Elrington, App.* VII. (A.), *p.* lxxxiii.

Would pass infantry officers through a practical compulsory course, examination qualifying not competitive, *Fletcher, App.* VII. (A.), *p.* lxxxiv.

INSTRUCTION OF OFFICERS—*cont.*

II.—*Expediency of a Course of Instruction: Attendance: Examinations*—cont.

Must be voluntary, *Forster*, 9349, 9350, 9390, 9391; if beyond subjects required for promotion examination, *ib.* 9351, 9352.

Should be voluntary, *Grant, App.* VII., *p.* lxxx.; but obligatory in purely military matters, including French and German, *ib.* 5991, 5997, 6017–6020. Higher instruction should be voluntary, *ib.* 5993, 6021–6023. Proportion who would avail themselves of it, *ib.* 5994–5996, 6024; with a voluntary examination, excellence in which would be recorded towards Staff employment, but would not give direct money rewards, *ib.* 6001–6006, 6031.

Would have officers' schools for education after entering the service, *Percy Herbert*, 5058; rendered compulsory, *ib.* 5059; attendance of young officers could be managed, *ib.* 5060. It would give them a pursuit, *ib.* 5061.

Practicable, attendance should be optional at first, but if commenced, continuance compulsory. Examinations half-yearly; but not now to affect promotion, *Horsford, App.* VII. (A.), *p.* lxxxi.

After commission, an officer should have a chance of continuing professional education, some but not many would care to do so, *H. M. Hozier*, 6231, 6247, 6272, 6291. Propensity for instruction would revive if professional advancement followed high professional knowledge, *ib.* 6233, 6234. Examinations would not secure proficiency in military knowledge, *ib.* 6287; to which our whole system is opposed, *ib.* 6289. Would insist on every officer having practical knowledge of field fortification, *ib.* 6301; which the majority have not now, *ib.* 6302, 6316. Instruction given must depend on students' knowledge, *ib.* 6278. Elementary fortification should be as compulsory as drill, *ib.* 6239, 6240; with a test of real examination, *ib.* 6241. Instruction after joining would be very difficult, *ib.* 6284; if compulsory it could not be enforced; if voluntary it would not be attended, *ib.* 6286, 6315.

Twelve months would be sufficient for the course, *Lennox*, 9273. Officers to be relieved from regimental duty, *ib.* 9272. Would take any officer applying to join, *ib.* 9287–9289.

Study should not be compulsory; but would allow infantry officers to undergo voluntary courses in Artillery and Engineering, *Mansfield, App.* VII. (A.), *p.* lxxviii.

Important to induce study after becoming Officers, *Milman*, 7652.

Practicable, if voluntary. Should not affect promotion *Napier, App.* VII. (A.), *p.* lxxxii.

Might be increased after joining the service and tested by examinations, *Paulet*, 5891, 5892. Professional instruction would not be unpopular, *ib.* 5897; and should be compulsory on subalterns of less than five years' service, *ib. App.* VII. (A.), *p.* lxxx.

Practicable attendance should be obligatory in *petite guerre*; voluntary in *grande tactique, Russell, App.* VII. (A.), *p.* lxxxi.

Officers after joining should have greater facilities for acquiring military science, *Scarlett*, 5927, 5976, 5977; but only military surveying and field fortification should be compulsory, *ib.* 5928, in addition to the subjects now required for promotion, *ib.* 5930, or the service would be unpopular, *ib.* 5942, 5943. 5953–5956. Uniformity must be secured by a higher authority, *ib.* 5946. Abstruse knowledge must not be demanded; the instruction should take the place of and not be additional to ordinary parades, should be experimental at first, *ib. App.* VII., *p.* lxxx.

Feasibility doubtful, *Shute, App.* VII. (A.), *p.* lxxxiii.

Professional knowledge for a Line officer may usually be easily acquired after joining, *Smith*, 5160–5163, 5193, 5208; for which increased facilities should be given, *ib.* 5164. Voluntary examinations would be fairly attended, if leading to advancement, *ib.* 5202; but preference could not well be based on the results, *ib.* 5203.

After a year's service an infantry officer should compulsorily go through a four months' course of field fortification and engineering, *Stephenson*, 6095, 6100, 6101, 6138. It would be popular, *ib.* 6102. At home all officers would be able to attend, *ib.* 6106, 6107, 6139. A report would be made on each officer, *ib.* 6114–6116. There would be a foundation for future self-instruction, *ib.* 6124–6126. Would rejoin if regi-

INSTRUCTION OF OFFICERS—*cont.*

II.—*Expediency of a Course of Instruction: Attendance: Examinations*—cont.

ments were ordered on service, *ib.* 6140. Regimental instruction would not answer, *ib.* 6096, 6097.

Would not require further instruction than could be had from the regimental instructor, *Storks*, 5847–5850. Professional instruction should be obligatory on young officers, and promotion up to captain should depend on qualifying examinations, *ib.* 5812, 5815, 5820, 5839. The Commanding officer would be responsible for the instruction being duly attended, *ib.* 5854, 5873, 5874. This would not exclude many from army; it would be popular, *ib.* 5826, 5827, 5840, 5875. Instruction in Military Law much needed, *ib.* 5832–5834. Would not allow men working pay for taking part in, *ib.* 5838. Uniformity of course would be secured by Council of Military Education, *ib.* 5852, 5853. Young officers would acquire habits of industry and application, *ib.* 5861. Number simultaneously under instruction would exceed two or three, *ib.* 5868. Length of course would depend on proficiency, *ib.* 5872, 5876. An officer under instruction would be regimentally efficient, *ib.* 5878–5883. Attendance of subalterns to be compulsory, until dismissed; of other officers and of soldiers, at the lectures, optional, *ib.* 5884.

Instruction in fortification after entering Army desirable and feasible, *Strathnairn*, 9474. Seven heads under which instruction should be organised, *ib.* 9476. For securing it would rely not solely on opinion of Commanding Officer, but also on Inspector's reports made by him to superior authority, *ib.* 9477; and on the opinion entertained by the several officers through whom they would pass to the Commander-in-Chief, *ib.* 9480, 9522, 9523. Regimental instruction should be systematic not voluntary (details the means he has adopted), *ib.* 9493. Officers should in turn be moved to stations where they can obtain instruction, *ib.* 9494.

Could be acquired in his battalion by study without a regimental instructor, *Walden*, 6347, 6348. Study would not be unpopular, but a resemblance to going to school would, *ib.* 6351. The same system would apply to India, *ib.* 6353. No reason why field and outpost instruction introduced by Lord F. Fitz-Clarence should not be carried out, *ib.* 6388.

In favour of instruction of officers as opposed to military schools, *Colonel Beauchamp Walker*,* p. 528.

Practicable; compulsory attendance useless and mischievous, *Woolsey*, *App.* VII. (A.), *p.* lxxxv.

Garrison system proposed by Right Hon. Sidney Herbert, *App.* VII. (D.), *p.* xciii.

Proposals of Council of Military Education, *App.* VII. (E.), *p.* xcv.

A staff of instructors should become part of our military system, to be eventually selected from Passed Officers of Staff College, Report, p. 27. Attendance of subalterns should be to some extent compulsory. Instruction in practical work of rank and file could be combined, ib. pp. 28, 46. A special examination should take place within two years of joining, in military law, field fortification, sketching, and reconnaissance, ib. p. 45. How examination should be conducted, ib. p. 46. Temporary provision of instructors, ib. pp. 47, 54.

INSTRUCTORS FOR OFFICERS:

I.—*Garrison Instructors.*

II.—*Regimental Instructors.*

III.—*Garrison* versus *Regimental Instructors.*

I.—*Garrison Instructors.*

A Garrison Board would not always be available, *Baker*, 6213.

Some officers might never be able to attend a Garrison-Instructor, *Barker*, 9128.

Great difficulty in finding, *Cambridge*, 5373. Should take part in promotion examinations, *ib.* 6431. Could not instruct in languages, *ib.* 6432.

Stations for, *Forster*, 9376–9380. A stationary appointment would be a lure, *ib.* 9385, and induce marriage, *ib.* 9383.

At large stations there should be professors of continental languages, *Horsford*, *App.* VII. (A.), *p.* lxxxi.

INSTRUCTORS FOR OFFICERS—*cont.*

I.—*Garrison Instructors*—cont.

Large garrison schools of instruction would be useful, *H. M. Hozier*, 6248.

Sees no practical difficulty, *Lennox*, 9267. The system should prevail everywhere, *ib.* 9269–9271. They would inoculate the army with the system, *ib.* 9286.

Would create the appointment for passed officers of Staff College, *Napier*, 1578, 1579, 1592.

At garrisons there might be several under a superior, *Paulet*, 5911–5914.

Garrison instruction not always attainable, *Peel*, 9450, and it might be difficult to detach an officer for it, *ib.* 9460.

Should have higher rank and qualifications than regimental instructors, *Scarlett*, 5938.

Might be appointed at large stations, *Stephenson*, 6098.

Would take any qualified officers, *Walden*, 6354, 6355; there would soon be plenty, *ib.* 6372.

Garrison instructors should be appointed, Report, p. 27; not under rank of captain, and with pay, &c. of a deputy assistant quartermaster-general. Stations where required. Duties, ib. p. 46. Must have passed Staff College, ib. p. 49. There should be a Superintending Instructor, at Aldershot, ib. p. 46.

II.—*Regimental Instructors.*

Each would cost 100*l.* a year besides pay, *Baker*, 6150, 6151. One to each regiment, *ib.* 6152, 6178. Would raise whole tone of army education, *ib.* 6186, 6188. Could do troop duty, *ib.* 6205, 6206; but, preferably, a special officer attached, *ib.* 6207. On service, he could be on general staff, *ib.* 6208–6210.

Would be well looked upon, *Barker*, 9116, 9117.

There should exist, to whom young officers could go for help, *C. B. Brackenbury*, 8257, 8258.

Body of officers would be unfavourable to captain-instructors, *Cambridge*, 5361. One could be appointed to each regiment to superintend technical instruction of officers and employment of soldiers in trades, *ib.* 6430, 6431. System would promote study, *ib.* 6433, 6497. Would not be unpalatable to Commanding Officers, *ib.* 6482; who could not themselves instruct; though a major might, *ib.* 6483. Success doubtful, *ib.* 9528.

Would find it difficult to retain moral influence, *Codrington*, 6078. A board of officers could not do the duty, *ib.* 6079.

Would attach to each regiment an officer of the Staff Corps, *Feilding*, *App.* XI. (A.), *p.* cxx.

One instructor would suffice for field works and musketry, *Fletcher*, *App.* VII. (A.), *p.* lxxxiv.

Would take, *Forster*, 9357, 9430; but should be appointed gradually, *ib.* 9431, and only where really wanted, *ib.* 9357, 9384. No social difficulty, *ib.* 9417. As prizes, the appointments would cause emulation, *ib.* 9358. Doubts if any could be found to teach languages or enough for fortification and drawing, *ib.* 9372–9375. The supply of qualified men would increase with time, *ib.* 9381, 9382.

Should teach French and German, *Grant*, 6020. Should have higher pay than that of his rank, *ib.* 6032, 6033.

Would attach a Captain-Instructor to each regiment, *Hort*, 5117. The lieutenant-colonel has not time to instruct officers, *ib.* 5144.

Would be useful, *H. M. Hozier*, 6246.

Would not, as yet, find enough pupils, *Lennox*, 9268.

Would have for regimental cadets, *Mansfield*, *App.* VII. (A.), *p.* lxxviii.

Would be useful, *Napier*, 1472–1475; but too expensive, 1593–1595.

Would employ a picked subaltern, *Paulet*, 5896, or Captain preferably, *ib.* 5899–5901. On service, would take regimental duty, *ib.* 5902. Could be appointed from surplus officers passed for the Staff, *ib.* 5926.

Duties of a Commanding Officer as to instruction in defence, *Peel*, 9435. Good regimental instruction better than previous technical knowledge, *ib.* 9437. There should be more instruction in military law, *ib.* 9438. An administrative instructor in a regiment would be a gain, *ib.* 9444, 9446. The second major might act, *ib.* 9447, or any other officer, *ib.* 9453, 9454, with extra pay, 9448, 9449; but the responsibility must rest with Commanding Officer, *ib.* 9444, 9446.

Success very doubtful, *Porter*, 2348. Could teach Non-Commissioned officers and men field works and

* Reports on Foreign Military Education, in a separate volume.

INSTRUCTORS FOR OFFICERS—*cont.*

II.—*Regimental Instructors*—cont.

rudimentary fortification, *ib.* 2349. Men so taught would have been invaluable at Sebastopol, *ib.* 2350–2352. Officers who pass Staff College would on an average be qualified, *ib.* 2355.

Should be a supernumerary captain, *Scarlett*, 5931, 5932; with captain's pay, and no duty beyond instructing, *ib.* 5933, 5934, 5944. Should have charge, with aid from subordinates, of the soldiers' and children's schools, *ib.* 5937, *App.* VII., *p.* lxxx. Officers hoping to succeed to the appointments would help without pay, *ib.* 5941. Should be a depôt officer and not go on service, *ib.* 5945, 5949. Remembers one captain who would have been an useful instructor, *ib.* 5948.

Might be officers in the regiment who have passed the Staff College, *Simmons*, 6649. No serious social difficulties, *ib.* 6652, 6653.

System would not work well, *Stephenson*, 6117–6119.

There should be a Captain-Instructor in every regiment, *Storks*, 5811; a supernumerary *ib.* 5857; with increased pay, *ib.* 5822, to superintend all regimental institutions, *ib.* 5813. A Passed Officer from Staff College would be suitable, *ib.* 5821. Doubts if he could teach languages, *ib.* 5831; or have leisure for musketry instruction, *ib.* 5835–5837. Captain's rank would suffice, *ib.* 5855. Would be useful to the Colonel, *ib.* 5856. If no instruction were going on, on service, could take a company, *ib.* 5859. An examining board could not take the work intended for the Captain-Instructor, *ib.* 5860.

Would not have, *Strathnairn*, 9478. Anticipates great difficulty in having, even if fit men could be found, *ib.* 9493.

Commanding officers of battalions ought to be the instructors for everything, *Walden*, 6387: they could teach better if there were a proper system, *ib.* 6408.

Would be very difficult to carry out, *A. L. Walker*, 8990: few would take the post, *ib.* 8992,9021. We are not ready for the system yet, *ib.* 8993, 9020, 9051; though may be eventually, *ib.* 9051. Officers would be indifferent or hypercritical, *ib.* 8994, 8995, 9019, 9046. If, however, Promotion Examinations were strictly enforced, officer might be glad of instruction, *ib.* 9028, 9048, 9049.

Would be required for regiments in detached positions, Report, p. 27, if possible with rank of captain, with allowance of 5s. 6d. a day; number estimated at 50, ib. p. 46; duties, ib. p. 47; temporary arrangement for passing, ib. p. 54.

III.—*Garrison* versus *Regimental Instructors.*

Prefers camp instructors, except when regiments are detached, *Barker*, 9115.

Prefers garrison, but for the dispersion of the army, *Cambridge*, 6466. Should be first tried in garrisons, on a small scale; could be extended to regiments afterwards, *ib.* 9528.

Prefers garrison, *Clifford*, *App.* VII., *p.* lxxxiii.

Would have garrison, at large stations, *Elrington*, *App.* VII. (A.), *p.* lxxxiii.

Prefers garrison, *Lennox*, 9262, 9283, 9284.

Prefers garrison: results of regimental instructors would fall far short of the expenses, *Napier*, *App.* VII., *p.* lxxxii.

Garrison preferable, *Porter*, 2348.

Would have district instructors, *Walden*, 6349, 6350, *App.* VII. (A.), *p.* lxxxiv.

Garrison or camp should be tried first, *A. L. Walker*, 9052, 9053.

Garrison instructors useful at large stations. Regimental Instructors would not answer, *Woolsey*, *App.* VII. (A.), *p.* lxxxv.

Regimental preferable. Garrison instructors would not work well, *Baker*, 6148, 6179, 6196, 6197, *App.* VII. (B.), *p.* lxxxvi., unless the instruction were compulsory, which would be objectionable, *ib.* 6149.

Regimental preferable, *Grant*, 5992, 6015, 6016.

Regimental for 4 or 5 years; afterwards brigade or divisional, *Horsford*, *App.* VII. (A.), *p.* lxxxi.

Prefers regimental, *Russell*, *App.* VII. (A.), *p.* lxxxi.

Prefers regimental, *Storks*, 5851, 5867.

Both, *Armstrong*, *App.* VII., *p.* lxxxiii.

Both should be tried, *Forster*, 9386, 9387.

Would combine the systems, *Paulet*, 5895, *App.* VII. (A.), *p.* lxxx. A board at military stations might give more confidence than regimental instructors, *ib.* 5903–5907.

INSTRUCTORS FOR OFFICERS—*cont.*

III.—*Garrison* versus *Regimental Instructors*—cont.

Would have instructors at various headquarters, and with every regiment, *Scarlett*, 5929. Instruction could not be imposed on present garrison boards, *ib.* 5946a, 5947. Regimental instructors far preferable, *ib.* 5950–5952.

Objects to both. *De la Warr*, *App.* VII. (A.), *p.* lxxxii.

There would be great difficulty in providing, in sufficient number, *H. M. Hozier*, 6236, 6237; unless to teach rudiments merely, *ib.* 6238.

A combination recommended, Report, p. 27.

INTELLECT:

The desideratum of the Army is to encourage, *C. B. Brackenbury*, 8270.

IRISH:

Could tell an Irish candidate by his moods and tenses, *Dasent*, 4517.

An Irish boy of 16 sharper than an English one, *Gordon*, 2589, 2590.

ITALIAN:

Very important to an officer, *Milman*, 7645.

ITALY:

Officers deficient in Physical Geography, *C. B. Brackenbury*, 8251.

Military History taught at Military Colleges, *E. Walker*, 2802–2804.

K.

KNOWLEDGE:

Desire for, not strong in human mind, *Gordon*, 2564, 2565.

One-sixth the marks allowed for a subject shows a small knowledge of it, *Napier*, 1554.

L.

LA FLÈCHE (Juvenile Military School): *see* FRANCE, III.

LANGUAGES:

Most important to a Staff Officer, *Adams*, 8800.

Where Latin and Greek are taught, French and German should not be; and, to some extent, *vice versâ*, *Barry*, 5437–5439. It is difficult to obtain scientific teaching of modern languages, *ib.* 5491; otherwise modern languages should form as good a basis as ancient ones, *ib.* 5492, 5530. Would prefer foreigners to teach composition, and English masters for grammar and for personal influence, *ib.* 5515.

Former Education Commission proposed to encourage languages by attaching to embassies abroad, for a year or two, artillery officers who were linguists, *C. B. Brackenbury*, 8243. Colloquial knowledge easily acquired early in life, *ib.* 8199; knowledge of several, universal in Austrian empire, *ib.* 8200; by degrees the English people could acquire a like facility, *ib*, 8242, 8243.

Does not see how officers could be sent abroad to learn, *Cambridge*, 5382.

An officer ought to know one foreign tongue, *Forster*, 9345; few do, *ib.* 9348. The efforts made to do so will depend on the prize offered, *ib.* 9346, 9347.

Classical knowledge an aid to modern languages, *Gordon*, 2611.

Cannot be usefully acquired without grammatical knowledge, *Hort*, 5146, 5147.

Examinations on paper fail to detect bad pronunciation, *Napier*, 1219. It is an advantage to an officer to speak a foreign language, *ib.* 737; but not indispensable, *ib.* 676; not likely to be learned at Sandhurst, *ib.* 736.

Better taught by Englishmen, who know them, than by foreigners, *Nicolson*, 7734.

Least easily crammed, *Walrond*, 9609.

Instruction, at a nominal charge, should be provided for voluntary classes of officers at large stations, Report, p. 47.

LATIN:

Perhaps the best instrument of education, *Dasent*, 4574.

Now expunged from Sandhurst course, *Napier*, 896. Is an advantage in acquiring modern languages, *ib.* 1216.

An advantageous subject to take up, *Walrond*, 9639.

LAW, MILITARY :
Too difficult for young cadets, *Abbott*, 2044.
Text book much needed, *Hort*, 5144.
Not taught at Sandhurst, *Napier*, 595–599, or Woolwich, *ib.* 1273; should be learnt in a regiment, *ib.* 598, 610, 728.
Important to a Staff Officer, *Napier*, 1598–1604. Has no alteration to suggest, *ib.* 1419, 1420.
Regimental Officers ought to be more instructed in, *Peel*, 9438.
Officers usually very deficient in, *Storks*, 5832–5834.
Text book wanted, Report, p. 45.

LIBRARIES :
Library and models should be formed in each regiment, *Russell, App.* VII. (A.), *p.* lxxxi.

LINE, OFFICERS OF; *see* OFFICERS, V.

LITERATURE :
Can be crammed, *Walrond*, 9601, 9602.

LOGARITHMS :
Not indispensable, but desirable for a Regimental Officer, *Napier*, 568, 733.

LONDON, UNIVERSITY OF :
Matriculation about parallel in Mathematics with Examinations for Direct Commissions or admission to Sandhurst, *Heaviside*, 2472.

M.

MALTA :
Fortified on Vauban's first system, *Porter*, 2236.

MARKS :
Strongly opposed to personal competition by, *Adams*, 8804.
Carrying forward from intermediate examinations makes study superficial, *E. M. Jones*, 8918, 8919.
May lead to unequal justice, *Lacy*, 8434.
Should not be communicated to students, *Twisden*, 8860, 8861. Should not be given for notes on lectures, *ib.* 8862, 8876. In computing, would deduct a given number from each subject and count the remainder only, *ib.* 8886–8889. An aggregate minimum more fair than a minimum in each subject, *ib.* 8845, 8846.
A bad system, *A. L. Walker*, 9023; examiners mark unequally, *ib.* 9024.

MARLBOROUGH COLLEGE :
Sends up a few boys direct, *Abbott*, 1737.
Could impart military rudiments, *Barry*, 5497.
Good in mathematics, *Frost*, 4301.
Successful with its candidates, *Gordon*, 2553, 2554.
Is a Public School, *Moseley*, 2091; successful with its candidates, *ib.* 2092, 2093.
Candidates from, very successful, *Napier*, 189, 390, without aid from crammers, *ib.* 300. A few pass direct to Woolwich, *ib.* 1245, 1252.

MARRIAGE :
Bad for young officers, *Forster*, 9383.

MATHEMATICS :
Will not give tone to a School, *Addison*, 3882.
A man of real mathematical talent out of place in the army, *C. B. Brackenbury*, 8215, 8216. Too generally insisted on in Military Education, *ib.* 8141, 8210: the bulk of officers being devoid of the faculty, *ib.* 8143. May be crammed in a year, *ib.* 8261–8263.
Good mathematicians have greater facility in other studies, *Bruce*, 6876–6878.
Eight hours a day too great a strain, *Cunynghame*, 7293.
Pupils work from six to twelve hours daily, *Frost*, 4300, without injury to health, *ib.* 4308.
Relative requirements of Engineers and artillery, *Heaviside*, 2398, 2414, 2416, 2453–2458. Not aware of injury from hard reading, *ib.* 2419, 2420; but does not see youths after examination, *ib.* 2441.
High mathematics not needed for Staff Officers, *Lennox*, 9296, 9297.
Boys would not have difficulty in acquiring the minimum demanded, *Moseley*, 2107, 2108.
An Officer cannot do without arithmetic, *Napier*, 258. More than first four rules may not be indispensable to a regimental officer, but would require more as a test of general education, *ib.* 221–233. Fractions, proportion, and interest, necessary for keeping his men's accounts, *ib.* 266, 267, 272. Would require some Euclid as a test of general education, *ib.* 221–233; though a lad may now pass for direct commissions without any, *ib.* 256. First three books very advantageous to an officer, *ib.* 268, 271. Higher mathematics voluntary at Sandhurst, *ib.* 650, 651. Mathematics for a Staff Officer, *ib.* 1403, 1454, 1531. Some young men are incapable of acquiring, *ib.* 273. Mathematics required for Direct Commissions Examination, *ib.* 161. Mathematics being obligatory keeps back candidates from public schools, *ib.* 252.
Eight hours daily, repeated often, more than a grown man can stand, *Simmons*, 6616.
Eight hours a day must be a maximum strain, *Sylvester*, 7473.
Cannot be taught by lecture only, *Vinter*, 2626. Logarithmic work is badly taught at schools, *ib.* 2696. Mathematical powers sometimes do not develop in youths until 16 or 17, *ib.* 2722.
Best mental test, *E. Walker*, 2935. Free study at, condemned at Public Schools, *ib.* 2900.
Not easy to cram, *Walrond*, 9606, 9607.

MENSURATION :
Not necessary for Regimental Officer; but he is the better for knowing it, *Napier*, 568, 733.

METZ (Artillery and Engineer School); *see* FRANCE, VI.

MILITARY COLLEGE :
True object to impart military education, spirit, bearing, *Addison*, 3876, 3964.
Intoxication and immorality ought to be kept down without difficulty, *Barry*, 5520. A military head is best, *ib.* 5521. The civilian element ought to have fair play *ib.* 5552. Moral tone unhealthy, *ib.* 5556; and the less time youths are in them the better, *ib.* 5548–5551, 5555.
There should not be difficulty in keeping down drunkenness and immorality, *Benson*, 4710.
Necessary to make a man a soldier, *Cambridge*, 9535, 9536, the military science could not be so well acquired in later life, *ib.* 9546.
Is not in favour of, for the Line: any such establishment should be a school for boys, *Storks*, 5817, 5866.
Should take lads of 17 or 18 and give them direct professional instruction, *Temple*, 5783. An instructor cannot teach properly without disciplinary power, *ib.* 5784. Head and other masters must be appointed specially for their educational qualities; they will fail in moral government, *ib.* 5806–5809. Drunkenness and immorality ought to be kept down without great difficulty, *ib.* 5805.
[*See also* SANDHURST: WOOLWICH.]

MILITARY COLLEGE, GENERAL: *see* GENERAL MILITARY COLLEGE.

MILITARY COLLEGE, ROYAL: *see* SANDHURST.

MILITARY SECRETARY: *see* STAFF, IV. 3.

MILITARY SUBJECTS :
Why taught to cadets, *Napier*, 689, 690.

MILITIA :
It might be important to have trained Staff Officers ready for service with, *Napier*, 1496, 1545.

MIMIC DUTIES OF SOLDIERS :
To learn in early life, useless, *Napier*, 666.

MODERN DEPARTMENT :
Advocated at Public Schools, *Gordon*, 2557, 2558, 2602–2605. Was a great gain at Oxford, *ib.* 2607, 2608.
(*See also* CHELTENHAM, IV.: PUBLIC SCHOOLS, II. 3: WELLINGTON COLLEGE.)

"MODERN" EDUCATION :
May ensure candidates passing, *Napier*, 190, 192; but does not advocate, to detriment of Classical Education, *ib.* 191.

MORALE :
Morale of soldiers should be well attended to, *Strathnairn*, 9476.

MURRAY, SIR GEORGE :
Was in Senior Department, Sandhurst, *Twisden*, 8867, and probably learned Astronomy, *ib.* 8868.

MUSKETRY, INSTRUCTORS OF :
Not attended to by Officers, *A. L. Walker*, 9021, 9022, 9042–9045.

MUSKETRY, SCHOOL OF (HYTHE) :
No connexion with Staff College or Council, *Napier*, 1468, 1471.
Historical notice, *App.* XII., *p.* cxlv.

N.

National Schools:
Many pupils could gain the marks in arithmetic required for Direct Commissions or entrance to Sandhurst, *Heaviside*, 2386.

Natural Sciences:
Reason for giving many marks to in Direct Commissions Examination, *Napier*, 416–419. Increased attention now given to such subjects at schools, *ib.* 421. Answers on, at Staff College, superficial, *ib.* 1557–1559.
Easily crammed, *Walrond*, 9609–9611.

O.

Officers:
I.—*Generally.*
II.—*Age for first Commission.*
III.—*Officers of Artillery.*
IV.—*Officers of Engineers.*
V.—*Officers of the Line.*

[*See also* Cadets, Army.]

I.—*Generally.*

To take sixth-form boys from Public Schools without examination, would open the doors to all schools, *Abbott*, 1669. Officers should come from various educational sources, *ib.* 1778, and be of different educational status, *ib.* 1878. Public School idlers sometimes make splendid officers, *ib.* 1708, 1709, 1739, and any system ought to provide for their admission, *ib.* 1710, 1713. Many educate themselves after appointment, *ib.* 1745.

Would not pay ordinary officers well; but would offer good prizes for real talent and energy, *C. B. Brackenbury*, 8270.

On joining Army should be ready at once to take their places, *Cambridge*, 6449. Ordinary run have a fair knowledge of military matters, *ib.* 5379.

Could not be selected for picket duty, *Codrington*, 6082, 6083. Would not have less confidence in an officer because he might not be studious, *ib.* 6084.

Those from Sandhurst have not more inclination to study than others, *Dering*, 4172.

Less than one-eighth of our officers, *Hale*, 3013, or one-sixth, derive advantage from Sandhurst, *ib.* 3063–3065. Idle cadets may make good officers, *ib.* 3079.

Commissions should only be obtainable from Sandhurst or from the ranks, *Hallewell*, 3363. An officer of general accomplishments is more useful than one without them, *ib.* 3732.

Talent not supposed to exist may be developed under trying circumstances, *Hamley*, 8620, 8621.

Those of highest tone are of good families, *Percy Herbert*, 5052; but a snob of a boy may turn out a gentlemanlike officer, *ib.* 5063. Should come, as far as possible, from Public Schools, *ib.* 5030–5033, 5095; including middle-class schools well carried on, *ib.* 5093, 5094; but would not hinder commissions being given for good direct examination, *ib.* 5096, 5097.

The best come from Public Schools, worst from crammers; Sandhurst cadets not desirable, *Hort*, 5109.

English system makes them no more than serjeants-major, *H. M. Hozier*, 6232. Commanding Officers wish young officers to learn drill only, without acquiring the higher parts of their profession; hence they prefer a Public School boy to a Sandhurst cadet, *ib.* 6269–6271, 6277. Our company, troop, and Staff Officers are inferior to foreign officers, *ib.* 6273–6276.

Do not enter Army to support themselves, *E. M. Jones*, 8943. Do not like being purchased over, *ib.* 8953.

What is wanted is a liberal education, *Lefroy*, 7967. Worst bane of officers is vacuity of mind, frivolity, and absence of definite intellectual taste, *ib.* 8008.

Lowest cadets do not always make the worst officers, *Milman*, 7547.

Better for the service to have a few well instructed rather than many superficially instructed, *Napier*, 714.

Should enter Army at sixteen, *Paulet*, 5910, 5915, with a Public School education, *ib.* 5916.

A great gain to have sons of country gentlemen, *Peel*, 9463.

What an officer should know, *Porter*, 2197, 2200: something beyond the education of an ordinary gentleman, *ib.* 2199. Would not shut the Army against idle men, *ib.* 2239.

Would like all to make the Army their profession, *Smith*, 5186–5188.

Approves of entering Army at an early age, *Stephenson*, 6131, 6132.

Should join the Line at 16 or 17, and never later than 20; joining later inimical to discipline, *Storks*, 5814, 5816, 5846, 5864, 5865. Young officers generally favourites, *ib.* 5862, 5863. Lads of 16 are not too young for regimental service, *ib.* 5828–5830. The best come from Public Schools, *ib.* 5841. The great want of the Army is youth, *ib.* 5887–5889.

British officers, above other nations, have inherent military qualifications, *Strathnairn*, 9476. Nothing is more profitable in the Army than varied talent, *ib.* 9498. Incompetent officers should be removed from service while yet young, *ib.* 9480.

Commanding-Officers of battalions are as good as can be got under present system, *Walden*, 6389.

Undoubted advantage in drawing from different educational sources, *E. Walker*, 2757.

Has not observed a bad tone among those from Sandhurst, *White*, 4856; there is no ill-feeling towards them, *ib.* 4826, 4827. One straight from a Public School, who does not pass the Staff College, is unlikely to acquire scientific military knowledge, *White*, 4874–4876; but might be a good officer, *ib.* 4880; though the more an officer knows the better, *ib.* 4879.

II.—*Age for first Commission.*

Age of officers gazetted [1858–1867], *App.* XIII. (E.), *p.* clx.

University candidates, *Baker*, 6144, should graduate at 19, *ib.* 6174. Prefers a young officer of 18 or 19, *ib.* 6204. Inconvenience of an officer entering late in age, *ib.* 6222.

Should join Army at 16 or 17, *Carey*, 4890, 4891.

Would reduce maximum for Direct Commissions, *Napier*, 174–178. Objects to old ensigns, *ib.* 331. Seventeen or eighteen too old for entrance to a Military College, *ib.* 519, 520. A commanding officer must object to an ensign joining at 22, *ib.* 471. An officer should join the Army between 17 and 18, *ib.* 441, 444, 467, when still plastic, *ib.* 468; and be a Captain at 24, *ib.* 474. Antedating commissions would not effect this, *ib.* 467. His great object is to attain younger officers, *ib.* 432, 433, 459, 488, 489.

Would have admission to Army from 20 to 23, ranging graduates according to age, not by order of joining, *Robertson*, *App.* VII. (B.), *p.* lxxxvii.

Should join Line from 17 to 20, *Simmons*, 6641.

Should enter at 16, and serve one year as cadets, *Walden*, 6356.

Candidates for Direct Commissions should be between 17 and 20, except University graduates in arts, Report, p. 12, who should be admitted to 22, ib. p. 44.

III.—*Officers of Artillery.*

Virtually enter army on becoming Woolwich cadets. *Abbott*, 2009. Would not reduce standard to gain a year, *ib.* 2010.

Train for a year at Department of Artillery studies and Shoeburyness, including Arsenal course, *C. B. Brackenbury*, 8202–8205.

Should, after leaving Woolwich, have a special course to themselves, *Bruce*, 6767, 6769.

On joining, having just had hard mental work at the Academy, should be attached for some months to batteries in England with only easy military work; afterwards should pass a short practical course at Shoeburyness, *Milman*, 7588. Men with good preliminary education wanted, *ib.* 7592.

Employs first three or four years in learning practical work and drill, *Nicolson*, 7714.

Should have increased military instruction after entering Army, *Strange*, 7858, 7859. Severe mental discipline of Academy has given distaste for immediate further study, *ib.* 7844. Doubts if the propensity to study often revives, *ib.* 7845, 7873. Would work more retentively, if professional knowledge brought advancement, *ib.* 7872. Have ample time as subalterns to learn company discipline, *ib.* 7885, 7886. Every officer should first serve five years in a garrison battery and then be

OFFICERS—*cont.*

III.—*Officers of Artillery*—cont.

transferred to a field battery to learn both duties. Futile to educate, if openings for professional ability are closed, *ib.* 7868. There is not sufficient incentive to work, *ib.* 7869. Promotion very slow relatively with other arms, *ib.* 7871, 7914–7922. Artillery pay scarcely exceeds that of Infantry, *ib.* 7918.

Should not join after nineteen, *Warde*, 9306. Were not formerly almost all sons of Artillery or Engineer officers, *ib.* 9319. Are inferior in discipline to those of former days, *ib.* 9320, 9332.

Cannot have too much practical work on first joining, *Young*, 8108. Are collected at Woolwich for 6 or 8 months, *ib.* 8073, 8130, 8131; but only attached to department of Artillery Studies for lectures on Military Law, *ib.* 8132, 8133; an advantageous arrangement, *ib.* 8075. Subalterns are becoming old, *ib.* 8122, 8123. There are good practical officers who have not been to Shoeburyness, *ib.* 8038.

IV.—*Officers of Engineers.*

Doubts if their discipline is as good as formerly, *Warde*, 9323.

V.—*Officers of the Line.*

Special intelligence not required in, *Addison*, 3963.

There are most valuable men of great experience in moving troops, *Cambridge*, 9545.

Duty of, not to be learned at a school, *Percy Herbert*, 4999, 5012.

Have not more responsibility in India than elsewhere, *Napier*, 639.

Duties not intellectual, *Smith*, 5191. The Colonel would value an officer for his regimental rather than scientific qualities, *ib.* 5201.

Young officers, recently joined, rarely go on detached duty, *Storks*, 5877, 5879.

OXFORD:

Undergraduate killed in town-and-gown row, *Dering*, 4144.

"Pass" men; "little go" men, *Gordon*, 2526. Matriculation candidates superior to those for Sandhurst and Direct Commissions, *ib.* 2528, 2573. Has known 50 per cent. plucked for "Little Go," *ib.* 2551. School of modern history was a great gain, *ib*, 2607, 2608.

Students older and steadier than senior Sandhurst cadets, *E. Walker*, 2917.

P.

PIONEERS:

Conversion into regimental sappers an excellent proposal, *Strathnairn*, 9511.

PLAN-DRAWING:

Essential to an officer, *Napier*, 658.

POLYTECHNIC: *see* FRANCE, IV.

PRIVATE SCHOOLS:

Not synonymous with Cramming Schools, *Abbott*, 1671. Many are admirable, *ib.* 1667.

Government inspection, scarcely practicable, *Cambridge*, 5365, 5366.

If well conducted, a good sequel to a Public School course, *Moseley*, 2067; but as a rule they are not, *ib.* 2068. Believes Government inspection would succeed, *ib.* 2069–2071; details of a scheme for inspection, *ib.* 2072–2080. It would raise the moral tone of schools, and the schools would like it, *ib.* 2081. It would not do for the Council to recommend schools, *ib.* 2105. There are sufficient known evils to justify inspection, *ib.* 2082. Day scholars should be ineligible, *ib.* 2083–2085.

Want of discipline, *Napier*, 377. Scheme for appointing an inspector of discipline and morals for registered private schools, and for accepting candidates from those schools only, *ib.* 341–384, was held impracticable, *ib.* 343, as regards Woolwich examination, without an Act of Parliament, *ib.* 345–349. Was not personally favourable to the proposal; but no disciplinary system would be perfect without supervision, *ib.* 380, 381.

At some, bad habits are acquired, *Sylvester*, 7471.

PRIVATE TUTORS:

Not all "crammers:" teaching of some, highly beneficial, *Barry*, 5432.

[*See also* "TUTORS."]

PROFESSORS:

Military masters undesirable in a civilian school, *Benson*, 5720.

Selected generally by the Council, *Hamley*, 8696; after a public call for candidates, *ib.* 8698 (the competition being more open at Sandhurst than Woolwich, *ib.* 8730). They are recommended to Commander-in-Chief and presently confirmed, *ib.* 8698. Council selects Woolwich professors on the recommendation of the Lieutenant-Governor, *ib.* 8697. Dismissal of an incompetent civilian professor almost impossible: military professors are appointed for six years and need not be renewed, *ib.* 8699. An incompetent professor ought to be removeable by Council on advice of the College authorities, *ib.* 8700. A senior instructor cannot claim promotion to a professorship, *ib.* 8729; but seniority is a fair ground for promotion if competency go with it, *ib.* 8731–8733.

Recommended for appointment by Council of Military Education, *Napier*, 22, 31, 32, 115, 116.

In military colleges abroad are usually officers, *Young*, 8089, 8117.

PROMOTION:

It would be difficult to make purchase promotion at a reduced rate the reward of proficiency, *Cambridge*, 5391, 5392. Selection is impracticable, *ib.* 9559.

Should not depend on examinations: but examinations to have their weight, *Clifford*, *App.* VII., *p.* lxxxiii.

Present system of competition gives promotion to literary merit: witness would give for military excellence, on report of general officers, *Strathnairn*, 9505, with aid, in the selection from half-yearly reports, *ib.* 9506. Promotion by selection on basis of real merit and efficiency need not cause heart-burning, *ib.* 9506, 9507. No objection to regimental promotion by selection; but selection would be the less necessary as military education improved *ib.* 9508.

PROMOTION, EXAMINATIONS FOR: *see* EXAMINATIONS III.

PRUSSIA:

I.—*Military System.*
II.—*Military Education generally.*
III.—*Cadet-Houses.*
IV.—*War Schools* (Kriegs Schulen).
V.—*Artillery and Engineer Schools.*
VI.—*War Academy* (Kriegs Akademie).

I.—*Military System.*

The military system,* *p.* 161.

Standing army,* *p.* 163.

Army corps, * *p.* 164.

Mode of officering the army,* *p.* 165. Examinations for a commission, *p.* 177, 197, 530 (preliminary, *p.* 180, 531; second, *p.* 192).

The Staff,* *p.* 301, 339.

Officers have better general education than English officers, *H. M. Hozier*, 6267; and more practical professional knowledge, *ib.* 6250–6255; but their intellectual tone is narrowed, *ib.* 6268. Nearly all staff officers pass through the Staff College, *ib.* 6256–6261. An aide-de-camp is more like our brigade major, *ib.* 6261. Officers enter army at 18 or 19, *ib.* 6262; one-third from cadet schools, the others from service in the ranks as cadets, 6263, 6264. The Army the only profession open to aristocracy, *ib.* 6265, 6266. Cavalry officers reconnoitre on important occasions under a staff officer, *ib.* 6281–6283. A commission is a greater prize than in England, *ib.* 6328.

Command of regiments frequently given to an officer from Staff College, *E. M. Jones*, 8915. Regimental commemorative dinners quite possible, *ib.* 8955, 8956. Mess system exists, *ib.* 8957. Duelling rare in Army, *ib.* 8958, 8959; common at universities, *ib.* 8960.

Officers superior professionally to ours, *Walden*, 6359, 6360, 6362, 6363.

PUBLIC SCHOOLS:

I.—*As a source of Army Supply.*
II.—*Education at.*

[*See also* the several Schools under the heading of their LOCALITIES.]

I.—*As a Source of Army Supply.*

Candidates who went direct for examination for Direct Commissions [1865-1868], *App.* XIII. (D.), *p.* clix.
Per-centage of successful candidates for Woolwich who came direct from [1858-1867], *App.* XIII. (C.), *p.* clvi.
As a preparation for Military Examinations, *App.* V. (A.), *p.* lxxi.
Responsible for cramming by their neglect of idle boys, *Abbott*, 1668. The Head Masters fixed a standard, *ib.* 1725; but the boys could not attain it, *ib.* 1671, 1714, 1726-1728, 1752. Boys from, ought to be able to pass for the Army or Woolwich, *ib.* 1675-1677, without cramming, *ib.* 1682-1685: their tone is superior, *ib.* 1678, 1679, 1690; and therefore it is desirable to have them direct, *ib.* 1751. Head Masters have not been communicated with as to so few pupils coming from them, *ib.* 1754, 1755. Not more than 2 per cent. for Woolwich, *ib.* 1974. Few boys come direct from *ib.* 1729, 1735. Ought all to do as well as Cheltenham, *ib.* 1702, if not so entirely devoted to classics, *ib.* 1733. To divide all Commissions among Public Schools would be unfair, *ib.* 1704, 1705. System faulty; Army gets their idlers, *ib.* 1707, 1740, sometimes splendid officers, *ib.* 1708, 1709, 1739. Public School boys cannot construe Virgil, *ib.* 1663, 1664, and must go to crammers, *ib.* 1665.
Cadets from, are a good, well-toned class; but they are very few, *Addison*, 3877. Traditions keep up tone; influence of Head Master through sixth form enormous, *ib.* 3880. Only 16 cadets out of 320 came from, *ib.* 3793.

PUBLIC SCHOOLS—*cont.*

I.—*As a Source of Army Supply*—cont.

Free Commissions and Exhibitions might be given for competition at: but there would be difficulties, *Baker*, 6174-6176.
Would offer military exhibitions or scholarships for competition, applying, under Act of Parliament, some civil endowments to the purpose, *C. B. Brackenbury*, 8190-8193.
Boys from make the best cadets, *Bruce*, 6882, 6883.
A clever boy may be taught as well at, as by a crammer, *Dasent*, 4569. Ought to send candidates for Direct Commissions, direct, without difficulty, *ib.* 4525.
An untrained youth from, might be preferred as a subaltern to a half-trained Sandhurst cadet, *Dering*, 4222. A boy from would probably fail to pass for Sandhurst in English grammar and composition, *ib.* 4239, and, perhaps, French, *ib.* 4240.
Boys should be left at, as long as possible, *Hallewell*, 3375, 3376. Officers or cadets from, are most amenable to discipline, *ib.* 3666. Drunkenness would cause expulsion, *ib.* 3684.
Pupils who are candidates for Direct Commissions or for Sandhurst usually go to Private Tutors for mathematics, *Heaviside*, 2469; which Public Schools neglect, *ib.* 2375. The Public Schools could prepare for this examination, if the boys would work, *ib.* 2380, 2421, 2424, 2425, 2431, 2432; but idling cannot be prevented, *ib.* 2470. Boys who went to Haileybury were very deficient in mathematics, *ib.* 2422, worse than those from Private Schools, 2445. The best boys think rather of the Universities than of Woolwich, *ib.* 2450, 2451.
Best officers come from, *Hort*, 5109.
Few boys come direct from, *Moseley*, 2064. With their advantages they ought to be able to compete against other boys; but cannot hope they will do so, *ib.* 2087, 2088. At the earlier examinations more boys came, *ib.* 2090.
Specified, *Napier*, 201, 203, 204. Instruction faulty, *ib.* 180-183, 264, 320, 321. English and mathematics being obligatory keep back Public School candidates, *ib.* 252: to make French obligatory would do so still more, *ib.* 253. Encouragement of a "modern" department tends to keep candidates from "Crammers," *ib.* 301. Would accept Head Master's certificate in lieu of examination for Direct Commission, *ib.* 292. Difficulties in doing so, *ib.* 293, 322-325. Cannot say if their pupils are better educated than those from crammers, *ib.* 299. Are supposed to work up to the standard of the Council, *ib.* 313, 314; occasional communication would facilitate this, *ib.* 333. The Council might so far meet them as to enable them to compete with crammers for Direct Commissions and for Sandhurst; but not for Woolwich, *ib.* 388, 389. Discipline is aided by control of older over younger boys, *ib.* 377. Cannot judge of education because boys leave school and go to crammers before examination, *ib.* 391-396. Some Commanding Officers like cadets from Public Schools, *ib.* 472. Only 5 per cent. of candidates come direct from Public Schools, *ib.* 188. Few candidates from, for Woolwich, *ib.* 1224, 1234. Boys not averse to Sandhurst discipline, *ib.* 505.
Produce the best officers, *Storks*, 5841.
Tone of, overrated, *Strange*, 7911.
Public School education, prolonged for the addition of modern languages, military history, drawing, and surveying is the best course before entering army, *White*, 4828, 4844-4846. Would give free commissions for competition at, *ib.* 4833, 4882.

II.—*Education at.*

1. Generally.
2. Classics.
3. Modern Department.
4. Military Subjects.

1.—Generally.

Candidates from, answer better and more freely than those from elsewhere, *Dasent*, 4515, 4516.
Pupils from, learn better than those from private schools, *Frost*, 4331.
Dislikes keeping boys after 16 unless they promise well, *Gordon*, 2539. More subjects taught than formerly; but classics not improved, *ib.* 2550. Boys study hard or not at all, *ib.* 2564, 2565.
Head masters might produce scholars less deficient in elementary knowledge, *Hale*, 3082.
Definition of a Public School, *Moseley*, 2091; it offers great advantages to a boy, *ib.* 2099. Cramming

* Reports on Foreign Military Education, in a separate volume.

PUBLIC SCHOOLS—*cont.*

II.—*Education at*—cont.

1.—Generally—*cont.*

classes would be desirable if the boys would attend them, *ib.* 2102. The boys are deficient in education generally, *ib.* 2106.

Ought by their teaching to render cramming needless, *Peel*, 9470, 9471.

If they taught well, there would be no need for crammers, *Porter*, 2300.

2.—Classics.

Send up discreditable candidates in classics, *Gordon*, 2536–2538. The fault lies in want of pains in the teaching, *ib.* 2580–2582; ignorance of classics amazing, *ib.* 2591, boys pushed too fast from class to class, *ib.* 2592.

Even classics not taught well, *Moseley*, 2117.

Is opposed to altering present classical organization of Public Schools, *Temple*, 5799.

3.—Modern Department.

Advocates a modern department at each, *Barry*, 5498, for youths of a mathematical or inductive bent, 5500, 5501.

A modern department a decided advantage, *Benson*, 5699, 5700, 5711.

It is a pity English, and English History, are not attended to, *Dasent*, 4523.

Pupils from, deficient in mathematics, *Frost*, 4259, 4267, 4300. English and the sciences, *ib.* 4260.

A Modern Department would be a good institution at all schools of sufficient size for division, *Gordon*, 2557, 2558, 2603–2605. Greek only need be absolutely given up, *ib.* 2606.

Could scarcely give sufficient time to mathematics to prepare for Woolwich, *Heaviside*, 2424.

Might not object to bifurcation, if a higher examination had to be prepared for, *Hornby, App.* V. (B.), *p.* lxxiii.

The instruction of a "modern" department desirable for boys without a classical bent; but not at classical schools. The two departments cannot work well side by side. New Public schools should be created, wholly devoted to "Modern" education but not merely military, *Temple*, 5748–5754, 5762, 5763, 5780, 5781, 5793, 5795–5801. Where there is a "modern" side, it has not the vigour of the classical side, *ib.* 5756. There is a tendency to lower the mental average of a modern department by putting into it boys too stupid for classics, *ib.* 5754, 5775–5779. In the proposed "Modern" Public Schools, civilian element should preponderate, *ib.* 5782.

Special practical subjects were formerly quite neglected, *White*, 4850.

4.—Military Subjects.

Separate classes for military candidates not needed, *Abbott*, 1681.

Special classes for military knowledge would fail, *Cambridge*, 6496. Do not work up to the Sandhurst entrance examination, *ib.* 5357.

Military education could not be imparted at, *Cameron*, 5312.

All that is taught at Sandhurst could be as well taught at a Public School, *Percy Herbert*, 5014. Public Schools should be encouraged to impart this knowledge, *ib.* 5030–5033, 5064, 5081, by giving them commissions to be competed for, *ib.* 5065, 5066. Fortification and military drawing could be easily acquired, *ib.* 5067, 5069; not much mathematics necessary, *ib.* 5068. Eye-sketching could be learned in play hours, *ib*, 5070, 5071. Military history would be popular, *ib.* 5073–5076.

Military instruction would clash with other studies, *Hort*, 5121–5124; but languages should be taught, *ib.* 5123.

It would be good if they would teach technical subjects; it need not curtail general education, *H. M. Hozier*, 6229, 6230.

Would arrange for national military education to be given at, *Strathnairn*, 9503.

Would rather Public Schools should not undertake technical education, unless by refusing they would lose Army candidates, *Temple*, 5757, 5758. Assuming a modern department to exist, it should rather tend to general culture than military training, *ib.* 5764; though the latter could be thoroughly taught, if sufficient time were given, *ib.* 5765, 5766; but to give five hours daily for two years to military subjects would much interfere with general knowledge, *Temple*, 5770.

There would be difficulty in teaching practical artillery, fortification, and surveying, *White*, 4851.

Commission cannot recommend the introduction of, Report, p. 22.

[*See also* EDUCATION, II.]

PURCHASE :

Priority of appointment by is given to passed Sandhurst cadets, *Napier*, 756.

Q.

QUEEN'S CADETSHIPS :

Should be competitive, *Benson*, 5661.

[*See also* SANDHURST, VI. 3.]

R.

RECONNAISSANCE :

Not universally necessary for officers, *Codrington*, 6041, 6042.

Text book needed, *Hort*, 5144.

Rough marching reconnaissances very important for a Staff Officer, *Napier*, 1532–1534.

Indispensable in war, *Strathnairn*, 9475.

A good one must be by a mounted person, *A. L. Walker*, 9014.

[*See also* SURVEYING.]

REGIMENTAL SYSTEM :

Stops study, *Simmons*, 6623.

REGIMENTS :

Command of might, after sufficient notice, be given as in Prussia to an officer from proposed Staff Corps, *E. M. Jones*, 8915, 8954.

Staff College students are absent in all for about 3 years, *Lacy*, 8550, 8551.

REGIMENTS, ECONOMY OF :

Could not be taught at Sandhurst, *Napier*, 600–602, 607, 727, must be learnt in a Regiment, *ib.* 605.

A young officer would depend greatly on the Quartermaster, *Peel*, 9439–9443.

REPETITEUR SYSTEM :

Admirable; tried at Sandhurst, succeeded, abandoned on personal grounds, *Hale*, 2983–2985.

Approves; but it would require more masters, *Napier*, 952–956.

Very good; but not carried far enough at Sandhurst, *Porter*, 2301–2308. Would not stop idleness; but would produce uniformity of instruction, *ib.* 2309.

Contrary to our principles, *Abbott*, 1993, 1994, which he prefers, *ib.* 1997.

REPORTS, CONFIDENTIAL :

Half yearly on officers, *Baring*, 9202, 9203.

Half yearly report should cease to be confidential, *Strathnairn*, 9480.

RIDING :

A military man ought to ride well, *Abbott*, 1964.

Cross-country riding very useful to Staff Officers, *Baker*, 6219, 6220. Want of it felt at Solferino, *ib.* 6221.

An officer ought to be able to manage an untrained horse, *Barker*, 9158.

Most important, *Cambridge*, 5407.

How good riding told at Varna, *ib.* 5409.

Should be practised at home, *Percy Herbert*, 5072.

Every officer ought to ride, *H. M. Hozier*, 6310.

Cavalry ought to be taught to jump obstacles and fences, *Strathnairn*, 9491.

Should be practised daily, *White*, 4862, 4863.

[*See also* SANDHURST, XI. 6; STAFF COLLEGE, VIII. 8; WOOLWICH, XII. 6.]

ROSSALL :

Good in mathematics, *Frost*, 4301.

ROYAL MILITARY ACADEMY. *See* WOOLWICH.

ROYAL MILITARY COLLEGE. *See* SANDHURST.

RUGBY:
Classical masters teach French and German, *Addison*, 3930.
Cost of a pupil is 120*l*. *Barry*, 5558.
English course works well. *Dasent*, 4523, 4571.
A good many candidates from, *Gordon*, 2555.
Never saw obscene writing on walls of, *Hallewell*, 3776–3778, 3780.
Counted as a Public School, *Napier*, 201.
Would rather not be endowed with free commissions, if boys were required to set aside their classical studies to compete for them, *Temple*, 5741–5745. Would regret being driven to create a modern department without classics as a staple, *ib*. 5746, 5747. A boy costs, in all, 140*l*. a year, *ib*. 5771; boys do not come from any special class, *ib*. 5772; but a large proportion are sons of hard-working professional men, *ib*. 5773. Drunkenness very rare, and punished as exceptional, *ib*. 5802, 5803. Disease from immorality would involve instant expulsion, *ib*. 5804.

RUSTICATION:
Objected to, *Abbott*, 1859.

S.

SADDLERY AND CAVALRY EQUIPMENT:
Soon picked up in the regiment, *White*, 4864.

ST. CYR. *See* FRANCE, V.

SANDHURST, ROYAL MILITARY COLLEGE AT:

1. Object and Advantages.
2. Military Organisation.
3. Question of passing all officers through.
4. Cost.

1.—Object and Advantages.
Historical notice of the College, *App*. II. (E.), *p*. xiv–xix.
Principal changes made since 1855, *App*. II. (F.), *p*. xix.
The present object of the College, *Abbott*, 1783, 1879–1881, 1953. The course much thrown away on cadets who purchase, *ib*. 1825–1828. If age were lowered at all, would make it a general school for officers' sons, *ib*. 1757–1759.
Systems prior to 1857 admirable, *Adams*, *App*. II. (A.), *p*. viii.
Original object: a preparatory school for officers' sons, *Addison*, 3794; is now a boon for those who obtain education at a cheap rate, *ib*. 3795; and provides the only officers with military education who enter the Line, *ib*. 3853, 3874, 3959. Gives a personal instance of utility of Sandhurst, *ib*. 3952.
Education of officers from, superior to that of those entering by Direct Commissions: but needless details are taught, *Baker*, *App*. VII. (B.), *p*. lxxxvi.
The peculiar moral influence of the head master of a school is wanting, and needed, *Barry*, 5557.
Would abolish, *C. B. Brackenbury*, 8187–8189, 8253–8255: or retain merely for the sons of poor officers, *ib*. 8221.
Greatest misfortune would be to diminish it to those striving for free commissions, thus shutting out the Public School element, *Cambridge*, 9530, 9548, 9557; which is of infinite advantage to the poorer cadets, *ib*. 9549. The loss of Sandhurst would be a great evil, *ib*. 9555.
A benefit to officers of the lower ranks, *Cameron*, 5290, 5291, 5299.
A good place of education, and renders easier acquiring an officer's duties, *Dering*, 4012, 4014, 4093.
Well adapted to its purposes, *Forster*, 9334.
Education not satisfactory; with exceptions, is superficial, and mere cramming, *Hallewell*, 3373, 3374, 3556. The College does not confer a maximum benefit on the service, *ib*. 3557. Sons of poorer officers would lose by abolition of Sandhurst, *ib*. 3655–3657; but could obtain education enough without it for Direct Commissions, *ib*. 3654. It is a gain to the Army that one-sixth the officers should enter with some military knowledge, *ib*. 3658. There is prejudice against Sandhurst education in the public, *ib*. 3388, and in regiments, *ib*. 3390–3392.
All that is taught at Sandhurst could be as well taught at a Public School, *Herbert*, 5014. Would abolish entirely; unless changed into a Public School, with tutors' houses, *ib*. 5053, 5054. The moral superintendence of a Public School is the paramount necessity, *ib*. 5042. Poor officers would lose by abolishing Sandhurst unless their sons were provided with equally cheap education elsewhere, *ib*. 5098. The practical education was useful, 4965, 5001–5006; but could be learned elsewhere. A commanding officer would rather have Public School boys than Sandhurst cadets, *ib*. 4965, 5065; who are not ready for regimental duty, *ib*. 4966.
Sandhurst cadets not desirable for officers, *Hort*, 5109; too old, too learned in drill, *ib*. 5110, 5111; though very well educated, *ib*. 5136; and their tone not in fault, *ib*. 5113, 5148. The education witness received has been of practical benefit to him, *ib*. 5137.
Education might be much improved, *H. M. Hozier*, 6294.
If maintained, all cadets should have hope of obtaining free commissions by examination, *Lefroy*, 8004; which would improve discipline and diligence, *ib*. 8005.
In Army found no immediate gain from Sandhurst course, *Mott*, 4360, 4462; but may do so hereafter, *ib*. 4479–4488. Is glad to have gone there, *ib*. 4361; liked it, *ib*. 4367, 4368, 4476; though less than Eton, *ib*. 4477.
Education is under Council, *Napier*, 422; founded in 1799, *ib*. 542; regulated by warrant of 1808, *ib*. 545, 546. Original object, *ib*. 423, 460, 478, 479, 543, 549; which he approves, *ib*. 455, and doubts the gain by the changes of 1858, *ib*. 426, 437–440, 452–454, 477, 509. The old system could not be reverted to, *ib*. 456–458, 462; and Wellington College does not supply its place, *ib*. 480. Present object, *ib*. 424, 425, 461, 725, 726, 729, 732, 765. Some commanding officers prefer Sandhurst cadets, *ib*. 472. The College was increased in 1862, *ib*. 787. Is opposed to any union with Woolwich, *ib*. 1116–1122. The education is advantageous in competing for the Staff, but not a sufficient qualification, 1124–1127; the real object of the course, *ib*. 1128–1130, 1151. How it may be advantageous to the Army, *ib*. 1152, 1153.
For a regiment would prefer an Eton boy to a Sandhurst cadet, *Paulet*, 5898. Cadets think too much of their military knowledge, *ib*. 5917; which, however, has improved of late, *ib*. 5918.
Is now a preparatory school for Staff officers, *Porter*, 2201; original object was to educate professionally numerous regimental officers, *ib*. 2202–2204. The training is only of value to the industrious, *ib*. 2244.
Had better have tried for a Direct Commission, *Prior*. 4603. Was of no advantage to witness, *ib*. 4604, except in drill, *ib*. 4704, 4766; and perhaps in fortification, surveying, and military history, *ib*. 4767–4774. Cadets like the place, *ib*. 4660.
Looked upon by military officers as a boon, *Smith*, 5180. There is little other need for the College, *ib*. 5194. Witness' education did not benefit him in his Line service, *ib*. 5205, 5206. Has not noticed any difference between the cadets who join his regiment from Sandhurst and other officers, except that the former sooner acquire the drill, *ib*. 5155–5159, 5176–5179, 5189, 5190, 5207. The time spent at Sandhurst would be better employed in general education, *ib*. 5160–5163.
Having been at, facilitated admission to Staff College, *A. L. Walker*, 8996–8999.
Injured by the system of Direct Commissions, *E. Walker*, 2755. Would remove every ground of prejudice against the College, *ib*. 2756. It would be good to make Sandhurst the way to a free commission certain if the standard and security for con-

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

I.—*Generally*—cont.

1.—Object and Advantages—*cont.*

tinuous work were adequate, *ib.* 2931, 2933; with much higher entrance standard, *ib.* 2932.

Cadets from do not make better officers than boys from Public Schools, *White*, 4819, 4820. Is not necessary, *ib.* 4833, 4852–4854, 4882; but does not advocate its abolition, for the sake of sons of poor officers, *ib.* 4883, 4884.

To be maintained solely for those who will enter Army by free commissions, Report, p. 31. An annual Report by an independent board of visitors should be presented to Parliament, ib. p. 17; such board not to be permanent, but not to be changed all at once, ib. p. 33. Abolition to be a question for the future, when success of garrison and regimental instruction shall be determined, ib. p. 28.

2.—Military Organisation.

Approves the military organisation, which, however, is more in name than fact, *Addison*, 3826–3828. It encourages military spirit, *ib.* 3833–3835.

Officers from are much the better for their military education, *Carey*, 4892, 4893, 4896, 4897, 4914, 4939; and become efficient six months sooner than those not so taught, *ib.* 4915, 4940, 4941. In the field, information acquired at Sandhurst is often of use, *ib.* 4947, 4948.

Military organisation advantageous, *Dering*, 4019. Learnt a private soldier's duties, *ib.* 4093, 4177; but not an officer's, *ib.* 4095. Could not have drilled a company, *ib.* 4176. An adjutant might prefer for a subaltern an untrained youth from a Public School to a half-trained Sandhurst cadet, *ib.* 4222.

Approves the military organisation, which teaches thoroughly the organisation of a Company, and is of great advantage in after service, *Farmar*, 3221–3223, 3231. The College has formed a battalion since present Commandant has been there, *ib.* 3232, 3233; which would not put instruction in the background if all were under the Commandant, *ib.* 3234. Cadets learn much of regimental economy, *ib.* 3283.

Approves battalion organisation, as a school of regimental instruction; therefore approximates conditions of a regiment of gentlemen, *Hallewell*, 3345–3348, 3529. Object, to introduce a military tone; if that were eliminated would abolish the College, 3771, 3772.

In favour of a smaller College at a higher standard, *Hale*, 3043, 3087; without double government, *ib.* 3044–3046, 3088; with reduced military organisation, and under a civilian head, if a suitable man could be found, *ib.* 3049, 3086. Ten years ago the Junior Department resembled a Public School, *ib.* 3026.

Attaches no importance to the military tone but much to the military education which a third of the cadets receive, *Cameron*, 5309–5311.

Attaches no importance to the military organisation, scholastic discipline would be better. *Percy Herbert*, 5078–5080. Would change the system entirely, *ib.* 4991, 5013.

3.—Question of passing all officers through.

Proposals for making it the sole entrance to Cavalry and Infantry, *App.* II. (H.), *p.* xxii.–xxxv.

In favour of all officers passing through Sandhurst or a University for a short course, *Baker*, 6147.

Satisfactory to a great extent, but would extend it, so as to pass all infantry and cavalry Line officers through, *Cambridge*, 5348, 5349, 5374, 6447; which would improve the tone, *ib.* 6454. Sandhurst would be a Military University, *ib.* 6449, of 600 or 700 young men, *ib.* 5375, 6450.

Would expand and pass all officers through it, *Grant*, 5990, 6012, 6013, *App.* VII., *p.* lxxx. Formation of good regimental subalterns would be more useful than abstract teaching, *ib.* 6011.

Would supply Woolwich and Chatham, by best cadets from. All Army aspirants should pass through Sandhurst, *Griffiths, App.* II. (A.), *p.* x.

Would have all Line officers pass through, *Hallewell*, 3379, 3387, 3556, 3773, 3774; which would involve 700 or 800 cadets and a larger staff, *ib.* 3728; but would not render discipline more difficult, *ib.* 3727. To effect this would expand present College rather than add others to it, *ib.* 3729.

Would pass all officers through it, *E. Walker*, 2757; not diminishing present numbers, *ib.* 2768.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

I.—*Generally*—cont.

3.—Question of passing all officers through—*cont.*

Objects to proposal to pass all Guards' and Line officers through Sandhurst, *Abbott*, 1776, 1777; there would have to be at least 1,000 cadets, *ib.* 1782. Gain of limiting to number of Non-purchase Commissions, *ib.* 1787–1790, 1875, 1925, 1926, 1950, 1951.

Strongly objects to passing *all* officers through Sandhurst, *Percy Herbert*, 5033, 5064.

The proposal of 1861 that all officers should pass through it was not carried out, *Napier*, 786. Cost of the College, *ib.* 942. Disadvantages of that proposal, *ib.* 1110–1115, 1134–1136.

If retained, would limit to completing education of young men selected by competition for Non-purchase vacancies, *Robertson, App.* VII. (B.), *p.* lxxxvii.

Not in favour of increasing, *Strathnairn*, 9503, 9504.

[*See also* GENERAL MILITARY COLLEGE.]

4.—Cost.

College might be greatly increased without much additional expenditure, *Cambridge*, 6452, 6493.

Net cost to country about 17,000*l.* a-year, *Cameron*, 5229–5233.

Was formerly self-supporting, *Hallewell*, 3622, 3623. Commandant goes into annual estimates, *ib.* 3624. Annual cost per cadet, *ib.* 3510–3518. Payments by friends of cadets, *ib.* 3634; and cost to Government, *ib.* 3635–3639. Three hundred cadets paying each 100*l.* a-year would cover five-sixths of the cost. The loss arises from low payments for officers' sons, *ib.* 3651–3653*a*. Various officers have half-pay in addition to College emoluments, *ib.* 3626–3629. The country does not obtain advantages proportionate to the expense, *ib.* 3558. If every cadet paid his full cost and the present charge to the country for Purchase cadets were applied in part purchase of Commissions as prizes there would be greater efficiency, *ib.* 3646–3648.

II.—*Estate; buildings; and domestic arrangements.*

1. Estate.
2. Buildings.
3. Domestic matters.
4. Mess.

1.—Estate.

Pays its cost, by timber, *Cameron*, 5226, 5227.

2.—Buildings.

No accommodation for Company officers, *Addison*, 3981; ought to be built close to college, *ib.* 3983; and might be devoted to professors, if not required for Company officers, *ib.* 3984. Quarters of some officers and professors are too far off, *ib.* 3885–3887.

Halls of study too small, *Griffiths, App.* II. (A.), *p.* ix.

Means of ablution insufficient, *Napier*, 958–960. Sleeping arrangements might be improved, *ib.* 961–964, 966. Bunk system uncomfortable, *ib.* 963. Does not advocate a separate room for each cadet, *ib.* 968, 969. Dining-rooms and halls of study sufficient, *ib.* 967. Reading rooms, 970–974. Younger cadets slept in "short passage," *ib.* 1048. All the cadets live in one building, *ib.* 1108.

3.—Domestic matters.

Each cadet should have the conveniences given at a Public School, *Cambridge*, 5402.

There are 50 associated dormitories of four cadets, and 100 bunks, *Cameron*, 5283. A cadet is responsible in each, *ib.* 5284. Would like every cadet to have a separate room, *ib.* 5269.

Food good and ample, *Dering*, 4099, 4100. Difficult to obtain clean linen, *ib.* 4200; not such stowage as at Eton, *ib.* 4201; but slovenliness not engendered, *ib.* 4202. Associated dormitories had not a bad effect, *ib.* 4054–4056.

Under-officer visits, *Farmar*, 3240; a corporal or responsible cadet in each room, *ib.* 3241, who ought to report intoxication, *ib.* 3242.

Private room for each cadet unnecessary, *Hallewell*, 3570, 3571. Rooms not uncomfortable, *ib.* 3572; their furniture, *ib.* 3573–3581. Change of linen obtainable when required, *ib.* 3582, 3583; and a good bath, *ib.* 3584; but not in cadet's own room, *ib.* 3585. Liquor rarely taken into dormitories, *ib.* 3586. Conduct in dormitories decent, *ib.* 3565; no bad effect from association, *ib.* 3566. In A and B companies there are four in a room: in C Company each has separate bunk: bunks described, *ib.* 3567.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

II.—*Estate, Buildings, and Domestic Arrangements*—cont.

3.—Domestic matters—*cont.*

New non-general bath arrangements a failure: does not see the need of ablution being private, *ib.* 3421, 3422.

Every cadet should have a separate room, *Percy Herbert*, 5087–5089.

Nothing analogous to fagging, *Mott*, 4413, 4414. Sees no objection to public bathing, *ib.* 4416.

Clean linen issued by housekeeper, *Prior*, 4665.

Dormitories are locked, *ib.* 4748.

Every cadet should have separate accommodation: quarters for officers of divisions, Report, p. 37.

4.—Mess.

Food too luxurious for hard study, *Adams, App.* II. (A.), *p.* viii.

An officer not present during whole time, *Farmar*, 3147. Senior under-officer is in responsible charge, *ib.* 3148.

Provisions detailed, *Hallewell*, 3587–3590. There is a committee of management, with cadets on it, *ib.* 3590.

III.—*Military Government.*

1. Generally.
2. Commissioners.
3. Governor.
4. Commandant.
5. Major and Superintendent of Studies.
6. Adjutant.
7. Paymaster and Quartermaster.
8. Chaplain.
9. Company Officers.
10. Serjeants.

1.—Generally.

No authority answering to master of boarding-house in a public school, *Addison*, 3975.

Meetings of officers and professors in educational matters would do good, *Cameron*, 5247.

Powers of the several officers were approved by Commander-in-Chief, *Hallewell*, 3742. Staff could not be reduced except by combination with professors, 3515–3518, 3630, 3631.

The chief authority has neither position nor authority analogous to the head master of a Public School, *Percy Herbert*, 5099, 5100. Would have a civilian of academic distinction at the head, *ib.* 5048.

The division in the government of Education and Discipline is bad, *Napier*, 645. The governing body, *ib.* 827–829; their appointment, *ib.* 832. Questions of discipline referred to Commander-in-Chief, *ib.* 921, 922; of study to Council of Military Education, *ib.* 923.

Double staff for teaching and discipline most pernicious, *Porter*, 2172. Council of Instruction would do good, *ib.* 2273.

Establishment proposed, Report, p. 35.

2.—Commissioners.

Unobjectionable, *Cambridge*, 5367; do not clash with Council, *ib.* 5368; no object in giving them further inspectional functions, *ib.* 5404.

Functions, *Hallewell*, 3501, 3502, 3506. Completely independent of Council, *ib.* 3503. Some inspect College occasionally, with Commander-in Chief, *ib.* 3504, 3505. Are well qualified to give opinions and unlikely to interfere for harm, *ib.* 3507–3509.

Duties, *Percy Herbert*, 4964, 4992–4995; not wanted, *ib.* 4991. Do not interfere with Council, *ib.* 4988, 4989.

The Commissioners, *Napier*, 830, 831, 851; who are honorary, *ib.* 833; their powers, *ib.* 847–850, 877, 890. Have no connection with Council of Military Education, *ib.* 879–889.

Do occasionally consider points of discipline, *Napier*, 1109.

Should cease to have any connection with discipline or instruction, Report, p. 33.

3.—Governor.

Exercises a general influence, *Addison*, 3978. Should have absolute power as to indulgences and punishments, *ib.* 3956; or removal of a cadet without appeal, 3849–3852.

Ought to have the large powers of a Public School Head Master, *Cambridge*, 5396, 5397; but not to appoint professors, *ib.* 5398; though he should recommend their removal, if inefficient, *ib.* 5399, 5400.

Cannot make regulations, *Cameron*, 5214, appoint officers or instructors, *ib.* 5215, or control course of study, *ib.* 5264; but is supreme in discipline, except as regards removal and expulsion of cadets, *ib.* 5234–5241. Has almost enough power, *ib.* 5302. Goes round the messes, &c. without notice, *ib.* 5276; but does not see much of the cadets unless he invite them to his house, *ib.* 5249–5251.

Can only rusticate for six months, *Hallewell*, 3313–3316; pending decision of Commander-in-Chief, *ib.* 3735–3737; has only lately had so much power. Ought to be able to dismiss absolutely, without appeal, *ib.* 3317–3320, 3465.

Should be selected for educational capacity, rather than military services: authority and responsibility should be increased: position more nearly assimilated to that of head-master in a Public School: should have absolute power of rustication, Report, p. 15, 16; should take part in instruction; and be appointed by and responsible to Secretary of State, ib. p. 33, should have local rank superior to any officer under him; should be appointed for 7 years, renewable, but 14 years' service or 60 years of age to be the limit: salary, 1,500l., ib. p. 34.

4.—Commandant.

Except as to rustication, corresponds to a Public School head master, *Addison*, 3977, having command of the cadets, *ib.* 3978. Lives in the College, *ib.* 3979.

Should have powers of a Head of a College at Oxford, *Farmar*, 3178, to rusticate or dismiss without appeal, *ib.* 3179–3181; which he has not now, *ib.* 3182. His action is confined to discipline, *ib.* 3301; but might advantageously take superintendence of studies, *ib.* 3298–3300.

Would combine with Superintendent of Studies, *Hale*, 2971.

Has command of Cadet College, under the Governor, *Hallewell*, 3304–3306; changes in studies are referred to him, *ib.* 3307–3308, and by him to Governor. In discipline, would only refer serious matters to Governor, *ib.* 3309. Can punish up to 14 days' arrest, *ib.* 3310, 3311. Cannot rusticate or dismiss, *ib.* 3312. Should deal with all misconduct; present system might lead to clashing between him and Superintendent of Studies, *ib.* 3740. Is responsible to Governor for everything connected with cadets, *ib.* 3741; but has no means of knowing their characters, *ib.* 3671. Is consulted privately by cadets about their prospects, *ib.* 3668–3670. Should not be a local magistrate, *ib.* 3769. Attends to the provisioning, *ib.* 3531.

Drill is under, *Napier*, 644. Duties generally, *ib.* 865–867.

Would write to friends of a cadet not doing well, *Prior*, 4740.

To be discontinued, Report, p. 35.

5.—Major and Superintendent of Studies.

Has, under Commandant, charge of all practical studies, except swimming, *Addison*, 3869, 3870. Has duties in the direction of commanding the cadets, *ib.* 3978. His recommendations have been to a certain extent considered, *ib.* 3864.

Is also Major, *Farmar*, 3250; and, as such, can punish for misconduct out of study, *ib.* 3251, 3252.

Would combine with Commandant, *Hale*, 2971.

Studies are under, but cannot change them without reference to Commandant, *Hallewell*, 3307, 3308. Controls studies and professors. On parade, is Major of the battalion. In all things is completely under Commandant. The relationship works smoothly, *ib.* 3321–3323.

Is second in command and has charge of instruction, *Napier*, 642. Duties generally, *ib.* 862–864.

Can always alter the course or time of any study, *E. Walker*, 2793.

To be discontinued, Report, p. 35.

6.—Adjutant.

No object in being separate from company officers, *Dering*, 4167, 4168. It might be useful afterwards, if cadets assisted in the duties, *ib.* 4215–4217.

Duties relate to drill; has nothing to do with dormitories, *Farmar*, 3134.

Duties chiefly at drill and in orderly room. Is absolutely necessary as a distinct officer, *Hallewell*, 3335–

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

III.—*Military Government*—cont.

6.—Adjutant—*cont.*

3338, 3525–3527. As necessary as in a regiment, *ib.* 3528, 3535.

Duties, *Napier*, 861, 909–911; possible substitute for, *ib.* 912–917.

To be discontinued, Report, p. 35.

7.—Paymaster and Quartermaster.

Paymaster's duties could not be combined with Quartermaster's, *Hallewell*, 3533. Quartermaster hardest worked man in the College, *ib.* 3530: aids Commandant in the provisioning, *ib.* 3531.

Duties, *Napier*, 903, 904, 924–926. Before 1858 the two appointments were united, *ib.* 927, 928, 931. Their present duties are more severe, *ib.* 929, 930, 932. Former position, *ib.* 933, 934.

Should be combined in one officer, Report, p. 35.

8.—Chaplain.

Had no influence, *Dering*, 4189.

Duties are only to read prayers and preach; but exercises great moral influence, *Hallewell*, 3493–3497. No objection to his being an Army chaplain liable to removal, *ib.* 3498–3500.

Cadets have no personal relations with, *Mott*, 4440, 4441.

Appointment, *Napier*, 1091; relations to cadets, *ib.* 1089, 1090.

Nearest approach to a superintendent of morals, *Porter*, 2256.

Often gave advice in hospital, *Prior*, 4738, 4739.

Should be specially appointed by Secretary of State, and not necessarily a military chaplain, Report, p. 33; should teach Latin and Greek, ib. p. 34, 36.

9.—Company Officers.

If they did adjutant's duties, it would not render closer their connexion with cadets, *Dering*, 4169.

Captain has general superintendence of cadets in his company, *Farmar*, 3129, 3130; for discipline of which he is entirely responsible, *ib.* 3133. The Subaltern acts under him, *ib.* 3137; except when he is on duty at the College, *ib.* 3138. Captain of the day, *ib.* 3139; his duties, *ib.* 3140; inspects mess, *ib.* 3145, 3146. Is quartered close to his Company's dormitories which he visits frequently, *ib.* 3141–3143. The Captain would not know of a cadet's punishment for inattention, *ib.* 3196, though a company officer is always present when Commandant punishes or warns, *ib.* 3197. Frequently go round College at night at uncertain hours, *ib.* 3259. Subaltern visits halls during study, *ib.* 3261, to make arrangements in case of Instructor's absence, this should not lower the Professor in the cadets' eyes, *ib.* 3291–3294. The Captain visits his cadets in hospital, *ib.* 3263.

Captains and subalterns are necessary, *Hallewell*, 3324. 3327. Captains responsible for interior economy of company; their subalterns support them, *ib.* 3325. Formerly there were no subalterns, *ib.* 3326. Captains see much of their cadets, *ib.* 3672; are appointed by Commander-in-Chief, *ib.* 3674; should be very specially selected, is quite satisfied with them, 3676, 3678. The post is military, *ib.* 3677. Ordinarily, captain would inquire into a charge against a cadet, *ib.* 3679; his early training fits him for this duty, *ib.* 3680, 3681, specially, *ib.* 3770. Duties of Captain of the day, *ib.* 3519, occupy his whole time, *ib.* 3520. Duties of other captains, *ib.* 3521; of subalterns, 3522, 3523.

Captain more intimately acquainted than Commandant with cadets, *Mott*, 4430. Holds position of Captain of a house at Eton, *ib.* 4410; but would not caution or lick a cadet, *ib.* 4411.

Number excessive, *Napier*, 857–860. Professors might take their duties, *ib.* 897, 898, 945, 946. Duties of captains and subalterns, *ib.* 902, 905–907, might be combined, *ib.* 908; what is not expected of them, *ib.* 1069–1080; should be more with the cadets, *ib.* 1097, 1103. Captains middle aged, *ib.* 1077.

Subalterns of companies are well qualified, *Porter*, 2282.

Would warn a cadet seen to be going wrong, *Prior*, 4737.

To be discontinued, Report, p. 35.

10.—Serjeants.

Not now a system of espionage by, *Dering*, 4248. Evidence of, against a cadet would not be taken, *ib.* 4249.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

III.—*Military Government*—cont.

10.—Serjeants—*cont.*

Duties, *Hallewell*, 3612–3614. Would not call for evidence of, against a cadet, *ib.* 3615, 3616. Do not exercise surveillance; have nothing to do with discipline, *ib.* 3474–3476. No advantage in their being constables for surrounding district, *ib.* 3768.

Duties formerly exercised, *Napier*, 1014–1025, 1031–1033. That system quite gone. *ib.* 1025. Cannot say why it was changed, *ib.* 1098, 1099. Present functions, *ib.* 1026–1030.

IV.—*Educational Staff.*

1. Strength and Duties.
2. Position, appointment, &c.
3. Salary.
4. Military *versus* civilian.
5. As to assuming disciplinary powers.
6. As to giving private lessons.

1.—Strength and Duties.

Fifteen military instructors, *Addison*, 3927, 3969; 14 civilians, *ib.* 3970. Excess of masters due to number of subjects, *ib.* 3805.

Number of professors could not be reduced, *Cameron*, 5342.

Labour of, not economised. Instructors should have been cadets previously, and should pass probation; their term should exceed six years, *Griffiths, App.* II. (A.), *p.* ix., x.

Professors not generally worked so hard as those on Military History, *Hale*, 3023.

Would not give professors any power over instructors, *Hallewell*, 3339, 3340.

The professors detailed, *Napier*, 834–836; their selection, *ib.* 839; appointment, *ib.* 837, 838; and disciplinary powers, *ib.* 840–846. Cannot be reduced, *ib.* 854–856. There is about one to ten cadets, *ib.* 891, 892. Professorships could not well be combined, *ib.* 893–895, though one man might teach two subjects, *ib.* 896.

Have as much as they can do, *Vinter*, 2680, 2681. Supply the place of both private tutor and college tutor at an university, *ib.* 2709. Would give them a share in the final examination, *ib.* 2722.

Professor combines duties of professor proper and répétiteur, *E. Walker*, 2823, 2824. Sees no gain in dividing the functions, *ib.* 2825, 2826. How witness' time is occupied, *ib.* 2872–2875; a fair sample of a professor's work, *ib.* 2876; all work hard, *ib.* 2877. Free study would lessen professors' labour, *ib.* 2893.

Correspondence [1867] as to reducing instructional staff, *App.* II. (K.), *p.* xli.–xliv.

Should occasionally meet as a Consultative Board, under presidency of Governor, Report, p. 17, 33. Proposed Establishment, ib. p. 35.

2.—Position, Appointment, &c.

Should not be interfered with, except by Governor, *Adams, App.* II. (A.), *p.* vii.

Instructors, have used a thoroughly military position, *Addison*, 3905.

Should be selected by the Council, *Cambridge*, 5398.

Do not communicate direct with Governor, *Cameron*, 5248; practice to be adhered to, *ib.* 5275. Appointments should be made by Council; but on probation, *ib.* 5329.

Should look up to Commandant, rather than superintendent of studies, as responsible for everything, under the Governor, *Farmar*, 3160, 3161. They want *esprit*, *ib.* 3256, and do not support the company officers, *ib.* 3282. Were responsible to Commandant, in Col. Scott's time, *ib.* 3234, 3255. The captain of company never interferes with, *ib.* 3270.

The tendency is to treat military professors as regimental officers, *Hale*, 2972.

Always treats professors, military and civil, and executive officers as strictly equal, *Hallewell*, 3715.

Never consulted as to general reforms, *Porter*, 2232. Nominated by Council, *ib.* 2277.

There is but one professor in each subject, *Vinter*, 2619. Has little power over other masters, in the same subject, *ib.* 2668; none as regards incompetent or careless master, *ib.* 2669, 2670. Can only advise ordinarily through Superintendent of Studies, *ib.* 2620. His opinion is usually acted on, *ib.* 2621, 2675; should only go to Commandant if Superintendent of Studies were absent, *ib.* 2671. Some analogy between his position towards his cadets and

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

IV.—*Educational Staff*—cont.

2.—Position, Appointment, &c.—*cont.*

that of a college tutor to his pupils, *ib.* 2653. Should receive a written answer from Superintendent of Studies to a written suggestion, *ib.* 2673, 2674; after reference to the Council, if necessary, *ib.* 2675. Professors do not communicate direct with Council, unless exceptionally, *ib.* 2672.

Should be, in great measure, appointed and dismissed by Governor, Report, p. 16, 33. The head of each branch should have general supervision and inspection over the studies in the Department. Language masters should, if possible, be Englishmen, ib. p. 33. Military professors to be appointed for seven years at least, renewable; civilians, unless under special circumstances, to cease at 55 years of age, ib. 34.

3.—Salary.

Language masters are good men, indifferently paid, *Addison*, 3928; pay some criterion of social position, *ib.* 3929. Mathematical instructors are civilians, wranglers; two are clergymen, *ib.* 3932.

Some of the civilian professors' salaries are too low to attract men of sufficient character, *Cameron*, 5341.

Language masters are paid the lowest, *Hallewell*, 3620, 3621.

Future professors to have consolidated pay, *Napier*, 938–941. Salaries are too small for hospitality to cadets, *ib.* 1069, 1078, 1079.

Civilians have lower salaries than military men, *Porter*, 2249–2252, with equal work, *ib.* 2253; but they have superannuation. Military men only serve for six years, *ib.* 2254.

Salaries lower than at Woolwich, *Vinter*, 2666, 2678, and low as compared with Public Schools, *ib.* 2667. Mathematical masters on same scale of salary as at Woolwich, *ib.* 2679. Would not be responsible for the whole mathematical duties without a much higher salary, *ib.* 2676; but thinks the professor should have that responsibility, if understood from the first, *ib.* 2677.

Consolidated salaries proposed, Report, p. 36.

4.—Military *versus* Civilian.

Might all be military, except for languages and sciences, *Addison*, 3866–3868, 3997, 3998. An officer has influence which a civilian cannot acquire, *ib.* 3933, 3973.

Not the unanimity of a Public School. Civilians have too little influence, *Benson*, 5706.

Prefers military professors for youths intended to become officers, *Cameron*, 5277. The military professors are excellent; the civilians not all well qualified, *ib.* 5328, for managing cadets, *ib.* 5332.

Military professors keep the best order, *Dering*, 4081. Relatively with an executive officer, a military professor's influence would depend on the man, *ib.* 4188. Most idleness and insubordination under civilians, *ib.* 4015–4018.

Civilians have less moral control than military men with equal powers, *Farmar*, 3162–3167.

Civilians have not the moral power of military professors, *Hallewell*, 3342. Instruction should be by military professors, *ib.* 3343: Cadets prefer it, *ib.* 3344, 3716.

Some civilians were as successful as the military, *Percy Herbert*, 5047. Military officers not suited for schoolmasters, *ib.* 5013, 5044: but would have military tutors for military subjects, *ib.* 5042, 5055; not a double staff of tutors, *ib.* 5056.

Discipline not good under civilians, *Mott*, 4387–4393, 4434.

Military professors had more influence than civilians, *Prior*, 4656–4659.

Witness believes he exercises a moral influence, *Vinter*, 2654.

All should be military officers, *E. Walker*, *App.* II. (D.) *p.* xiv. Civilian, as compared to military professors, lose authority through not wearing uniform, *ib.* 2851.

To be military or civilian at discretion of appointing power, Report, p. 33.

5.—As to assuming disciplinary powers.

Deprecates union of disciplinary and educational functions, *Adams*, *App.* II. (A.), *p.* vii.

Proposed to make six military professors captains of companies (leaving other military instructors and the civilians responsible for discipline in their classes), *Addison*, 3865: if they have time, *ib.* 3830–3832, 3854, 3922–3925, 3968: and as at present they have only 18 hours' work a week, they could take the duty, *Addison*, 3896, 3901, if more study work were not thrown on them, *ib.* 3982. The particular supervision of discipline could not be distributed among all the instructors, *ib.* 3971. Have now connexion with cadets only in study, *ib.* 3974.

Had no military control, *Dering*, 4133, 4134, or power out of study, *ib.* 4135; but helped in cadets' amusements. *ib.* 4136. Order in class depends on professor, *ib.* 4079, 4080. Would combine the two functions, *ib.* 4112–4114, 4186.

Would not combine instructional and disciplinary Staff, *Griffiths*, *App.* II. (A.), *p.* x.

Professors should take disciplinary duties, *Hale*, 2972, 2998, 3022 (preferably to having an Adjutant, *ib.* 3085), except that of subaltern of the day, *ib.* 2972, 2973, 3024, 3097, 3098, whose duty should not be entrusted to the serjeant, *ib.* 3025.

In favour of making military professors captains of companies: there are some who have time, *Hallewell*, 3328–3334. Professors have now sufficient disciplinary power, *ib.* 3341.

Disciplinary powers, *Napier*, 1063–1068. Professors might take duties of Company Officers, *ib.* 897, 898, and supervise discipline out of study, *ib.* 945, 946.

Disciplinary powers, *Porter*, 2165–2171, 2175, 2233–2235, 2245–2248, 2276, 2281. May see the same class six hours a week, *ib.* 2258, 2259, and can better know cadets' characters than the company officers, *ib.* 2260, 2261, 2174. Professors should officer the companies, *ib.* 2173. Subordination of instructional staff bad, *ib.* 2319, 2320. Disciplinary powers of professors, *ib.* 2165–2171, 2175; ought to be independent of captains of companies, *ib.* 2233–2235; and to be increased, *ib.* 2181, 2245, 2246, 2248, 2276; limited, however, to Englishmen, *ib.* 2247.

Professors have now sufficient disciplinary power, *E. Walker*, 2849. Could not take the duties of company officers without increase of strength or decrease of study work, *ib.* 2850, 2871, 2909.

Should have limited powers of punishment, Report, p. 33; and be solely responsible for order during study, ib. p. 34.

6.—As to giving private lessons.

No objection to private tuition, *Addison*, 3808, 3809; but the Council has not approved it, *ib.* 3810, 3811.

Not now allowed to instruct private pupils, *Napier*, 935, though once did, *ib.* 936, 937.

Some professors had private pupils, and witness taught his son one hour a day, *E. Walker*, 2878.

Private lessons should be allowed, with Governor's sanction; but not resident pupils, Report, p. 34.

V.—*Admission.*

1. Candidates.
2. Age for entrance.

[For EXAMINATION, *see* § XII. 2.]

1.—Candidates.

Almost all come from crammers, *Addison*, 2793.

Young men from Public Schools should go direct to Sandhurst, *Cambridge*, 5356.

Average classical attainments very low, *Gordon*, 2497–2492. Their spelling often very bad, *ib.* 2510. Occasional candidates show high classical attainments, *ib.* 2517. Comparison with Oxford "Pass" men and "little go" men, *ib.* 2526; with matriculation candidates, *ib.* 2528, 2573.

Generally go to private tutors, *Heaviside*, 2469. A large proportion well-grounded in elementary mathematics; others merely crammed, *ib.* 2381, 2468: better than formerly, *ib.* 2383, 2446: but the standard does not rise, *ib.* 2384.

Sons of officers have some advantages; but they let in very few, *Napier*, 481. University candidates, 329, 330, 426, 431, 457, 473, 509. Prolongation of age, for benefit of, to be abolished, *ib.* 329, 330. Would not limit to candidates from Public Schools, *ib.* 484, 485; but would require a certain amount of preliminary education, *ib.* 486. Mathematical knowledge of candidates is small, *ib.* 562.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

V.—*Admission*—cont.

1.—Candidates—*cont.*

The most advanced in mathematics have often failed for Woolwich through superficial reading. The best are those with some ability and moderate, but sound foundation. The men are better in years when Woolwich admissions are few, *Vinter*, 2630.

Two-thirds of those who enter have sufficient general education to avail themselves of special instruction in military history; one-third are deficient in history, geography, spelling, and writing, *E. Walker*, 2738, 2739. Generally a deficiency in history, geography, and spelling, *ib.* 2740, 2741, 2821.

2.—Age for entrance.

Present regulations [1867] as to, *App.* II. (L.), *p.* xliv.

Age of cadets admitted [1866–1868], *App.* XIII. (B.), *p.* cxlvii.

Older University men make an objectionable mixture as to age, *Abbott*, 1760–1762; but very few come, *ib.* 1763. Age should not be below 16, *ib.* 1756.

Should be 14 to 16, *Adams*, *App.* II. (A.), *p.* vii.

Boys from Public Schools might enter at 17 or even 18, *Cambridge*, 6476, 6477–6479, 6487. Should enter army younger, *ib.* 5352, at 18, *ib.* 5364, 6450.

Age should not exceed 15, *Carey*, 4890, 4891, 4898–4900.

Mixture of older and younger men an advantage, *Gordon*, 2574, 2577, 2593–2599.

Would not reduce minimum age, unless Sandhurst were made a mere boy's school, *Hallewell*, 3375, 3376.

Entrance age before and since 1858, *Napier*, 426, 437–440, 422–454, 477, 509. Prolongation of age, for benefit of university men, to be abolished, *ib.* 329, 330. There is now a pupil of 24, *ib.* 483. Would alter the admission age, *ib.* 431, 445–451, 487, 493–495. Would not let any pupil remain after 19, *ib.* 475. Once pupils were divided, according to age into A and B companies, *ib.* 482. Range of age under his proposal, *ib.* 490, 492. Lowering age need not lower the examination, *ib.* 503, 504.

Much against reducing minimum age, *E. Walker*, 2759. Men of 16 and 20 may mingle without disadvantage, *ib.* 2758.

Should be from 16 to 17, Report, p. 12, 19, without exception, ib. p. 31.

VI.—*Cadets.*

1. Generally.
2. Numbers, payment &c.
3. Queen's or Indian Cadets.
4. Idlers.
5. Commissions; rewards; prizes.
6. Uniform.

1.—Generally.

If war broke out, half would be ready for service with two months' training, *Addison*, 3951. As a rule, could not afford to go to Public Schools and would join army direct from inferior training, *ib.* 3836–3838. One-third have not enough intelligence for their military studies, *ib.* 3937. From Public Schools a well-toned class, but very few, *ib.* 3877. An instructor could best judge of a cadet's character in the field, but fairly well in class-room, *ib.* 3897, 3898; more likely to know it than Captain of Company, *ib.* 3858, 3907, 3958.

Has never had a complaint from a cadet's parent, *Cameron*, 5300, 5301.

Consider themselves *quasi* soldiers, *Dering*, 4115. Often borrow money from tailors, *ib.* 4196, 4198; but not from professional money lenders, *ib.* 4197. Debt in the neighbourhood difficult, *ib.* 4199.

Always remain in same company, *Farmar*, 3131, 3132. Commanding officers sometimes find them conceited, *ib.* 3230. Do not decide quarrels by fighting, *ib.* 3258.

Incurring debts ought to be prevented, *Griffiths*, *App.* II. (A.), *p.* x.

On entering have sufficient general education to take up their studies; but very little arithmetic and no fortification, *Hale*, 2943–2946, 3009–3011. 37 per cent. profit much; 35 per. cent. learn something; 28 per. cent. nothing, *ib.* 2948, 3012. Neither *esprit de corps* nor leaders to set a tone, *ib.* 2952. The tone attributable to the system at private tutors; would be better from a Public School, *ib.* 3040–3042. Are slovenly because there is no great town near, *ib.* 3007. Have a bad name at Aldershot, *ib.* 3008. Forfeitable rank might improve their tone, *ib.* 3006, 3050–3052. Bad tone attributable to a few ill-disposed idle young men; not general, *ib.* 3126.

Only those who obtain free commissions (35 or 37 per cent.) obtain great advantage from the College, *Hallewell*, 3555; half those on the "B" list derive very little benefit, *ib.* 3558, 3641, 3643–3645. Sees no disadvantage in having older cadets from Universities, *ib.* 3377. Pocket-money regulations, *ib.* 3532, 3598, 3599. Do not run into debt more than public schoolboys, *ib.* 3597. To give them military rank would increase Governor's power over them, *ib.* 3649, 3650.

Pocket-money arrangements, *Mott*, 4408. Money-lenders come occasionally, *ib.* 4409, 4417. Treated too much like private soldiers, *ib.* 4464, 4465, 4469.

Formerly sometimes passed on to Woolwich, *Napier*, 547, 548; now furnish officers to Cavalry, Infantry, and perhaps Military Train, *ib.* 551–553. Sometimes visit Continent, but not sent by the College, *ib.* 581, 674. Form a small battalion; but are not treated as soldiers, *ib.* 608, or taught as such, *ib.* 609–613. Only treated as private soldiers when under arms, *ib.* 792–796; their organization is military but not regimental, *ib.* 797–801; nominally under Articles of War, *ib.* 804. Would not give Commissions, *ib.* 807–813. Half-yearly report is sent to parents, *ib.* 1081, 1082; insufficient to give a knowledge of character, *ib.* 1083.

Out of study, very slovenly, *Porter*, 2178, 2266, 2268, 9269, in great contrast to Woolwich, *ib.* 2179, 2267.

Would go to some officer for advice, in a private trouble, *Prior*, 4699, 4700. Dealings take place with money lenders, *ib.* 4701, 4702. Treated as gentlemen by the military officers, *ib.* 4749; but on parade as private soldiers, *ib.* 4750, 4751; without having degrading duty, *ib.* 4752.

His cadets are well behaved in study, *Vinter*, 2643. To knock off quietly a few fit for nothing would improve the tone of the place, *ib.* 2701–2703. With a two-years' course cadets become attached to the place, *ib.* 2710–2712: no special encouragement for this feeling, *ib.* 2713, 2714.

Very lowest cadets do not improve their powers from first to last; others do, *E. Walker*, 2746. Would admit best cadets to practical class at Woolwich, to prepare for Artillery and Engineers, *ib.* 2767.

Get on well in Infantry, *White*, 4830; but such as do would have got on equally well without Sandhurst, *ib.* 4832.

2.—Numbers, payment, &c.

Payments for, 1858–1867, *App.* XIII. (A. i.), *p.* cxlvi.

Payments for, by present regulations, *App.* II. (L.), *p.* xlv.

Average number on each scale of payment, [1865–1869], *App.* XIII. (B.), *p.* cxlix.

Payment should be moderate, *Cambridge*, 6498, 6499, 6501–6505.

Number, *Cameron*, 5216; cost. *ib.* 5217, 5219, 5222–5225.

About 190 enter Army yearly, *Hallewell*, 3640.

To increase qualifying marks for a Commission would decrease the cadets, *Napier*, 814, which is undesirable, *ib.* 696–700, as it might lower their social status, *ib.* 749, 752; though the College would be more efficiently worked with smaller numbers, *ib.* 815, 816, without increased cost to the cadets, *ib.* 820. There are now 300 cadets, *ib.* 706, with the same military status as Woolwich cadets, *ib.* 817–819, cost about 120*l.* a year each, *ib.* 943.

Number should be nearly limited to the free commissions attainable, i.e. for a two years' course to 210 cadets, Report, p. 16, 31. Scale of payment, ib. p. 33.

3.—Queen's and Indian Cadets.

Original correspondence, *App.* II. (I.), *p.* xxxv–xli.

Numbers who obtained commissions among the competitors [1858–1867], *App.* XIII. (B.), *p.* cxlix.

Queen's and Indian cadets a great disadvantage, *Abbott*, 1774; they should be commissioned without passing through, *ib.* 1775. Benefit of their removal, *ib.* 1949. Queen's cadets are few in number, *ib.* 1952.

Cost, *Cameron*, 5221, 5528. Would rather give them scholarships at other place of education, *ib.* 5304, 5305; requiring them to pass the Direct Commission examination, *ib.* 5306–5308. Parents of Indian cadets have better means than those of Queen's cadets, *ib.* 5346.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

VI.—*Cadets*—cont.

3.—Queen's and Indian Cadets—*cont.*

Not specially idle, *Dering*, 4089.
Not less energetic than others, *Hale*, 2960.
Foster idleness; would rather give them a sum of money than have them at Sandhurst, *Hallewell*, 3415, 3416. In four years six have been in "A" list, *ib.* 3642.
Queen's and Indian cadets as a rule idlers, *Napier*, 525–529, 534–539; they are prejudicial to the College, *ib.* 534, 535; and should receive commissions, on qualifying, without passing through, *ib.* 536. There are from 25 to 30 of them, *ib.* 540; out of 300 cadets, *ib.* 541.
Queen's cadets, as a rule, are idle, *Porter*, 2157, 2158.
Were idle, *Prior*, 4655.
Do not need to compete, *E. Walker*, 2747; idle for the most part and are prejudicial to college, *ib.* 2748. Would double their minimum pass examination, *ib.* 2749, 2751; rather than give them commissions without passing through the college, *ib.* 2754.
Should be admitted to and passed through the College only under the same conditions (except as regards payments) as other cadets, Report, p. 33.

4.—Idlers.

Idlers, *Abbott*, 1784–1786; possibly a stimulus could be applied to them, *ib.* 1884–1890. Could not compete successfully for Woolwich, *ib.* 1797–1799.
One third idle; as in most public institutions, *Addison*, 3812–3815. Idling great; but less than at Universities, *ib.* 3971. An improved educational system would give cadets' minds more occupation, *ib.* 3792, 3936.
Idleness could be mitigated, *Cambridge*, 5377, 9556.
Would try to prevent by making the attainment of periodical standard more strictly a condition of remaining, *Cameron*, 5292–5294. Second term cadets are idlest, *ib.* 5295–5298.
Cadet can study or idle as he pleases, *Dering*, 4015, 4306. Two-fifths work hard, three-fifths are idle, *ib.* 4087, having no inducement to work, *ib.* 4088. Those lazy in study, not always so in athletics; a small proportion are too lazy for anything, *ib.* 4038–4040, 4250, but not a large proportion, *ib.* 4251.
Incorrigible idleness would be punished, *ib.* 4166. Requiring a standard to be attained each half-year must check idleness, *ib.* 4218, 4219.
Best chance of eliminating idlers, *Forster*, 9335, 9336.
Monthly reports of conduct, properly acted on, ought to repress idleness, *Griffiths, App. II. (A.)*
A vast number do not profit, *Hale*, 2949. Two-thirds are listless and apathetic, *ib.* 2950, from their first entrance, *ib.* 2951, 3039; not from lack of ability, *ib.* 3109, 3110. Cadet soon knows if he will be below free commission list, and if so, idles, *ib.* 2954, with perfect impunity, *ib.* 3095. The evil would be met by reducing the numbers, *ib.* 2955, and raising the entrance examination, *ib.* 2956. Great idleness should be a bar to obtaining a commission, *ib.* 3093; though idlers may make good officers, *ib.* 3079.
Does not admit general listlessness; but there is idleness among those intending merely to qualify, *Hallewell*, 3394, 3395. Idleness not punished as such, *ib.* 3488–3491; but parents have been requested to remove idle cadets, *ib.* 3726.
Military instruction almost limited to those trying for free commissions, *H. M. Hozier*, 6295.
Have greater impunity than at Eton, *Mott*, 4363, 4364.
The idlers, *Napier*, 692–694, 707, 757, 765–784; how to be rid of them, *ib.* 695, 702–713, 753.
Half the cadets idle because they know they can pass for purchase, but cannot win a free commission, *Porter*, 2155, 2237, 2238. Remedy, *ib.* 2156. Idleness has not been punished, *ib.* 2161–2164. Only knew one case of discharge for it, *ib.* 2224, 2241. A minor penalty should precede discharge, *ib.* 2225. Idleness ought not to be recognized at, Sandhurst, *ib.* 2240.
Some work hard, *Prior*, 4706. Rich men only wishing to qualify, and Queen's cadets idle, *ib.* 4653–4655.
Idlers are they who find out early that they have no chance of free commissions, *Vinter*, 2648. Tries to persuade idlers to work, *ib.* 2650, often with success, *ib.* 2651.
Some idle, but not half, all work at Military History, *E. Walker*, 2744, 2771, 2856.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

VI.—*Cadets*—cont.

5.—Commissions; rewards: prizes.

Free commissions granted to cadets, (1863–1868.) *App.* XIII. (B.), *p.* cxlviii.
Percentage gained by sons of army to navy officers, *App.* XIII. (B.), *p.* cxlix.
More pass out than can enter Staff, *Abbott*, 1954, which is valuable, *ib.* 1955, and might be a loss if abolished, *ib.* 1956, 1957. Would not give Probationary Commissions, but appoint at once, *ib.* 1896, 1897.
Time at College should count as commissioned service, *Cambridge*, 6500, 9532, subject to good conduct, *ib.* 9530. It would be army, not regimental rank, *ib.* 9533, 9537.
Would like to give free commissions to all cadets, if it would not diminish the number of cadets, *ib.* 9558. Free commissions should be given for good conduct as responsible under-officers, *ib.* 9538. Would increase incentive to study, by graduating the prices of commissions to the "B" list of cadets, *ib.* 5376, 5390, 5405, 9530.
Would graduate the price of purchase commissions according to proficiency of cadets, *Forster*, 9337: and for zeal and good character would antedate commission to period of entering college, *ib.* 9338: this would fill the college, *ib.* 9402. If the prize were a commission certain, a high standard could be insisted on, *ib.* 9339, 9343, 9344. Non-purchase commissions not given except to Sandhurst cadets, *ib.* 9401.
The purchasing idler's military knowledge very small indeed, *Hale*, 3015. Would raise qualification for a purchase commission, *ib.* 3103–3106.
Rather than raise the qualification would increase the prizes, *Hallewell*, 3743, by splitting up some free commissions into money rewards, *ib.* 3380–3386.
Prizes insufficient to encourage industry, *Napier*, 708, 716–719, 754; but does not know how to add to them, *ib.* 720–724, 764. Two hundred commissions are given (with and without purchase) annually, *ib.* 554. Priority of appointment by purchase is given to passed Sandhurst cadets, *ib.* 756, in order of passing, *ib.* 826. Those first on list obtain without purchase, *ib.* 523, about one-third of the competitors besides the Queen's and Indian cadets, *ib.* 527, 528. A large proportion of purchase commissions necessarily go to the cadets, *ib.* 708, 788–790. A cadet soon learns his chance of obtaining a non-purchase commission, *ib.* 757, 758, 761–763; and works accordingly, *ib.* 759, 760, *ib.* 716–719, 754; but commissions could not be increased, *ib.* 720–724. Cadets should not have commissions, *ib.* 807–813.
More free commissions, less idling, *Porter*, 2243. If each cadet had a fair hope of obtaining a free commission there would be inducement to work, *ib.* 2159, 2160, 2242.
Sufficient free commissions to incite to work, *E. Walker*, 2769, 2770; but if entrance examination were raised, more would be required, *ib.* 2772. As encouragement to study would give military exhibitions to best cadets, *ib.* 2857, 2858, and would allow men who had passed well to join senior or practical class at Woolwich, *ib.* 2859–2863. Would give a grant of marks to under-officers and corporals, *ib.* 2835–2848.
Minimum marks for a free commission: prizes for distinguished examination, Report, p. 37.

6.—Uniform.

Out of grounds should be in full dress, *Hale*, 3083, 3084.
Always in, except when going a distance on pass; always worn at Aldershot, *Hallewell*, 3609. Red worn on Sundays and when blue jacket is under repair, *ib.* 3751.
Would insist on strict uniform in York Town, *Vinter*, 2722; which might indirectly check going there, *ib.* 2724.

VII.—*Discipline.*

1. Generally.
2. Companies.
3. Under-officers and Corporals.
4. Offences and punishments.
5. Good-conduct rewards.

1.—Generally.

Present regulations, *App.* II. (L.), *p.* xlv.
Has nothing to do with, *Abbott*, 1900, 1901. Arrest would not cure idleness, *ib.* 1927, 1928. Professors should report disgraceful conduct, *ib.* 1929; but not punish it nor notice minor offences, *ib.* 1930.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*
VII.—*Discipline*—cont.
1.—Generally—*cont.*

Officers from, have undergone discipline substantially the same as at public schools, *Addison*, 3836–3838. The influence exercised in a public school by headmaster through sixth form cannot be had in a military establishment, *ib.* 3881. The college, as far as possible, responsible for cadets' moral and intellectual training, *ib.* 3883, 3884; but their age and the shortness of the course diminish possibility of control, *ib.* 3946. Discipline on the whole good considering cadets' antecedents, *ib.* 3793, which give many a bad tone, *ib.* 3816–3818, 3993. College would gain greatly if the worst cadets were weeded out, *ib.* 3822. Military officers in charge look upon cadets as entrusted to their care, *ib.* 3888, 3944, so far as they come in contact with them, *ib.* 3945. As regards moral discipline, correspondence with parents is by Governor only, *ib.* 3917, 3918, or Commandant in less serious matters, *ib.* 3920, 3921; not by captain of company, 3919. Misconduct in study would be reported by instructor to Superintendent of Studies, *ib.* 3890, who would bring case forward, *ib.* 3889. If a whole class went wrong, instructor would probably be to blame; but not in separate cases, *ib.* 3891–3894; a kind officer or instructor would warn a cadet before reporting him, *ib.* 3895. Difficulty of sending home an obnoxious cadet, *ib.* 3843–3845, 3850.

Believes moral tone has been bad; but is better, *Benson*, 5701–5704; causes, *ib.* 5705.

Not worse than at other colleges; tone could be kept high, *Cambridge*, 6453. Much improved of late, *ib.* 5350, 6453. Should be on a military and civil system combined, *ib.* 5362; under military men, *ib.* 5363; though more rigid than at civilian universities, *ib.* 6451. Great defect consists in good-conduct marks not counting towards a commission, *ib.* 5405. To make them do so would be difficult; but would have the best effect; *ib.* 5416–5422, 9530.

Proximity of Aldershot a great drawback, *Cameron*, 5344. Sees no objection to an annual inspection as to discipline, if there were not at the college a general officer of high rank, *ib.* 5266–5268.

Improved of late, *Carey*, 4907, 4908: but officers from, are too much given to drinking and smoking, *ib.* 4895, 4904, 4905, which he attributes to the late age at which they are at Sandhurst, *ib.* 4906.

Tone does not admit comparison with a school, *Dering*, 4043; but not high, *ib.* 4122, from so many coming from crammers, *ib.* 4137–4139, 4241. Might be improved, if course were longer, *ib.* 4123, 4124, 4165. Course too short for much *esprit de corps*, *ib.* 4118, 4119, 4153–4155. More communication wanted between executive officers and cadets, who are treated like private soldiers, *ib.* 4037, 4073, instead of junior officers, *ib.* 4076, 4211–4214. Under-officers and corporals would form a link for discipline, *ib.* 4152. Only cadets of habitual bad character come under moral supervision, *ib.* 4242–4247.

All officers supervise cadets out of doors, *Farmar*, 3134–3136. Is generally satisfactory, *ib.* 3168, 3177; fairer than in Colonel Scott's time, *ib.* 3256; complaints have been much exaggerated, *ib.* 3169, 3170. Describes previous disturbance in Sir H. Jones' time, *ib.* 3171–3176; stopped by an under-officer, *ib.* 3172. Two or three cadets were sent away, but were allowed to purchase afterwards, *ib.* 3253, 3254. Authority is too much divided between Commandant and Superintendent of Studies, *ib.* 3235. Would concentrate in Commandant, *ib.* 3178–3182, 3298–3301. Enters everything in defaulter sheet, *ib.* 3193, 3194. Professors report monthly on cadets for Commander-in-Chief's information, *ib.* 3195. Mutinous movements easily suppressed by officers accustomed to regimental command, *ib.* 3275, 3276. Cadets are as smart as can be expected, *ib.* 3281; the case at Woolwich is essentialy different, 3282.

Was good when witness was a cadet, *Forster*, 9340, but cadets were younger, *ib.* 9399, and demand for officers great, 9388, 9389. The Governor would disapprove inspection by a general officer, *ib.* 9403, 9404.

Discipline and manners improving, *Griffiths, App.* II. (A.), *p.* x.

A good man at study is good out of it, *Hale*, 2960, 3035. Lengthening the course would add to senior cadets' authority, 3123. Discipline less strict than at Woolwich, 3053–3057; false principies are taught, *ib.* 3047, 3048. Bad tone is not general, 3126A. Present monthly reports are useless, *ib.* 3080, 3096; and unnoticed, *ib.* 3099–3102. During an instructor's absence the senior cadet is in charge, but is often unfit, *ib.* 3060. Has had a difficulty in his class only once, *ib.* 2994; a case of very bad language, *ib.* 3027. Has rarely to exercise his power of arrest, 2295. There is a want of indirect supervision, *ib.* 2997.

Better than could be expected, *Hallewell*, 3464; cadets, on the whole, wonderfully well conducted, *ib.* 3775. System essentially military, *ib.* 3662; properly so, *ib.* 3663, 3664; with more discipline on the whole than a civilian would exercise, *ib.* 3665, 3685. Military rigidity reconcileable with sympathetic government, *ib.* 3667. Pickets of cadets to visit the town on Sunday evenings have answered and done their duty, *ib.* 3477–3480, 3484. Bounds inappropriate to young men, and not acted up to, *ib.* 3611. No roll-call from 5 p.m. till tattoo, except on Sundays, when there is parade, *ib.* 3748–3750. No one in special charge of morals, *ib.* 3700–3702. Cadets not legally under Mutiny Act and Articles of War, *ib.* 3787–3789. Conduct marks described; were objectionable; approved of their abolition, *ib.* 3354–3361.

Moral tone low, *Percy Herbert*, 4962, 4963, 5037, 5062, from absence of tutorial superintendence, *ib.* 5038–5040, 5083, and not from intellectual deficiency, *ib.* 5049; deters parents from sending their sons, *ib.* 5077.

In witness' time was satisfactory, *Hort*, 5126.

Little *esprit de corps*, *Mott*, 4369. Discipline not very good, *ib.* 4387 in study, *ib.* 4388, under civilian professors, *ib.* 4389–4393, 4434. General tone not so high as Eton, *ib.* 4362, 4376, 4460, 4461. There is no one to go to for advice, *ib.* 4466–4468. Much went on of which authorities were not aware, *ib.* 4470, 4471. Eton principles inapplicable, *ib.* 4412.

No distinction between character of cadets admitted before and since 1858, *Napier*, 464–466. To mix young men of very different ages is prejudicial to discipline, *ib.* 434–436, 491. Having an upper and lower school would not remedy this, *ib.* 469, 470. Discipline not distasteful to public school boys, *ib.* 505. Questions concerning discipline go straight to Commander-in-Chief, *ib.* 921, 922; discipline not under Council of Military Education, *ib.* 975, best that it should not be, *ib.* 1059–1062. All public-houses out of bounds, *ib.* 993, 994; any shop can be made so, *ib.* 995.

Failed because the College has been treated too much like a regiment, *Porter*, 2287, 2311–2313, 2318. There can be no *esprit de corps*, *ib.* 2321. Professorial discipline not represented, *ib.* 2315. Captains of companies mix more with cadets than captains in a regiment with their men, *ib.* 2322. A combination of university and public school systems should be attempted, *ib.* 2314. Objects to inspection by a general officer, *ib.* 2287. No one to whom a cadet in a scrape could apply, *ib.* 2255; chaplain nearest to a superintendent of morals, *ib.* 2256; but no one so recognised, *ib.* 2257. Double staff for teaching and discipline pernicious, *ib.* 2172. Good conduct can only be tested by defaulter sheet, *ib.* 2333–2335. Relaxation from former strict discipline was very rapid, *ib.* 2274; present system not too lax, if breaches of discipline were severely met, *ib.* 2275.

Was very good, *Prior*, 4611. Tone not altogether studious, *ib.* 4706. There is *esprit de corps*, *ib.* 4711, 4712, 4715. Tone and feeling were right, though a few fellows might be otherwise, *ib.* 4647–4649, No going out after tea, *ib.* 4748. Cadets orderly at night, *ib.* 4757–4759. Language bad, *ib.* 4694; giving a low tone, *ib.* 4697; but not acquiesced in by all cadets, *ib.* 4698.

Power of putting in arrest recently given to professors, *Vinter*, 2641, 2642, an improvement, *ib.* 2643. Junior instructors might use greater powers injudiciously, *ib.* 2644. Does not know how far the new powers are acted on, *ib.* 2645. Would not act the spy; but is under positive order to report a cadet who entered a forbidden house, if he recognised him, *ib.* 2646. Idleness punishable with impositions, *ib.* 2649. Before reporting for a minor offence should speak in a friendly way to a cadet,

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

VII.—*Discipline*—cont.

1.—Generally—*cont.*

ib. 2652. To give civilian professors and masters care of discipline would interfere with the military arrangements, *ib.* 2697, 2698. No such difficulty with military professors, *ib.* 2704.

It is bad for discipline that cadets go to Aldershot, *E. Walker*, 2880, 2916. Cadets as smart as Woolwich cadets, *ib.* 2881; but has seen them slovenly dressed, *ib.* 2882–2884.

Tone inferior to Harrow, *White*, 4823, 4834.

2.—Companies.

Ninety per company has been the maximum, *Addison*, 3856; too many for one captain, *ib.* 3857. Proposed to have six companies under six selected military instructors, responsible for discipline, out of study as well as in; not sure there are not grave obstacles, *ib.* 3830–3832, 3854, 3855, 3865, 3922–3925, 3968, 3972. No great fault in present system, *ib.* 3907; but would prefer to unite discipline and instruction, *ib.* 3829; avoiding double government, *ib.* 3967. Would base selection of professors for companies on the man rather than the subject he teaches, *ib.* 3924, 3933. Is not sure of the effect on cadets, *ib.* 3925, or of the practicability, *ib.* 3926. From difference in advancement an instructor could scarcely have all his own company to teach, *ib.* 3859. An officer in charge of a company should devote his whole time to it, *ib.* 3899, 3900. Would divide cadets into fifties, *ib.* 3902 (which would not cause diversity of discipline, *ib.* 3903), rather than into one company with one captain and several subalterns, *ib.* 3904. Direct supervision rests with captains of companies, *ib.* 3976. In domestic arrangements captains work under commandant, *ib.* 3980. Company officers do not live in College from want of accommodation, *ib.* 3981.

With interior alterations cadets could be organised in subdivisions of 20 or 30 cadets, *Cameron*, 5278; under charge of the professors, *ib.* 5279, 5280.

Three companies better than one large one, *Dering*, 4156–4160. Imperfect tone of "C" company attributable to three or four individuals, *ib.* 4132.

About 80 cadets per company, *Hallewell*, 3673. Should be sorry to see changed the custom of visiting cadets in dormitories and at mess, *ib.* 3524.

Should be replaced by divisions of not more than 25 cadets under personal supervision of professors and instructors; who should have a special allowance for the duty, Report, p. 33. Senior cadets in each division should aid in discipline, ib. p. 34.

3.—Under-Officers and Corporals.

Selected by captains and commandant (Superintendent of Studies being consulted), *Addison*, 3860; on ground of fitness, *ib.* 3908, from third-term cadets, *ib.* 3909, 3962, of good character, *ib.* 3913. Choice would be better if captain and professor were united, *ib.* 3861; better still if professors recommended as a body, *ib.* 3862. Missing link between cadet and tutor would be filled up, *ib.* 3863. Object of having under-officers, *ib.* 3910–3916.

If term were lengthened would be more efficient, *Cameron*, 5281, 5282. Attaches great importance to their aid in discipline, *ib.* 5285–5287.

Under-officers had proper influence, corporals had not, *Dering*, 4120, 4150, 4151. Moderately conscientious, *ib.* 4121; very strict on parade, *ib.* 4170. Have power beyond their own companies, *ib.* 4161–4163. The appointment ought to convey substantial advantages, *ib.* 4109–4111, 4220. In the row at York Town an under-officer was a leader, *ib.* 4146, 4164; but his company officers did not know it, *ib.* 4147. A corporal also was present, *ib.* 4164. Course too short for monitors, *ib.* 4230–4232; which is a disadvantage, *ib.* 4235. Sees no remedy, *ib.* 4233. Could only approximate monitors by being brought nearer to commissioned officers, *ib.* 4234.

Ten corporals for company, *Farmar*, 3149; no supernumerary or lance-corporals, *ib.* 3150. Recommends for corporals and under-officers, *ib.* 3191; from third-term cadets (second-term cadets were tried and failed), *ib.* 3238; taking into consideration study marks and good conduct together, *ib.* 3192. Course is too short to give under-officers much power, *ib.* 3202. An additional term would give them more control, *ib.* 3239. Under-officers are too much

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

VII.—*Discipline*—cont.

3.—Under-officers and Corporals—*cont.*

of an age with other cadets, *ib.* 3203; they have authority enough, *ib.* 3204. Quite satisfied with them as a body, *ib.* 3205; the choice is rather limited, *ib.* 3206; the appointment is an object of ambition, *ib.* 3207. On passing out under-officers and corporals are gazetted first, *ib.* 3208; not always considered a boon, *ib.* 3209–3211.

Greater rewards should be open to, *Griffiths, App.* II. (A.), *p.* x.

A month is a short time after which to make a cadet a corporal, *Hale*, 3061. With halls, as at Sandhurst, doubts if they could maintain discipline in study, *ib.* 2993, 3059. Have little authority, *ib.* 2996; except in occasional instances, *ib.* 3034. Are appointed by commandant on recommendation of captains of companies, *ib.* 3069. Professors should have a voice, *ib.* 3035–3038, 3058, 3062.

Selected carefully by commandant, *Hallewell*, 3452–3454. Powers of awarding arrest only provisional, *ib.* 3455, 3457. Would strengthen their hands, *ib.* 3458. Are valuable for discipline, if actually placed on duty, *ib.* 3459. Would encourage, by free commissions to the best, *ib.* 3460–3463. Off duty are too completely associated with cadets, *ib.* 3766.

Many cadets pass out without becoming corporals, *Mott*, 4422; and without commanding others, *ib.* 4423, 4424. Have a certain influence, *ib.* 4415. In each class an under-officer or corporal is responsible for order, *ib.* 4431–4433.

Former powers of under-officers and corporals, *Napier*, 1056.

Selected irrespective of professors, *Porter*, 2226, 2227. Few are qualified for post, *ib.* 2329–2332. Professors should report on conduct of, 2336–2338. Ought to receive marks for good service, as it detracts from time for study, *ib.* 2323, 2324, 2326. Priority for commission is not reward enough, *ib.* 2325.

Are influential, if generally liked, *Prior*, 4708, and of decided use in maintaining order, *ib.* 4760.

Should have more responsibility and therefore powor, *Vinter*, 2705, 2706, 2719.

Corporal wanted in each class to keep order, *E. Walker*, 2849, 2919. The link of effective under-officers much needed: would select the cadets first on study list (including drill and gymnastics, 2870) subject to veto by discipline officers, and would encourage them by a grant of marks, *ib.* 2835–2848, 2869. There are no lance corporals, *ib.* 2864. Under-officers and corporals might be made on probation, *ib.* 2865. There are none in third division, *ib.* 2866. Corporals from higher classes should have charge of junior classes: promotion of a cadet should be out of his own company, *ib.* 2868. High standing in studies does not now influence appointment as under-officers, *ib.* 2904, 2905; the senior under-officer may be lowest in the final examination, *ib.* 2906. Prefers the Woolwich to the Addiscombe system, *ib.* 2907, 2908.

4.—Offences and Punishments.

Denies that one cadet in seven is insubordinate, *Addison*, 3819–3821; but cannot quite explain the large percentage, *ib.* 3988, 3989; average raised by the large number in 1862, *ib.* 3822–3824, 3987. Insubordination, in the returns, has a wider meaning than usually given, *ib.* 3992.

Insubordination rather frequent towards civilian professors, *Dering*, 4066–4071. Insubordination would probably stop on the appearance of an officer, *ib.* 4208–4210. Describes a row at York Town, *ib.* 4058, 4059, 4062, 4140; it was not premeditated, *ib.* 4060; and gave way to proper feeling when an officer appeared, *ib.* 4061. Would have been worse had there been any one to fight with, *ib.* 4145. Did not hear of an attempt to throw the guns into the lake, *ib.* 4143; but a skittle alley was burnt, *ib.* 4141, 4142. Was the only row in witness' time, *ib.* 4065. There has not been a row at Blackwater fair for three years, *ib.* 4063, 4064.

Has never met with disrespect from a cadet, *Farmar*, 3271; but has heard of impertinence to a professor by a cadet whom he threatened to report, *ib.* 3295–3297.

Disturbance at Blackwater fair in 1864, *Hallewell*, 3481–3483, 3746, and one in October 1867, *ib.* 3484–

3487, 3617–3619. The fair is a source of evil for several days, *ib.* 3744, 3745. Disrespect to officers almost unknown, *ib.* 3746.
Blackwater disturbance in 1864 described, *Mott*, 4385, 4386.
Intoxication not rife; though there have been cases, *Addison*, 3990–3992.
Every effort made to check drunkenness and immorality, *Cambridge*, 5423. Contagious disease not always incurred at the College: parents should be informed of it, *ib.* 5424.
Drunkenness now very uncommon, *Cameron*, 5289. No notice taken of disease due to immorality, *ib.* 5246, 5257, 5259, 5260, or notification to parents, *ib.* 5262. It would lead to concealment *ib.* 5274. No medical inspections, *ib.* 5261. The disease happens among the juniors, *ib.* 5258.
Disgraceful offences not common; drunkenness occasional, *Dering*, 4044. Not aware of indecent conduct or gambling, *ib.* 4045, 4046. Much swearing, *ib.* 4052; obscene language in dormitories, *ib.* 4053; never noticed it in study, *ib.* 4072. No night drinking in "C" company, *ib.* 4057. At public-houses cadets would not mix with low company, *ib.* 4206, 4207.
Drunkenness uncommon and could not pass unobserved, *Farmar*, 3272, 3273. Drunkenness arises from frequenting public-houses, *ib.* 3432. Intoxication is always recorded: less prevalent than generally supposed, *ib.* 3765; would not incur much bad opinion in the College, *ib.* 3705, 3706. Probable punishment, solitary confinement, *ib.* 3682; rustication, if repeated, *ib.* 3683. No punishment for immorality, though the hospital returns shew that offences occur, *ib.* 3690; but being seen in company with loose women involves punishment, *ib.* 3691, 3699. Cadets' ages average over 18, *ib.* 3694; and must be taken into account, *ib.* 3692, 3693. The offence is injurious, *ib.* 3696–3698. Should not report such cases to parents, unless the cadets were very ill indeed, *ib.* 3701. Sandhurst is under Contagious Diseases Act, *ib.* 3700.
Immorality, insubordination, and intoxication were not rife, *Hort*, 5127.
Neither theft, bullying, nor indecent conduct; but sometimes intoxication, *Mott*, 4377–4383; spirits are obtained from public-houses, *ib.* 4473, 4474.
No gambling, drinking, or bullying, *Prior*, 4636–4640. One or two cases of illegal combination, *ib.* 4642–4646. Insubordination and misconduct due to a small number of idle cadets, *ib.* 4661. There is drinking and smoking in public-houses, principally in the evening, *ib.* 4677–4679; the cadets keep to their own society, *ib.* 4795, 4796; beer the usual drink, *ib.* 4744. Two or three cadets went to bed each night the worse for liquor, *ib.* 4745. Some drunkenness at half-yearly board dinner, *ib.* 4806–4815. Intoxication common among new cadets, *ib.* 4717–4722, 4794; would not lead to serious punishment unless habitual, *ib.* 4726–4728. Never saw spirits smuggled into dormitories, *ib.* 4680; nor knew of an immoral offence, *ib.* 4681. Fellows have been "toshed" for dirtiness, *ib.* 4682–4685, 4689, 4690, or ungentlemanly behaviour, *ib.* 4691. Some whoring, but not much, *ib.* 4687, 4688, 4724, generally with servant maids, *ib.* 4734. A man thought none the worse of for it, *ib.* 4725, 4735. About ten cadets usually laid up with venereal disease, *ib.* 4816, 4817.
Drunkenness and disorder prevail, *Walden*, 6426.
Very little bullying, *Farmar*, 3262.
No bullying, *Hallewell*, 3604.
No scandalous bullying exists at Sandhurst, *Vinter*, 2721.
Obscene writing on the walls quite exceptional, *Hallewell*, 3779. Lateness for roll call would not be entered in Defaulters' Book unless of constant occurrence, *ib.* 3767. Falsehood punished by isolated close arrest, *ib.* 3560. Bad language punished according to its degree, 3561–3563. Ungentlemanlike conduct severely treated, *ib.* 3564. Frequenting public-houses defined, *ib.* 3763; under recent orders, insures dismissal, *ib.* 3687, 3688, or rustication, *ib.* 3448–3451, 3689. Repression will not prevent, *ib.* 3659, 3688, nor proctorial supervision, *ib.* 3660. Adding professors for discipline out of study has given additional power, *ib.* 3661.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*
VII.—*Discipline*—cont.
4.—Offences and Punishments—*cont.*

Falsehood, if flagrant, held disgraceful, *Mott*, 4425, 4426. Cadets said to duck each other for disgraceful conduct, *ib.* 4472.
Falsehood would be looked down upon, *Prior*, 4723.
Return of Crimes and Punishment [1835–1867], *App.* XIII. (B.), *p.* cl.
Company officers have only recently had power of punishment, *Addison*, 3905. If each instructor could dictate punishment, there would be too great diversity, *ib.* 3906. Disapproves of impositions, *ib.* 3953–3955. Governor should have absolute power, *ib.* 3849–3852, 3956.
Has inflicted rustication; but not expulsion for a long time, *Cambridge*, 5383.
Rustication must be confirmed by Commander-in-Chief, *Cameron*, 5234–5239; who alone can expel, *ib.* 5240. Rustication destroys chance of a free commission, *ib.* 5252, 5253; return of a rusticated cadet has a good effect, *ib.* 5254; but rustication punishes parent more than cadet, *ib.* 5273. No objection to imposition of tasks, *ib.* 5270; but present punishments not unsuitable, *ib.* 5271. Since witness has been Governor nine cadets rusticated, *ib.* 5242, 5243. Six months longest period of rustication; if in last term, acts as expulsion, *ib.* 5244.
Governor should have absolute power of rustication; dismissal should require approval of Secretary of State, Report, p. 16, 34.
Captain of Company has been able, for a year past, to give three days' close arrest, *Farmar*, 3151, 3154, 3236, 3237; reporting the case to Commandant, *ib.* 3153; to whom he would refer a more serious case, *ib.* 3152. A Professor's complaint would go to Superintendent of Studies, *ib.* 3155, 3278; who would punish, *ib.* 3280, and the captain of a company would not take it up unless specially referred to him, 3156–3159. Does not think functions of Professors and Captains clash, *ib.* 3277. No recognised punishment for idleness, *ib.* 3198. Now and then, in a bad case, friends are advised to remove a cadet, *ib.* 3199–3201. In close arrest, parole is optional, *ib.* 3226; a few irregular cadets refuse it, *ib.* 3277; alternative should not be offered, *ib.* 3228, 3229. Open arrest is confinement to college grounds, *ib.* 3243, 3244. Does not exempt from roll call, *ib.* 3245. Captain of Company can give 3 days, *ib.* 3246. Superintendent of Studies can punish with 7 days' close arrest; Commandant can give 14, *ib.* 3249. Should place a cadet using bad language under arrest and report to Commandant, *ib.* 3257. Disapproves of fines for swearing, *ib.* 3274.
Arrest, with option of parole, a false system, *Hale*, 3047, 3048. Objects to Captain of Company dealing with an offence committed in study hours, *ib.* 3003, 3004. Would punish for idleness, *ib.* 2967, 3092, 3094, as such, *ib.* 3100, on a Professor's report, *ib.* 2999–3002, simply, *ib.* 3005, through Superintendent of Studies, and not the Commandant, *ib.* 2968–2970. Swearing is punishable, but would rather reprove than report it, *ib.* 3028, 3029.
Optional arrest on parole has failed, *Hallewell*, 3466–3473; does not see how to enforce it, *ib.* 3733, 3734. Rustication still exists, *ib.* 3720; but objected to by War Office as punishing parents more than cadets, *ib.* 3717–3719. Objects to punishment drill, *ib.* 3752; and strongly to impositions, *ib.* 3753, as inapplicable to young officers, *ib.* 3754, 3755. For trivial crime, Captain can punish up to three days' arrest. More serious disposed of by Commandant in presence of accuser and accused, *ib.* 3349–3351; but offences in study, if admitted by cadets, are dealt with by Superintendent of Studies, *ib.* 3352, 3711–3713. Objects most strongly to any person being punished without having his accuser face to face, *ib.* 3353, 3707–3710, 3714.
Punishments, *Napier*, 868–872, 918, 919, 1034–1038. Extension of punitive power, *ib.* 998–1001. Rustication and removal, *ib.* 873–877, 1001, 1002, 1005, 1096. Dismissal, *ib.* 1003–1005. Bounds, *ib.* 1007–1013. Treatment of refractory cadets, *ib.* 1039–1041, 1094; offences during study, *ib.* 1042–1045. Does not remember bullying in dormitories, *ib.* 1046. Presumes Governor gets a return of every punishment, *ib.* 1085. No punishment less serious than arrest, *ib.* 1086. Arrest, its nature, *ib.* 1095, 1101, 1102. Frequenting public-houses, *ib.* 1100, 1101. The power of punishment vests in Governor, Com-

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

VII.—*Discipline*—cont.

4.—Offences and Punishments—*cont.*

mandant, Superintendent of Studies, and Captains of Companies, *ib.* 1106, with the Adjutant, *ib.* 1107.

Arrest on honour, why it fails, *Porter*, 2180.

Inattention in ranks punished by extra drill, *Prior*, 4753, 4754. Arrest-on-honour optional, *ib.* 4755; few accept it, *ib.* 4756. In witness' time two or three cadets removed for misconduct. *ib.* 4761, 4762.

Arrest should always be on honour, *E. Walker*, 2852, 2853. Optional or limited honour does not work, *ib.* 2854, 2855. On arrest by a professor, a cadet goes to the guardroom, *ib.* 2879. Disapproves fines for misconduct out of study, *ib.* 2915.

Punishments should be less exclusively military, Report, p. 34.

5.—Good-Conduct Rewards.

Good-conduct decoration earned by being four months clear of defaulter-book, *Farmar*, 3216; carries additional pocket money, *ib.* 3217.

Good-conduct marks were once given, but abolished as bad, *Napier*, 1282–1287.

As to marks for good conduct, *Porter*, 2328.

A single special good-conduct award should be given at each final examination, Report, p. 34.

VIII.—*Drill.*

Cadets taught to drill troops to a small extent; mostly want drilling themselves, *Addison*, 3842.

Should be exactly as regimental drill, *Cambridge*, 5401.

Has not to be unlearned, *Carey*, 4894, 4901–4903, 4916. Battalion of cadets once attached to his brigade for a field day did very well, *ib.* 4952a. Drill ought to be learned at Sandhurst, *ib.* 4943.

Battalion drill daily, *Dering*, 4175. Sword drill optional, *ib.* 4178. Musketry drill useless, and instruction a farce, *ib.* 4179–4185.

Extra drill is instruction drill, *Farmar*, 3247, and not a punishment, *ib.* 3248. Cadets in turn act as company and field officers, *ib.* 3268, 3269. The mass know perfectly duties of rank and file: the under-officers and corporals could command a company, *ib.* 3283–3286, 3289, 3290. Commanding officers are prejudiced against Sandhurst drill, *ib.* 3287.

A cadet smart at drill may not understand command, *Hallewell*, 3536. Sees no object in private examination drills, *ib.* 3537–3539. Would give more time to practical drill; firing blank cartridge was objected to as making cadets' hands shake, *ib.* 3554. A cadet might so acquire regimental knowledge at Sandhurst as to be soon dismissed from drill on joining a regiment, *ib.* 3371, 3372.

Taught at Sandhurst, *Napier*, 603–605, 618–620, 623, 624, 629–636, 679, 680, 742, 743. Advantages of, *ib.* 659–661, 681–683. Sword exercise, *ib.* 617, 626; fencing, shooting, gymnastics, *ib.* 629–636.

Drill is sufficient for understanding lectures on tactics, *E. Walker*, 2786–2791.

Practical, but not recognised in his regiment, *Mott*, 4394, 4395. In regiments much needless drill inflicted on officers from Sandhurst, *ib.* 4442, 4443.

Was liked, *Prior*, 4773. Learned light infantry drill, *ib.* 4784. On picket duty could strengthen a post, *ib.* 4788, 4789. Much drill learned, *ib.* 4613, 4615, 4791. Inspection on Sunday evening before bed time, *ib.* 4746. Had extra drill in his regiment on account of having been at Sandhurst, *ib.* 4634, 4635, 4775–4783.

Drill and military details should be left until after joining the army, *Baker*, 6145.

Attaches no importance to, *Cameron*, 5309–5311.

Worse than useless, *Percy Herbert*, 4999.

There should not be more than is essential for discipline, *Hort*, 5138–5143.

No pretence of teaching Cavalry drill, *White*, 4847. Would rather have a young officer without the drill learned at Sandhurst, *ib.* 4824, 4825.

Drill should never be awarded as punishment, Report, p. 34. Should only be taught to a limited amount, but that thoroughly; should not exceed an hour a day. Some Artillery drill might be combined with fortification course. Non-military parades to be as few as possible, ib. p. 36.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

IX.—*Recreation.*

1. Generally.
2. Manly Exercises.
3. Billiards.
4. Cards.
5. Smoking.
6. Refreshment Rooms.
7. Workshops.

1.—Generally.

Amusements should be limited to those allowed in a Public School. Billiards, smoking, &c. depress energy in study, *Adams*, *App.* II. (A.), *p.* vii.

Cadets sometimes give supper parties outside, *Hallewell*, 3600–3603. There is a band, *ib.* 3721. Cadets sometimes study music, *ib.* 3722. They have a Musical and Dramatic Society, *ib.* 3723; but not a Scientific, *ib.* 3725; or Debating Society, *ib.* 3724. Recreation rooms rest on the idea that cadets are young men, *ib.* 3781, 3782. All that is done for them is conducive to good, not harm, *ib.* 3786. Recreation buildings comprise billiard, smoking, refreshment, writing, reading-rooms, with library. Hopes to provide, as funds allow, chess-room, music-room, and workshops, with lathes, *ib.* 3436. Library arrangements, *ib.* 3437, 3438.

Each company has a room for recreative reading, *Napier*, 970, 974. Billiard-rooms and smoking-rooms a mistake, *ib.* 978, 996, 997, 1049, 1050; their intended object, 989–992. Refreshment Department, *ib.* 981–988. Smoking, *ib.* 1051. Meeting friends at hotels, *ib.* 1052; cadets take part in concerts and theatricals, *ib.* 1053.

2.—Manly Exercises.

As a rule, athletics not much cared for, *Prior*, 4713; *Mott*, 4370, 4407.

Bathing not compulsory, *Porter*, 2264. Boating might be made more attractive; only tubs provided, *ib.* 2283.

Cricket not very general, *Addison*, 3994.

Pack of beagles kept for cadets, *Hallewell*, 3605, who hunt twice a week, *ib.* 3606, partly on college grounds, *ib.* 3607. Cadets not allowed to join other hunts, *ib.* 3608. Two covered racket courts in constant use; a fives-court less used, *Hallewell*, 3444–3447.

Racket courts open on Sunday, *Prior*, 4666.

Swimming taught last autumn; but nearly all cadets could swim, *Addison*, 3871.

Usual proportion of cadets could swim, *Dering*, 4096; regular bathing, *ib.* 4097; but no swimming master, *ib.* 4098.

Almost all can swim, *Hallewell*, 3553.

Marks should be given for swimming, *Mott*, 4449; which is not encouraged as at Eton, *ib.* 4418–4421.

Swimming not compulsorily taught, *Porter*, 2264.

Swimming not taught, *Napier*, 625.

[*See also* § XI. 6.]

3.—Billiards.

Object, good effect, *Cambridge*, 5423.

Never saw money played for in college, pool prohibited, *Dering*, 4047, 4048; low stakes played for in town billiard rooms, *ib.* 4049–4051. A cadet could not get more for billiards than an hour or two daily, 4190–4192.

The billiard rooms a success, *Farmar*, 3212, 3213. Senior cadets exclude juniors, *ib.* 3214, 3215; none admitted without a good-conduct decoration, *ib.* 3216, 3218. Cadets of all grades frequent the room, *ib.* 3219. The Captain of company visits rooms unexpectedly at night, *ib.* 3260.

Do not encourage lounging, *Hale*, 3126.

Proposes to have two tables per company, *Hallewell*, 3783, 3784, conducive to discipline, *ib.* 3785. Play for money jealously guarded against. Perfectly satisfied with their action, *ib.* 3423–3429; Should much regret their closing, *ib.* 3433–3435.

The chief amusement: in the town, for money: scarcely gambling, *Mott*, 4371–4375; stakes low, 4438; no tables then in the College, *ib.* 4435–4437.

Will not teach gambling; only objects to the tables because shut to junior cadets, *Porter*, 2176, 2177, 2214–2216. Two tables per company, *ib.* 2262, allow a moderate amount to all, *ib.* 2270–2272. It is an effort to keep the youths from the town tables, *ib.* 2289–2294.

Much played; but not for money, *Prior*, 4636–4640. The College billiard rooms exercise a counter-attraction to the tables at public-houses, where low stakes were played for, *ib.* 4797, 4798.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

IX.—*Recreation*—cont.

3.—Billiards—*cont.*

Policy of, doubtful, *Griffiths, App.* II. (A.), *p.* x.
Objects to billiard tables, *Abbott*, 1820.

4.—Cards.

Strictly forbidden, *Dering*, 4193; seldom or never used, *ib.* 4194; use would be reported or stopped, 4195.
Never saw them played, *Mott*, 4439.
Prohibited; punishment follows discovery, *Porter*, 2263.

5.—Smoking.

Excessive, *Addison*, 3995; could not limit hours for it, without setting spies, *ib.* 3996.
Hours not limited; but not allowed in dormitories, *Farmar*, 3264.
No gain in limiting hours for, *Hallewell*, 3764.
Much smoking, *Prior*, 4636–4640. Cadets would not like it restricted to afternoon, *ib.* 4792.

6.—Refreshment Rooms.

Object; good effect, *Cambridge*, 5423.
Beer cannot be taken away from the bar, *Farmar*, 3220.
Policy of, doubtful, *Griffiths, App.* II. (A.), *p.* x.
Drinking and smoking late destroy energy, *Hale*, 3126.
Cooked provisions can be had from, with table furniture, but not wines or spirits, at consumer's expense, *Hallewell*, 3591–3595. Arrangements described, *ib.* 3439, 3440, 3442; beer not allowed in smoking room, *ib.* 3441. Commandant not responsible for cadets' bills; but keeps an eye on the proceedings; ready money transactions impossible, *ib.* 3596. The bar has acted well, *ib.* 3430, 3431; its closing would be a misfortune, except for neighbouring publicans, who lose much by it, *ib.* 3433–3435.
Only bad in so far as cadets stop there drinking, *Porter*, 2176, 2177.
Canteens open on Sunday, *Prior*, 4666. Canteen "inaugurations" described; coarse affairs, *ib.* 4667–4671, 4763–4765, 4799–4805. Canteens closed in the evening, *ib.* 4676. Had some effect against public-houses; but not very much, *ib.* 4741–4743.

7.—Workshops.

Cadets most likely to care for, are those working hard for commissions, who would not have time, *Dering*, 4252, 4253.
Attaches importance to workshops, desiring to provide as many amusements as possible, *Hallewell*, 3443.
Would establish as a recreation, *Napier*, 821–825.
Should be established, Report, p. 37.

X.—*Course of Instruction.*

1. The course generally.
2. Duration.
3. The week after the examination.
4. System of teaching, &c.
5. Free or private study, and independent study.

1.—The course generally.

Present regulations, *App.* II. (L.), *p.* xlvi.
Would abolish voluntary studies, *Abbott*, 1764, 1768, 1769, 1936, 1937. The study answers its purpose, *ib.* 1773. More taught than absolutely necessary for regimental duties, *ib.* 1882.
Educational course detailed, *Addison, App.* II. (B.), *p.* x. Educational changes since 1855, *ib. App.* II. (F.), *p.* xix. Intended to make an officer more useful throughout his career, *ib.* 3947, 3951. Would reduce compulsory subjects to Fortification and Surveying, and allow a cadet to take up any three of the other six subjects, 3791, 3935. The course needs concentration, would not allow a cadet to study more than four or at most five subjects at once, *ib.* 3796. Believes the course adds to the military usefulness of future officer, 3797, 3798. If more practical, might benefit the regimental officer more; but would not have it less theoretical, *ib.* 3799. Would not lessen the subjects taught, *ib.* 3807, 3934. Physics, geology, and landscape drawing, the only optional studies, *ib.* 3873.
Too many subjects attempted, *Cambridge*, 5407, 5408.
Under control of Council, *Cameron*, 5264.
Too many subjects to be learned thoroughly, *Dering*, 4082, 4083. Competitors for free commissions take up every subject, as marks in all count if a qualifying minimum be reached, *ib.* 4024, 4104; the time would be better spent on a practical military subject, *ib.* 4105, 4106.
Too many subjects, *Griffiths, App.* II. (A.), *p.* ix.
Would retain the present studies, *Hale*, 3089.
Should be more practical, *Hallewell*, 3364, 3365, 3756, without mathematics and limited to strictly military subjects, *ib.* 3366, 3367, 3730; other subjects being learnt as extras in recreation time, *ib.* 3368, 3369; not at public expense, *ib.* 3731.
Too many subjects, *Mott*, 4400, 4406. Would limit to purely military subjects, *ib.* 4405.
Obligatory and voluntary subjects now taught, *Napier*, 521. Approves the distinction between obligatory and voluntary subjects, *ib.* 532: also the subjects themselves, *ib.* 533, 637. Studies are under the Council of Military Education, *ib.* 923. Offences during study, how punished, *ib.* 1042–1045.
Would restrict subjects of study, *Porter*, 2217–2220. Doing away with some voluntary subjects, *ib.* 2136–2138. The system is superficial, *ib.* 2147, 2148, as regards military subjects, *ib.* 2298, the cadet being driven through without a groundwork, *ib.* 2149.
Instruction suitable and practical, *Prior*, 4606, 4632.
Would be assimilated to Woolwich, with lower mathematics, if Sandhurst were only for candidates for free commissions, *E. Walker*, 2934. It should be optional to take high mathematics, or classics, or general history as a compulsory subject, *ib. App.* II. (D.), *p.* xiv. Changes in the course are sometimes very inconvenient to Instructors, *ib.* 2795, 2801. Professors and Instructors should be consulted as to contemplated changes, *ib.* 2796, 2797.
A mere finishing process, *White*, 4855.
Subjects of study proposed, Report, p. 21, 34; proportional marks, ib. 36.

2.—Duration.

Present length, *Abbott*, 1947, 1948. To lengthen to two years, hard upon purchase cadets, *ib.* 1821, 1822.
Should be two years, *Adams, App.* II. (A.), *p.* vii.
Would like to have time for practical field instruction in military subjects, *Addison*, 3839. Should prefer a course of 2 years, *ib.* 3804: the present, too short for so many subjects, *ib.* 3806.
Would not insist on 2 years' residence, if a cadet could pass earlier, *Cambridge*, 6476, 6477.
1½ or 2 years should suffice, *Carey*, 4900.
If lengthened, there should be nothing to learn after joining a regiment, *Dering*, 4123, 4124, 4165. If cadets did not lose army seniority, half-a-year more would be a gain to them and the service, *ib.* 4173, 4174, 4221.
With reduced subjects, should be 3 or 4 terms, *Griffiths, App.* II. (A.), *p.* ix.
Too short for *esprit de corps*, *Hale*, 2953; shorter than at most military and civil colleges, *ib.* 3121; an extra half year would make little difference, *ib.* 3122. Would prefer three terms to two, *ib.* 3108. Sees no objection to a cadet passing out after two terms, *ib.* 3125.
Three terms ought to suffice, *Hallewell*, 3378; cadets, who can pass, being allowed to leave after second term, *ib.* 3492.
Its length, *Napier*, 497–501, 555–557, 664, 665. Is too short, *ib.* 558–561. Would lengthen it, *ib.* 701, to two years, *ib.* 530, 531.
Should be extended or the subjects reduced, *Porter*, 2134, 2135.
Two years proved the best period, *Vinter*, 2710.
Cadet may pass out after two terms, *E. Walker*, 2761, which lessens incentive to study soundly, *ib.* 2762–2766.
Should be increased to two years, Report, p. 17, 34.

3.—The week after Examination.

Idle week after the examination should be abolished, *Hallewell*, 3407–3413.
The interval between examinations and vacations are idle periods, *Napier*, 685, 686, 744, why not abolished, *ib.* 687, 688, 745–748.
Disadvantageous week of idleness after examination, difficulty in getting over it, *Porter*, 2182–2184; unless board day be changed, *ib.* 2185.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

X.—*Course of Instruction*—cont.

4.—The system of Teaching, &c.

The new system of requiring a minimum each term, *Abbott*, 1831, under penalty of discharge, *ib.* 1832, 1833.

Progress from class to class should be conditional, *Griffiths, App.* II. (A.), *p.* ix.

Whether a cadet understand his first course or not he must pass to the second, *Hale*, 2964, a bad system, but unavoidable with classes, *ib.* 2965, 2966, and he would not alter it, *ib.* 3090, 3091.

Is under second in command, *Napier*, 642, which may be bad, 646. Teaching is successful, *ib.* 691, except to the idlers, *ib.* 692. Hours of study, *ib.* 677, 678. In halls, of 15 or 20 cadets, *ib.* 588–590.

All subjects are not taught by lecture, *Porter*, 2142. Some subjects best taught under professorial system, some under tutorial, *ib.* 2208. One rule will not apply to so many subjects, *ib.* 2209. Répétiteur system attempted, but not carried far enough, *ib.* 2301–2306. Répétiteurs should be under lecturing professor, *ib.* 2307, 2308. It would produce uniformity of instruction, *ib.* 2309.

No difficulty in the halls of study, classes not large, *Vinter*, 2655, 2657. Would assume a cadet's ignorance, until he proved the contrary, and teach accordingly, *ib.* 2630.

Cadets work 6 hours 4 days a week and 4½ hours on 2 days, *E. Walker*, 3923; they only work in the study hour, before the Professor; except a minority who do more just before the examination, *ib.* 2901–2903, 2924, 2927, 2928. A cadet passes from one division to the next, whether he has mastered the subject or not, *ib.* 2742, 2743. To study a Military subject without lectures involves access to a large library, *ib.* 2938. It would be an encouragement if a member of Council sometimes attended lectures. All should be in lecture-hall, and lecture-classes should be 100 strong, *ib. App.* II. (D.), *p.* xiv. Would have the same subject read simultaneously in different classes, as in Military History, French, and German, *ib.* 2827–2829.

There should be 30 hours per week under the instructors: division thereof, Report, p. 35.

5.—Free or Private Study: "Independent" Study.

At "Independent Studies" only those who went in for free commissions worked, *Dering*, 4089–4092. No obstacle to private study, *ib.* 4084; allowed till midnight for those approaching final examination, *ib.* 4086. Work at night was illegal, and leave would not be given except at end of term, *ib.* 4203–4205.

"Independent Study" a premium on idleness, *Farmar*, 3183, and smoking, *ib.* 3184; resorted to daily by many cadets, *ib.* 3185, 3186; unsettling others and unfair to parents, *ib.* 3187; believes the cadets while at it keep bounds, 3188, 3224–3226. Should report one he saw beyond, *ib.* 3189, 3190.

"Independent Studies" were very bad; there are none now, *Hale*, 3030; or very few, *ib.* 3119; and those among the idlest cadets, *ib.* 3120. Private study, taken up weekly, might promote industry, but would confine it to obligatory subjects, *ib.* 3073.

Formerly discouraged; witness allowed reading-room to be lit till midnight for work. Much used by competitors for free commissions, *Hallewell*, 3416–3420, 3568, 3569. "Independent Studies" were introduced by Council, *ib.* 3738, 3739; are no studies at all, *ib.* 3397; a bad system, *ib.* 3398, 3407; and should be abolished by forbidding voluntary subjects in study time, *ib.* 3399–3406.

Not discouraged, *Mott*, 4475.

Private study optional, *Napier*, 591, 592; and under difficulties, 593, 594. Attaches little importance to it, 965.

Little practised, *Porter*, 2153; would not encourage it, *ib.* 2154.

Not inimical to study, *Prior*, 4607–4610, 4663, 4664. Many cadets used their bunks for studying, *ib.* 4662.

As a rule, cadets would not work alone, *Vinter*, 2686.

"Independent study," as now allowed, synonymous with idleness and prejudicial to study and discipline, *E. Walker*, 2885, 2891. Cannot say when the system commenced, *ib.* 2914. To make the cadet prepare beforehand certain work and bring it to the professor would make all studies independent, *ib.* 2892; and would change the whole system, *ib.* 2893; to that of Public Schools and Universities, *ib.* 2895. Boys not disposed to work would do nothing, *ib.* 2894. Cadets could scarcely have time for, *ib.* 2897–2899. Has heard it condemned at Public Schools as regards mathematics, *ib.* 2900. Boys would not study mathematics by themselves, *ib.* 2902, 2903. Thinks cadets might be more encouraged to study in their rooms, *ib.* 2825.

There should be private study for one hour daily, Report, p. 35.

XI.—*Specific Subjects of Instruction.*

1. Religious Teaching.
2. Mathematics.
3. Languages
4. Military Knowledge.
5. Natural Sciences.
6. Bodily Exercises.

1.—Religious Teaching.

Nothing like it now, *Hallewell*, 3493; but there was formerly, when cadets were younger, *ib.* 3703, 3704.

The want of, a scandal to the country, *Percy Herbert*, 5084–5086.

Should be regularly imparted by Chaplain, Report, p. 36.

3.—Mathematics.

In one class, work impossible from disturbance, *Dering*, 4078.

Arithmetic and Euclid (I.) all that are needed for practical fortification, *Griffiths, App.* II. (A.), *pp.* ix., x.

Would omit, *Hallewell*, 3366.

Surprised to hear cadets are grossly deficient in arithmetic, *Heaviside*, 2480, 2481.

Higher mathematics, *Napier*, 650, 651.

All the instruction might be by military men, *Porter*, 2278. Cadets often have but slight knowledge of arithmetic, though not unacquainted with higher mathematics, *ib.* 2128, 2129, 2296.

Classing of cadets, *Vinter*, 2622–2624. Varies his teaching to suit different cadets. A cadet gets for mathematics four and a half or six hours weekly. The third section course would fairly take a year, if the cadet knew nothing of it previously, *ib.* 2626, 2627. Difficulty of persuading cadets who have read widely and loosely to be content with a shorter course, *ib.* 2630. The arithmetic of cadets complained of by fortification instructors, *ib.* 2630. Private study is desirable, *ib.* 2631; but quite optional, *ib.* 2631, 3682, 2683; there might be better opportunities for it, *ib.* 2632, 2633, 2657. Has no alteration to suggest in present course, logarithmic work lately added to first section, *ib.* 2634; some Euclid and quadratic equations being transferred to second section, *ib.* 2635; the change was beneficial, *ib.* 2636. Mensuration simplified, *ib.* 2637. Trigonometry and algebra, limited to those parts which bear professionally, *ib.* 2638–2640. Would let cadets pass the mathematical minimum at end of second term and then drop mathematics unless they proposed to compete for free commissions, *ib.* 2647. Too much may be taught as well as too little, *ib.* 2656. Evils of omitting higher mathematics, *ib.* 2659. The higher Sandhurst course is professionally necessary for military questions of a high order, *ib.* 2660, 2661; and a good preparation for the Staff College, *ib.* 2662; but not high enough for practical use to an Artillery, Engineer, or Staff Officer: there is no differential calculus, *ib.* 2663. Cadets cannot do much mathematics out of study, without aid from masters, 2684; but knows no place where they do more, *ib.* 2685. Mathematical knowledge of those who obtain free commissions, fair but variable, *ib.* 2688. No special books insisted on, except in mechanics, trigonometry, and mensuration, *ib.* 2716. It is better not have any precisely fixed course, *ib.* 2717. Instruction is as practical as possible, *ib.* 2718.

Should be diminished in importance, Report, p. 21; and dropped when competent knowledge is attained. Higher mathematics to be a voluntary subject, ib. p. 34.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

XI.—*Specific Subjects of Instruction*—cont.

3.—Languages.

How taught at Sandhurst, *Napier*, 583–587, 672, 673, 736, 896.
Believes fair progress is made, *Addison*, 3999, 4000.
No progress made, *Hallewell*, 3368.
Nothing to prevent French Master instructing colloquially, *Forster*, 9406–9408.
Witness improved at Sandhurst in French, *Mott*, 4401–4404.
Learned French very badly, *Percy Herbert*, 4987.
German and French cannot both be learned; as they are taught simultaneously, *Dering*, 4107, 4108. Could have learned German, had he not been lazy, *ib.* 4030–4034.
Oriental languages not taught at Sandhurst, *Napier*, 641.

Might probably be dropped in the last year; chaplain should teach Latin and Greek, Report, p. 34.

4.—Military Knowledge.

Military science was always taught, *Napier*, 550.
There is rough instruction in artillery drill, *Hallewell*, 3546, 3547; and examination in it, *ib.* 3550.
Bivouacking not taught, *Napier*, 611. Camping out never practised, *ib.* 612.
Castrametation not sufficiently practical, *Dering*, 4101, 4102, 4236.
Dwells much on military geography, *E. Walker*, 2819; would like to teach on Lavallée's system, *ib.* 2820.
Military history as taught is really strategy: would restrict to pure military history, *Adams*, *App.* II. (A.), *p.* vii.
Time given to military history, *Napier*, 670, 671; which is taught by lecture, 577, 668; in detail, *ib.* 578, 663, without models, *ib.* 579, 580; but the plans are excellent, *ib.* 582, 740, 741.
Learnt military history, *Prior*, 4769; which was popular, *ib.* 4771.
Military History course described, *E. Walker*, 2728, 2806, 2807; would not attempt to teach the whole theory to cadets, *ib.* 2773, 2774. Instruction has been gradually improved, *ib.* 2729. It is by lecture; followed by note-study, *ib.* 2730, 2821, in the halls of study, *ib.* 2731, the Professor being present, *ib.* 2732. Instructors independent of Professor; but all under Superintendent of Studies, *ib.* 2734. Text-books required on the elements of the theory, *ib.* 2735–2737, 2775, 2776, 2779. Cadets are interested in the subject, *ib.* 2744, 2771, 2805: and show very fair average intelligence, *ib.* 2745. Would not allow it to be learnt under 16, *ib.* 2759, 2760. The instruction is sufficiently practical, *ib.* 2777–2779. Teaches elementary theory of war, *ib.* 2780; examinations carrying marks towards commissions, founded on the lectures, *ib.* 2781, 2782, 2784, 2806. Questions should be more simple than at Staff College, *ib.* 2783. Tactics and Strategy only slightly touched on, *ib.* 2789, 2792, 2812, 2813; and cadets profit thereby, *ib.* 2814. A class might be taken to Aldershot to study tactics practically, *ib.* 2798–2800. Lectures on ancient campaigns (even Marlborough's) not permitted, *ib.* 2808; instruction beyond technical not approved, *ib.* 2809. The course cannot be done in a lazy way, *ib.* 2810. Makes the instruction analytical, *ib.* 2811. The cadet's memory and reason are exercised, *ib.* 2815–2818; his perception being proved by a sketch, *ib.* 2818. Very little idling at Military History, *ib.* 2856. The present system or free study would work well, *ib.* 2896. Military History very popular with cadets, *ib.* 2911. Text-book wanted, *ib.* 2831–2834, 2929. About 30 young men attend a lecture, 2918; a corporal needed to stop talking, *ib.* 2919. Cadets write a paper on the subject of the lecture and the marks on it count, *ib.* 2925, 2926. No objection to free study if there be time for it. The campaign to be lectured on might form previously the subject to be read in French and German classes and to be worked at in Topography, *ib.* 2929, 2930. The lectures are not abbreviations, *ib.* 2939; practically, he writes fresh lectures every term, *ib.* 2913.
Field cooking not practised, *Napier*, 613.
Would not give up permanent fortification, *Addison*, 3966.
Fortification not practical enough, *Dering*, 4101, 4102, 4236; but beneficial, *ib.* 4236, 4237.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

XI.—*Specific Subjects of Instruction*—cont.

4.—Military Knowledge—*cont.*

Fortification too long and not practical enough, would omit permanent, *Griffiths*, *App.* II. (A.), *p.* IX.
A good education in Fortification not given, *Hale*, 3014, 3071. Instructors work independently in couples, *ib.* 2981. Professor has not general charge, *ib.* 2980; but should be responsible for whole instruction, under reference to Superintendent of Studies, *ib.* 2982. *Répétiteur* system was tried successfully, but abandoned on personal grounds, *ib.* 2983–2985. Would make the course thoroughly practical, nearly limited to fieldworks, out-door work has been very successful, *ib.* 2986–2992, 3019, 3066–3068. Under present system course is too short, *ib.* 2963; and knowledge gained is superficial, *ib.* 3072. If the number of cadets were diminished, the course need not be lengthened, *ib.* 2961, 2962. The course is sufficiently practical, *ib.* 3016. Enough materials are provided, *ib.* 3076. Practising cadets in strengthening positions might arouse energy, *ib.* 3077, 3078. Any incentive desirable, *ib.* 3031. Would like to see obligatory, as well as voluntary, fortification got up out of study, *ib.* 3032, 3033. Recent examinations were unsatisfactory because of the shortness of the term, the examinations being hurried for Woolwich, *ib.* 3107.
Fortification course too short to be remembered, *Mott*, 4398, 4399. Marks should be given for out-door work, *ib.* 4445–4449.
Fortification, *Napier*, 615, 650–655.
Six professors in fortification, acting independently, *Porter*, 2150–2152. Examines the work of each cadet, *ib.* 2143. It is an advancing course, *ib.* 2144, and every cadet passes right through, *ib.* 2145, well or badly, *ib.* 2297. Would prefer to put back those not up to their comrades, *ib.* 2146; but has not suggested it, *ib.* 2228; as unlikely to be carried out, *ib.* 2229–2231. New systems are not in obligatory course, but are examined upon, *ib.* 2205.
The professor should be the only lecturer and the instructors should teach the cadets in class-rooms, *Porter*, 2209, 2210. Now each instructor lectures in turn, *ib.* 2210, in lecture hall, *ib.* 2212, with plans or models, *ib.* 2213.
Learnt something of fieldworks, *Prior*, 4703: also fortification, *ib.* 4767, 4768. It was popular, *ib.* 4772,
Would limit fortification to fieldworks, *E. Walker*, *App.* II. (D.), *p.* xiv.
Would not teach military law, *Abbott*, 1823, 1824.
Military law could be taught by officers commanding companies, *Hallewell*, 3370.

Fortification should be limited to knowledge required in the Line, Report, p. 21.

Military law not taught, *Napier*, 595–599.
Cadets may object to musketry in recreation hours, *Dering*, 4225.
Cadets pass through musketry instruction, *Hallewell*, 3548, 3549.
Learnt a little shooting, *Prior*, 4785.
Pontooning and bridging are taught, *Porter*, 2265.
Regimental economy not taught, *Addison*, 3841. Would only object to cadets making out orderly room returns as time taken from more important subjects, *ib.* 3960, 3961.
Regimental economy could be taught by captains of companies, *Hallewell*, 3370. Distinct utterance of words of command is taught, *ib.* 3758. Senior cadets can command companies and a few manœuvre bartalions, *ib*, 3759–3762. Under-officers and corporals alone practise command, *ib.* 3536. Only approach to regimental duties is inspection of rations and sick by under-officer and corporal on duty, *ib.* 3540. No instruction in picket duties, bivouacking, or subaltern's duties, would introduce it, *ib.* 3541. Cavalry manœuvres not taught, *ib.* 3543.
Regimental matters best learned in the regiment, *Hort*, 5138–5143.
Learnt nothing of Regimental economy, *Mott*, 4397. Giving words of command should be more taught, *ib.* 4444. Learning to command others is important in military education, *ib.* 4424.
Regimental economy impossible, *Napier*, 600–602, 607, 727.
Writing reports not taught, *Mott*, 4489; *Napier*, 616.
Field Sketching taught sufficiently practically, *Dering*, 4101, 4102.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

XI.—*Specific Subjects of Instruction*—cont.

4.—Military Knowledge—*cont.*

Derived practical benefit in Surveying, *Dering*, 4236, 4237. Taught out-of-doors, *ib.* 4077. Sufficiently practically, *ib.* 4101, 4102, 4236.

Studied Surveying, *Prior*, 4770; it was popular, *ib.* 4774.

Little knowledge of transport acquired, *Napier*, 621.

Topography, *Napier*, 647–649.

Military accounts and correspondence should be studied, Report, p. 21.

5.—Natural Science.

Only obtained a smattering, *Dering*, 4026; but a foundation for subsequent study, *ib.* 4027.

Would omit, in favour of riding, *Cambridge*, 5407.

Geology and Chemistry taught by lecture, *Dering*, 4077.

Would not neglect Geology and Chemistry, though unlikely to be of military use, *Addison*, 3950.

Would abolish marks for Geology and Chemistry, and make attendance purely voluntary, *E. Walker*, *App.* II. (D.), *p.* xiv.

Would omit Geology and Chemistry, *Porter*, 2139–2141.

Chemistry and geology should be omitted, Report, p. 21.

6.—Bodily Exercises.

Fencing and Gymnastics encouraged by prizes, *Hallewell*, 3551, 3552.

Riding taught, *Napier*, 617, 626, not thoroughly, *ib.* 627, 628, 662.

Witness benefited by riding instruction, *Dering*, 4094. Cadets do not mind it coming in recreation time, *ib.* 4223, 4224. Marks for, proportionate to pains taken, might be given, *ib.* 4227.

Riding popular and the master well attended to, *Farmar*, 3265 3267.

Riding-school drill taught, *Hallewell*, 3542; but not cavalry manœuvres, *ib.* 3543. Periodical examinations in riding, *ib.* 3544; but no certificates specially for it, *ib.* 3545. To ride daily for three months would interfere with the studies, *ib.* 3757.

Marks should be given for riding, *Mott*, 4449; was not of much use to witness, *ib.* 4396.

Riding used not to be neglected, *White*, 4848, 4849.

Sword exercise taught, *Napier*, 617, 626.

Proficiency should be exacted in riding, fencing, swimming, and gymnastics, Report, p. 17, 36.

[*See also* § IX. 2.]

XII.—*Examinations.*

1. Generally.
2. Admission.
3. Intermediate.
4. Final.

1.—Generally.

Object of carrying forward marks, *Abbott*, 1958.

The more difficult they are the less will people send their sons, *Forster*, 9341.

Cannot have commensurable marks with Woolwich, *Heaviside*, 2463, 2464. Only mode of reducing the slack time after the examinations is to spread the examination over the Course, *ib.* 2485–2488.

Why they might properly be raised, *Napier*, 715.

Cadet should be allowed to include classics in his examinations within the College, Report, p. 17. Examinations should be entirely conducted by examiners independent of the College, ib. p. 33.

2.—Admission.

Numbers examined and failed [1858–1867], *App.* XIII. (A. iii.), *p.* cxlvii.

Percentage of failure [1865–1868], *App.* XIII. (B.), *p.* cxlvii.

Mathematics. If College were restricted to Non-purchase cadets, should be by open competition, *Abbott*, 1830.

Would limit examination to four subjects, with option of landscape drawing, but would require 2,400 marks, *Addison*, 3937. This would keep away some candidates at first, *ib.* 3938, 3939; but the standard would soon be worked up to, *ib.* 3940–3943.

Would exclude technical subjects, *Benson*, 5632.

To require a severe entrance examination would shut out sons of poor officers, *Cambridge*, 5378, 5379; but they might be compensated, *ib.* 5380. Entrance examination too high, relatively with work of Public Schools, *ib.* 5357. Age should be 16 or 17, *ib.* 5364, 6450.

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

XII.—*Examinations*—cont.

2.—Admission—*cont.*

A Language might be insisted on, *Forster*, 9405.

With common industry, all pupils can pass, *Frost*, 4298.

Classical Examination identical with that for Direct Commissions; as easy as possible; the men of the same quality, *Gordon*, 2492, 2507, 2508, 2511, 2578, 2579. Bad spelling would not affect marks in classical examination, *ib.* 2509. In Classics, would limit the subjects to a few easy books announced six months beforehand, *ib.* 2518, 2519. The breakdown as much in elementary grammar as in translation, *ib.* 2529. Only one Greek paper, *ib.* 2560. University candidates admitted direct, *ib.* 2568, 2569; desirable arrangement, *ib.* 2570–2572.

Entrance examination in mathematics nearly identical with that for Direct Comissions, *Heaviside*, 2373, candidates for either having similar mathematical knowledge, *ib.* 2477, 2478. Intended as a test of general education, *ib.* 2374. Mathematics very low and elementary, *ib.* 2376, 2379, 2466, 2482; and any boy properly taught, should pass with ease, *ib.* 2448. Mathematics required, *ib.* 2377, 2378, 2386. Would not raise the minimum, *ib.* 2483, which was lowered in 1860, *ib.* 2385; and as a rule is fairly reached, *ib.* 2467, 2468, 2480, 2481; few failing to pass, *ib.* 2484. Examination papers, *ib.* 2387–2389; about parallel to those for matriculation at University of London, *ib.* 2472.

Entrance examination should not be stiff, *Percy Herbert*, 5049.

Examination satisfactory, *Moseley*, 2060.

Entrance is by nomination, *Napier*, 805, not competition, *ib.* 806. Entrance examinations half-yearly, *ib.* 426; points of identity with those for Direct Commissions, *ib.* 427–430, 517, 518. All candidates pass the same, *ib.* 506; virtually it is merely qualifying, *ib.* 507, 510, 511. Nineteen per cent. fail, *ib.* 512. Why percentage of failures is less than for Direct Commissions, *ib.* 513–516, 518.

Entrance examination sufficient for present object, but might be raised if education is to approach that of a staff officer, *Porter*, 2122–2126, 2131. Examination should be more elementary and searching, *ib.* 2127, 2130, 2288, 2295. Qualification in practical geometry or use of mathematical instruments should be insisted on, *ib.* 2211. Would not reduce age to 15, *ib.* 2132, 2133. If all cadets had fair hope of a free commission, would have severe competition for entrance, *ib.* 2159, 2160, 2242.

No disadvantage to exclude technical subjects from entrance examination, *Southwood*, 5575, 5576.

Examination should be more severe, *E. Walker*, 2768.

Should be conducted by Civil Service Commissioners, Report, p. 13, 31. Minimum being deducted from marks gained in each subject, ib. p. 14. Should be by open competition, ib. p. 16, 19, 32. Subjects of examination, ib. p. 32.

3.—Intermediate.

During the course there are quarterly and half-yearly examinations, marks gained at which count toward the final examination. A qualification is required for passing from one class to another, failing which the cadet is removed from the College, *Napier*, 522.

Monthly, started lately, *Porter*, 2221, carry marks on for commissions, *ib.* 2223, and are good as keeping cadets up to the collar, *ib.* 2222, 2223.

Whether a cadet has completed his compulsory course or not he is examined in the whole of it, *Vinter*, 2626.

There should be stringent examinations as tests of progress at least once a term; failure at two successively to involve dismissal, Report, p. 17, 34.

4.—Final.

Subjects and marks, regulations for, *App.* II. (L.), *p.* xlvi.

Return of results in Dec. 1868, *App.* XIII. (B.), *p.* cli.

No object in classifying purchase cadets, *Abbott*, 1834, 1835.

Standard for a pass so low that idling cannot be stopped, *Addison*, 3791. Marks should be given for drill, gymnastics, and riding, *ib.* 3872. Would raise the

SANDHURST, ROYAL MILITARY COLLEGE AT—*cont.*

XII.—*Examinations*—cont.

4.—Final—*cont.*

Sandhurst qualification for a purchase commission, *ib.* 3846, which now exceeds that for direct commissions, 3847; but is not nearly sufficient, *ib.* 3848. The same marks in much higher papers would be satisfactory, *ib.* 4002.

Could be raised for purchase commissions, *Cambridge*, 6455, 6494.

Proper recognition is given to practical subjects, *Dering*, 4103. In passing out, no practical distinction between 5th and 25th candidate, *ib.* 4125: some real distinction would improve educational tone, *ib.* 4126, 4129, 4130. It would be a loss to omit the public declaration of the order of merit, *ib.* 4127, 4128. There is no public record if a cadet distinguish himself, *ib.* 4148, 4149.

If course were lengthened would make it higher, *Hale*, 3124.

"A" list obtain free commissions; "B" list are qualified to purchase, *Hallewell*, 3559: the latter may furnish as good officers as the former, *ib.* 3393.

Mathematical culture of the cadets, *Heaviside*, 2434, 2435.

Final examination competitive; marks which must be obtained for a pass, *Napier*, 523, 654, 669. The subjects are the same as in the intermediate examinations, *ib.* 524. A few marks might be given for physical exercises, *ib.* 667.

Would not raise minimum for purchasing cadets, *Porter*, 2217. Marks ought to be given to under-officers for good service as such, *ib.* 2323–2325, also for swimming and fencing, *ib.* 2326, 2327, 2339.

The lowest cadets passing for purchase obtain in mathematics at least one-fourth marks in obligatory course, *Vinter*, 2689–2694; representing an useful amount of knowledge, by bringing in logarithmic work, *ib.* 2695. Would give professors a share in, *ib.* 2722. Would mention publicly the names of cadets worthy of the distinction, *ib.* 2722.

Should be competitive; and the more distinguished students exempted from examination for Aide-de-Camp; good conduct to be an element of excellence, Report, p. 17, 34, 149. Standard of qualification should be much raised, ib. 21. A single special reward for excellent conduct to be given at each final examination, ib. p. 34.

SANDHURST SENIOR DEPARTMENT:

Would not return to in any way, *Strathnairn*, 9525.

SCHOOL OF GUNNERY: *see* SHOEBURYNESS.

SCHOOL OF MILITARY ENGINEERING: *see* CHATHAM.

SCHOOLS:

Would publish whence failing rather than successful candidates come, *Gordon*, 2535.

SCHOOLS, PUBLIC AND PRIVATE:

Cadets from severally, who entered Sandhurst in 1866 and 1867, *App.* XIII. (B.), *p.* cxlviii., cliii., cliv.

Ditto, as to Woolwich, *App.* XIII. (C.), *p.* clv.

Ditto, as to successful candidates for Direct Commissions, *App.* XIII. (D.), *p.* clix.

[*See also* PRIVATE SCHOOLS: PUBLIC SCHOOLS.]

SCIENCE, MILITARY:

Necessity of theoretical knowledge, *Baring*, 9196 (1).

SCIENCES:

As brought up at examinations, worthless, *Abbott*, 1749.

SCIENTIFIC CORPS:

Education for, should be quite distinct, *Napier*, 1117, 1137–1139. Sees no disadvantage in their obtaining the best candidates, *ib.* 1142–1144.

SHOEBURYNESS, SCHOOL OF GUNNERY AT:

Historical notice, *App.* X. (B.), *p.* cxvi.

Object of School: description of long and short courses; results in producing instructors; volunteer annual competition; experimental establishment; full benefit in the future, *Elwyn*, *App.* X. (A.), *p.* cxiii–cxvi.

Officers come to for six months on leaving Department of Military Studies, *C. B. Brackenbury*, 8202; best place for drill, *ib.* 8203.

Soldiers have slop clothes, *Cambridge*, 6469.

SHOEBURYNESS, SCHOOL OF GUNNERY AT—*cont.*

Demi field-battery might be stationed there, *Milman*, 7588. Course too long; summer months would be better, *ib.* 7590. Militia Adjutants passed it well, *ib.* 7591.

A young officer would not be sent to, unless he go in for a special class or course, *Nicholson*, 7715.

The young officer would have little to do with company discipline, *Strange*, 7884.

Officers desire to pass, *Young*, 8034, 8110; and every one should who has the chance, *ib.* 8057. There were formerly short-course classes, *ib.* 8035. The instruction is very desirable, though not absolutely essential to an artillery officer; the capabilities of the place would not allow all officers to pass through, *ib.* 8036, 8037: every encouragement is given, *ib.* 8092: the course is all important for managing modern heavy guns of position, *ib.* 8038. Long-course class consists of 20 officers and 40 non-commissioned officers, *ib.* 8036. There is no more useful practical school, *ib.* 8057. Officers from India often give up their leave to attend, *ib.* 8058. Complete batteries go for practice and instruction, *ib.* 8086. Classes are occasionally volunteers, occasionally detailed, *ib.* 8094: an officer of any brigade liable to be sent, *ib.* 8095. All artillery officers should pass through, if the place would admit of it, *Young*, 8109: but commanding officers of brigades would object, *ib.* 8111, 8113. Opportunities would occur of sending almost every officer before he became captain, *ib.* 8112. All officers and men going abroad (and many at home) pass through, *ib.* 8126.

Number of officers annually under instruction should be increased: all artillery officers on first entering the service should pass through a short course: existing quarters should be improved, and more provided, as well as an additional instructor, Report, p. 26, 49.

SHREWSBURY:

Counted as a Public School, *Napier*, 201.

SKETCHING MILITARY:

Not universally necessary for officers, *Codrington*, 6041, 6042.

Should be practised by eye, with speed, and with simplest instruments, *Grant*, 5997, 6007.

SPELLING:

Dictation not always a criterion, *Dasent*, 4504. Would not pass serious errors: but sometimes distinguished men cannot spell, *ib.* 4539.

STAFF:

I.—*Generally.*
II.—*System of Admission.*
III.—*Brigade-Majors.*
IV.—*Personal Staff.*

I.—*Generally.*

Plan proposed in 1856, by Right Hon. Sidney Herbert, for instruction of officers for, *App.* XI. (D.), *p.* cxxxviii.

Insufficient facilities for practical training, *Abbott*, 2037–2039. British and Indian systems are entirely different, *ib.* 2049, 2050.

A man good at examination and at drill not necessarily a good Staff Officer, *Baring*, 9195, 9196 (2), 9245–9247. There might be instruction specially for Adjutant-General's Staff and for Quartermaster General's Staff, *ib.* 9240.

Scientific attainments are not sufficient, *Cambridge*, 5410–5414. Selected Regimental officers make the best Staff officers, *ib.* 9529: never knew a good regimental officer break down on the staff, *ib.* 9553.

In the field never found a want of qualified officers for the Staff, *Carey*, 4932. Some of the best have never been at the colleges, *ib.* 4933.

Temper and regimental knowledge are indispensable, *Codrington*, 6077, 6093. A Staff officer may be invaluable, though ill-educated; cites case of Colonel Waters, *ib.* 6092.

Every officer should serve a year with a regiment between two Staff appointments, *Colley*, *App.* XI. (A.), *p.* cxxiv.

Physical qualities may constitute a good Staff officer, *Forster*, 9363–9367, 9409.

Previous regimental service invaluable, *Percy Herbert*, 4968. High mathematics not wanted, *ib.* 4973, 4975, 5011. Knowledge of embarking troops important, *ib.* 4976; as also rapid judgment of a position, *ib.* 4977. Regimental service produces Staff officers as good as those more scientifically educated, *ib.* 4980–4982; is opposed to a separate

STAFF—*cont.*

I.—*Generally*—cont.

Staff Corps, *ib.* 4983–4985. Knowledge of French may be fairly insisted on, *ib.* 4986. Selection of regimental officers difficult in peace; but easy on service, *ib.* 5019, 5020. Knows no reason for excluding Artillery and Engineers, *ib.* 5021; but has not seen them largely employed, *ib.* 5017. Some most valuable Staff officers would have been the better for professional education, *ib.* 5011.

Staff instruction should qualify an officer for any section of, *E. M. Jones*, 8961–8963. Many officers have acted both on Adjutant-General's and Quarter-master-General's Staff, 8964. Every Staff officer ought to have qualification of one passed the Staff College, though he need not have been through that Institution, 8925, 8926; though would prefer all Staff officers doing so, 8927.

A Staff appointment should be less a reward for labour, than a recognition of fitness, *Lacy*, 8459.

Staff prospects may induce an officer to keep up his knowledge, *Napier*, 1131–1133. The demands of a war, *ib.* 1464–1467, 1495, 1581. Knowledge of all arms of the service, *ib.* 1535–1537. Deep scientific knowledge not necessary for all appointments, *ib.* 1539, 1541. Should not be shortsighted, *ib.* 1546.

Mode of rendering Staff College needless, *Peel*, 9433. We have had good Staff officers without special extra knowledge, *ib.* 9451, 9452.

In Crimea, Staff officers were scarcely fitted for their post, *Porter*, 2361, 2362.

Scientific knowledge of Artillery and Engineer officers has not interfered with efficiency on, *Strathnairn*, 9515, 9516.

Instances of officers physically incompetent who have passed high examination, *Walden*, 6373–6379.

To have passed Staff College examination should be a *sine quâ non* for the General Staff and for Military Secretary or Assistant Military Secretary, except under special circumstances, Report, p. 23, 49. Officers should be appointed by selection, ib. p. 49.

II.—*System of Admission.*

General Order [1857] instituting examinations for Staff appointments, *App.* XI. (H.), *p.* cxliv.

Present regulations [1868] for examinations for direct Staff appointments, *App.* XI. (I.), *p.* cxliv.

Appointments [1859–1867] showing those who had and those who had not passed Staff College, *App.* XIII. (G.), *p.* clxiii.

Number of officers examined for, without passing Staff College [1858–1868] *App.* XIII. (G.), *p.* clxiii.

If officers passed out of Staff College with 10 years' service would abolish restrictions as to rank, *Barker*, 9113, 9114.

Staff appointments may be given for proved Staff capacity in the field, *Forster*, 9369.

Not every officer appointed to the Staff need be examined, *Napier*, 83. Limitation of appointments to officers who have passed Staff College applies only to General Staff, *ib.* 1439; and not to Personal Staff, *ib.* 1607–1625, where the General should have freedom of choice, *ib.* 1494. Lieut.-Colonels appointed direct are not examined, *ib.* 1605. Military Secretaries are not examined, *ib.* 1626, 1627. Minor appointments given to officers who have passed the Staff College, and the system will be extended, *ib.* 1566, 1567, 1574, 1575, 1606. Doubts if a Passed Artillery officer would seek Staff employment, except in higher ranks, *ib.* 1647, 1648.

Present system would not secure adequate supply at the outbreak of a great war, *Porter*, 2346. How to increase it, *ib.* 2345, 2364–2368.

Should be selected for employment according to the peculiar talents needed in the appointment, *Schaw*, 8772–8777.

The present regulation examinations are not carried out, *A. L. Walker*, 9065, 9066.

On service, should be selected from Passed Officers of Staff College, *Baring*, 9204, 9205, on probation, *ib.* 9206.

Appointments to, should be by selection from graduates of the Staff College, *Barker*, *App.* XI. (A.) *p.* cxxiv.

Regimental officers could be examined for Staff, without passing through Staff College, *Cambridge*, 6441.

Regiments furnish very good Staff Officers, *Codrington*, 6047, 6072. There is a gain, on service, in being able to take them on trial, *ib.* 6085. In the Crimea the supply from regiments never failed, *ib.* 6086, 6087. In the field would not have any examination for the Staff, *ib.* 6058, 6059; but in peace, candidates for Quartermaster-General's Department must be tested in surveying and sketching, *ib.* 6060, 6064. Staff Officers must be selected *ib.* 6061, 6063. Would not choose any who were not competent in languages and riding, *ib.* 6065–6067.

Officers who have prepared themselves by special studies ought to have a preference, *Forster*, 9415, 9416.

The preliminary professional examinations a great advantage to army, *Hort*, 5130.

Would limit appointments to Passed Officers of the Staff College, *H. M. Hozier*, 6317; and to Regimental Officers who passed the final examination, *ib.* 6318. Does not think there are many officers practically fit for the Staff, yet unable to pass a high examination, *ib.* 6321.

Would restrict appointments to Passed Officers and officers of proved ability in the field, *Lacy*, 8460, 8461; but the time for that restriction is not yet fixed, *ib.* 8496. Certain positions are adapted to studious officers, *ib.* 8418, 8419; but they ought to combine field efficiency, 8420, 8421.

In peace, Staff College should be only portal to the General Staff, *Napier*, 1571. It might be important to have Staff Officers ready for service with Militia and Volunteers, *ib.* 1496, 1545. Would not form whole Staff from the Engineers, 1542.

Competition for the Staff would not derange regimental system, *Porter*, 2363. Would require every officer to have passed Staff College, *ib.* 2365, 2369.

Would open (subject to examination) to officers who had not been to Staff College, *Baker*, 6182, 6183. Officers might qualify partially before going to Staff College, *ib.* 6168–6171. A certain number of Staff Appointments might be competed for by officers in the regiments, *ib.* 6187. Men's qualifications vary much, *ib.* 6198.

If an officer could really pass the final examination should not be compelled to pass through the College course, *Baring*, 9242, 9243.

A disadvantage not to be able to appoint officers who have shown aptitude in the field, *Cambridge*, 6434, 6470, 6492.

For open examinations many men would study privately; instances cited, *Carey*, 4909–4913.

Would select from Regimental officers, and form into Staff Corps. "Five years' rule" bad. Physical and moral attributes more important than intellectual, *Clifford*, *App.* XI., *p.* cxvii.

Actual service in the field the only thorough test of a Staff officer, *Grant*, 6008–6010.

Careful training for Staff desirable, *Napier*, 1493, 1568, 1569; but experience in field sufficient qualification, *ib.* 1492, 1570.

Would allow officers to be examined for, without passing a college, *Paulet*, 5923–5925.

Would select the officers most distinguished by abilities, attainments, and service, *Robertson*, *App.* VII. (B.), *p.* lxxxvii.

Would allow entrance, independently of Staff College, on passing a proper local examination, *Scarlett*, 5965–5967. It is convenient on service to take an officer from a regiment on trial, *ib.* 5980. Would not take Staff officers from the Engineers merely because they are scientific, *ib.* 5917, 5988.

Would prefer a very severe test, based on thorough regimental knowledge, to competition, *Stephenson*, 6120, 6127–6130; which excludes valuable men, *ib.* 6121. Other qualifications besides mere education are needed, *ib.* 6122. A few Staff appointments may be given by favouritism, *ib.* 6123.

Regimental excellence should be a sure road to, *Strathnairn*, 9480, 9522, 9523; without passing through Staff College, *ib.* 9496, 9524.

III.—*Brigade-Major.*

Brigade-major should be a step to the divisional Staff, *Barker*, 9155.

Subaltern unsuited for, *Cambridge*, 9539, 9541, 9543, 9549; unless with brevet or local rank, *ib.* 9542.

Deep scientific knowledge not necessary, *Napier*, 1539, 1541. Such appointments should be reserved for officers passed the Staff College, *ib.* 1577.

STAFF—cont.

IV.—*Personal Staff.*

1. Generally.
2. Aides-de-Camp.
3. Military Secretary.

1.—Generally.

Should pass through Staff College, *Baring*, 9196 (5).
Would require them to pass whole course at Staff College, *Barker*, 9112, 9126, 9127, 9152–9154, 9160, 9161.
Would open to Passed Officers of Staff College, *Cardew*, *App.* XI., *p.* cxxviii.
Must not be a man of whom the General is entirely ignorant, *Codrington*, 6091.
No grievance in not being open to Passed Officers, *Lacy*, 8493, 8494.
Would require a four months' course at Staff College, *Shute*, *App.* VII. (A.), *p.* lxxxiii.

2.—Aides-de-Camp.

High science not needed for an aide-de-camp, *Barker*, 9156.
In foreign armies, officers are detached to perform duties of, on service, *H. M. Hozier*, 6279, and are allowed two horses each, *ib.* 6280.
Examination for, to be rigidly enforced (with exceptions), Report, p. 49.

3.—Military Secretary.

Not examined for appointment as, *Napier*, 1626, 1627.

STAFF COLLEGE:

I.—*Generally.*
II.—*Buildings and Internal Arrangements.*
III.—*Military Staff.*
IV.—*Professors.*
V.—*Candidates.*
VI.—*Students.*
VII.—*Course of Instruction.*
VIII.—*Specific Studies.*
IX.—*Examinations.*
X.—*Passed Officers.*

[For *Horses* and *Servants*, see § VI.]

I.—*Generally.*

Historical notice, *App.* XI. (C.), *p.* cxxxiv.
Scheme proposed by Council in 1857 for establishment of, *App.* XI. (E.), *p.* cxxxix.
Original regulations [1857], *App.* XI. (F.), *p.* cxli.
Present regulations [1868], *App.* XI. (G.), *p.* cxlii.
Should in peace be only portal to the General Staff, *Napier*, 1571. Established (in 1858), 1476. Its object, *ib.* 1382, 1541. Cost of College, *ib.* 1497, 1498.
The key of the whole system is the previous selection of the best officers for the College to work upon, *Lacy*, 8370–8374.
Too young yet for the system to be fully developed, *Adams*, 8832.
Might educate more officers, *Porter*, 2340, 2341; national benefit not proportional to cost, *ib.* 2343. Reason for limited number, *ib.* 2343. There would be ample competition for, if rewards were adequate, *ib.* 2344, 2347.
Does good work, *Abbott*, 2032, 2040.
Results not altogether satisfactory, *Armstrong*, *App.* XI. *p.* cxvii.
In favour of, *Baker*, 6153, *App.* VII. (B.) *p.* lxxxvi.
Imperfect though it be, better than none, *Baring*, 9196 (1). Why unpopular, *ib.* 9196 (4), 9244.
Quite approves, *Barker*, 9085, 9088.
Is satisfied with, *Cambridge*, 6434. Conditions under which it could be abolished, *ib.* 9534, 9552.
Right in principle, *Cardew*, *App.* XI. *p.* cxxviii.
Works fairly well, though favouring scientific as opposed to practical knowledge; has increased military education among officers, *Colley*, *App.* XI. (A.), *p.* cxxii.
Almost a necessity; reasonably successful, *Crealock*, *App.* XI. (B.), *p.* cxxx.
Of great advantage to Army, *Feilding*, *App.* XI. (A.), *p.* cxx.
Opening, has benefited Artillery, *Ford*, 8298.
Excellent; but not much better than old Senior Department, *Forster*, 9363–9368, 9409.
Is very good, *Grant*, 6025. Produces many efficient Staff officers, *ib.* 6026, though the educational test is not conclusive as to fitness of an officer, *ib.* 6027.
A great benefit to the Army, *Hamley*, 8682, 8683; and a Staff officer is the better for passing through it, *ib.* 8630.

STAFF COLLEGE—*cont.*

I.—*Generally*—cont.

Has caused in the Army study and competition in the military art, *E. M. Jones*, 8966, 8967, and has benefited officers passing through it, *ib.* 8968–8970.
Satisfied with operations of, *Lacy*, 8369. Its object is to educate for every department of military administration in its widest sense, *ib.* 8408. Has promoted education among young officers, *ib.* 8497; but there would be little competition to join unless more than the education it imparts, 8482.
An officer will be better fitted for Staff by passing through, no matter how otherwise qualified, *Porter*, 2369.
Beneficial to Army, *Scarlett*, 5958; and desirable, *ib.* 5978.
Derived benefit from, *A. L. Walker*, 8974. Tends to produce study in the Army, *ib.* 8974, 9000–9002.
Unnecessary, *Codrington*, 6047. The privilege of studying there is a boon, *ib.* 6088.
Does not necessarily bring the best officers to the Staff, *Clifford*, *App.* XI., *p.* cxvii.
Fails to secure the best officers, as best Staff appointments are not reserved for Passed Officers, *H. M. Hozier*, 6235, 6319, 6320.
Does not secure best men for Staff, *A. S. Jones*, *App.* IX. (A.), *p.* cxxiv.
Unnecessary; the required knowledge could be gained by private study, tested by examinations, *Lennox*, 9277–9280, 9294–9296. An instructor to tell an officer what to study would be a help, *ib.* 9282. Two years at, would not make an Engineer, *ib.* 9285.
Not a great advocate for; many officers join to avoid regimental duty, *Paulet*, 5922.
Is a failure, *Strathnairn*, 9483. Instruction too theoretical; would abolish the College on its present footing, *ib.* 9484. Practical ability is sacrificed to theory and useless sciences, *ib.* 9485. Might be reconstituted with a course of one year, *ib.* 9488.
Does not provide Cavalry, with as good Staff officers as were had before, *White*, 4835–4839.
Would send from each regiment an officer for a four months' course, passing which first-class should qualify for personal Staff, *Shute*, *App.* VII. (A.), *p.* lxxxiii.
Should be entirely distinct from Sandhurst Cadet College, Report, p. 52.

II.—*Buildings and Internal Arrangements.*

If full, holds 40 students, *Lacy*, 8536–8540; the vacant quarters are partly utilized, *ib.* 8571, 8572.
Library much used for private reference, *ib.* 8486. Regent's allowance (170*l.*) granted in aid of mess, *ib.* 8541. Quite satisffed with domestic arrangements, *ib.* 8567.
Ample accommodation, *Napier*, 1422, being built for 40 officers, *ib.* 1462.

III.—*Military Staff.*

1. Generally.
2. Commandant.
3. Adjutant.
4. Paymaster and Qnartermaster.
5. Non-Commissioned Officer.

1.—Generally.

Selection of first-rate men very important, *E. M. Jones*, *App.* XI. (A.), *p.* cxxviii.
Commandant to be assisted by a College Board of Professors, Report, p. 53.

2.—Commandant.

Special qualifications required, *Fielding*, *App.* XI. (A.), *p.* cxx.
Perfectly satisfied with relation to Governor of Sandhurst, *Lacy*, 8506; through whom his recommendations to the Council pass, *ib.* 8509–8511. Sees no advantage in reporting direct, *ib.* 8512, 8513.
Should be specially selected for Staff experience: appointed for seven years, renewable, but not beyond 14 years in all, or after age of 60, Report, p. 53.

3.—Adjutant.

Adjutant or some second to Commandant necessary, *Barker*, 9104, 9105.
Duties, *Lacy*, 8514–8517, 8519–8522.
Adjutant's duty is important, *E. M. Jones*, 8921; too confidential for a clerk, *ib.* 8923; though Commandant might perhaps do the confidential part, *ib.* 8924.
Would abolish; and employ a student by weekly roster, *A. S. Jones*, *App.* IX. (A.), *p.* cxxiv.
Should be discontinued, Report, p. 53.

STAFF COLLEGE—*cont.*

III.—*Military Staff*—cont.

4.—Paymaster and Quartermaster.

Duties of, performed by corresponding officers of Royal Military College, *Napier*, 924–926.

5.—Non-commissioned Officer.

There is but one, *Lacy*, 8526; the quartermaster serjeant, *ib.* 8527; whose duties could not be taken by the quartermaster serjeant from Sandhurst, *ib.* 8528.

IV.—*Professors.*

A Board of Study on the spot might be useful, *Lacy*, 8507. Educational branch entirely controlled by Council, *ib.* 8508. Professor of military history has an allowance for travelling on the Continent, *ib.* 8542, 8543. Cannot be reduced without reducing the subjects, *ib.* 8523–8525.

Appointed on Council's recommendation, *Napier*, 1583. Could teach more students, *ib.* 1463.

In military subjects should be changed periodically, *Cardew*, *App.* XI., *p.* cxxviii.

Military professors should be appointed for seven years, renewable: civilians not to retain office after 55, unless specially recommended, Report, p. 53. Second professor of mathematics and professor of geology to be reduced: establishment and salaries: professors of French, German, and Hindustani to be resident, ib. p. 53.

V.—*Candidates.*

1. Generally.
2. Special Qualifications.
3. Commanding Officers' Certificates.

1.—Generally.

Officers from Sandhurst who have competed [1858–1867], *App.* XIII. (B.), *p.* cxlix.

Some, not most, are very able men, *Adams*, 8823, 8824; some scarcely fit for the Staff, *ib.* 8825.

Reasons for small proportion of Sandhurst officers, *Addison*, 3800–3803, 3985, 3986.

Best officers do not enter; rewards too doubtful, *Armstrong*, *App.* XI., *p.* cxvii.

Many of the best officers do not offer, *Baring*, 9241.

Many will never reach the qualification required, *Baker*, 6184, 6185, 6202.

Most candidates now go to crammers, *Barker*, 9165, 9166; at an expense, 9168, 9169. Camp or regimental instruction might render this needless to some extent, 9167.

As a rule best men in Artillery do not go up for, though some of the best men in the Army do, *C. B. Brackenbury*, 8268.

Every officer does not go for hard work, *Cambridge*, 6472; some might as well not go, *ib.* 6435.

Why one per regiment is the limit, *Forster*, 9429.

All should be above average Army level, *Hamley*, 8605; but some who now pass through are not, *ib.* 8604, 8629, 8684. The candidates are no smatterers, *ib.* 8663.

Almost all go for special instruction, *Lacy*, 8549. About 15 out of 28 obtain entrance, *ib.* 8579, 8580.

To whom open, *Napier*, 1383, 1596. Number admitted, 1383, 1580. Why Artillery officers go there and Engineers do not, *ib.* 1441–1444. Candidates are fit for the Staff, *ib.* 1390. Proportion to vacancies, *ib.* 1385; slight diminution of late years, *ib.* 1386, 1478–1480; probable causes, *ib.* 1457, 1481, 1482, 1576, 1597.

Sometimes join to avoid foreign service, *Scarlett*, 5959. Any test of bona fides would be invidious, *ib.* 5960–5964. Does not know that applications have fallen off, *ib.* 5972, 5973.

The candidate's physical fitness better tested before than after the College course, *Schaw*, 8740.

There would be greater security of fitness for Staff, if he were twice successively so reported by the Inspecting Officer, *Strathnairn*, 9517; judgment and intelligence being reported on as well as mere knowledge of drill, *ib.* 9518, 9519. Frequently officers who marry or do not wish to go India have recourse to Staff College, *ib.* 9488.

Must almost inevitably go to a crammer, *A. L. Walker*, 8998, 9080, 9081. Its help to the candidate, *ib.* 9073–9079.

2.—Special Qualifications.

One or two years more service might be required, *Baring*, 9238.

STAFF COLLEGE—*cont.*

V.—*Candidates*—cont.

2.—Special Qualifications—*cont.*

Should have 8 years' service, *Barker*, 9092, 9093. Objects to the limit per battalion, *ib.* 9094, 9095; though it is inconvenient to strip a regiment of officers, *ib.* 9151. A candidate should be grounded in languages, *ib.* 9144.

Would not admit subalterns, *Cambridge*, 9540, 9541.

Should have 7 years' service, *Cardew*, *App.* XI., *p.* cxxviii.

Should have served 7 years or 2 years as Adjutant, *Crealock*, *App.* XI. (B.), *p.* cxxxii.

Should have served a year with regiment as captain, *Feilding*, *App.* XI. (A.), *p.* cxx.

Regimental efficiency should be indispensable. Would limit to home regiments, *A. S. Jones*, *App.* IX. (A.), *p.* cxxiv.

Should be required to be with their regiments some time immediately before examination, *E. M. Jones*, 8904, to prevent cramming, *ib.* 8905, which is bad, *ib.* 8906. Should understand Riding and French, *ib.* 8909–8911.

A candidate should bring languages at a high standard, *Lacy*, 8398, 8452. If officers came well prepared in general education, the Course might be more practical, *ib.* 8565; an improvement, *ib.* 8566.

Would as a reward admit a regimental officer frequently and favourably reported on by his Commanding Officer and the Inspecting General at half-yearly inspections, *Strathnairn*, 9488.

Five years' regimental service should be required, Report, p. 50. Before coming up for examination, candidates should be appointed to Staff of a General Officer on trial for a month and for confidential report, ib. p. 24, 50. Candidate must have passed the Special Army Examination in addition to that for captain, ib. p. 50.

3.—Commanding Officers' Certificates.

Sufficient, if signed in their integrity, *Armstrong*, *App.* XI., *p.* cxvii.

Sufficient, if carefully given, *Cardew*, *App.* XI., *p.* cxxviii.

His Commanding Officer can alone judge of a candidate's physical fitness for the Staff, *Adams*, 8821, 8826, and his certifying should be a stern military duty, *ib.* 8795–8798.

Would make Commanding Officers much more strict, *Baker*, 6168, 6203, 6217.

Commanding Officer's certificate not stringent enough, *Barker*, 9089–9091, 9106; should be categorical, *ib.* 9132. How it might be strengthened, *ib.* 9122–9125, 9150.

For certificates, must trust to good faith of Commanding Officers, *Cambridge*, 6435. Inspecting Generals could not be relied on, *ib.* 9550, 9551.

To render trustworthy, specific reasons must be required for recommending, *Colley*, *App.* XI. (A.), *p.* cxxii.

Ought to be rigidly carried out, with verbal amendments, *Crealock*, *App.* XI. (B.), *p.* cxxxiii.

Should be enforced and strengthened, *Forster*, 9394–9397, 9419–9428.

Commanding Officer should recognise the proper physical qualities, *Grant*, 6028, 6029.

As to Commanding Officers' certificates; and decision by Commander-in-Chief as to admission to College, *E. M. Jones*, 8945–8952.

Certificates of Commanding Officers, *Napier*, 1438, 1518, 1519; cannot devise a substitute, *ib.* 1522.

Commanding Officers' certificates should be more definite, and would supplement them by a report from the field officers, *Schaw*, 8738, 8739, 8742, 8747, not the junior officers, *ib.* 8755, 8756; leaving to Commander-in-Chief to decide on the admission, *ib.* 8745–8749. The Commanding Officer's certificate if categorical ought to be enough, *ib.* 8757, 8758. Suggests alterations in the certificate, *ib.* 8759. Certificates as to capabilities of officers by Commanding Officer to his District General, *ib.* 8760–8762. Commanding Officers' certificates worth little, *Baring*, 9196 (2), 9199–9201, 9322, 9229. Preliminary trial on a General Officer's Staff, *ib.* 9295, 9226, 9228.

Commanding Officer's certificate an insufficient guarantee, *Hamley*, 8594, 8645–8648; how to strengthen it, *ib.* 8593, 8595–8599, 8649, 8654–6658; to which he attaches great importance, *ib.* 8603. The Commanding Officer would certify to mental and moral

STAFF COLLEGE—*cont.*

V.—*Candidates*—cont.

3.—Commanding Officers' Certificates—*cont.*

attributes, *ib.* 8615, 8618, 8652; Commandant of College certifying after one term to fitness of character and physique, *ib.* 8616, 8617, 8635–8637, 8651. Commanding Officer's certificate would be for admission merely, *ib.* 8653. To test each candidate under a General Officer would be cumbrous, *ib.* 8634. The acceptance or rejection of a candidate should not rest with College authorities, *ib.* 8650.

Commanding Officer's certificate not to be relied on, *A. S. Jones, App.* IX. (A.), *p.* cxxiv.

Commanding Officer's certificate not much to be relied on, *Lacy*, 8587: should be more stringent, 8370, being the key of whole system, *ib.* 8371–8374. It should, therefore, be amplified, *ib.* 8422, 8423, and strengthened by report of a Board, *ib.* 8424, 8425: pointing out if a candidate be not a good regimental officer, *ib.* 8429. It would be hard upon the College Commandant to have to reject for physical disability, *ib.* 8471. Previous acting appointment on the Staff would answer excellently. *ib.* 8472, 8504: unless a month so taken up were an objection, *ib.* 8473, 8505.

Puts little faith in certificates of Commanding Officers, *Scarlett*, 5974, 5981.

Certificate given by Commanding Officer a sort of form, *Strathnairn*, 9487.

Should be much more categorical and be made by the three senior officers of the regiment, Report, p. 24.

VI.—*Students.*

1. Generally.
2. Servants.
3. Horses.

1.—Generally.

Would try them at Aldershot as aides-de-camp, to test physical qualifications, for which marks should count, *Baker*, 6168–6171, 6189–6193, 6199–6201. Would diminish the number of students, *ib.* 6186.

Would admit 30 a year, if Personal Staff were limited to Passed Officers, *Baring*, 9196 (5), 9198. Cost of living rather more than in a regiment, *ib.* 9217. Keeping a horse, *ib.* 9217–9219, 9224.

Commandant might report on fitness of, for Staff, *Barker*, 9107: though removal would be an extreme case, *ib.* 9162. There is now a power of removal, *ib.* 9163, 9164. Expense slightly exceeds a regiment, *ib.* 9140, 9168. Servants are the great expense, *ib.* 9142, 9143.

Diverse in quality, *C. B. Brackenbury*, 8180; of the army average in mental capacity, but of higher attainments, *ib.* 8181.

Several have broken down under the hard work, *Cambridge*, 6472. Objects to any increase of number, *ib.* 9531.

Should have 2*s.* a day to cover cost of living, *Cardew, App.* XI., *p.* cxxviii.

Would increase number, *Colley, App.* XI. (A.), *p.* cxxiv.

Should be employed during course as Staff officers, *Hamley*, 8609.

Might pay for their Course, *E. M. Jones*, 8934, 8935, 8941, 8944. All should be mounted, *ib.* 8936, 8937. College not more expensive than a regiment, *ib.* 8939, except as regards servants, *ib.* 8940.

Fifteen vacancies yearly, *Lacy*, 8577. Marine officers supernumerary, *ib.* 8578. It would be an advantage if a class travelled on the Continent with a Professor during vacation, *ib.* 8544–8546. Many go from their own ambition, *ib.* 8395. Are not so well off in allowances as with a regiment, *ib.* 8531, 8532. In the old Senior Department each paid 30*l.* *ib.* 8533, and each might pay something now, *ib.* 8534; but it would exclude poor officers, *ib.* 8535. Have no personal expense, *ib.* 8396; beyond library subscription (3*l.*), *ib.* 8487. One-fourth to one-third are married, *ib.* 8479. Makes monthly returns of application and attendance, *ib.* 8581, 8582. Officers of small means are able to join, *ib.* 8478. No difficulty with, *ib.* 8574–8576.

Disciplinary powers of Commandant, *Napier*, 1459; never heard of a breach of discipline, *ib.* 1458. Never paid anything, *ib.* 1432–1434, except towards library and mess, *ib.* 1436. They complain of not having soldier servants, 1435. Would not increase their pay, 1436. As to keeping a horse, *ib.* 1502, 1503. Monthly reports are made to Council, *ib.* 1525.

STAFF COLLEGE—*cont.*

VI.—*Students*—cont.

1.—Generally—*cont.*

Think more of future position, than expenses at the College, *A. L. Walker*, 9064. The course costs a man at least 100*l.* over his pay, *ib.* 9067–9069.

Should be increased to 40, Report, p. 50. Commandant to report confidentially on, ib. p. 54.

2.—Servants.

Cavalry Pensioners as grooms, very desirable, *Barker*, 9142.

Servants' allowance inadequate, *E. M. Jones*, 8938.

Allowance for, totally inadequate, *Lacy*, 8478; students bring their private servants, *ib.* 8529, 8530.

Students have their private servants, *A. L. Walker*, 9060. Cavalry pensioners as servants considered, *ib.* 9061–9063.

A moderate staff of servants should be provided at public expense, Report, p. 54.

3.—Horses.

Students should keep, *Hamley*, 8633. There are some now attached from several regiments, *ib.* 8668; but only for use in the Riding School, *ib.* 8641. Prefers that horses should belong to students, who should hunt them, *ib.* 8642–8644.

All students should keep horses, *A. S. Jones, App.* IX. (A.), *p.* cxxiv.

Students should be mounted, *E. M. Jones*, 8936, 8937.

Some students cannot keep, *Lacy*, 8441, 8474. Government should give the means of keeping horses, and require them to be kept, *ib.* 8475–8477.

Every student should be mounted, *Schaw*, 8743, 8744, 8767. The College might maintain a set of horses, *ib.* 8768; their provision is now a difficulty, *ib.* 8769, 8770.

Students should provide, *A. L. Walker*, 9015.

Students should be strictly required to keep, Report, p. 52.

VII.—*Course of Instruction.*

1. Generally.
2. Duration.

1.—Generally.

Subjects might be reduced, *Abbott*, 2033. Should be strictly practical, *ib.* 2034, 2036.

Would restrict the Studies, *Adams*, 8799. Instruction is essentially in War duties, *ib.* 8809, 8833. It is not too theoretical if subsequent opportunity be allowed of acquiring practical experience, *ib.* 8813, which is much needed, *ib.* 8819.

Might be improved, *Baring*, 9173, and more practical, *ib.* 9178. No marks should be given during the Course, *ib.* 9232.

More attention should be given to practical subjects, *Barker*, 9086.

Military administration, principles of drill, and tactics need more attention; physics less; would omit artillery and give it at Woolwich, with practical instruction in the three arms at Aldershot. Course too much directed to Quartermaster General's Department, *Colley, App.* XI. (A.), *p.* cxxiii.

Numerous proposed changes, *Crealock, App.* XI. (B.), *p.* cxxx–cxxxiv.

Too discursive, makes officers smattterers; subjects should depend on section of Staff duty aspired to, progress to be tested by quarterly examinations, Students to attend lectures or not, as they like; practical operations not sufficiently taught, *Feilding, App.* XI. (A.), *p.* cxx.

Improved of late, *Hamley*, 8623, but might be more practical, *ib.* 8624. Enough engineering is learnt, *ib.* 8626; without sending students to Chatham, *ib.* 8625. To teach subjects in a foreign language would be undesirable complication, *ib.* 8664.

Ought to teach the necessary duties of a Staff Officer, *H. M. Hozier*, 6322.

Would encourage student to follow his special bent in study, *Lacy*, 8384. To give professional instruction in a foreign language would require the instructor to be a perfect linguist, *ib.* 8400, 8401.

Subjects taught, *Napier*, 1396. Obligatory subjects, 1399, 1400. Voluntary subjects, *ib.* 1401.

Time too broken up, *Schaw, App.* XI. (A.), *p.* cxxvi. Would give a greater choice of subjects; and work each student in his peculiar line of talent, *ib.* 8763, 8771. A mistake to allow languages to be dropped

STAFF COLLEGE—*cont.*

VII.—*Course of Instruction*—cont.

1.—Generally—*cont.*

after first year, *Twisden*, 8859. Practical work of senior class is comparatively small, *ib.* 8877.

Professors should not give marks, *A. L. Walker*, 8982, 8983.

A larger option should be given to students as to the subjects to be taken up, Report, p. 24. Subjects proposed; marks during course not to be carried on. All instruction to be practical, ib. p. 51. As many practical duties as possible should be carried out on horseback, ib. p. 52.

2.—Duration.

Would add six months for telegraphy, railway transport, and modern appliances, *Adams*, 8814, 8815. Distinctly against shortening the Course, *ib.* 8817.

Would not shorten, *Baring*, 9230.

Would shorten to 12 or 18 months, print lectures, and curtail plan drawing. Field sketching and surveying need more time, *Cardew, App.* XI., *p.* cxxviii.

Too many subjects: should be one year, *Crealock, App.* XI. (B.), *p.* cxxx.

Difficulty of shortening to one year, *Hamley*, 8659–8662.

Eliminate languages and reduce to one year from 15 July, *A. S. Jones, App.* IX. (A.), *p.* cxxiv.

With advanced entrance examination might be reduced to one year, *Lacy*, 8375, 8376, without giving up any subjects now taught, *ib.* 8432; but has no decided opinion, *ib.* 8437.

Two years, *Napier*, 1406; without grace, *ib.* 1407.

Might be shortened to a year *Schaw*, 8778–8783. It would be inconvenient, if officers stayed for varying periods, *ib.* 8784.

Two years far too long, would eliminate useless subjects and reduce to one year, *Strathnairn*, 9488.

An educated man of very moderate ability ought to pass in the two years, *Twisden*, 8890–8892.

Should be two years, Report, p. 51.

VIII.—*Specific Studies.*

1. Administration.
2. Artillery.
3. Drawing and Fortification.
4. Languages.
5. Mathematics.
6. Military History, and Law.
7. Reconnaissances and Surveying.
8. Riding.
9. Sciences.
10. Transport.

1.—Administration.

Military administration studied insufficiently, *Baring* 9185–9189; as also schemes of defence, *ib.* 9191–9193, 9211; and outdoor work, eye-sketching and road-making, *ib.* 9194.

Time is lost in lecturing on military administration and legislation, *Barker*, 9133, 9134.

Requires more attention and practical exemplification *Hamley*, 8606–8608.

Better from text-book than lectures, *A. S. Jones, App.* IX. (A.), *p.* cxxiv.

Railway and sea transport are a principal part of, *Lacy*, 8411: also ambulance, military train, and Commissariat, *ib.* 8389–8391, 8394. Of all departments is almost the most important, *ib.* 8392. More attention might be given to railways, telegraphy, &c.; and instruction should be more practical, *ib.* 8393, 8415–8417, 8564.

Lectures are given, *Lefroy*, 8016.

Practical instruction is given in laying out camps, *Lacy*, 8568–8570.

Discipline neglected as a study, *Strathnairn*, 9488.

Are taught how to encamp, *Hamley*, 8627, and could be exercised practically if a brigade came occasionally to the College, *ib.* 8628, 8679–8681.

Pontooning and bridging, *Baring*, 9236, 9237.

Signals and telegraphy not taught, *Napier*, 1455.

Strategy too theoretical; can only be practically learnt in a camp of instruction, *Strathnairn*, 9484.

Telegraphy should be practised, *Hamley, App.* XI. (A.), *p.* cxix.

Telegraphy and photographic copying to be practised, Report, p. 52.

2.—Artillery.

Artillery course, *Baring*, 9234.

Knowledge not high: examination in it a farce, *Milman*, 7549, 7550, 7604–7610, 7614; but no want of diligence, *ib.* 7553. Students should be attached to an Artillery brigade at Aldershot, *ib.* 7611, 7614.

STAFF COLLEGE—*cont.*

VIII.—*Specific Studies*—cont.

2.—Artillery—*cont.*

Present instruction too technical, *ib.* 7612; and examination admits of cramming, *ib.* 7615. The Staff officers want general Artillery principles, *ib.* 7629; not the management of a gun, *ib.* 7630.

Should be taught by an Artillery officer, *Strange*, 7296.

Should be more in general application and less in details, Report, p. 52.

3.—Drawing and Fortification.

Geometrical drawing, *Baring*, 9215, 9216.

Time wasted in drawing, *Lacy*, 8442, 8443, 8450, 8452.

Fortification too much in detail, *Baring*, 9207–9209.

In practical outdoor work, knowledge of fortification was considerable, *Milman*, 7551, and the officers might teach others in the lower parts, *ib.* 7552.

Field works, roads and bridges, defence of positions, *Napier*, 1412–1418.

Doubts the expediency of teaching fortification in a foreign language, *Schaw*, 8764. It would be a great advantage to send students to study models abroad, *ib.* 8765, and need not be very expensive, *ib.* 8766.

Fortification course to be more practical for field purposes, Report, p. 51.

4.—Languages.

Languages, *Baring*, 9214, 9248.

Should be more colloquial, *Barker*, 9099–9103.

Scarcely to be well studied at Staff College, *Adams*, 8800–8803.

Might be omitted if rigidly required at entrance, *Hamley, App.* XI. (A.), *p.* cxix. Not absolutely necessary at the College, *ib.* 8660.

Should be more attended to, *Hort*, 5131.

Should keep up classics, as mental cultivation, *Lacy*, 8404. Would reduce instruction in, 8398, 8433, 8452.

English composition, *Napier*, 1445–1451; French, *ib.* 1530.

Cannot well be studied at the College, *Schaw*, 8783.

As taught, would fail to be useful in Intelligence Department, *Strathnairn*, 9484.

Would not teach at the College: but candidates for admission should know one, *A. L. Walker*, 9009–9011. Officers neglect military subjects to obtain marks more easily in languages, *ib.* 9025–9027.

5.—Mathematics.

The direct intention is to obtain mathematical knowledge without a secondary object, *Heaviside*, 2438–2440.

Mathematics studied beyond any practical purpose, *Baring*, 9179, 9180. The marks count for competition, *ib.* 9182, 9183.

Would not reduce the mathematics, *Barker*, 9149.

Too much attended to, *Hort*, 5131.

Mathematics, *Napier*, 1403, 1454, 1531.

Would make compulsory a certain necessary course, *Twisden*, 8840–8843, 8878; and would encourage further voluntary study, especially practical astronomy, *ib.* 8844. Mathematics could be dropped at whatever time the compulsory course might be passed, *ib.* 8882–8885. Officers rarely continue after second term, *ib.* 8852; but take astronomy, *ib.* 8853. Cannot say if astronomy be required in actual service, *ib.* 8866. Elementary mathematics omitted since College was founded, being insisted on at entrance, *ib.* 8871. Mathematics not now indispensable for passing, *ib.* 8893.

Too much advantage given to those who study beyond military needs, *A. L. Walker*, 9003–9007. It is necessary for Topographical Department, *ib.* 9006.

Should be reduced, Report, p. 24.

6.—Military History and Law.

Military law taught, *Abbott*, 2043, sufficiently, *ib.* 2047, 2048.

Every Staff Officer benefits by a knowledge of geography, general and military, *Lacy*, 8409; physical and political, most important, *ib.* 8405, 8406.

Military history requires time, *Adams*, 8817, 8818.

Instruction in military history supplies what is necessary for English composition and military correspondence, *Lacy*, 8552, 8553. Every Staff Officer benefits by a knowledge of it, *ib.* 8409.

Art of war forms part of, *Napier*, 1528. Military law, *ib.* 1598–1604.

STAFF COLLEGE—*cont.*

VIII.—*Specific Studies*—cont.

7.—Reconnaissances and Surveying.

Would give up time saved from languages to rapid sketching and reconnaissances, *Abbott*, 2046.
Should be taught on horseback, *Hamley*, 8665-8667.
Should be made rapidly, as in war, *A. S. Jones*, *App.* IX. (A.), *p.* cxxiv.
Should all be done on horseback, *E. M. Jones*, 8937.
Increased allowance applied for in aid of, *Lacy*, 8483–8485. Sketching on horseback is desirable, *ib.* 8438–8440.
Reconnaissance and surveying, *Napier*, 1412–1418, 1460, 1461, 1487, 1488, 1504–1513, 1532–1534, 1541.

To be personally under Commandant; to be more rapid and practical; £100 extra per annum to be granted in aid of; surveying should include more extended roadmaking, Report, p. 52.

8.—Riding.

Occasional inspection from Aldershot might secure good military riding, *Baker*, 6218.
Riding, *Baring*, 9223.
Riding, badly taught, *Barker*, 9097, 9098, 9130, 9131.
Has not noticed bad riders from, *Hort*, 5132, 5133.
Should be daily, till dismissed, *A. S. Jones*, *App.* IX. (A), *p.* cxxiv.
Twice a week, *Lacy*, 8464, 8465; might be better distributed, *ib.* 8466.
Riding, *Napier*, 1397, 1398, 1483, 1484.
Does not see how better to try it, *Scarlett*, 5979.
Mode of teaching faulty; and vexations to those who can ride, *A. L. Walker*, 8985–8988, 9016, 9017, 9040. Should be required on entrance, *ib.* 9018.

To be more frequently attended, Report, p. 52.

9.—Sciences.

Geology and chemistry should be abolished, and telegraphy taught, *Baring*, 9184.
Experimental sciences originally taught by evening lectures, *Lacy*, 8436,
Time is mis-spent in acquiring sciences of no military use, *Straithnairn*, 9484.

Should be reduced, Report, p. 24.

10.—Transport.

Embarking and disembarking troops taught profitably, *Barker*, 9146, 9147. Railway transport not taught. *ib.* 9148.
Railway transport a most important subject to teach practically, *Hamley*, 8670–8672. Sea tonnage and stowage taught already, *ib.* 8673, 8674, 8677.
Railway and sea transport taught in theory only, *Lacy*, 8412–8414. Working locomotives not taught, *ib.* 8467.
Theoretical instruction in embarking and disembarking troops, *A. L. Walker*, 9012; none in railway transport, *ib.* 9013.

IX.—*Examinations.*

1. Generally.
2. Entrance.
3. Intermediate.
4. Final.

1. Generally.

Should be by independent examiners, and in some subjects viva voce, Report, p. 51.

2.—Entrance.

Examinations of candidates abroad [1858–1867], *App.* XIII. (G.), *p.* clxii.
Numbers examined and failed [1858–1867], *App.* XIII. (A.), *p.* cxlvii.
Languages should be required, *Abbott*, 2035; Hindustani, *ib.* 2051.
Would require a language at entrance, *Adams*, 8801.
Would continue competition, *Baring*, 9196, (2, 3).
Riding might be included in entrance examination, *Barker*, 9097, 9098. A language also, *ib.* 9139. Field-drawing should be required, *ib.* 9157. Minimum too low, *ib.* 9138.
Approves system; but half marks in each subject taken up should be obligatory, *Cardew*, *App.* XI., *p.* cxxviii.
At each examination should be reduced by selection to 20 competitors, *Colley*, *App.* XI. (A.), *p.* cxxiv.
There should be yearly 20 to 40 admissions, *Crealock*, *App.* XI. (B.), *p.* cxxxi.
Objects to system, *Feilding*, *App.* XI. (A.), *p.* cxx.
A language might be insisted on, *Forster*, 9405.

STAFF COLLEGE—*cont.*

IX.—*Examinations*—cont.

2.—Entrance—*cont.*

Would retain competition in the present subjects, *Hamley*, 8612, 8613.
Would require one language, *A. S. Jones*. *App.* IX. (A.), *p.* cxxiv.
There should be a higher minimum in mathematics for entrance, *E. M. Jones*, 8907, 8908.
Competition an important mode of admission, *Lacy*, 8444. In Peace, nomination might be substituted for competition, but does not advocate it, *ib.* 8498, 8499. Failures to pass are rare, *ib.* 8470. Examination not hard, *ib.* 8547; but should be more searching, *ib.* 8399, 8449; failures attributable to competition, *ib.* 8548. Would alter optional subjects so as to admit more men of liberal education, *ib.* 8382, 8445–8447; and would include classics and general history, *ib.* 8383, 8448. An officer should pass for great proficiency in one subject, with moderate knowledge of others, *ib.* 8561–8563. Military geography as required at entrance, *ib.* 8554–8558.
Object, *Napier*, 1393, 1394. Minimum, *ib.* 1384, 1552, 1553. One language and mathematics obligatory, *ib.* 1395–1453. Why so many subjects, *ib.* 1452, 1547, 1548, 1551–1553. Candidates abroad allowed three hours for each paper, *ib.* 1440. The subjects might be increased to bring in the best educated officers, *ib.* 1499–1501: they are nine already, *ib.* 1547, 1548, which may lead to cramming, *ib.* 1549, 1550, 1555, 1556. Would not reduce the subjects, *ib.* 1551, 1564, 1565. No explanations given, *ib.* 1526, 1527. Answers in Natural Science superficial, *ib.* 1557–1559. Mathematics may be rated too highly, *ib.* 1560–1563. Proportion of failures, *ib.* 1388. No gain in passing unless in the first fifteen, *ib.* 1389. Cramming may be led to by the number of subjects, *ib.* 1549, 1550, 1555, 1556.
Ample test of fitness, *Porter*, 2358–2360.
Not a proof of ability or acquirements, *Twisden*, 8895. Students enter with insufficient mathematics, *ib.* 8838, 8869: but doubts if minimum could be raised, *ib.* 8839, 8870.
Competition is sure to be met by cramming, *A. L. Walker*, 9070–9072.

Subjects proposed and marks, Report, p. 50.

3.—Intermediate.

Would have less: they foster cramming, *Baring*, 9231.
Half-yearly, failure to involve dismissal, *Cardew*, *App.* XI., *p.* cxxviii.
Intermediate examinations valuable, *E. M. Jones*, 8916. Examiners should be independent, *ib.* 8917. Carrying forward marks makes knowledge superficial, *ib.* 8918, 8919.
Nature and marks, *Napier*, 1404, 1405, 1408–1411: marks carried on, *ib.* 1409, 1411, 1517: consequence of failing, *ib.* 1407.
Examinations should be independent of professors, *Twisden*, 8847, 8861, 8873, except chemistry and astronomy, *ib.* 8875. Mathematical examinations detailed, *ib.* 8848. Approves of intermediate professional examinations not carrying on marks, *ib.* 8879, 8880.

Should be abolished, except a probationary examination at end of first year, Report, p. 51.

4.—Final.

Would classify passed officers, *Adams*, 8828: but not allow personal competition by marks, *ib.* 8804. Honours might be granted to each officer in one compulsory subject, *ib.* 8805, 8806, 8827, 8829, 8830.
Evils and difficulty of competition, *Baring*, 9174, 9175. Should depend entirely on independent examiners, *ib.* 9232, 9233.
Like personal competition: but passing in classes would cause less jealousy, *Barker*, 9108, 9109. Approves marks during the course, *ib.* 9110, 9111. It is inconsistent to require a subject to be taken up and not to require marks to be made in it, *ib.* 9135, 9136. Would rather raise than lower the minimum, *ib.* 9137.
Would abolish competition: examiners should be independent, *Cardew*, *App.* XI. *p.* cxxviii.
Places should be by classes, *Crealock*, *App.* XI. (B.), *p.* cxxx.

STAFF COLLEGE—*cont.*

IX.—*Examinations*—cont.

4.—Final—*cont.*

Would substitute classes for personal competition, *Hamley*, 8610, 8611.

Would substitute classes for personal competition, *Hamley*, *App.* XI. (A.), *p.* cxx.

Would substitute classification for competition, *A. S. Jones*, *App.* IX. (A.), *p.* cxxiv.

Classification preferable to personal competition, *E. M. Jones*, *App.* XI. (A.), *p.* cxxvii.

Would substitute classification for personal competition, *Lacy*, 8380, 8381, 8435, 8453, 8491, 8559; marks being used for the classification, but not published, *ib.* 8435, 8492; the examiner being required to produce his marks to justify his placing, *ib.* 8454, 8455. It is better not to mention a student's extraordinary proficiency, *ib.* 8488–8490. Formerly officers not educated at the College could compete, *ib.* 8462. Supposes it did not answer, *ib.* 8463.

Examiners, *Napier*, 1514–1516.

To fail in riding should disqualify for a Mounted Staff appointment, *Porter*, 2357.

Would substitute classes for personal competition, *Schaw*, *App.* XI. (A.), *p.* cxxvi.

Final Examinations are at Christmas, *Twisden*, 8849. Marks at examinations, *ib.* 8850, 8851. Examiners in Astronomy, *ib.* 8854. Other mathematics examined independently, *ib.* 8855. Single final examinations are best, *ib.* 8857, 8858, 8872, 8874. A given number should be deducted from the marks in each subject and the remainder counted, 8886–8889. Passed officers might be classed instead of placed, *ib.* 8881.

Would classify and not have marks, *A. L. Walker*, 9023, 9024, *App.* XI. (A.), *p.* cxxx. Competition causes overwork, *ib.* 9029–9033. A high place in mathematics may secure passing high on the list, *ib.* 9034, 9035. Astronomy counts above everything, *ib.* 8978. Dislikes personal competition and would rather divide Passed officers into two classes (arranged by Regiments) with excellence in a special subject noted, *ib.* 8979–8981, 9036–9039. Examiners should be independent, *ib.* 8984.

Should be by classes, not personal competition, Report, p. 24, 51. Officers of 7 years' service to be allowed to be examined after only a short residence, ib. p. 24, 49, 54. The "pass" standard to be raised, ib. p. 51. Great importance to be attached to a colloquial knowledge of languages, ib. p. 52.

X.—*Passed Officers.*

1. Capabilities; and Prospects of Employment.
2. Attachment to other Arms.

1.—Capabilities; and Prospects of Employment.

Return of officers now in service who hold certificates from late senior department at Sandhurst, *App.* XIII. (G.), *p.* clxii.

Total number, and number in service; number who have received Staff appointments, *App.* XIII. (G.), *p.* clxii.

As a rule, not efficient on Staff, *Armstrong*, *App.* XI., *p.* cxviii.

Names should be published in order of seniority, *Baring*, 9176, 9177. Confidential Report of Commandant on is valuable, *ib.* 9196 (2, 3). Should have the monopoly of Personal Staff, *ib.* 9196 (5), which would increase the rewards, *ib.* 9197.

Obtained a Staff Appointment, *Barker*, 9087. The College Certificate recognised of late in India, *ib.* 9129. Proportion qualified for Regimental Instructor, *ib.* 9118–9121.

Could be employed as Regimental Instructors, *Cambridge*, 6433, 6497. Complaints of non-employment are common, *ib.* 6490. Virtually Passed Officers are under obligation to the public, *ib.* 6491.

Likely to be efficient; should wear a distinguishing badge, *Cardew*, *App.* XI., *p.* cxxviii.

Having a Staff College, it is but fair to provide appointments for those who pass through it, *Codrington*, 6049.

Popularity of College would be increased if all Passed Officers were allowed forage, so as to be always ready for extra Staff appointments. Staff should be rigidly selected from Passed Officers, *Colley*, *App.* XI. (A.), *p.* cxxii–cxxiv.

Should be appointed to those situations which fit them best, *Feilding*, *App.* XI. (A.), *p.* cxx.

STAFF COLLEGE—*cont.*

X.—*Passed Officers*—cont.

1.—Capabilities; and Prospects of Employment—*cont.*

All Captains, sooner or later, have Staff employ, *Forster*, 9370, 9371. Elaborate report on each made to Commander-in-Chief, *ib.* 9398.

Any test as to Staff qualifications after passing would lower the College's character, *Hamley*, 8601, and be objectionable, *ib.* 8638. The College authorities have no means of indicating those likely to be inefficient, *ib.* 8686; though the Commandant does report on such matters, *ib.* 8689, 8690. It would be difficult to obtain a trustworthy report from a general officer unless he were specially selected for his ability, *ib.* 8631, 8632, 8688. Some who pass have not all the qualities for Staff officers, *ib.* 8685. Should be appointed according to special qualifications, *ib. App.* XI. (A.), *p.* cxx.

Would institute a Staff Corps for, *E. M. Jones*, 8912, 8928, to enter at their option, *ib.* 8914. Objects to giving them extra pay in their regiments, *ib.* 8931. Sees no special object in their doing regimental duty, 8932.

Is bound to report confidentially on the general fitness for the Staff of Passed officers, *Lacy*, 8430, 8431, 8500, 8502, 8503, 8584–8589, at the end of the course, *ib.* 8501, 8583. Supposes adverse report would affect future appointments, *ib.* 8586. A general officer, to whom Passed officer was attached, could not say for a long time if he were fit for Staff, *ib.* 8387; and to do so would be an obnoxious duty, *ib.* 8388. Passed Officers think they have a claim upon the nation, *ib.* 8385. A considerable proportion of those eligible have had Staff employment, *ib.* 8386, 8397, 8456–8458.

Reported on by Commandant when they pass out, *Napier*, 1523, 1524. Chances of Staff College's utility depends much on Staff employment being given to Passed Officers, *ib.* 1572, 1573. Additional appointments should be created, *ib.* 1578, 1579, 1592. More will soon be vacant, *ib.* 1520, 1521. Honorary degrees, *ib.* 1585–1591. Council should be informed when Passed officers receive appointments, *ib.* 1421.

May be unfit for mounted duty though of high attainments, *Porter*, 2356. Would withdraw guarantee of Staff employment and give a pecuniary reward until appointed to the Staff, *ib.* 2345, 2364, 2368.

More fitted for instructors than for Staff duties, *Russell*, *App.* VII. (A.), *p.* lxxxi.

The course could not make a good Staff officer, if physique were deficient, *Scarlett*, 5968; a circumstance difficult to test beforehand, *ib.* 5969, 5970. Can only be appointed as vacancies occur, *ib.* 5971. Has been satisfied with those who have come under his command, *ib.* 5975. Has generally military science, *ib.* 5982; but may be otherwise unfit for the Staff, *ib.* 5983, 5984, 5989. Thinks they have a moral claim to Staff employment, *ib.* 5986.

Would classify in each subject and give honours in each, *Schaw*, 8750. Better to know a few subjects well than a smattering of many, *ib.* 8751–8755, 8775. In necessary subjects would only have a qualifying examination, *ib.* 8754, 8774. About 20 per cent. are not fully fit for the Staff, *ib.* 8785.

Insufficient certainty of Staff employment, *Walker*, 9054–9056. All general and personal Staff employment should be reserved for them, *ib.* 9056, 9057. No other reward open, *ib.* 9058. Expenses at the College might be lightened: but would not give them extra pay, *ib.* 9059.

Those of Cavalry do not wait long for appointments, *White*, 4840.

Commandant to report for what department of Staff best suited. Passed Officers reported on favourably to be employed whenever extra Staff Officers are wanted, Report, p. 54.

2.—Attachment to other Arms.

Would attach to camps, *Adams*, 8807, to qualify for peace duties, *ib.* 8809, 8810, where practice can best be had, *ib.* 8816.

Might be sent abroad, but not to fortresses, *Baring*, 9210, expenses being paid in proportion as the foreign language is acquired, *ib.* 9248. Should serve a month at Shoeburyness, and as long with a field battery, *ib.* 9234.

Should go for Artillery studies from May to August, *C. B. Brackenbury*, 8161, 8162.

STAFF COLLEGE—*cont.*

X.—*Passed Officers*—cont.

2.—Attachment to other Arms—*cont.*

To be attached to other branches for at least four months. *Cardew, App.* XI., *p.* cxxviii.

To serve two months at Woolwich for Artillery, and five and half months at camps in practical Staff duties: should wear an aigrette, as in Prussia: should be helped in visiting continental armies, *Crealock, App.* XI. (B.), *p.* cxxxiii.

As to going abroad to learn a language, *Forster*, 9348.

Not attached long enough to other arms, *Hamley*, 8639, 8640.

Would increase time of service with other arms, *Lacy*, 8377, 8378; to learn general system rather than details, *ib.* 8402; but a field day at a large camp would help more, *ib.* 8403. It is desirable to attach Passed officers to Chatham except for loss of time, *ib.* 8560.

Should have some training at Chatham, *Lennox*, 9266.

The repository course is too detailed, *Milman*, 7613.

Attached to other arms, *Napier*, 1423; but would double the periods, *ib.* 1424, 1425, 1429, 1430. The period for each arm was originally six months, *ib.* 1426; why reduced, *ib.* 1427.

Should go to Chatham after leaving, *Schaw, App.* XI. (A.), *p.* cxxvi.

Their time at Woolwich should be longer and not in winter, *Strange*, 7927, 7928. Does not attempt to make them Artillery officers; but show them what may be demanded from Artillery, *ib.* 7294. Their qualifications for acquiring instruction are high, *ib.* 7295. Might acquire both branches of Artillery (with a laboratory course) in six months, without previous study, *ib.* 7934.

Attachment to an arm for less than six months is useless for instruction, *Strathnairn*, 9494.

Those attached to Aldershot Cavalry brigade for instruction are employed as aides-de-camp, *White*, 4865–4870.

Artillery instruction should be for three months, from May or June, *Young*, 8050–8064; a very short time with Cavalry would then suffice, *ib.* 8062.

As a substitute, should be attached for 3 months, in the summer after passing, to a General Officer commanding at a Camp, Report, p. 24, 54.

STAFF CORPS:

Absence of modern knowledge of regimental duty is a disadvantage, *Codrington*, 6077.

Would put in, officers who had served five years on Staff with distinction, giving captains brevet-majorities, *Feilding, App.* XI. (A.), *p.* cxx.

Institution of proposed, *E. M. Jones*, 8912–8915, 8928, 8954. Prejudice in France is against it, *ib.* 8929.

STRATEGY:

More neglected in our Army than any other subject: from its omission from books of instruction: instances given; every reverse we have had may be traced to neglect of simple strategy, *Strathnairn*, 9475. Would introduce into books of Cavalry, Artillery, and Infantry evolutions, *ib.* 9476.

SUBALTERNS:

Duties of, are little learnt at Sandhurst, *Napier*, 622.

SUNBURY, CAPTAIN LENDY'S SCHOOL: *see* CRAMMING SCHOOLS."

SURVEY CLASS, ALDERSHOT:

Details as to, would be better under same roof, as Prince Consort's Library, *Woolsey, App.* VII. (A.), *p.* lxxxv.

Officers learnt surveying, course two months, *Lennox*, 9251; which was sufficient, *ib.* 9254, 9255. Numbers pass through, *ib.* 9252, 9253. Popularity, *ib.* 9256. Students detached from regimental duty, *ib.* 9257; worked zealously, *ib.* 9258, 9259. Field sketching and field works might have been taught similarly, *ib.* 9261. Would like to see system extended and systematized, *ib.* 9263, 9264.

Instituted by Government, *White*, 4877; but attendance purely voluntary, *ib.* 4841, 4871–4873.

Pretty full, *Carey*, 4950; instructed by an Artillery officer, *ib.* 4952.

SURVEYING, MILITARY:

Study of, educates the judgment, *Addison*, 3882.

Is required in Quartermaster-General's department, *Codrington*, 6047.

Elementary knowledge, of great use to an officer on attaining high rank, *Percy Herbert*, 5007, 5008.

Of the greatest use to an officer, *White*, 4829.

Elements can be as well taught by civilian as military teachers, *Benson*, 5648–5654, 5731–5735; *Southwood*, 5592, 5608, 5609.

Note on, as practised in France and Prussia,* *p.* 583.

[*See also* RECONNAISSANCE.]

SWIMMING:

A military man ought to swim well, *Abbott*, 1964.

[*See also* SANDHURST, IX. 2: WOOLWICH, XII. 6.]

T.

TACTICS:

Can be taught without experience in the field, *E. Walker*, 2785, with the aid of drill, *ib.* 2786, 2791.

TEACHING:

Classes and lectures have both their advantages, *Cunynghame*, 7242. Lectures are good provided the pupil master the subject himself, *ib.* 7243, 7244. Idle students could scarcely be made to work at lectures, *ib.* 7296, 7297.

Should be elastic and sympathetic, *Percy Herbert*, 5046.

[*See also* REPETITEUR SYSTEM.]

TECHNICAL KNOWLEDGE:

Examination for Direct Commissions deliberately fixed without reference to the professional knowledge required from officers, *Napier*, 309–312, 332. Sandhurst course is chiefly professional, *ib.* 949–951.

TELEGRAMS:

Officers need practice in, *Strathnairn*, 9491.

TESTIMONIALS:

Dislikes appointments on, *Milman*, 7633.

TEXT-BOOKS:

Needed for military law, fortification, and reconnaissance, *Hort*, 5144.

Required in field fortification, *Strathnairn*, 9476.

Wanted in military history, *E. Walker*, 2831–2834, 2929.

Text-books for the instruction of Officers should be issued by authority, Report, p. 27: the book on Military Law is wanted without delay, ib. p. 45.

TONE:

By high tone understands obedience, self-sacrifice, and self-control, with usual military virtues, *Strange*, 7909, 7910.

TOPOGRAPHICAL DEPARTMENT:

A temptation to Staff College students to study more mathematics than can be useful, *Baring*, 9180, 9181, 9220–9222.

One Passed officer at each final examination usually recommended for, *Lacy*, 8495.

Mathematics necessary for, *A. L. Walker*, 9006.

Qualifications to be required for, Report, p. 54.

TRADES:

Approves of men being exercised at, as an appendage to drill, *Codrington*, 6080.

TRANSPORT, SEA:

Embarking horses not usually very pressing, *Hamley*, 8674; without appliances, must depend greatly on the sailors, *ib.* 8676.

TUTORS:

Is delicate about recommending, *Heaviside*, 2423.

Special characteristics needed, *Percy Herbert*, 5043. Military not suited for moral control of youth, *ib.* 5013, 5045.

[*See also* PRIVATE TUTORS.]

TUTOR, SPECIAL:

Ought not to be wanted in Classics between a school and an Army admission examination, *Gordon*, 2609.

U.

UNDER-OFFICERS:

Prefers Woolwich to Addiscombe system, *E. Walker*, 2907, 2908.

* Reports on Foreign Military Education, in a separate volume.

United States:
I.—*Military System.*
II.—*West Point Academy.*

I.—*Military System.*

Officering the army,* *p.* 413.

II.—*West Point Academy.*

Generally,* *p.* 414, 436.
Staff,* *p.* 415.
Professors and instructors,* *p.* 416.
Admission,* *p.* 417.
Course of Instruction,* *p.* 419, 588–594.
Camp Duties,* *p.* 594.
Private study,* *p.* 421.
Daily routine,* *p.* 423, 601.
Examinations,* *p.* 424.
Graduation,* *p.* 426.
Idleness overcome,* *p.* 427.
Discipline and punishments,* *p.* 428, 596–600.
Buildings,* *p.* 435.
Expense,* *p.* 435.
Most of the eminent American generals have passed through, *Baring*, 9196 (1).
Gives a good professional education, *Percy Herbert*, 5014.
Can learn thoroughly regimental economy, but are treated as private soldiers, *Napier*, 791; being enlisted and liable to Court Martial, *ib.* 802, 803. All arms are united in the one College, *ib.* 1150.
Educates many men who do not enter army, *Simmons*, 6657.
Professors always military officers, *Young*, 8118.

United States War of Secession:
Proved, above everything, that special instruction is necessary to make good officers, *Simmons*, 1657.

Universities:
All officers should pass through Sandhurst or the Universities for a short course, *Baker*, 6147. Likes University candidates, but they should graduate at nineteen, *ib.* 6172–6176. Believes Universities agreed to give a military degree after 6 terms, *ib.* 6216.
Used to send candidates for Woolwich, *Moseley*, 2090.
Much idleness at, *Vinter*, 2685.

University Candidates:
B. A.'s are passed for direct commissions without examination, *Napier*, 202, 205, 294. A lower University pass might suffice, if the age of admission were assimilated to that for general public, *ib.* 295–297, 327, 328. Difference between an University examination and one at a Public School, *ib.* 326. It is an advantage to bring them into Army, *ib.* 179. Admission to Sandhurst, *ib.* 426, 509: prolongation age in their behalf to be abolished, *ib.* 329, 330. Would exclude them, *ib.* 431, 457, 473.
Should be eligible for Direct Commissions, without examination, after passing Responsions at Oxford or a corresponding examination at any other University, Report, p. 13: from 17 to 20 years of age; up to 22, if graduates in arts, ib. p. 44.

V.

Veterinary Science:
Not needed at Woolwich, *Napier*, 1381.
It might be important to have trained Staff Officers ready for service with, *ib.* 1496, 1545.

W.

War:
Too practical for science to be of much use in the field, *Codrington*, 6047.

Waterloo Rank:
The two years told signally, *Cambridge*, 9547.

Waters, Colonel:
Case of, *Codrington*, 6093.

Wellington College:
Two departments: one, the classical, for Universities, other, the modern, mainly for Army, *Benson*, 5627, 5683–5686. System of instruction in the Modern Department, *ib.* 5628; no technical subjects, as tending to divide the attention, *ib.* 5629–5631, 5712; number and ages of pupils, *ib.* 5633–5635; percentage trying for Woolwich, *ib.* 5636, 5639.
Disposal of military pupils during last five years, *ib.* 5640–5644. A young man leaving for the Army at 17 or 18 would be well grounded in elementary military education, *ib.* 5646. Subjects taught, *ib.* 5647. Professors and masters are chosen by head master, *ib.* 5655, 5656, Queen's cadets the only idlers, *ib.* 5657. A "Woolwich Exhibition" has been founded with good results, *ib.* 5658, 5676. Could give a military education if boys stayed till 18 or 19, *ib.* 5622–5666. Charge for pupils, *ib.* 5667. Meals in hall: each boy has separate room, *ib.* 5668. No complaints, *ib.* 5669. There is a growing tendency to complete education in the modern department, without resort to a private tutor, *ib.* 5670, 5677, 5687. There would be much difficulty in adopting the Sandhurst course, *ib.* 5671–5675, 5697, 5698. Woolwich technical course could not be given, *ib.* 5678. Fortification tried; but abandoned, *ib.* 5629, 5679–5682. Classical side gives the better mental discipline, *ib.* 5688, 5689. Boys on both sides work well, *ib.* 5694. Mode of teaching French and German, *ib.* 5695. Drunkenness and immorality very rare, *ib.* 5707-5709. Should object to give fortification and surveying more than two hours a week, *ib.* 5734. Woolwich examination has a good influence, *ib.* 5717. There are no military masters, *ib.* 5719. Good-conduct medal, 5721, 5725–5730. Prefects, *ib.* 5722–5724.
Cadets from, not so good in tone as from old Public Schools, *Addison*, 3878, 3879. Sent 24 cadets out of 320, *ib.* 3793.
Could impart military rudiments, *Barry*, 5497.
Boys from classical side pass into Woolwich high, but are not so high in final examination, *Cunynghame*, 7322; as classics do not then count, *ib.* 7323. Special education in modern side decidedly advantageous, *ib.* 7224, 7321. More time wanted for mathematics and French, 7265; but learnt some French, *ib.* 7229. The modern side did not make a separation in the school, *ib.* 7324, 7325. Three or four hours daily at mathematics, *ib.* 7331.
Good in mathematics, *Frost*, 4301.
Does not supply the place of Sandhurst (before the change of 1858) as a general school for officers' sons, *Napier*, 480. Pupils do not pass direct to Woolwich, *ib.* 1246.
Modern department answers; Classical department should be dropped, *Temple*, 5755, 5793, 5794.

West Point: *see* United States, II.

Westminster:
Counted as a Public School, *Napier*, 201.

Wimbledon School (Mr. Brackenbury's):
Does not reckon it as private tuition, *Napier*, 1240; its pupils pass direct to Woolwich, *ib.* 1245, 1252.
Passed into Woolwich (fifth) from, without needing a crammer, *Nicolson*, 7668–7673. Except for very young boys Classics an optional study, *ib.* 7721-7724, 7727, 7728; the substitute being English generally, and history, *ib.* 7725. Mathematics a strong point, *ib.* 7726, 7751, 7752. Languages taught by natives, *ib.* 7732, 7732.

Winchester:
Counted as a Public School, *Napier*, 201.

Commissions and committees of inquiry on Woolwich from 1835 to 1861, *App.* III. (D.), *p.* lxi.
Annual charge, 35,006*l.*, *Field*, 6661, of which public bears 3,142*l.*, *ib.* 6662. Cadets' contributions, *ib.* 6663. Indian contribution described, *ib.* 6749, 6750.
Comparison with Addiscombe does not hold, *Owen*, 7099, 7100.
Object of the Academy, *Napier*, 1163. Present state satisfactory, *ib.* 1171.

* Reports on Foreign Military Education, in a separate volume.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

I.—*Generally*—cont.

Works very satisfactorily, *Cambridge*, 9526.
Works very well at present, *Hamley*, 8614.
Looked upon by military officers as a boon, *Smith*, 5181.
Liked the Academy, *Nicolson*, 7660.
Increase of knowledge not very great, *Nugent*, 7387–7389. The life at, pleasant, *ib.* 7452.
Locality very suitable, *Bruce*, 6927.
Locally advantageous for Artillery instruction, *Owen*, 7199.
Proximity of arsenal very important, *Lefroy*, 7939. Cost of education somewhat excessive, from artificial system and number of subjects taught: in other respects not costly and worth to country more than it cost, *ib.* 7956, 8014.
Intellectual and moral results of the system are good, *Simmons*, 6508–6510, 6512, 6513, 6628; though minor details may require change, *ib.* 6514.
Essentially different from a civil college, *H. Brackenbury*, 7020. Would limit to technical subjects, *ib.* 6947, 7051.
Military training of great importance, *Milman*, 7603.
Should be more a School of Application, *Strange*, 7863. Would have more liberal education before entering, or at, Academy, *ib.* 7858, 7859. Should be conducted on the principles of Artillery service, *ib.* 7905, the object being to produce officers, *ib.* 7904.
Would consider as a School of Application, *H. Brackenbury*, *App.* III. (A.), *p.* liii.
Might be a school with first classes in the regiment for its University; or it might itself be the University for candidates drawn from the education of the whole country; prefers the latter course, *C. B. Brackenbury*, 8185.
Should be a preliminary School of Application leading to Chatham and Shoeburyness, *Stuart*, *App.* III. (A.), *p.* li.
Is too much a place of toil, *Fraser*, 8359.
Organization should be Military. Report of a Board of visitors should be annually laid before Parliament: constitution of Board, Report, p. 39.

II.—*Buildings and Domestic Arrangements.*

Construction and occupation return, *App.* XIII. (C.), *p.* clvii.
Each cadet should have separate room, *Bruce*, 6788.
Four cadets in a room, *Cunynghame*, 7239. Fed well, *ib.* 7245; not too well, *ib.* 7246; cold dinners in summer, *ib.* 7248. Within limits, cadets regulate their own supplies, *ib.* 7247.
Barrack accommodation, insufficient, *Field*, *App.* III. (B.), *p.* lvi. Barrack rooms described, *ib.* 6675. No objections are made; but a room per cadet would be much better, *ib.* 6689–6693. Reading-rooms, dining-halls, and class-rooms, *ib.* 6676. Arrangements for meals, *ib.* 6677, 6678. Lights out at 10½ and 11 p.m., *ib.* 6680. Each cadet has his desk, portmanteau, and cupboard, *ib.* 6704, which is liable to daily examination, *ib.* 6705. There are means of separate ablution, *ib.* 6707, 6708.
Gymnasium excellent, *Napier*, 1276. The buildings are good, *ib.* 1346.
A separate room is very comfortable, *Nicolson*, 7685, 7686. Well satisfied with food, *ib.* 7689.
Gas throughout. Never heard complaints that it hurt eyes, *Nugent*, 7450.
A good model room wanted, *Stuart*, *App.* III. (A.), *p.* li.
Too many subordinates, *Sylvester*, 7474, 7485, 7493.
Classrooms need re-arrangement, Report, p. 21, 43: separate accommodation desirable for cadets; a place for divine service required, ib. p. 43.

III.—*Military Government.*

1. Generally.
2. Governor.
3. Lieutenant-Governor and Commandant.
4. Inspector of Studies and Second Commandant.
5. Assistant-Inspector of Studies.
6. Adjutant.
7. Chaplain.
8. Paymaster.
9. Quartermaster.
10. Company Officers.

1.—Generally.

Establishment, *App.* III. (C.), *p.* lviii.
Staff detailed, *Field*, 6660.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

III.—*Military Government*—cont.

1.—Generally—*cont.*

No commissioners, *Percy Herbert*, 4996.
The Commander-in-Chief is Governor, *Napier*, 1319; the Lieutenant-Governor virtually governs, *ib.* 1318. In whom the government rests, *ib.* 1317. No Commissioners, *ib.* 1345.
Too many executive officers, *Sylvester*, 7474, *App.* III. (A.), *p.* xlvii. Groans under double government, *ib.* 7467.
Professors should have a share in government, *C. B. Brackenbury*, 8209.
Professors and instructors should be more consulted, *H. Brackenbury*, 6953, 7011, 7018. Staff officers should retire at 60, *ib.* 7046–7048.
One man would not have time to perform duties of Lieutenant-Governor, Inspector, and Assistant Inspector of Studies, *Bruce*, 6901–6903. Superior military rank does not involve priority on the educational establishment, *ib.* 6841–6844. There should be a Council of Improvement, of Professors, under Lieutenant-Governor and Inspector of Studies, *ib.* 6769.
There might be a Board of Improvement, *Field*, *App.* III. (B.), *p.* lv. Discipline officers reside (with exceptions) within the precincts, *ib.* 6748. Would make Vice-President of the Council the immediate authority to decide questions of studies, *ib.* 7536. One officer, aided by an adjutant, could not perform the duties of Lieutenant-Governor, second Commandant, Inspector of Studies, and Assistant Inspector, *ib.* 7601, 7602. Would have a Board of Improvement, of Professors and Military Officers, *ib.* 7508, 7520, consultative, with Second-Commandant as *ex officio* president, *ib.* 7509. It would tend to harmonious working, *ib.* 7521. Lieutenant-Governor could, but probably would not, form such a Board, *ib.* 7573–7575.
Governor should be assisted by an Academy Board, and at times should consult all the Educational Staff, Report, p. 39.

2.—Governor.

The resident chief should be governor, with absolute power of rustication, but not discharge, *Bruce*, 6778–6782.
Should always be a military man, *Lefroy*, 8013.
Head of Academy should be governor with full powers, *Stuart*, *App.* III. (A.), *p.* li.
Should be military, selected by and responsible to Secretary of State; taking part in instruction, with power of appointing and removing professors and instructors. Should be solely responsible for discipline and study, Report, p. 39. Should have local rank superior to any Officer employed under him: appointment for 7 years, renewable up to 14 at most, or to stop at 60 years of age, ib. p. 40: salary 1,500*l.*, ib, p. 41.

3.—Lieutenant-Governor and Commandant.

Should have increased power, *C. B. Brackenbury*, 8209; *H. Brackenbury*, 6942–6944, 7000.
Has not time for details, *Bruce*, 6867; but in principle should be the point of general connexion, *ib.* 6870–6873.
Inspects details, by regulation, *Field*, 6703. Would not rusticate without consulting Commander-in-Chief, *ib.* 6732, 6733.
Should have absolute power to remove (but not dismiss) a cadet, *Milman*, 7536; should be at the head of discipline and education, *ib.* 7537, with plenary power, *ib.* 7538.
Ought to have prompt powers of punishment, *Napier*, 1368–1371.
Saw very little of, *Nicolson*, 7702.
Should be combined with Inspector of Studies, *Sylvester*, 7468, 7469, 7480; with not more than the present assistance, *ib.* 7479. Is too exalted to exercise moral influence, *ib.* 7470. Colonel is sufficiently high rank, *ib.* 7474. Ought to have been present at an assembly of professors, *ib.* 7496.
To be discontinued, Report, p. 41.

4.—Inspector of Studies and Second-Commandant.

Academy fortunate in the present holder, *Sylvester*, 7480.
Ought to be Second-Commandant *ex officio*, but should not as a rule interfere in military discipline, *Milman*, 7556, 7557; might not be the senior officer *ib.* 7558; but is always a Lieutenant-Colonel, *ib.* 7560.

Woolwich, Royal Military Academy at—*cont.*

III.—*Military Government*—cont.

4.—Inspector of Studies and Second-Commandant—*cont.*

Discipline and studies should both be under, *Bruce*, 6865, 6866. Has time to join in cadet's amusements and drill, *ib.* 6868. Might think more of smart drill than of the studies, *ib.* 6869.

Seemed practically governor, *Nicolson*, 7703.

Would dispense with, *H. Brackenbury*, 6941.

Question of continuing, Report, p. 41.

5.—Assistant-Inspector of Studies.

Duties of, *Bruce*, 6836–6840. His visitation of studies very useful, *ib.* 6919.

Rendered necessary by the distribution of studies, *Lefroy*, 7960. His seniority does not enter into his position towards the Professors, *ib.* 7962.

Is Inspector's deputy, *Owen*, 7117. Sees no use in his visits to the classes, *ib.* 7118, 7119.

To be discontinued, Report, p. 41.

6.—Adjutant.

Need not exist separately from Paymaster, *Milman*, 7563–7567. Conveys Second-Commandant's order to Captains, *ib.* 7568; nothing else to do with drills, *ib.* 7669, 7570.

Combination with Paymaster, a mistake, *H. Brackenbury*, 7049.

Objects to, on principle, *Strange*, 7901, 7902. Depreciates Company officers before their cadets, *ib.* 7903.

To be discontinued, Report, p. 41.

7.—Chaplain.

Duties, *Fraser*, 8305–8308. Has for two years been attached to this garrison church, as a distinct duty, *ib.* 8309, with great advantage, *ib.* 8315, as augmenting his prestige, *ib.* 8360; had 50*l.* a year for the duty; but War Office has terminated the connexion, and he will again be without church or congregation, *ib.* 8316, 8317. Acts under great disadvantages, *ib.* 8309. Can only preach on Sunday in the hall, *ib.* 8319, 8320; where cadets dine and breakfast, *ib.* 8321. Has intercourse with cadets as librarian, *ib.* 8330. Does not mingle in their sports, *ib.* 8331. His religious duties occupy very little time, *ib.* 8347. Should either have a chapel or his functions be combined with the garrison chaplains. Should be a regular chaplain to the Forces, *ib.* 8348. As chaplain, is honorary librarian, *ib.* 8307; which takes much time, *ib.* 8347.

Visits cadets in hospital, *Cunynghame*, 7252; but not otherwise, *ib.* 7251, 7287. Should be young and energetic, *ib.* 7289.

Exercise a moral influence, *Lefroy*, 8012.

Saw little of, except at prayers: did not know him personally, *Nicolson*, 7676.

A cadet would not receive advice from, unless he asked for it, *Nugent*, 7378: but believes he visits hospital, *ib.* 7379.

Should be specially appointed by Secretary of State, and not necessarily military, Report, p. 40; should teach classics, ib. p. 42.

8.—Paymaster.

Not necessary, *Lefroy*, 7957–7959, 7993–7995.

Duties might be performed, as formerly, by one of the Captains, though there is now more responsibility, *Strange*, 7899, 7900.

Duties too responsible to fall on a Captain, *Milman*, 7561, 7562. There should always be a Paymaster and Adjutant in one person, *ib.* 7563, 7567.

Should have whole payment of cadets; combination with adjutant a mistake, *H. Brackenbury*, 7049.

Question of continuing, Report, p. 41.

9.—Quartermaster.

Should be young and active, *H. Brackenbury*, 7049.

Question of continuing, Report, p. 41.

10.—Company officers.

Might be reduced, *Napier*, 1320: but are not under council, *ib.* 1353, 1354.

Would suppress two out of the three captains, *H. Brackenbury*, 6941.

Would have only one captain and give subalterns increased disciplinary power, *C. B. Brackenbury*, 8209.

Subalterns have insufficient power, *H. Brackenbury*, 7039: mode of appointment, *ib.* 7040, 7041.

Subalterns have nothing to do with instruction, *Field*, 6699.

Question of continuing, Report, p. 41.

Woolwich, Royal Military Academy at—*cont.*

IV.—*Educational Staff.*

1. Generally.
2. As to holding disciplinary power.
3. Military *versus* Civilian.
4. Private Lessons.

1.—Generally.

Nominal list, *App.* III. (C.) *p.* lviii.

All the mathematical professors, except one or two, and half the professors generally, might be reduced. Two instructors in the same class disturb each other, *C. B. Brackenbury*, 8206, 8207. Are too weak influentially, *ib.* 8206, 8208: should be called into council for governing institution, *ib.* 8209.

Would reduce, *H. Brackenbury*, 6945, 6946.

With optional studies some professors or instructors might be reduced, *Bruce*, 6771. Would not select foreign teachers from military men, *ib.* 6921. Civilians not allowed to give private instruction, *ib.* 6890.

Thirty-four professors and instructors, *Field*, 6694, with very similar duties, *ib.* 6697: number could not be reduced under present system, *ib.* 6761, 6762. Greatest number of cadets under instruction at once is 23, *ib.* 6698, 6760. Professors solely responsible under Lieutenant-Governor and Inspector for instruction, *ib.* 6700: keep order in study through the corporal, *ib.* 6701. Appointed by Commander-in-Chief on recommendation of Lieutenant-Governor, *ib.* 6751–6753. Professors should be responsible for their subjects. Each instructor should have separate class room, *ib. App.* III. (B.), *p.* lvi.

Selected by council, *Hamley*, 8696 on recommendation of Lieutenant-Governor, *ib.* 8697.

By different distribution of time, Masters might advantageously be reduced, *Lefroy*, 8014. Would release Professors from much of their present work and give them general supervision of studies, *ib.* 7978.

Should be carefully appointed by Lieutenant-Governor, and the appointments should be regarded as among the highest in the Artillery, *Milman*, 7513–7516, 7631, 7634: which they are not now, *ib.* 7635. A candidate would bring his best interest to bear, *ib.* 7632: dislikes appointing on testimonials, *ib.* 7633. Would put one or two on Boards of all kinds, *ib.* 7539: there is no reason to dissociate them from cadets, *ib.* 7540. Engineers are eligible for employment, *ib.* 7541, 7542.

Number (33), *Napier*, 1322, 1332, 1351; enumerated, *ib.* 1324. Selection of civilian, *ib.* 1328, military, *ib.* 1331. The term of office for military men, *ib.* 1372, 1374, 1377. Salaries inclusive, *ib.* 1378, 1379. Ought to be allowed to take private pupils, *ib.* 1380.

In excess, as compared to an ordinary school, *Owen*, 7069, 7151. Only to be reduced by decreasing compulsory subjects, *ib.* 7070–7073. Rarely consulted as to changes of study, *ib.* 7116. Every instructor should have separate class room; should be mostly military, and the appointment deemed important, *Stuart, App.* III. (A.), *p.* li.

Generally, proportion of instructors to instructed is large, *Sylvester*, 7491, in consequence of the variety of subjects taught, *ib.* 7499. Act very little together, *ib.* 7494. Assembled once, to discuss change of hours, *ib.* 7495; such meetings would be advantageous, *ib.* 7497, 7498. Mathematical professors badly paid, *App.* III. (A.), *p.* xlviii.

Should be appointed and removed by Governor, Report, p. 39. Languages should, if possible, be taught by Englishmen. Appointment, if military, for 7 years at least, renewable. If civilians, to cease at 55 years of age, as a rule, ib. p. 40. Establishment, and salaries, ib. p. 41.

2.—As to holding disciplinary power.

No reason why a military professor should have less authority than a military officer of like rank, *C. B. Brackenbury*, 8224, and they could have charge of general discipline in study, *ib.* 8228; but charge of general discipline would lower them in cadets' eyes, *ib.* 8226.

Disciplinary power undesirable, *H. Brackenbury*, 6954–6957, 6970, 6971, 7019, 7020.

Responsible for discipline in their classes; but keep order through an under-officer or corporal, *Bruce*, 6789. Have no power to punish; but are bound to report anything they see wrong, *ib.* 6790-6792, 6817, 6892. No great difference between powers of Military professors and executive officers, *ib.* 6813. Should be limited to teaching, *ib.* 6814. Do not

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

IV.—*Educational Staff*—cont.

2.—As to holding disciplinary power—*cont.*

know cadets until they pass into their classes, *ib.* 6893; and then see little of them out of study, *ib.* 6819; which is desirable, *ib.* 6820. A military professor could, as an officer, put a cadet in arrest, *ib.* 6792, 6794; and so differs slightly from a civilian, *ib.* 6795, 6891.

Would not give civilians power of punishment, *Cunynghame*, 7236.

Instructional Staff cannot award definite punishment, *Field*, 6738–6741. Would not give military professors disciplinary power, *ib.* 6742–6744; though a professor would of course notice a breach of discipline, 6745–6747.

Professors not sufficiently trusted or independent, *Lefroy*, 7962. Sees no necessary distinction between Professors and Company officers, *ib.* 7963.

Are now responsible for discipline in their classes, *Milman*, 7639; would give increased power, *ib.* 7640. There is now a reference to inspector, *ib.* 7641. A professor taking out cadets for surveying, &c. would know them better than their captain, *ib.* 7649.

Professors cannot punish, *Napier*, 1347; how each is aided, *ib.* 1349.

Objects to give them power of arrest, *Nicolson*, 7790–7794, or authority, *ib.* 7677, 7678, 7680, 7772. Can put a cadet in arrest, through the corporal, *ib.* 7679, 7774, 7775. A civilian professor could not be trusted to maintain discipline, *ib.* 7771.

Only exercise authority in study, *Nugent*, 7372. Would not give it out of study, lest civilians might fail to act impartially, *ib.* 7373, 7418.

Should have better opportunities of common action with disciplinary staff, *Owen*, 7059. Require disciplinary power; some actually exercise it, *ib.* 7074–7080, 7085–7087. It would suffice to give power of inflicting slight punishment, *ib.* 7120, as 24 hours' arrest, *ib.* 7143. Preserving discipline depends on an officer's personal qualities; but he must be supported, *ib.* 7173.

Professors, &c., have powers enough, *Stuart*, *App.* III. (A.), *p.* li.

Civilian professors and masters had some disciplinary power, *Vinter*, 2720.

Too much worked to have disciplinary charge, *Wilson*, *App.* III. (A.), *p.* xlix.

Should have the same disciplinary powers as Company officers, *Young*, 8090, 8091.

Should have limited powers of punishment, and be solely responsible for order during study, Report, p. 40.

3.—Military *versus* Civilian.

A military man may attract more attention than a civilian, *Bruce*, 6922.

Respect shown to civilians depends on themselves, *Cunynghame*, 7337.

Except for languages, should be officers, *Field*, *App.* III. (B.), *p.* lvi.

The respect for a civilian depends on the man, *Nicolson*, 7773.

Civilians have the same respect as military, because the Inspector of Studies backs them up, *Nugent*, 7374, 7375. Military professors teach best, *ib.* 7400.

All should be military, *Strange*, 7863.

Should be military to a greater extent, *Young*, 8087, as being better attended to, *ib.* 8088.

Either, at discretion of appointing power, Report, p. 40.

4.—Private Lessons.

Should be permitted to Academy students only, Report, p. 40.

V.—*Candidates.*

1. Open Competition.
2. Qualifications.
3. Age.

1.—Open Competition.

Alterations of system from 1855 to 1869, *App.* III. (D.), *p.* lxii.

Memorandum upon introduction of competitive system, *App.* III. (E.), *p.* lxiv.

Regulations for competitive examinations *App.* III. (F. H.), *p.* lxv–lxviii.

Sons of Artillery and Engineer officers admitted under competition [1855–1868], *App.* XIII. (C.), *p.* clvi.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

V.—*Candidates*—cont.

1.—Open Competition—*cont.*

Was originally against open competition, but it works well, *Abbott*, 1969, 1971; and produces superior officers, *ib.* 1970, 2004, without undue strain on health, *ib.* 2023.

Approves of open competition, *H. Brackenbury*, 6935, 6982.

Satisfied with open competition, *Bruce*, 6772.

Examination competitive, *Dasent*, 4541.

High social status of competition cadets, *Moseley*, 2115.

Competition open to all British subjects, *Napier*, 1166–1168; and has worked well, *ib.* 1169, 1170.

Approves of open competition, guarded by a high educational test, *Simmons*, 6510, 6511.

Open competition has brought in men of higher knowledge, industry, and tone, *Sylvester*, *App.* III. *p.* xlvii.

Open competition has, on an average, produced better men, *Wilson*, *App.* III. (A.), *p.* xlviii.

Would prefer limited competition, *Stuart*, *App.* III. (A.), *p.* li.

Evils of the competitive system, *Warde*, 9309; how it might be improved, *ib.* 9328–9331; but would substitute nomination, with qualifying examination in subjects of liberal education, *ib.* 9311–9318. There might be difficulty in reverting to old system, *ib.* 9321.

Open competition should continue, Report, p. 38.

[*See also* § XII. 1.]

2.—Qualifications.

Fathers force their sons to try, regardless of inability, to learn mathematics, *Dasent*, 4576, 4577.

Superior in work to those for Sandhurst, *Frost*, 4315–4317.

Often of high classical attainments, *Gordon*, 2515, 2563, and might take University honours, *ib.* 2516.

Average abilities very good indeed, especially in mathematics, *Heaviside*, 2391: not crammed, *ib.* 2465. Have improved in appearance and general bearing, 2395, and show no sign of intellectual strain, *ib.* 2396. Best candidates compared with Trinity men at Cambridge, *ib.* 2473.

On entry should have considerable scholarship, *Lefroy*, 7969.

Public School boys deterred by the discouragement of classics, *Milman*, 7595–7598.

Entrance more difficult than at Sandhurst, *Napier*, 389, 1207. Cadets do not get in with a small amount of mathematics, *ib.* 1123. Ratio between candidates and vacancies varies, 1158, and could not be regulated, *ib.* 1204, 1205, 1251. Age for; competition; half-yearly: qualifications, *ib.* 1164, 1186. Few candidates from Public Schools, *ib.* 1224, 1234.

Not much over-work among, *Nicholson*, 7753.

Ordinary Public School course insufficient; have more general knowledge than formerly, *Owen*, *App.* III. (A.), *p.* l. Should know elementary pure mathematics, *ib.* 7058.

Those entering very intelligent: their mathematics not crammed, *Sylvester*, 7471. Some cannot get through Academy without aid from private teachers, *ib.* 7499.

Candidates deficient in logarithmic work, *Vinter*, 2696.

3.—Age.

The average age is nearly 18, *Abbott*, 2005; and should not be reduced, *ib.* 1972, 1973.

Advocates 18 to 19, *H. Brackenbury*, 6937.

Average age, 16½ to 17½, *Bruce*, 6879. Maximum age might be lowered to 18, *ib.* 6774.

18 about the best age, *Cunynghame*, 7227.

Admission is now between 16 and 19, by open competition, *Field*, 6661. 19 too old: would lower limit to 18, *ib.* 6717–6724.

Age, 16 to 18, *Milman*, *App.* III. (A.), *p.* li.

Would make age 16 to 18, *Napier*, 1171, 1172.

Age should be 16 to 18. *Owen*, *App.* III. (A.), *p.* l.

Should enter younger and stay longer, to prevent cramming, *Peel*, 9469.

Entrance age could be reduced, without diminishing the education required, *Simmons*, 6605, 6638.

Would reduce limit of age from 19 to 18, *Strange*, 7862, 7863.

Should be from 17 to 18½, *Stuart*, *App.* III. (A.), *p.* li.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

V.—*Candidates*—cont.

3.—Age—*cont.*

Should not be older than 15 to 17; raising the age was worst thing for the service, *Warde*, 9307, 9324a, 9325.

Should be 16 to 18½, *Wilson*, *App.* III. (A.), *p.* xlviii.

Should join earlier, or be commissioned at 18, *Young*, 8086, 8087.

Should be from 16 to 18, Report, p. 12, 19, 38.

VI.—*Cadets.*

1. Generally.
2. Work.
3. Tone.
4. Military Status.

1.—Generally.

Medley of cadets from 1857 to 1863, *App.* III. (D.), *p.* lxii.

Age on leaving [1858–1867], *App.* XIII. (C.), *p.* clvi.

Payments for [1858–1867], *App.* XIII. (A. i.), *p.* cxlvi.

Average numbers on each scale of payment, *App.* XIII. (C.), *p.* clvii.

Many of foremost enter Engineers against their will, *Abbott*, 1979.

Sees no difference in mastering studies between older and younger cadets, *Bruce*, 6880, 6881. Public-School boys direct from highest forms make the best cadets, *ib.* 6882, 6883. Average age 19¼, *ib.* 6907; a few are 20, *ib.* 6908. Overwork only occasional, *ib.* 6899; as a body, healthy and strong, *ib.* 6900.

222 in three divisions, *Field*, 6660, and five classes of equal strength, *ib.* 6661. Graduated scale of pocket-money, 5*s.* to 3*s.* a week, *ib.* 6706.

Total number, 222, *Milman*, 7623. Since 1863 hospital returns diminished, *ib.* 7625, owing to improved food and treatment, *ib.* 7626. Printed rules for everything: not deviated from, *ib.* 7573.

There are 220, *Napier*, 1323. Formerly cadets sometimes came from Sandhurst, *ib.* 547, 548. Every cadet obtains a commission, *ib.* 1291, without much delay, 1294. Artillery commissions to Engineers' as two to one, *ib.* 1300–1305. Very few cadets fail to qualify, *ib.* 1308.

Would give four scholarships for excellence: to be held during residence, *Owen*, 7066–7068.

Scales of payment, Report, p. 39.

2.—Work.

Do not suffer from overwork, *Nicolson*, 7754.

About half would try to discourage study, *Nugent*, 7365–7368.

Have time for general reading, *Owen*, 7189; but would leave that till after leaving Woolwich, *ib.* 7190. Very few cases of overwork, *ib.* 7187, 7188.

To be overworked quite exceptional, *Simmons*, 6607, 6608.

Work hard; but are not overworked, *Sylvester*, 7471; though they complain of having examinations always impending, *ib.* 7500.

3.—Tone.

Many are very religious, *Fraser*, 8329. Religious and moral tone much improved of late years, *ib.* 8325, 8356; attributable, *inter alia*, to cadets' greater age and intelligence, *ib.* 8357. Far less venereal disease than formerly, *ib.* 8337; in fact it is very rare, *ib.* 8362; causes, *ib.* 8338. There is a want of *esprit de corps* partly attributable to there being no chapel, *ib.* 8358. The want diminishes as the building is beautified and high associations evoked, *ib.* 8359.

Smarter than Sandhurst cadet when beyond the grounds, *Napier*, 1361. Failures in moral conduct, *ib.* 1364.

Were gentlemanly, *Nicolson*, 7661. Their language not specially coarse, *ib.* 7799.

Everything gives way to meals and recreation, *Owen*, 7140; cadets pampered, *ib.* 7142, and over-fed, *ib.* 7183–7185.

Out of study, neat and tidy, *Porter*, 2179, 2267.

[*See also* § VII. 1.]

4.—Military Status.

Should be commissioned officers, *H. Brackenbury*, 6949, 6957, 7051. Would only treat cadets as soldiers, while on drill, *ib.* 7028.

More soldiers than students, *Bruce*, 6793; between soldiers and officers, *ib.* 6848; nearer subalterns, *ib.* 6915; cannot say if under Articles of War, *ib.* 6796, 6797; but under military discipline, *ib.* 6847, which

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

VI.—*Cadets*—cont.

4.—Military Status—*cont.*

is important, *ib.* 6849. Cadets sign a declaration that they will obey orders, *ib.* 6845. The order is to salute every officer he meets, *ib.* 6846; to which only cadets of bad tone could object, *ib.* 6916. A cadet has to obey professors and masters, *ib.* 6850–6852.

Have no character to maintain, *Nugent*, 7452. Should be treated less as private soldiers, more as officers, *ib.* 7453–7460.

On emergency might be taken for active service, *Strange*, 7881, so should have as much practical education as possible while still cadets, *ib.* 7882.

VII.—*Discipline.*

1. Generally.
2. The Companies.
3. Under-Officers and Corporals.
4. Offences.
5. Punishments.

1.—Generally.

Hours of study, meals, recreation, and drill, *App.* III. (C.), *p.* lix.

Good, *Abbott*, 1984, 1985.

Would assimilate minor matters to an University, *C. B. Brackenbury*, 8186.

Not very good, *H. Brackenbury*, 6951, 7037; especially formerly, *ib.* 7035, 7036. Tone moderately loyal to authorities, *ib.* 6996.

Satisfactory, *Bruce*, 6777. Any officer seeing a cadet do anything wrong ought to place him in arrest or report him, *ib.* 6853, 6854. Woolwich being a garrison town, cadets are under constant supervision, *ib.* 6818. Officers always ready to advise cadets, *ib.* 6863. Communications to parents would ordinarily be through Second-Commandant, *ib.* 6913. Strongly opposed to combining teaching (except of drill) with discipline, *ib.* 6827: the fewer who punish the better, *ib.* 6816, 6825–6828.

Well maintained, *Cunynghame*, 7231, 7238; tone gentlemanlike, *ib.* 7232; bad language not more than might be expected, *ib.* 7235. Cadets can be religious without hindrance, *ib.* 7288. There is no personal supervision of morals, *ib.* 7279, 7280; but it could be introduced, *ib.* 7281. A link and adviser between cadets and authorities is wanted, *ib.* 7320.

Bounds only as to time, *Field*, 6682; but houses of public resort may not be entered, *ib.* 6680, 6681, a law very rarely transgressed, *ib.* 6683–6687.

Enforcement of bounds has tended to stop venereal disease, *Fraser*, 8338. Bounds are of time, not locality, *ib.* 8339, 8340, 8342, 8343. Cadets under punishment may not pass the enclosure, *ib.* 8341. Public-houses forbidden, *ib.* 8344, 8345. Captains and subalterns associate freely with cadets, *ib.* 8351; but there is not a particular officer to whom each cadet would look for guidance, *ib.* 8352–8354.

"Old cadet" system, bad as it was, helped to maintain discipline, *Hale*, 2938.

In witness' time there was no person of whom moral supervision of cadets was expected, *Lefroy*, 8009, and violations of decency, if not offences against discipline, were completely condoned, *ib.* 8110. Control was exercised by individuals, but simply as personal influence, *ib.* 8011. Believes chaplain now considers it his duty to exercise moral influence, *ib.* 8012.

Morality and discipline very fair, *Milman*, 7527, 7528. *Esprit de corps* exists, though less than formerly: there is very little vice or immorality; what there is, occurs in visits to London, *ib.* 7622–7624. Young men may be kept too strictly, *ib.* 7581, 7582. Cannot recommend any alterations as to privileges or disabilities, *ib.* 7583, 7584. Difficulties arise from individuals, *ib.* 7585.

Officers responsible for, *Napier*, 1317. Not under the Council, *ib.* 1333. Is now satisfactory, *ib.* 1334, 1344, 1367.

Tone, regulated almost entirely by cadets themselves, *Nicolson*, 7797, 7798, was satisfactory, *ib.* 7707. Moral tone better than he expected, *ib.* 7758, 7759. In a disturbance, opinion would be against delinquents whose behaviour had been ungentlemanly, *ib.* 7704–7706. *Esprit de corps* is inferior to that of a College or Public School, *ib.* 7769; but increased of late, *ib.* 7693. Discipline very well maintained, *ib.* 7674, 7675. There are no bounds, *ib.* 7804, 7805. No authority is seen sufficiently for personal attach-

WOOLWICH, ROYAL MILITARY ACADEMY, AT—*cont.*

VII.—*Discipline*—cont.

1.—Generally—*cont.*

ment to him to be formed, *ib.* 7740; and officers and professors see very little of cadets at their own houses, *ib.* 7781.

Much improved under General Ormsby, who treated cadets as gentlemen, *Nugent*, 7361–7363. Not much *esprit de corps*, *ib.* 7420. Discipline would not suffer by abolition of some of the 4,000 parades, *ib.* 7421, 7434.

In fair condition, *Owen*, 7060, 7193. Insubordination has died out, *ib.* 7061. Tone of cadets exceedingly good: much improved from former times, *ib.* 7163, 7192.

Not conducive to habits of military obedience, *Strange*, 7854. Would not fear true military spirit, *ib.* 7908. More tone is needed than in a Public School, *ib.* 7912. Parades, drills, and discipline are essential, *ib.* 7913.

In class, majority well-conducted; a few noisy, who know they will not pass, *Sylvester*, 7483. *Esprit de corps* increased of late, *ib.* 7497, 7498. Should be glad to see more of cadets than he now can, *ib.* 7501. The great majority treat him with respect; but some cadets are of a lower stamp, *ib.* 7502. In a particular case of disrespect, civilian professors were not duly vindicated by military officers, *ib.* 7503–7505.

Discipline ought to be learnt at the Academy, *Warde*, 9324.

Discipline good, *Wilson*, *App.* III. (A.), *p.* xlviii.

To be part controlled by the senior cadets, Report, p. 40.

[*See also* § VI. 3.]

2.—The Companies.

80 cadets in a company, *Bruce*, 6829–6832. Would have one captain over all cadets, *ib.* 6833, 6859, 6918, with a second captain as assistant, *ib.* 6860, 6862. Company officers know what their cadets do, though less intimately than College tutors, *ib.* 6834, 6835. A captain has leave very rarely, *ib.* 6861; captains supposed to be specially selected, *ib.* 6911. Responsible for cadets' moral welfare, *ib.* 6912.

Opposed to putting all cadets under one captain, *Cunynghame*, 7311–7313, 7318, 7319. Cadets would respond to advances from their officers, *ib.* 7314, 7315.

Does not see necessity for as many as three, *Lefroy*, 7961.

Captains see too little of cadets; but should feel bound to speak to a cadet acting wrongly, *Milman*, 7618, 7619, 7648; or to communicate privately with his friends, *ib.* 7620. Doubts a cadet's sympathy with his captain; but thinks he would go to him in a difficulty, *ib.* 7621. It is a question whether one battery might not be better than three companies, *ib.* 7511, 7554, 7555, 7638. Five executive officers are the minimum, *ib.* 7512. Would not combine in one person instructional and disciplinary powers: if done, more professors must be appointed, *ib.* 7517. Strongly opposed to it, *ib.* 7518, 7519; if done, professors would rarely instruct their own cadets, 7603. Would not increase powers of subalterns, *ib.* 7640. No community of feeling between cadets and their officers, *Nicolson*, 7795, 7796.

There is no one to whom a cadet would go for private advice, *Nugent*, 7424.

Three captains not necessary, *Owen*, 7179, 7180. Discipline officers not responsible for study-parades but for those at meals, *ib.* 7123, 7124. Senior captain exercises superintendence, *ib.* 7125.

Drill instructors are connected with, *Strange*, 7879. The best men are therefore desirable, *ib.* 7880. Officers have too little power and influence, *ib.* 7856; much less than formerly, *ib.* 7857. The officer commanding company teaches drill practically as much as a professor theoretically, *ib.* 7890, and is responsible for cadets' drill and discipline, *ib.* 7891, which duty is best done by a man without other duties, *ib.* 7892. Only the diffusion of influence among so many cadets hinders the most intimate relations between cadets and the company officers, *ib.* 7893. Would prefer one battery to three companies: there would be uniformity of punishment, *ib.* 7894, 7895. The company officers' influence on the cadets, once enormous, now seems small, *ib.* 7896, perhaps from Inspector of studies and Second Commandant being brought into one, *ib.* 7897.

WOOLWICH, ROYAL MILITARY ACADEMY, AT—*cont.*

VII.—*Discipline*—cont.

2.—The Companies—*cont.*

No need for three companies, *Stuart*, *App.* III. (A.), *p.* li.

Divergent views of Commission on this question, Report, p. 39.

3.—Under-officers and Corporals.

Responsibility and power, *Vinter*, 2719.

Have responsible duties analogous to orderly officers, *Bruce*, 6917. Corporals of classes selected from classes immediately above, *ib.* 6821–6824, 6885–6888.

Ought to have higher privileges than old cadets, *H. Brackenbury*, 7042, 7045.

Advice from, well received by cadets, but rarely acted on, *Cunynghame*, 7316, 7317. Only on parade treated differently from other cadets, *ib.* 7253. Would increase power of, *ib.* 7254, 7255. Would not separate corporals at meals and quarters from other cadets, *ib.* 7290–7292.

Being senior cadets, have prestige, *Hale*, 2997.

Would increase powers of under-officers, *Napier*, 1339, 1340. There are no non-commissioned officers, *ib.* 1341, 1342.

As a corporal, witness had sufficient power and influence, *Nicolson*, 7681–7684.

Much depends on under-officers and corporals, *Nugent*, 7370, 7403, whose authority should be decidedly increased, *ib.* 7371, 7402. Can award extra drill and arrest, *ib.* 7402. Are selected by seniority, if of good character, *ib.* 7404, 7430. Never heard of one promoted against his will, *ib.* 7405, 7429. Could, but do not, exercise power out of doors, *ib.* 7406–7408. Would not separate those of 2nd class from other cadets at meals, *ib.* 7435.

Employing corporal in class in which he is not working, good for discipline but bad for corporal, *Owen*, 7126: indispensable, however, in first term or two, *ib.* 7127, 7128. Would increase power and privileges of corporals, and make them do their duty, *ib.* 7096–7098, which they do not now, *ib.* 7152–7162.

More of the discipline should be entrusted to, *Strange*, 7888, 7889. Would count an officer's army service from date of becoming corporal: reduction would be real punishment, *ib.* 7887.

4.—Offences.

Return of [1835–1867], *App.* XIII. (C.), *p.* clviii.

In 1864 there was insubordinate combination, *Bruce*, 6783.

No flagrant insubordination, *Cunynghame*, 7249.

There was a rebellion eight years ago, *Field*, 6754.

Little insubordination, *Nugent*, 7364.

Describes insubordination in the matter of General Wilford, *Owen*, 7088–7092.

In study, mostly trivial, *Field*, 6728–6731, 6735–6737.

Drunkenness rare, *Bruce*, 6904: would probably involve dismissal or rustication, *ib.* 6905, 6906.

Very little drunkenness, and that among juniors, *Nicolson*, 7760. Habitual drunkenness would cause a cadet to be looked down upon, *ib.* 7761; drunkenness, if known, would be punished, *ib.* 7765, 7766.

Some drunkenness at end of terms, *Nugent*, 7409, 7410.

Drunkenness and disorder prevail, *Walden*, 6426.

Venereal disease too prevalent, *Bruce*, 6784–6787: involves no punishment, *ib.* 6811: but cadet would probably be admonished, *ib.* 6812, 6855–6858, 6910. Does not see how to prevent venereal disease, *ib.* 6909: punishment would cause concealment, *ib.* 6914.

As to offences with women, tone lower than in a Public School, *Cunynghame*, 7284, 7285.

Not much venereal disease, *Field*, 6755, 6756.

Immorality with women not looked down upon, *Nicolson*, 7762; there was much, *ib.* 7763, though not more than elsewhere, *ib.* 7764. Immorality would not be known, *ib.* 7767.

Venereal disease does not involve punishment, nor general reprobation, *Nugent*, 7415, 7416; not much venereal disease, *ib.* 7414, 7417.

Not much untruthfulness, *Nugent*, 7411: no bullying, *ib.* 7412.

Bullying was the great scandal, *Vinter*, 2721.

5.—Punishments.

Scale and description, *App.* III. (C.), *p.* lxi.

Discipline and punishments described, *Field*, 6672, 6725–6727. Sufficient, *ib.* 6716.

Woolwich, Royal Military Academy at—*cont.*

VII.—*Discipline*—cont.

3.—Punishments—*cont.*

Punishments, *Napier*, 1335, 1336.
Subalterns should be able to confine to barracks for three days, *C. B. Brackenbury*, 8209.
Cadets would support a punishment they thought just, *Cunynghame*, 7233.
Would abolish minor punishments, and treat cadets as officers: punishments not uniform, *H. Brackenbury*, 6997–6999.
Trivial offences should not be recorded, *Owen*, 7144–7146, 7168. No solitary confinement, *ib.* 7169: it might sometimes be advantageous, *ib.* 7171.
Rustication dreaded by young men, *Bruce*, 6920. Rustication or removal rests with Commander-in-Chief, *ib.* 1337, 1338, 1362, 1363: is effectual, *ib.* 1375, and severe, *ib.* 1376.
Rustication not objectionable: but it may foster a cadet's idleness, *Owen*, 7181, 7182.
Arrest on honour used to be evaded, but is now kept, *H. Brackenbury*, 7000–7002: would continue it, but abolish punishment drill, *ib.* 7002.
A strong feeling in favour of keeping arrest, *Cunynghame*, 7308–7310.
Arrest scarcely ever broken, *Nugent*, 7413.
Arrest on honour succeeded perfectly, *Porter*, 2181.
Dismissal should not bar all entrance to army, *H. Brackenbury*, 6992, 6993.
Dismissal of a cadet should always be referred to Commander-in-Chief, *Cambridge*, 9527.

Governor to have absolute power of rustication: dismissal subject to Secretary of State's approval. Punishments should be less exclusively military, Report, p. 40.

VIII.—*Divine Service.*

1. Celebration of Divine Service.
2. Religious Instruction.

1.—Celebration of Divine Service.

Chapel much needed, *Field, App.* III. (B.), *p.* lvi.
Morning and evening prayers, *Fraser*, 8305, in cadets' hall; one weekly evening service, *ib.* 8306. On Sunday evenings a very meagre service (without music) in the hall, *ib.* 8308. Cadets are paraded on Sunday mornings and marched to Garrison church (having no church or chapel specially to themselves), *ib.* 8310–8314; their seats are inconvenient, and they are lost in the great congregation; there is no establishment of the kind in England without a chapel, *ib.* 8318. Cadets' attendance at two services a day compulsory, *ib.* 8315. A chapel was promised but has not been built, *ib.* 8315, 8324. Sunday evening attendance in dining and breakfast hall compulsory; no music, mixed congregation, or accessories to devotion, *ib.* 8321. Presbyterian and Roman Catholic cadets go to their respective churches, *ib.* 8336. To have a College chapel would be a great improvement, *ib.* 8355.

A chapel recommended, Report, p. 43.

2.—Religious Instruction.

Chaplain has a weekly class of 8 to 12 volunteers, *Fraser*, 8307, 8324. Principal opportunities are in the hospital and the voluntary class, *ib.* 8322, 8323, 8327, 8361, 8362. Some years ago volunteers for religious instruction would have been impossible, *ib.* 8325, 8356, 8357. Many cadets are very religious, *ib.* 8329. Difficult to initiate religious intercourse with individual cadets, *ib.* 8326; but finds them amenable to advice and reproof, *ib.* 8327. Can visit cadets in their rooms, *ib.* 8328; and would not be received with coldness or incivility, *ib.* 8329. Nearly all have been confirmed, *ib.* 8333. Presbyterian and Roman Catholics attend their respective churches; but their ministers do not visit them at the Academy, *ib.* 8333–8336. Reading-rooms not the place for; he must not seem to sermonize, *ib.* 8364.
No attention paid to, *Nicolson*, 7768.
None, beyond a Bible class, *Owen*, 7194–7197. Diverse religions of cadets might make it difficult, *ib.* 7198.

Should be regularly imparted by chaplain, Report, p. 42.

IX.—*Drill.*

Gymnastics and drill described, *Field*, 6670, 6671.
Very little battalion drill, *Owen*, 7177; would increase it, *ib.* 7178.

Woolwich, Royal Military Academy at—*cont.*

IX.—*Drill*—cont.

Drills and outdoor practical work need improvement, *Milman*, 7529. Military parades not too numerous, those for study unimportant, *ib.* 7530, 7543, 7544, 7580. There might be a distinction between general and drill parades: parades are less steady than formerly; but cadets drill well, *ib.* 7545, 7546.
Drills and minor parades not a grievance, *Nicolson*, 7700, 7701; but latter might be abolished without loss to discipline, 7800.
Objects to parades, *H. Brackenbury*, 7020, 7021, 7038; except for genuine drill *ib.* 7022. Parades not under an officer are a farce, *ib.* 6995, 7039, 7043, 7044.
Non-military parades should be reduced, *Cunynghame*, 7298, 7299; except for junior terms, *ib.* 7329.
Would diminish study parades, *Field, App.* III. (B.), *p.* lvi.
Parades unsteady, *Owen*, 7121, 7163; probably from large number of useless ones, *ib.* 7122.

Not to be awarded as punishment, Report, p. 40. Amount at discretion of Governor: non-military parades as few as possible, ib. p. 42.

X.—*Recreation.*

Amusements described, *Field*, 6673, 6674.
Library, workshops, and pianos, *Napier*, 1298. Debating society, *ib.* 1299. Billiard-rooms, *ib.* 1355. Not aware of a canteen, *ib.* 1357. Smoking, *ib.* 1355, 1356.
Improved means of, have helped to almost stop venereal disease, *Fraser*, 8337, 8338, 8362. There are two reading-rooms, *ib.* 8368.
Association of officers in cadets' games has a good moral effect, *Milman*, 7512.
Amusements enumerated, *Nicolson*, 7690–7692. Superiority of Woolwich to Sandhurst, *ib.* 7694, 7695.
On first half of last term, 1½ to 2 hours daily, *Nugent*, 7395; with the drills gives sufficient open air exercise, *ib.* 7396; cricket and football played, *ib.* 7397; but no boating, *ib.* 7398.
Billiard-tables just set up, *Abbott*, 1987.
Approves of facilities for billiards, *Bruce*, 6864.
A nice billiard-room, *Field*, 6688.
Public billiard-room forbidden, but cadets have their own, *Fraser*, 8346.
Approves of having a billiard-room, *Nicolson*, 7747, 7748.
Cadet can go to London every Saturday and Sunday, *Nicolson*, 7810; for first three terms on producing a written invitation, *ib.* 7814. Leave is given as a matter of course, *ib.* 7815–7817. As to going to the Alhambra, *ib.* 7811, 7822. Impossible for a cadet to go to London without leave, *ib.* 7823.
Cadets work too hard to care for, *Nicolson*, 7755–7757.
Allowing beer and coffee at all times has much reduced intoxication, *Cunynghame*, 7282, 7283. There is no limit, but the power is not abused, *ib.* 7307.
Approves of facilities for smoking, *Bruce*, 6864.
Restricted as to place, not time, *Field*, 6709–6711.
At least a fourth of the cadets smoke, *Nicolson*, 7744. No limit as to time, but cadet may not smoke in his room, *ib.* 7745, 7746.
90 to 100 cadets subscribe, *Field*, 6713. For six months cadets attend arsenal workshops regularly, *ib.* 6714, 6715.

XI.—*Course of Instruction.*

1. Generally.
2. Duration.
3. Mode of teaching.
4. Free Study and Private Study.
5. Hours of Study, &c.
6. Practical Class.
7. Separation of Artillery from Engineer Cadets.

1.—Generally.

Alterations since 1857, *App.* III. (D.), *p.* lxiv.
Distribution of time and marks for, *App.* III. (C.), *p.* lx.
Excellent, *Abbott*, 1977. Cadet is nearly 20 when he comes to the heaviest mathematical examination, *ib.* 2006–2008. The course increases fairly in severity, *ib.* 2024–2026.
Should be suited to a cadet's peculiar capacity, *C. B. Brackenbury*, 8142, 8266. Obligatory studies being reduced, *ib.* 8149, 8212, and selected for their practical value, *ib.* 8213. Practical studies develope common sense, *ib.* 8265.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

XI.—*Course of Instruction*—cont.

1.—Generally—*cont.*

Six or seven subjects at once too much for any man, *H. Brackenbury*, 6958, 6960–6963; would be better divided into courses, *ib.* 6976. All subjects are obligatory, *ib.* 7005.

Would not reduce the subjects taught, *Bruce*, 6807. Preparation out of study not obligatory, *ib.* 6802; nor essential, *ib.* 6803. Chemistry, applied mechanics, and physics should be voluntary, *ib.* 6768. Organisation of studies on the whole, good, *ib.* 6766.

Too many subjects, *Cunynghame*, 7214–7219, 7300. Would make certain studies voluntary, *ib.* 7217, to afford time for general study, *ib.* 7273. Studies better mixed up than classed by time, *ib.* 7301. Severe in the last year, *ib.* 7268. No time for general study, *ib.* 7271; especially in last year, *ib.* 7272.

All studies compulsory, except that there is a choice between German and Hindustani, *Field*, 6669. Thirteen subjects of instruction, *ib.* 6695, 6696.

Instruction too uniform; cadets should work up to their special talents, *Lefroy*, 7940, 7964. Would group studies and allow cadet to choose his group; no taking of places in the last year, *ib.* 7972; unless among those pursuing similar studies, *ib.* 7973. Every cadet should begin all the purely military subjects, but only pursue those for which he had aptitude, *ib.* 7989. A few officers with special talent in each subject preferable to many with a nominal knowledge of all the subjects, *ib.* 7977.

12 or 13 subjects already compulsory; classics could not be added, *Milman*, 7643.

The obligatory course, *Napier*, 1254–1257. Penalty of failing to pass from one class to another, *ib.* 1261–1265. The course is enormous, *ib.* 1270, and exhausts cadets, *ib.* 1271.

Too many compulsory subjects; time wasted in again going into things studied before entrance, *Nicholson*, 7662, 7663. Would make certain studies voluntary, *ib.* 7664. Two languages are now required, *ib.* 7665. Most useful studies are fortification, artillery, surveying, and chemistry, *ib.* 7717. Work not too severe, but hard enough, *ib.* 7716.

Satisfied with, on the whole, *Nugent*, 7353. Would not omit any compulsory subject, *ib.* 7384–7386. With hard work the time just suffices, *ib.* 7355. Not too severe for health, *ib.* 7356; nor more than can be managed, *ib.* 7394.

Arsenal course very advantageous to cadets for Engineers, *Owen*, 7204, 7205. It takes the last term, *ib.* 7202, 7203. Mechanics, natural philosophy, and machinery should be learnt at Academy, *ib.* 7058. Languages should be optional, *ib.* 7174. Too many subjects in last term, *ib.* 7115. Half the instruction is practical, in the field, *ib.* 7111, 7112.

Would not alter, *Peel*, 9468.

Pure mathematics, French, and German should not be studied at Academy, *Stuart*, *App.* III. (A.), *p.* li.

Would limit to subjects having direct bearing on professional studies, *Sylvester*, 7472.

Opposed to voluntary subject, *Wilson*, *App.* III. (A.), *p.* xlviii.

Number of obligatory subjects should be reduced, Report, p. 20; subjects of study, ib. p. 21, 40; not to be obligatory beyond points useful to both corps, ib. p. 37; proportional marks, ib. p. 42.

2.—Duration.

Length and nature, formerly and now, *App.* III. (D.), *p.* lxiv.

Course is five terms, *Field*, 6702.

Five terms, *Napier*, 1258, with half-yearly examinations, *ib.* 1259–1261, 1268.

Would not shorten, *Simmons*, 6553.

Would not shorten, specially for Public School boys, *Bruce*, 6884.

Would reduce to two years, *Bruce*, 6775, 6776.

Would reduce to four terms, *Field*, *App.* III. (B.), *p.* lvi.

Possible reduction to two years, *Napier*, 1277. Cadets now can scarcely qualify before 5th term, *ib.* 1292. A recent exception, *ib.* 1293.

Two years, well employed, would suffice, *Strange*, 7863. Time should not be wasted over non-essential subjects, for which the cadet has no talent, *ib.* 7860. It is best to divide practical study from theoretical, which requires very high power, *ib.* 7875–7878.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

XI.—*Course of Instruction*—cont.

2.—Duration—*cont.*

Course should be two years, *Stuart*, *App.* III. (A.), *p.* li.

Should be two years, with six months extra in case of failure, *Wilson*, *App.* III. (A.), *p.* xlviii.

Would reduce by one year, *C. B. Brackenbury*, *App.* III. (A.), *p.* lii.

Would shorten, by abolishing mathematics and languages as compulsory subjects. *H. Brackenbury*, 6938, 6959, 6968. Eighteen months should suffice, *ib.* 6939, 6940.

Should be reduced to two years, Report, p. 19, 40.

3.—Methods of Teaching.

Each professor teaches in his own method, *Bruce*, 6798, 6799. Lectures not much employed; *viva voce* examinations better, *ib.* 6800. Cadets' note books are examined and marked, *ib.* 6801. Finds no special fault with the teaching, *ib.* 6806.

Tutorial, part by lecture, part by class, *Field*, 6664; 44 cadets in each class-room, but not all taught by one man, *ib.* 6757–6760.

In large class-rooms with 40 cadets and three instructors, numbers cause confusion, *Milman*, 7531–7535, 7576–7579.

Satisfactory, *Nugent*, 7392. Does not think questions after lectures, would cause more attention to be paid, *ib.* 7436, 7437.

Many professional books could well be read in French, *C. B. Brackenbury*, 8199.

Should be by lecture, with previous study and subsequent examination on répétiteur system, cadets being left for free study, *H. Brackenbury*, 6955, 6972–6974, 6990; choosing to some extent their own subjects, *ib.* 6977, 6978. No danger in thus approaching Oxford system, *ib.* 7015–7017.

Recommends répétiteur system, *Milman*, *App.* III. (A.), *p.* li.

Work best done in class, under professors, *Nicolson*, 7708–7711, whose help is constantly needed, *ib.* 7712.

Should be by classes, where all do the same thing, *Owen*, 7113.

Would have répétiteur system and free study: professional reading might be in foreign language, *Stuart*, *App.* III. (A.), *p.* li.

4.—Free Study and Private Study.

Private study optional, *Bruce*, 6804, with limit of time as to putting out lights, *ib.* 6805. Would not permit, in any subjects beyond the Academy course, *ib.* 6894–6896.

Discouragement of private study has died out, *Cunynghame*, 7234.

Seniors lately allowed to work late in their own rooms, *Milman*, 7650; should be limited to midnight, *ib.* 7651, 7652.

Objectionable: there is study enough without it, *Nicolson*, 7687, 7688, would lead to idleness, *ib.* 7708–7711.

Not encouraged, *Nugent*, 7392. Third-term cadets might be allowed lights till 11 p.m., *ib.* 7393, 7422, 7423.

After a certain time would give them provisional commissions and leave them free to study or not, *C. B. Brackenbury*, 8174, making the permanent Commission depend on an examination after entering the Army, *ib.* 8175–8177. Would apply free study to everything taught by lecture, adopting the University system, *ib.* 8267, testing its results by examination, *ib.* 8227.

Would give more opportunity for private study, *Sylvester*, 7463–7465, by diminishing class-room study, *ib.* 7466. Would encourage free study, *ib.* *App.* III. (A.), *p.* xlviii.

At least one hour's private study daily, Report, p. 41.

5.—Hours of Study, &c.

Hours of study, *Field*, 6664. Saturday a half-holiday, *ib.* 6679.

Cadets are worked too hard—Hours are excessive, *Fraser*, 8359.

Hours of study, *Napier*, 1272.

There should be daily 5 hours in halls of study and at least one hour in private study, Report, p. 41.

Woolwich, Royal Military Academy at—*cont.*

XI.—*Course of Instruction*—cont.

6.—Practical Class.

Now in same barracks with theoretical class, *Owen*, 7147, a disadvantage, *ib.* 7148–7150.
In a measure done away with, *Strange*, 7874.
Would admit best cadets from Sandhurst, *E. Walker*, 2767, 2859–2863.

7.—Separation of Artillery from Engineer Cadets.

As to a separation in studies, *Napier*, 1199, 1200, 1278–1280, 1295–1297.
Should be educated together, *Bruce*, 6769, 6770, 6808–6810, 6923.
Deprecates separation, *Cambridge*, 9526.
Should have same course, *Owen*, 7166.
Would not separate, *Milman*, *App.* III. (A.), *p.* li.
Approves of educating together, *Nicolson*, 7696.
Would keep together, *Nugent*, 7369; even in mathematics, *ib.* 7390; which is virtually the dividing subject, *ib.* 7419.
Should not be separated, *Cunynghame*, 7303.
To separate would be disastrous for both, *Simmons*, 6554.
Objects to any division between, *Wilson*, *App.* III. (A.), *p.* xlix.
Would separate before final term, *Stuart*, *App.* III. (A.), *p.* li.
Might be separated sooner, *Moseley*, 2109. Would try to teach each cadet one military subject thoroughly, instead of all, *ib.* 2110.
Might be separated after two years, *Abbott*, 1977, and sent to Shoeburyness and Chatham, *ib.* 1978–1983, 2016. The theoretical course should not be reduced for either corps, *ib.* 2017, 2022.
After third term should be separated, *Lefroy*, 7940, 7941, 7964, the separation depending on aggregate marks of three preceding terms, *ib.* 7965.
Should have same course, *C. B. Brackenbury*, 8147, for, say, 18 months, 8148.
Would separate after one year, *H. Brackenbury*, 6964.
Should be separated early in the course, *Heaviside*, 2397, 2442. Majority have a natural turn for mathematics, *ib.* 2479.
Would separate from the first: but the Engineers should learn something of Artillery, *Young*, 8041.

The course should be identical for both corps, Report, p. 20.

XII.—*Specific Studies.*

1. Artillery.
2. Military Science.
3. Mathematics.
4. Languages: Classics.
5. Physical Sciences.
6. Athletics.

[For religious instruction, *see* § VIII. 2.]

1.—Artillery.

Would give more time to Artillery subjects, *Cunynghame*, 7302.
Time given insufficient for Artillery cadets, too much for engineers, *Lefroy*, 7992.
Time allowed is insufficient, *Owen*, 7115.
Could not be so well taught after joining the service, *Owen*, 7200, 7201, 7204, 7205.
More drill and more class study needed, *Strange*, 7874.

Obligatory course to be confined to what is requisite for Engineers, Report, p. 40.

2.—Military Science.

Machinery drawing should be more practical, *Nugent*, 7357. Perspective a voluntary subject, *ib.* 7439, and not essential for machinery drawing, *ib.* 7438.
Geometrical drawing, *Napier*, 1198. **Should be reduced, Report, p. 21.**
Drill instruction satisfactory, *Abbott*, 1988.
Sand-modelling useful in fortification, *H. Brackenbury*, 6981.
No sand-modelling, *Field*, 6712.
As regards Artillery students, fortification is not sufficiently practical with reference to actual British fortresses, *Lefroy*, 7996, 7997.
As much instruction given in fortification as well could be, *Nugent*, 7431–7433.
Fortification should be more taught by modelling in sand, *Strange*, 7863. Too much time given to obsolete plates, *ib.* 7930.

Obligatory fortification to be limited to amount necessary for artillery, Report, p. 40.

Would reduce manufacturing course to lectures while at Academy, *C. B. Brackenbury*, 8201.

Woolwich, Royal Military Academy at—*cont.*

XII.—*Specific Studies*—cont.

2.—Military Science—*cont.*

Cadets take eagerly to military history: notes examined after every lecture, *H. Brackenbury*, 6975, 7011. Taught with direct reference to art of war, *ib.* 6983, 6984, 8989. Lectures are on particular campaigns, *ib.* 7003, not farther back than Napoleon, *ib.* 7007, 7008: a printed syllabus destributed beforehand, *ib.* 7006. Colonel Chesney's outline maps used, *ib.* 7012. Large numbers of cadets benefit, *ib.* 7004. Time too short for much on transport and supply, *ib.* 7009.
The course of Military History tends to give an interest in the subject, *Nicolson*, 7719.
The campaigns studied are well understood, *Strange*, 7843.
Military Law not taught, *Napier*, 1273.
As much instruction given in Field Sketching as well could be, *Nugent*, 7431–7433.
Elaborate surveying not needed for artillery, *H. Brackenbury*, 6979, 6980.
Modification in surveying desirable, *Simmons*, 6596.
Surveying could not be reduced, *Strange*, 7929.
Veterinary science not taught, *Napier*, 1381.

3.—Mathematics.

Mathematics, *Abbott*, 1989, 1990, 1998; may equal that for University honours, *ib.* 1999. Doubts advisability of private study, *ib.* 1991, 1992, 1996. No opening for coaching, *ib.* 1995, 1997. No undue forcing of intellectual powers, *ib.* 2000–2003.
Too generally insisted on, *C. B. Brackenbury*, 8141, 8210. Would limit obligatory course to simple artillery and engineering problems, 8144, 8206, 8266. At present the real mathematicians go into the engineers, *ib.* 8211.
Would make great difference between Artillery and Engineer cadets, *H. Brackenbury*, 7031, 7032. Subject carried too far for Artillery, *ib.* 6932, 6933, 6948; and labour wasted, *ib.* 7013, 7014.
Cadets might be more grouped, *Bruce*, 6806. Would not reduce the amount taught, *ib.* 6807. Not excessive, *ib.* 6874; valuable professionally, and as mental discipline, *ib.* 6875.
Obligatory, should stop short of differential calculus, *Cunynghame*, 7269, 7270. Higher, should be voluntary; men for the Engineers would take it up, *ib.* 7326–7328.
Imperative for the Engineers, *Heaviside*, 2398; but would make it more optional for Artillery cadets, *ib.* 2399, 2459. The course to be neither dropped nor reduced, but made less compulsory, *ib.* 2400, 2410, 2417, 2460; which will be like having separate classes, *ib.* 2461. Should certainly not be dropped after entrance, *ib.* 2406–2409. Carries such high marks that a candidate could scarcely pass without, *ib.* 2415, 2417. Parkinson's Mechanics or Dean Goodwin's Course would suffice for an Artillery cadet, *ib.* 2416. With the idlers the course is not very productive, *ib.* 2436, 2437. Majority of cadets have a natural turn for mathematics, *ib.* 2479.
It is a pity that those who have taken up the study should not pursue it, *Lefroy*, 7974–7976.
Would regret to see shortened the short time given to mathematics, *Moseley*, 2112; a cadet may not really advance in mathematics, but examiners' reports are not unfavourable, *ib.* 2113.
Mathematics, *Napier*, 1190, 1249, 1250, 1315, 1316.
Not well taught, except by Mr. Crofton, *Nugent*, 7399; not instructors enough, *ib.* 7401. Lectures would be preferable to tutorial instruction, *ib.* 7377. Practical geometry carried farther than can be useful, *ib.* 7354.
Would confine higher mathematics to those showing special aptitude, *Owen*, 7062, as a voluntary subject, *ib.* 7165.
Would not diminish either for Artillery or Engineers, *Simmons*, 6555–6557.
Might be dropped by those obtaining 1,800 or 2,000 marks at entrance, *Southwood*, 5597, 5598.
High mathematics should be obligatory for the Engineers, *Strange*, 7860. Too much time is given to, *ib.* 7930.
Does not approach eight hours a day, *Sylvester*, 7473. Professors' instruction all tutorial, *ib.* 7476; would be more useful if he lectured and summarised, *ib.* 7477, with subsequent questioning, 7478. Professor should have general control, but should also instruct highest class, *ib.* 7481, 7482. Not stronger than necessary in instructors, *ib.* 7486; no serious reduc-

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

XII.—*Specific Studies*—cont.

3.—Mathematics—*cont.*

tion could be made, *ib.* 7487, 7488, 7492. Objectionable in evening. Should be the same for Artillery and Engineer cadets, *ib. App.* III. (A.), *p.* xlvii.

Needlessly high, *E. Walker*, 2861, 2934; and it may interfere with acquirement of other subjects, *ib.* 2936; but would not lower the course, as being a good mental test, 2935.

Mathematics over-studied, *Warde*, 9310.

The qualification should be reduced, Report, p. 20; obligatory not to go beyond plane trigonometry, ib. p. 40.

4.—Languages; Classics.

Languages can be studied during the course, *Napier*, 1175–1185.

One language might be taught instead of two, *Abbott*, 2041, 2042.

Languages if required at entrance might afterwards be optional, *Owen*, 7109, 7110. Doubts if they can be acquired at Woolwich, *ib.* 7175.

Languages should be taught by foreigners, *Bruce*, 6897, 6898.

Would have a class and master to read military classical works, *Lefroy*, 8006.

Would not object to continuance of classics at Woolwich, but it is not a practical subject, *C. B. Brackenbury*, 8261–8263, 8270.

Classics could scarcely be kept up, *Moseley*, 2109.

Classics undesirable, *Napier*, 1194–1197, 1311–1314.

English not obligatory at Woolwich, *Napier*, 1165; nor taught there, *ib.* 1211–1215.

French, *Napier*, 1274, 1275.

German could not be learnt at Academy by a cadet who knew nothing of it previously, *Nicolson*, 7665, 7666.

Classics to be taught by chaplain, Report, p. 42.

5.—Physical Sciences.

Time given to Physical Sciences might be reduced, *Wilson, App.* III. (A.), *p.* xlviii.

Chemistry, *Napier*, 1213.

Cadets' ignorance of geography astonishing, *H. Brackenbury*, 6985, 6986. It is best taught with history, *ib.* 6987, 6988.

6.—Athletics.

Gymnastics sufficient, prizes given, *Nugent*, 7428. Riding instruction beneficial, but insufficient to make good riders, *ib.* 7425–7427; or to teach training, saddling, bridling, or shoeing, *ib.* 7443–7448.

Riding, gymnastics, fencing, swimming, to form part of ordinary course, and to be encouraged by prizes, Report, p. 42.

XIII.—*Examinations.*

1. Generally.
2. Admission.
3. Intermediate.
4. Final.

1.—Generally.

Marks from all should carry forward, *Bruce*, 6768.

Do not admit of proper comparison with Cambridge, *Heaviside*, 2462, 2475. Cannot have commensurable marks with Sandhurst, *ib.* 2463, 2464.

Value of marks, *Napier*, 1206.

Passed five, from which marks in some subjects carry on, *Nugent*, 7359, 7360.

Should be by independent examiners, Report, p. 40.

2.—Admission.

Numbers examined and failed [1858–1867], *App.* XIII. (A. iii.), *p.* cxlvii.

Results of examinations [1865–1868], *App.* XIII. (C.), *p.* clv.

For most part of the examination "cramming" impossible, *Abbott*, 1975, 1976.

Mathematics not inordinate, *Barry*, 5512; but might be tried, *ib.* 5514.

Number of subjects (five) required causes mental strain and distraction, *Benson*, 5690–5692, 5714, 5715. Mathematics not too severe, *ib.* 5693. The English literature condemned, *ib.* 5696.

Would encourage passing in classics, *C. B. Brackenbury*, 8261–8263.

Disapproves of present examination, *H. Brackenbury*, 6935, 6982: which feeds cramming schools, *ib.* 6991. Mathematics not practical enough, *ib.* 6965–6967: would exclude experimental sciences, *ib.* 6934: and require colloquial French, *ib.* 7029, 7030.

WOOLWICH, ROYAL MILITARY ACADEMY AT—*cont.*

XIII.—*Examinations*—cont.

2.—Admission—*cont.*

Would only allow two trials, with ·5 as a fixed minimum on every subject taken up. Marks from entrance examination to be carried on, *Bruce*, 6774.

Entrance examination allows of cramming, *Cunynghame*, 7220. Marks for classics should carry on; but not for other subjects not in the course, *ib.* 7306. Witness was not overworked in preparation, *ib.* 7267.

Numbers who choose history and geography have increased, but not for English, which *per se* is dry: would add literature to it, *Dasent*, 4575.

Entrance examination detailed, *Field*, 6665, 6666. Would increase requirements in mathematics and geometrical drawing: classics constitute a serious difficulty, *ib.* 6717–6724, 6763.

Classical marks too high, *Frost*, 4304.

Classical examination higher than for Sandhurst, and men generally better, *Gordon*, 2495, 2521, 2563. Ancient history and classical literature tried formerly, but given up, *ib.* 2494, with advantage, *ib.* 2575, because of the cramming, *ib.* 2534. Mathematics the staple, *ib.* 2512, would not therefore look for high classics, *ib.* 2513: but the classics sometimes very satisfactory, *ib.* 2514, 2515, 2563. Would not announce the classical books beforehand, *ib.* 2520, 2521. There are two Greek papers, *ib.* 2560. A great deal of physical science is demanded, *ib.* 2566.

Examination very different to that at Sandhurst, *Heaviside*, 2390, 2447: but not above boys of average mathematical ability specially instructed for it, *ib.* 2449. Standard has risen: results singularly uniform, *ib.* 2392. For boys of 15 examination would have to be lowered, *ib.* 2393, 2394. Would omit differential calculus, and in voluntary subjects only allow the marks over a certain number to count, *ib.* 2397. To raise the standard would be unreasonable for the age of youths, *ib.* 2411–2413.

Approves of examination, *Lefroy*, 7990.

Two trials only, *Milman, App.* III. (A.), *p.* li.

Classics should count at entrance, *ib.* 7593, and modified marks be carried on, *ib.* 7594, 7642. Very high mathematics are unnecessary, *ib.* 7616, 7617.

Mathematics could not be raised, *Moseley*, 2111.

Entrance examination much higher than for Sandhurst or Direct Commissions, *Napier*, 389. English not obligatory. The examination, *ib.* 1173–1187, 1219. Crammed subjects, *ib.* 1188, 1189, 1219, 1234, 1247, 1248. Mathematics, 1190, 1249, 1250, 1315, 1316. 47 per cent. of candidates fail, *ib.* 1202, 1203.

Would not confine to pure mathematics the mathematical examination, *Nicolson*, 7776; which is now too low, *ib.* 7777. Questions not very searching *ib.* 7780: but there are catch questions, *ib.* 7778, which favour cramming, *ib.* 7779.

Entrance examination fair, *Nugent*, 7345: but marks for classics high, *ib.* 7346–7350. Trials allowed are not too numerous, *ib.* 7351, 7352.

Entrance examination severe, *Owen*, 7186. Would limit trials to three, *ib.* 7055, 7056, or four, *ib.* 7130–7139, and carry on marks obtained in languages, classics, and pure mathematics, *ib.* 7057, 7107, 7108, 7164, 7191. One language should be indispensable, *ib.* 7058. Entrance examination should show bent of cadet's mind, *ib.* 7167.

Test of general capacity, *Peel*, 9471, 9473.

Examination rather severe, *Southwood*, 5599: classics too highly reckoned, *ib.* 5600: mathematical standard excludes dull boys, *ib.* 5601; but does not cause overwork, *ib.* 5602.

Would require higher mathematics, drawing and languages. Marks for classics too high. Would only allow two trials, *Stuart, App.* III. (A.), *p.* li.

Would exact more mathematics, *Sylvester*, 7472.

Would reduce the qualification, *Warde*, 9308.

Would only allow two chances, and would require higher standard in geometrical drawing, practical geometry, and mathematics, *Wilson, App.* III. (A.), *p.* xlviii.

Should be conducted by Civil Service Commissioners, Report, pp. 13, 31; the minimum marks being deducted in every subject, ib. p. 14: open competition to continue. Only three trials should be allowed. Subjects for qualification and competition, ib. p. 38.

[*See also* § V. 1.]

Woolwich, Royal Military Academy at—*cont.*
XIII.—*Examinations*—cont.
3.—Intermediate.
Half-yearly, *Napier*, 1259, of two sorts, *ib.* 1260: carrying on marks to final examination, *ib.* 1261, 1268.
Half-yearly; are competitive and written, *Field*, 6666, 6667.
Would weed out inefficient cadets by an examination at end of first or second term, *Wilson, App.* III. (A.), *p.* xlix.
Once a term at least, failure at two successively to involve removal, Report, p. 40.
4.—Final.
Final examination, *Napier*, 1266, 1267: how qualifying and how competitive, *ib*, 1288–1290. First candidates have option of joining Engineers, *ib.* 1268, which they usually do, *ib.* 1269. Good-conduct marks do not count, *ib.* 1281. Position in final examination and entrance examination relatively, *ib.* 1306, 1307.
Commissions given, and percentage of sons of army and navy officers, *App.* XIII. (C.), *p.* clvi.
Marks attainable and required, *Field*, 6668.
The best men would probably have been high wranglers at Cambridge, *Heaviside*, 2476.
Concurs in carrying on to, marks gained in classics at entrance, *Lefroy*, 7966–7968.
Modified marks for classics should be carried on from entrance exemination, *Milman*, 7596. The total classical marks would be one-eleventh of the whole, *ib.* 7599, 7600.
Classics should count, if it be just, *Moseley*, 2114.
Cadets who pass high sometimes prefer Artillery to Engineers, *Nicolson*, 7697–7699, 7749, 7750. To carry entrance marks to final examination might prevent the best mathematicians entering Engineers, for which they are the proper men, *ib.* 7782–7784, 7788, 7789. Classical cadets may complain of present arrangement, but it is their own fault, *ib.* 7785–7787: and they had their advantage in getting in by classics, *ib.* 7824–7826.
Test of professional knowledge, *Peel*, 9472, 9473.
Would carry credits of marks (including classics) through from entrance to end, *Strange*, 7860.
Good conduct should be an element, a single special reward for excellence in conduct to be given at each final examination, Report, p. 40. Minimum qualification for a commission, ib. p. 43.
Woolwich and Sandhurst, Amalgamation of:
Historical notice of plans for amalgamating, *App.* II. (G.), *p.* xx.
Lord Herbert's plan (1856), *App.* II. (G.), *p.* xx.
The Council's scheme (1857), *App.* II. (G.), *p.* xx.
Sees neither special gain nor loss in amalgamating, *E. Walker*, 2767.
Woolwich and Sandhurst, Amalgamation of—*cont.*
Opposed to amalgamating; but would facilitate Woolwich cadets failing for Artillery in passing to Line, *Field, App.* III. (B.), *p.* lvi.
Would keep them quite separate, *Abbott*, 1791, 1876. Each site is admirable for its purpose, *ib.* 1877.
Would not educate Line cadets with those for scientific corps, *H. Brackenbury*, 7033, 7034.
Not in favour of amalgamating, *Bruce*, 6924–6926.
Amalgamation would be most unfortunate for the army, *Cambridge*, 6444–6446.
Amalgamation was contemplated in 1856, *Lefroy*, 7937. No longer in favour of it, *ib.* 7938: objects because Woolwich education would deteriorate and the united college would be too large for instruction or discipline, *ib.* 7945; but that would not apply to 400 cadets only, *ib.* 7946, if the Sandhurst system were totally departed from, *ib.* 7947. There would be idling and difficulty with the cadets who intended to purchase, *ib.* 7948–7953, 8003; but does not apprehend ill-feeling among the cadets, *ib.* 7950, 7951, 7970, 7971. Young men in a college should be under the same stimulus, *ib.* 8003. The union would be more economical than the present arrangement, *ib.* 7955.
Decidedly opposed to any amalgamation, *Milman*, 7522–7526. The Line would not like having the lowest cadets, *ib.* 7547.
Any union with Sandhurst would lower the Woolwich standard, *Napier*, 1116–1122.
Amalgamation objectionable, *Owen*, 7101–7106.
Opposed to amalgamating, *Simmons*, 6654–6656, 6658.
Would not amalgamate, *Stuart, App.* III. (A.), *p.* li.
Objects to amalgamate, *Sylvester, App.* III. (A.), *p.* xlviii.
Any union would lower Woolwich standard, *Wilson, App.* III. (A.), *p.* xlix.
Undesirable, Report, p. 22.
Woolwich Artillery Advanced Class: *see* Artillery Advanced Class.
Woolwich Department of Artillery Studies: *see* Artillery Studies.
Woolwich Garrison:
Number of chaplains in, *Fraser*, 8350.
Woolwich Town:
Distant from Academy a quarter-hour's walk, *Nicolson*, 7806. Small opportunities of dissipation, *ib.* 7809, beyond billiard-rooms, *ib.* 7807: no night houses, *ib.* 7808.
Words of Command:
Should be assimilated for the three arms, and shortened for the Infantry, *Strathnairn*, 9476.
Working Pay:
Would not give for mere instructional work, *Simmons*, 6617.

Observations on a Memorandum of the Secretary of State for War regarding the Royal Military College, Sandhurst.

LETTER FROM THE SECRETARY OF STATE FOR WAR.

My Lord, War Office, 1st February 1870.

I have the honour to request that the Royal Commission on Military Education will now proceed to inquire into the state of general education among the Non-commissioned Officers and Soldiers of the Army and their children.

I enclose a paper of Instructions containing the several points to which I am desirous that the attention of the Commission should be more particularly drawn.

I have the honour to be,
My Lord,
Your Lordship's obedient servant,
EDWARD CARDWELL.

The Right Honourable
Lord Dufferin and Clandeboye, K.P., K.C.B.,
&c. &c. &c.

INSTRUCTIONS.

To inquire into the state of general education among the Non-commissioned Officers and Soldiers of the Army, and among their children, and to report specially on the following points:—

Whether the existing system of Army Schools for adults and children is adapted to afford the requisite amount of general education to the Non-commissioned Officers and Soldiers of the Army, and sound elementary instruction to their children.

Whether any alterations should be made in the general organisation of these schools and in the regulations under which they are conducted, in the method of inspection and superintendence, in the system of the appointment and training of teachers, and in the subjects and extent of the instruction given at them.

Whether any improvements are necessary in the organisation of Garrison Libraries, Recreation rooms, and Soldiers' Institutes, and in the system of lectures carried on in connexion with these establishments.

How far the Royal Military Asylum at Chelsea and the Royal Hibernian Military School at Dublin are adequate to fulfil the purposes for which they are maintained, and whether any improvements or alterations should be made in their general constitution and management, or in the system and course of instruction pursued at them.

Whether any alterations are necessary in the organisation of the School of Musketry at Hythe, or in the system of instruction given there.

Further to inquire into and report upon such other subjects as may seem to them likely to improve the general education of the Non-commissioned Officers and Soldiers of the Army.

SECOND REPORT.

EDUCATION OF SOLDIERS.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

SINCE laying before Your Majesty our First Report on the present state of Military Education we have continued our inquiries in obedience to the further instructions we received from Your Majesty, and we now beg leave humbly to submit our Second and final Report, relating chiefly to the state of general education among the non-commissioned officers and soldiers of Your Majesty's Army and their children.

The principal subjects to which our attention has been directed are:

Subjects of inquiry.

Army Schools for adults and children, with which are intimately connected the regulations affecting the appointment and status of Schoolmasters and Schoolmistresses.

Recreation Rooms and Libraries.

Lectures delivered to Troops.

Soldiers' Institutes.

The Royal Military Asylum at Chelsea—consisting of the Normal School for training Army Schoolmasters, and the Model School for the sons of soldiers.

The Royal Hibernian Military School at Dublin.

The School of Musketry at Hythe.

We propose to treat of these subjects in the order in which we have enumerated them, and in connection with each institution we purpose to give a brief outline of its existing organisation before stating the alterations which we venture to recommend for Your Majesty's consideration.

ARMY SCHOOLS.

Introduction of the system of Army Schools.

W. O. Circular, 27 Dec. 1811.

Royal Warrants, 21 Nov. 1846, and 21 Dec. 1846.

A system of Regimental Schools was first introduced into the Army in the year 1811, on the recommendation of His Royal Highness the Duke of York, then Commander-in-Chief, with the object of providing means of education for soldiers and their children. For many years no machinery existed for providing these schools with trained instructors, but in the year 1846 a Normal School for training Army Schoolmasters was founded in connection with the Royal Military Asylum at Chelsea. At the same time the boys' school, which had previously existed at this institution, for the education of the sons of soldiers, was entirely reorganised and converted into a "Model School," intended in its system of instruction to serve as a pattern to the various Regimental Schools throughout the Army. With the view of still further improving the state of education in the service an Inspector-General of Military Schools was appointed, and charged with the supervision of all arrangements connected with the education of soldiers and their children. The duties discharged by that Officer were at a later period transferred to the Council of Military Education, and, in consequence of the recent abolition of that body, now devolve upon their present representative, the Director-General.

W.O. Letter, 24 May 1859.

Regimental Schools.

4.

At the present time in every regiment of Cavalry and battalion of Infantry throughout Your Majesty's Army, and in each corresponding portion of the other branches of the service, a Regimental School is established for the education of the non-commissioned officers and soldiers and their children. To each school are attached a duly qualified schoolmaster and schoolmistress, who are provided with paid assistants according to the number of pupils on the school-books.

Detachment Schools.

4, 5, 93, 178.

For the use of troops detached from their regiments or battalions, when the numbers of the pupils are sufficient to justify the expense, "Detachment Schools" are organised, and placed under the charge of paid assistants, as temporary substitutes for the regimental schools at head quarters.

*** The figures in the margin refer to the numbers of the answers in the evidence. The term "Replies" refers to the replies to questions issued by the Commission, which will be found in the Appendix to the Minutes of Evidence.

General Superintendence of Schools.

Director-General.

11, 118.

The general superintendence of everything connected with Army Schools, and the appointment of teachers at home and in the colonies, is in the hands of the Director-General of Military Education. This officer issues the general regulations by which the school system is uniformly conducted throughout the service. The machinery for exercising a more immediate supervision and inspection over the schools varies in different parts of Your Majesty's dominions.

Inspectors of schools.

108 to 115. 200, 201.

At home there are, under the Director-General of Military Education, an Inspector and Assistant Inspector of Army Schools, the duties of the former officer mainly relating to Great Britain, those of the latter being entirely confined to Ireland.

Superintending Schoolmasters.

90 to 92, 115, 225.

91, 92, 205.

202.

The inspectional staff further consists of a certain number of "Superintending Schoolmasters," who are commissioned officers holding the relative rank of ensign, and are selected from the most efficient of the Regimental Schoolmasters. For the supervision of schools Great Britain is divided into nine districts, to each of which is appointed a Superintending Schoolmaster, whose duty it is to conduct an examination annually of the pupils in every regimental school within his district, and frequently to visit the schools in the garrison at which he is stationed. The schools at out-stations are not visited by him without special authority. Ireland is not at present similarly divided into districts; in that country the duties of examination of the pupils are partly shared by the Assistant Inspector of Schools. In Great Britain the Inspector exercises only a general supervision over the schools, which he visits annually, reporting upon their state, and upon the efficiency of the instructional staff, to the Director-General of Military Education.

110, 203.

The duties of the Inspector in Great Britain, and of the Assistant Inspector in Ireland, further differ in the fact that the latter officer is not empowered to grant "certificates of education" to soldiers; these certificates in both countries alike are issued exclusively on the recommendation of the Inspector of Army Schools.

Local Inspectors.

135, 136.

At some foreign stations, where large bodies of troops are quartered, there are appointed from the officers of the garrison local Assistant Inspectors of Schools, who maintain a general supervision over the schools at the station, and receive a small remuneration for performing this duty. Malta and Gibraltar are at present the only stations at which such local Inspectors are maintained; at Toronto a similar supervision is exercised by a Superintending Schoolmaster.

The present staff of Superintending Schoolmasters consists of 12 officers, nine of whom are stationed in Great Britain, two in Ireland, and one in Canada.

Present system generally satisfactory.

We consider that the present system in regard to the superintendence and inspection of Army Schools, of which we have given a brief account, is in the main well adapted to effect the objects proposed. Such changes as we recommend would be with the view of giving fuller effect to the principles on which the system is based.

Changes proposed.

203 to 205.

It appears to us that the Assistant Inspector of Schools in Ireland occupies a somewhat anomalous position, from the mixed character of his duties, which correspond with those performed in Great Britain partly by Superintending Schoolmasters, and partly by the Inspector. We are decidedly of opinion that this intermixture of duties is unadvisable, and that an officer charged with the duty of general inspection should be entirely relieved from that of personal examination of pupils. We are confirmed in this opinion by the evidence of Colonel Gleig, the Inspector of Schools, who, in contrasting the English and Irish system of inspection, states that he thinks "the English "system is the best because it places the schools under one head."

205.

System of inspection.

206 to 211.

396: Col. Gleig, Memo.

We therefore recommend that the system of inspection in Ireland should be assimilated to that now existing in Great Britain, and that the whole should be placed under one responsible head, in place of under two separate, and to a considerable extent independent, authorities. Our attention has been turned to the question whether it might not be advisable to extend the duties of the present Assistant Inspector to Great Britain as well as Ireland, making him entirely subordinate to the Inspector, whom he might assist in his supervision of the Army Schools in the whole United Kingdom. We have, however, come to the conclusion, which is supported by the evidence of Colonel Gleig, that such assistance is unnecessary, if the Inspector be relieved not only from the duties of actual examination, but also from the necessity of personally visiting every school in the course of each year. These latter duties (subject to the check of occasional visits from the Inspector) might, in our opinion, be satisfactorily performed by the Superintending Schoolmasters, whose title, in consequence of the more responsible duties thus devolving upon them, we propose to change to that of "Sub-Inspectors of Army Schools." We

are also of opinion that it is unadvisable to interpose any intermediate authority between the responsible Inspector and his staff of subordinates. We therefore recommend that the office of Assistant Inspector should be abolished, the duties of general supervision now performed by him in Ireland being transferred to the Inspector—who at present decides upon the certificates of education to be granted in that country—and those of examination being entrusted to the Sub-Inspectors. By this arrangement the superintendence of schools will be centralised, and uniformity of system introduced throughout the whole of the United Kingdom.

The change may possibly necessitate a slight increase in the staff of subordinate officers acting under the Inspector, more particularly in Ireland. We are of opinion that there should be at least one Sub-Inspector in each Military District throughout the United Kingdom.

Examinations.

At present the pupils in each school are examined once a year by the Superintending Schoolmaster, in addition to which the Regimental Schoolmasters are required to hold independent examinations half-yearly. By this arrangement every school, besides being generally inspected by the Inspector, is subjected to at least three (and sometimes even four) examinations in the course of the year. The evidence we have received leads us to believe that under the present system of inspection the examinations are too frequent, and interfere unduly with the working time of the schools. It has been represented to us that the report of a schoolmaster upon his own school is unlikely to afford unbiassed information regarding the attainments of the pupils; we therefore recommend that all reports upon schools shall be made, and all examinations be conducted, in future, by independent authorities. We have already stated that we consider it unnecessary that every school should be personally visited in the course of the year by the Inspector, but we are of opinion that a thorough inspection and examination of each should be made half-yearly by the Sub-Inspector of the district. These examinations should, we think, take place a short time previously to the half-yearly inspection of the respective regiments by the inspecting general officer, who would thus have an opportunity for judging, from the report made by the Sub-Inspector, of the state of the school and the results of the instruction in each regiment.

140.

196, 351; Col. Gleig, Mr. McLeod, Memo.

512.

Returns, &c.

From the evidence we have received we are led to believe that the Reports and Returns at present required from both Superintending and Regimental Schoolmasters are too numerous and cumbrous. We recommend that their number be, as far as possible, reduced, and that the reports at present forwarded monthly by Regimental Schoolmasters through their commanding officers be in future only required quarterly.

351, 352, 676; Mr. McLeod Memo.

System of schools in India.

Before concluding our recommendations on the subject of the general superintendence of schools we think it necessary to observe that the system of Army Schools in India is not, as in other parts of Your Majesty's dominions, under the control of the Director-General of Military Education. That officer has no direct authority over the local Inspectors of Schools in India, of whom there is one in each Presidency. The training and appointment of Schoolmasters and schoolmistresses are in India conducted on a different system from that prevailing in this country. It has been represented to us that great inconvenience results from this arrangement, and that the Council of Military Education have for many years constantly urged the amalgamation of the school system in India with that at home. It has also been stated to us by a witness who had himself served as a schoolmaster in India, that the schools in that country are conducted in a less satisfactory manner than at home, and that the system of superintendence is inferior. We are aware that there may be local difficulties, into the consideration of which we have not entered, in effecting such an amalgamation as has been recommended by the Council; but, if these difficulties are not insuperable, it appears to us *primâ facie* extremely desirable that the general system of Army Schools, the method of inspection and superintendence, and the training and appointment of teachers should be conducted on uniform principles in India and in other parts of Your Majesty's dominions; and we recommend that attention should be directed to this subject.

137 to 139.

197.

612 to 614.

Sir H. Grant, Replies.

Existing machinery for schools.

As we have already stated, at the head-quarters of every regiment and battalion in Your Majesty's service a school is established, to which a schoolmaster and schoolmistress, with a certain number of paid assistants, are attached. In many barracks Chapel Schools have been erected, which are used both for secular instruction and for divine service; and where these special buildings do not exist, barrack-rooms are appropriated for school purposes. An ample supply of books and other materials for instruction is also furnished at the public expense. The machinery thus provided is employed in affording means of education both to children and adults.

62, 63.

69.

156, 157. 159, 160, 243, 991, 2268.

For the proper management of the Regimental Schools, and their conduct in accordance with the general regulations issued, commanding officers are directly responsible; and the evidence we have received shows that they in general evince great interest in the institutions, and give them every countenance and support.

Schools for Children.

Admission to the schools. 26, 27.

The children's schools are mainly intended for the children of the non-commissioned officers and soldiers of the regiments or battalions to which they are attached; but they are also open to the children of officers, of subordinates employed in the military departments, of pensioners, and of civilians immediately connected with the Army.

Payments exacted. 124.

Payment of fees is required from all children, except those of soldiers serving abroad who have been prevented from accompanying their fathers. The fees paid monthly for the children of non-commissioned officers and soldiers are twopence for one child, threepence for two children of the same family, and one penny for each of three or more children. Threepence a week for each child is charged in the case of the children of those people not in actual military employment to whom the privilege of admission to the schools is extended. The fees charged for the children of officers vary from 5*s.* a month for one child to 12*s.* 6*d.* for four children of the same family. Officers' children receive precisely the same instruction and treatment as the others with whom they are associated in the school classes.

175.

The fees thus paid are credited to the public, but amount to little more than 1,400*l.* a year.

Compulsory attendance. 24, 392. Queen's Regulations, par. 452.

The attendance at school of the children of non-commissioned officers and soldiers married with leave is compulsory, commanding officers of corps being directed by Your Majesty's Regulations to require "that all married soldiers shall send their children to "the school of the regiment or garrison, on pain of being liable to be deprived of the "privileges attendant on the residence of their wives in barracks." It appears that at

4, 18.

the present time the Army Schools at home and in the colonies afford education to about 20,000 children.

Infant and grown children's schools. 21.

The children's schools are divided into "infants'" and "grown children's" schools. The infants' school is placed entirely under the charge of the schoolmistress, generally, though apparently not always, in a room set apart for the purpose. The elder children of both sexes attend school together in the morning under the schoolmaster, but are separated in the afternoon, when the boys still remain under the master, while the girls are associated with the infants for special instruction under the mistress.

Separate girls' schools exceptional.

In one or two large garrisons, such as Woolwich and Chatham, where, from the number of troops of the same corps, the Regimental School reaches an unusual size, the education of the girls, after they rise above the class of infants, is entirely separated from that of the boys. In these cases there is a special girls' school, with its allotted mistress. This is, however, an exceptional arrangement, the mixed school plan being almost universally adopted.

Infant schools. 6, 171.

No limit of age is fixed for admission to the school. Children are frequently sent to the infant school with their elder sisters so young that they cannot derive any benefit from the instruction.

Grown children's schools. 21, 23, 120 to 123.

There is, likewise, no fixed line of demarcation in regard to age between the infants and the grown children; and although by the regulations children should remain in the infant school until they are able to read words of two syllables at least, this rule does not appear in practice to be observed. The transfer of a child from one class to another is left to be arranged between the schoolmaster and schoolmistress; boys, however, are not allowed to remain in the infant school after eight years of age.

Garrison infant schools.

In a few large garrisons where a number of regiments are quartered—such, for instance, as Aldershot—a system has been tried by which the infant schools of several different corps, in place of being conducted regimentally, are combined and placed under the charge of a single schoolmistress.

School hours.

The ordinary school hours are from 9 to 12 in the morning and from 2 to 4 in the afternoon. On Saturday there is no afternoon school.

Assistant teachers. 57. 56. 144.

The schoolmaster is assisted by a certain number of soldier assistants appointed from the soldiers of the regiment or battalion to which the school belongs. The schoolmistress receives similar assistance from pupil-teachers and monitresses, the latter being selected from the more advanced girls attending the school. The monitresses join the grown children's school for a short period every day, for instruction under the schoolmaster. We shall have occasion in a later portion of our Report to speak of the principles which regulate the appointment of the assistants of both sexes.

The subjects of instruction in the grown children's schools comprise reading, writing, ctation, singing, grammar, English history, geography, arithmetic, and in some cases gebra. In the infant schools, spelling, reading, and singing are the subjects chiefly ught. The afternoon school attended jointly by the infants and girls is termed an Industrial School," in which the pupils are taught various kinds of needlework. In aid these industrial schools a capitation grant of 5*s.* per annum for each pupil over four ars of age, calculated on the average daily attendance of the previous year, is allowed wards the purchase of materials, the articles made up being afterwards distributed, nder the authority of the commanding officer, as rewards for good conduct and skill nongst the children. Beyond the needlework taught in the industrial school no in- ruction in any kind of industrial employment is given to either boys or girls.

Subjects of instruction. 43 to 45.

Industrial schools. 46 to 51.

52, 54, 134.

In religious instruction careful attention is paid to the religious predilections of the rents. The school is opened each morning with prayers and a simple Bible lesson, sting for half an hour, but attendance at this is voluntary with children not of the me religious persuasion as the teacher. On two days in each week an hour is specially t apart for the purpose of instruction by the Chaplains of the several denominations to hich the children belong. Separate hours are fixed during the week for the religious struction of enlisted boys serving with regiments, their attendance at this instruction eing compulsory.

Religious instruction. 64, 65, 289, 290.

Chaplain-General, Memo.

Sunday schools are likewise formed for religious instruction, but the arrangements onnected with them are left in the hands of the Chaplains of the Forces. School- asters and schoolmistresses are, however, liable to be required by the Chaplain of ne denomination to which they themselves belong to assist him in the Sunday school struction. In some cases, though not universally throughout the Army, a special rvice for children is conducted on Sundays by the Chaplain.

Sunday schools. 66. 530. 1291.

Having thus briefly reviewed the existing arrangements for children's schools we feel ound to express our belief that they are on the whole such as to provide the means f sound and useful elementary education to the children of the non-commissioned fficers and soldiers of Your Majesty's Army. The evidence we have received leads s to believe that the educational results of the schools are decidedly successful, as mpared with those of civil schools of a similar class. Colonel Pocklington, a member the late Council of Military Education, expresses his belief that "the educational status of our Army Schools is far beyond that of village schools;" and the Chaplain- eneral says, "I have had many opportunities of examining schools both in London and in the country, and I think that nothing approaches the generality of our Military Schools." Instances are also mentioned in which the pupils of Army Schools have oved their superiority over those educated at civil schools in competitive examinations eld in connection with the Society of Arts. The regularity of attendance, which is nforced by the authority of commanding officers, gives the instructors a distinct advan- ge over those of the National Schools of the country, and contributes greatly to the tisfactory progress of the pupils. The subjects taught appear to us in general well dapted to the social condition and future wants of the children, and the system of struction seems to be well devised and practically successful in its results. It is also vident that the advantages afforded by the schools are highly appreciated by the parents. Ve therefore find it necessary to recommend but few changes in the children's schools.

Results of children's schools. 224, 241, 302, 669, 1280. 25. 1280. 241, 302. 24, 389, 392. 457, 887, 902, 947.

We have considered the question whether it would be desirable to curtail the privilege attending school now extended to others than the children of the non-commissioned fficers and soldiers serving in Your Majesty's Army, but we have come to the conclusion at it would be unadvisable to do so. The number of such outside pupils is at present pproximately estimated at about 3,000, out of a total number of 20,000 children ttending school. No representation has been made to us that the attendance of such upils interferes in any way with the instruction of the children of soldiers; and the egulations guard against such a result by making the sanction of the commanding fficer necessary to their admission. Their presence may in some cases necessitate an creased number of assistant instructors; but the expense thus caused is small in com- arison with the great boon afforded to those who, though not actually engaged in ilitary service, are more or less directly connected with Your Majesty's Army. The xclusion of their children from Army Schools would in many garrisons, where civil chools are remote from barracks, inflict a hardship upon parents whose occupations equire them to live in close proximity to the troops; more particularly at foreign ations it might often be impossible to find any other means of education than those fforded by the regimental schools.

Admission of outside pupils. 28. 361.

Officers' children.

We also consider that the regulation which at present provides for the admission of the children of officers to the regular school classes is sound and just. Though but few avail themselves of the privilege, the opportunity of cheap education for their children affords at all times a valuable advantage to a highly deserving class of officers; while at the remote and isolated stations in which some of Your Majesty's troops are always

1020, 1021.

quartered, occasions may frequently arise when the privilege would be highly prized by those who, when other schools were within reach, would not avail themselves of it.

We are, however, strongly of opinion that in all cases in which advantage has been taken of the privilege of admission to a regimental school regularity of attendance should be strictly enforced. The attendance of the outside pupils is represented as being less

1118.

regular than that of those upon whose parents the authority of the commanding officer can be more directly brought to bear; and we recommend that, a child's name having once been placed upon the school books, irregularity in attendance, without sufficient cause, should be stringently visited with forfeiture of the privilege of admission to the school.

Payment of fees.

With regard to the fees charged to the pupils, we are of opinion that a wider distinction than at present should be drawn between the children of those actually serving in Your Majesty's Army, and of others who are exceptionally permitted to take advantage of means of education not primarily intended for their benefit. We consider that the same fees as at present should continue to be demanded from the latter class; but we

374, 677, 678.

recommend that no payment should be required for the children of either officers, non-commissioned officers, or soldiers actually engaged in military service. The expense entailed by the remission of these fees would be trifling, the total amount realised by them annually being only 1,400*l*. At present the motive of saving the fee undoubtedly

390, 391.

in some cases acts as a temptation to parents to keep their children absent from school for the whole month when they have lost a part of it; while, as has been

676.

pointed out to us by a witness of long experience in teaching, the system of fees necessitates a multiplication of returns, to which we have already referred as imposing unnecessary labour on the schoolmaster. The argument that people in general only value what is paid for, does not appear to us to be applicable to soldiers in the same degree as to civilians. There can be no reason why a soldier should feel any sense of dependence or pauperism in availing himself of what would be considered one of the natural advantages of his military service. The privilege of free education has already been granted, in our opinion most wisely, to the soldier himself; and we strongly recommend that the same privilege should be extended to his children.

Infant schools.

Complaints have been made to us by the schoolmistresses we have examined, of the early age at which children are frequently sent to the infant schools. It is stated that

1092 to 1097, 1196 to 1199.

in many cases they are not only too young to benefit by the teaching, but that their presence also interferes with the instruction of the elder children. The convenience to parents induces us to abstain from recommending the exclusion of such infants. At the same time we think it would be desirable, wherever the number of children is sufficient

1123, 1139, 1140, 1149, 1203.

to justify the expense, that a room should be set apart for the very young children where they might be placed under the charge of a pupil-teacher or monitress during the industrial school hours. We also consider that a separate room with special apparatus should be provided for the infant school, distinct from that in which the older children are taught. Much inconvenience to the schoolmaster, and interference with the instruction of the elder pupils, must necessarily result from the presence of children of the age at which many are sent to the infant school.

Garrison infant schools.

Garrison infant schools—as contrasted with those regimentally conducted—are, as we have previously stated, quite exceptional. From official correspondence on the subject which has been laid before us, we have formed the opinion that these amalgamated garrison schools have not been found to work satisfactorily. We consider it preferable that in large garrisons the children of each regiment should continue under the charge of their special mistress, as must necessarily be the case when the regiment is moved to an isolated station. The inconvenience caused by the distance to which children have often to be sent to such garrison schools is also a strong argument against them. We believe, moreover, that the separate regimental system is more likely both to stimulate the zeal of the teacher, and to create that interest on the part of officers and others connected with the regiment which is universally represented to us as having the greatest effect upon the efficiency of a school.

Importance of infant education.

In addition to the suggestions we have made for improving the accommodation provided for infant schools, we wish to point out the necessity of paying strict attention to the instruction given in them. It is impossible to attach too much importance to the

bject, as experience has shown that the successful results of later education depend, to very great extent, on the care bestowed upon infant teaching.

Industrial instruction.

We have already stated that no industrial occupation is taught in Army Schools, with he exception of the instruction in needlework given to girls and infants in the afternoon ndustrial school. From the evidence before us we have come to the conclusion that the rrangements with regard to the capitation grant of 5*s.* a head in aid of the expenses of he industrial school are not on a satisfactory footing. All the witnesses we have examined on this subject agree in stating that much misconception exists among the arents of children in regard to this grant, and that great discontent is thereby caused. A general impression prevails that the grant is intended to assist in providing clothing or the children, and not merely for the purchase of materials for instruction. For the ormer purpose the sum allowed is manifestly insufficient, while for the latter it is stated by every witness to be largely in excess of that required.

363 to 366, 597, 662, 1099, 1215, 1233; Mrs. C., Mrs. D., Replies.

We are clearly of opinion that the latter is the real and sole intention of the grant, and ve accordingly recommend that this fact should be clearly made known to parents, and hat the amount of the grant should be reduced to 2*s.* 6*d.* a head, a sum which is repre- ented by several witnesses as amply sufficient for the purchase of an adequate supply of materials for instruction in needlework.

336, 597, 662; Mrs. D., Replies.

Its extension recommended.

We also strongly recommend that opportunities for further industrial training should e afforded both to boys and girls. We would suggest that, whenever practicable, the girls attending school should receive instruction in domestic duties; and that advantage hould be taken of the regimental workshops, and other existing means, to give the elder boys, for whom no kind of industrial occupation is at present provided, some insight nto trades such as tailoring, shoemaking, carpentry, farriery, saddlery, armourer's and smith's work, engineering, &c. The advantages of instruction of this nature are already recognised by Your Majesty's Regulations, in which "it is suggested, as an arrangement ' which may be adopted with advantage in all corps in which regimental workshops have ' been established, that every facility should be given to the elder boys for instruction ' in trades."

Sir H. Grant, Replies; 981, 1013.

Queen's Regulations, par. 428.

We have, however, found no trace in the evidence we have received, of any systematic attempt to give effect to this suggestion. It is unnecessary for us to point out the great benefit that would accrue to children in the class of life of the pupils of an Army School from some kind of industrial training in youth, whatever may be their future career; while, as the sons of soldiers in numerous cases enter the military service, the arrangement we propose may help to extend an acquaintance with trades among the rank and file of Your Majesty's Army. At the boys' school of the Royal Military Asylum at Chelsea—which is a Model School for the regimental schools of the army—instruction in trades, though only to a limited extent and on an unsatisfactory system, is at present afforded to the pupils. In recommending that the sum saved annually by the reduction we have proposed in the present industrial grant, together with such an additional sum as may be found requisite, should be devoted to providing, in connection with regimental schools, an extended system of industrial training for both boys and girls, we beg to refer to the suggestions we shall hereafter make for improving the instruction at the Model School.

Religious instruction.

As regards religious instruction we see no reason for recommending any change in the existing regulations, which appear to us to work satisfactorily. We are, however, of opinion that both schoolmasters and schoolmistresses should, after the labours of the week, be relieved from necessarily taking part in Sunday school instruction. At present their liability to do so depends upon the will of the chaplain, and the practice varies at different stations, many chaplains not requiring the attendance of the masters and mistresses. We consider that this should become the universal rule, that it should be part of the duty of the chaplains to organise and conduct Sunday schools, and that Sunday teaching should be left in their hands, aided by such lay assistance as we believe will always be found spontaneously forthcoming. We also think it highly desirable that the system of special services on Sundays for children, which at present, though only occasionally adopted, is spoken of by the Chaplain-General as very valuable, should be more universally carried out.

Attendance at school on Saturdays.

The question of exempting masters and mistresses from attendance on Saturdays as well as from Sunday school teaching has also engaged our attention. At present no adult school is held on Saturday, which is a half holiday, the duties of the teachers being confined to the children's school during the morning. It has been represented to us that the attendance of the children on this day is so irregular, from the large number kept at home for domestic duties by their parents, that little advantage is derived from the Saturday school. It has also been urged that the teachers after five days' con-

701, 702, 1132, 1170, 1171, 1200, 1201.

tinuous occupation stand in need of mental and physical rest. We are, however, of opinion that, although the attendance of the pupils on Saturday may be irregular, it would be unadvisable to deprive those who are in the habit of attending of the opportunity of instruction, and to throw them for the whole day entirely on their parents' hands; and as we have recommended that the teachers should be relieved from all duty on Sunday, we have the less hesitation in requiring the continuance of their attendance during a portion of the day on Saturday.

Moral effects of schools. 1280.

Before concluding our remarks on children's schools we wish to refer briefly to their moral effects. If these are not in all respects so satisfactory as might be desired, they at all events appear not to fall short of those produced by similar institutions in civil life. The Chaplain-General, who as Inspector-General of Military Schools for many years, has had great experience on this subject, in speaking of the moral condition of soldiers' children, says:—"I have seen them in all situations, and I honestly declare that in my "opinion they are better disposed than young people of the same class in civil life. The "moral influence upon them of the schools, both secular and religious, is very striking." The direct influence of the teachers, it is true, appears to extend little beyond the school. One important witness, a commanding officer of great experience, goes so far as to express his belief that with the present class of teachers less attention is paid to the children out of school than in former days, when a regimental serjeant was appointed schoolmaster. We should have been glad, if it had appeared to us practicable, to extend the responsibility of the schoolmaster in this respect; but although it is certain that much good may be effected by the example and influence of individual teachers, it does not appear to us possible to require schoolmasters, as a matter of general regulation, to exercise any special control over the children out of school-hours. The direct responsibility for the moral welfare of their children out of school, we consider, is a duty which must in a regiment, no less than in civil life, devolve mainly upon the parents.

Chaplain-General, Memo. 1255, 1273. Col. Shute, 1254.

Schools for Adults.

Organisation.

Adult Army Schools are established for the purpose of affording a sound and useful education to the non-commissioned officers and soldiers serving in Your Majesty's Army. They are entirely under the charge of the schoolmasters, the same accommodation, material, and staff being employed as for the elder children's schools. The adult school is in general held during the afternoon, frequently at the same time as the afternoon boys' school.

Gratuitous admission.

The adult school is open gratuitously to all non-commissioned officers and soldiers of the regiment or corps in which it is established. Formerly fees were paid by those under instruction, but for some years past these payments have been abolished, in the belief that they operated as a discouragement to attendance. This change, however, appears, both from the published Reports of the Council of Military Education, and from the evidence we have received, to have been followed by little improvement in the regularity of the attendance. Attendance at school is not made compulsory even on the most uneducated soldiers by any general regulations; and although, by one of the Articles for the better government of Your Majesty's Army, commanding officers are empowered to bring a soldier to trial by court-martial for absenting himself from school when duly ordered to attend, the evidence we have received proves clearly that advantage is not generally taken of the powers so conferred. The question of enforcing attendance being left entirely to the discretion of commanding officers, the practice on the subject varies widely in different regiments. In some corps attendance is enforced generally, in some only on recruits, in some on non-commissioned officers and recruits until duly qualified; in others attendance is entirely voluntary.

Attendance not compulsory. 32nd Article of War. 33, 34, 60, 130, 813. Replies.

Subjects of instruction. 61.

The main subjects of instruction in the adult schools are reading, writing, arithmetic, English history, and geography.

Certificates of education. 106, 110, 202, 222.

Certificates of education are issued by commanding officers, on the recommendation of the Inspector of Army Schools, to such students as pass a satisfactory examination in certain of the subjects taught. These certificates are of three classes: for the lowest or third class certificate, reading easy narratives, simple writing from dictation, and a knowledge of the four compound rules in arithmetic, and of the reduction of money, are required. For the second class certificates, greater facility in reading and in writing from dictation, an acquaintance with regimental accounts, and the power of working questions in practice, simple interest, and proportion, are demanded. The first class certificate implies a good education in reading, writing, and arithmetic, a thorough acquaintance with regimental accounts, and a fair knowledge of two other more advanced subjects among a list of ten from which a candidate is allowed to make his choice. These ext

ubjects comprise English history, general geography, algebra, mensuration, plane trigo-
ometry, practical geometry, fortification, drawing, surveying, and chemistry. The
xaminations for the certificates are conducted in the presence either of a Superintending
choolmaster or of a Board of Officers; the papers are looked over and marked by the
uperintending Schoolmaster, and are then forwarded to the Inspector of Army Schools,
ho communicates to the commanding officer of each regiment the class of certificate
which a candidate is entitled. 202.

No uniform rule prevails as to the positive advantages conferred by the possession of a ertificate of education. In some corps the possession of a certain certificate is made an dispensable condition of promotion to a certain grade; in other cases a regimental xamination is employed as the test; in others again no educational qualification is xacted, promotion being dependent simply on personal recommendation. Want of uniformity in the use of certificates. Replies.

In connection with the ordinary school, which is open to all non-commissioned officers nd soldiers who wish to attend it, a system of special classes has within the last few ears, on the recommendation of the Council of Military Education, been organised in any regiments for the instruction of specially selected students. The main object f the formation of these classes is to meet the prejudicial effects caused by irregularity f attendance upon the progress of pupils in the ordinary school classes. To form a pecial class in a regiment a certain number of men, generally about 25 or 30, selected y the commanding officer, are exempted from all duties with the exception of being able for guard on Saturdays, with the object of enabling them to attend school regu-rly every day. The class attends, as a rule, at a different time from the ordinary pupils. o special subjects are taught, the main advantage being a regular and systematic course f instruction. The formation of these classes is left to the discretion of commanding fficers, and though their numbers are at present on the increase, and their advantages re becoming yearly more appreciated, it does not appear that they are so general hroughout the service as could be desired. Special classes. 3, 35. 38 to 41. 3, 35, 184.

From this review of the existing arrangements for adult schools it would appear that mple opportunity is afforded to non-commissioned officers and soldiers for acquiring a ound and useful education. The instructional staff is the same as that employed for the hildren's schools, the educational results of which, we have already stated, appear to us atisfactory. Adequate accommodation is provided, and the supply of materials for in-truction is ample. No defect is apparent in the system of teaching, or in the mode of scertaining its results. Yet we feel bound to record our opinion that these results are ot satisfactory, nor such as the machinery employed and the expenditure incurred would ntitle us to expect. Unsatisfactory results of adult schools. 69. 3, 212, 302, 513.

This must, we think, be to a great extent attributed to the want of any uniform method, established by authority, of giving full and general effect to the advantages offered to Your Majesty's Army. The enforcement of attendance at school, the use of certificates of education, the organisation of special classes, are all alike at present governed by no general regulations. Each is dependent on the will of the commanding officer; and though we are bound to state that commanding officers generally appear to take great interest in the education of those under their command, yet the want of uniformity of system in various regiments naturally leads to a wide difference in results. We must express our conviction that the education of the army cannot be placed on a satisfactory footing until some system, founded upon uniform principles, be generally applied, designed to turn to more account the means of instruction placed within the reach of the army. Want of uniformity of system. 3, 31, 733, 752; Replies.

The evidence which we have received clearly shows that the great obstacle to the progress of education among soldiers is irregularity of attendance. Not only is attendance in the first instance voluntary, but even those whose names have been entered on the school-books appear habitually to be absent from the classes. Although the number of adults on the school-books in 1867 was nearly 39,000, and has probably considerably increased since that time, this number very far exceeds those whose attendance is sufficiently regular to enable them to profit by the instruction. It has been stated to us that out of 200 or 300 men's names on the school-books of a regiment, "there would not probably be an average attendance daily of more than 30 men." Colonel Pocklington, the member of the Council of Military Education who had the special charge of Army Schools, states in his evidence, that "there are a great number "of men whose names are put upon the school-books but who only attend twice or "three times a month, or once a week." It is obvious, as the witness remarks, that "very little good, as regards education, can result when the attendance is so limited." It is true that by Your Majesty's Regulations, commanding officers are directed "to Irregularity of attendance. 18, 36, 132, 213, 265, 302, 741, 742. 36. 14. 3. Queen's Regulations par. 458.

"afford every facility for men whose names are on the school-books to attend regularly, "and are to require them to do so as a parade or duty;" and, as previously stated, they are empowered to bring to trial before a court-martial any soldier "who, without "due cause or without leave from his commanding officer, shall absent himself from the "garrison or regimental school, when duly ordered to attend there;" but we are led to believe that few commanding officers would under the existing regulations be disposed to have recourse to such a measure. In fact it seems to us that the power of enforcing attendance at school is not at present sufficiently recognised either by the commanding officer or the soldier.

32nd Article of War.

34, 60.

130, 813; Lt.-Gen. Eyre, Replies.

Possibility of introducing compulsory attendance.

The question which has most seriously occupied our attention in reference to this subject is, whether it would be desirable to make attendance at school compulsory throughout Your Majesty's service on all soldiers who do not possess a simple rudimentary education. In reference to this point we have taken the opinion of numerous commanding officers and other officers of experience.

In the case of old soldiers;

183, 219, 306, 513, 768, 770, 1260.

Of recruits.

From the evidence we have received, we have come to the conclusion that it would be unadvisable to introduce such a system with men who have already for some time been in the service. Men of this class, who in spite of the opportunities afforded them still remain uneducated, would, it is to be feared, in general either from their age be unlikely to profit by instruction, or from prejudice and previous habits be unable to appreciate the advantages of education. The same difficulties, however, do not occur with younger soldiers; and we are strongly of opinion that in the case of recruits, and of all men hereafter entering Your Majesty's service, education up to a certain point should be insisted upon, and that attendance at school should be enforced as a duty upon all who are unable to prove their possession of the required amount of knowledge.

2244; Replies.

Though some of our witnesses have expressed themselves as strongly unfavourable on general principles to compulsory education of any kind, they do not for the most part appear to have any special military grounds for their objections to the application of the principle to the army. On the other hand, the preponderance of the evidence we have received appears to be in favour of requiring the soldier to avail himself, at least to a limited extent, of the means of instruction afforded him; and more than one witness has stated that, until the attendance of recruits at school be made compulsory, no material improvement can be hoped for in the educational condition of the army. Apart from the general grounds on which the claims of education rest, there are, more particularly at the present day when greater demands are made than formerly on the intelligence and self-reliance of the private soldier, peculiar reasons for making it in the highest degree desirable that he should at least have a rudimentary education. Nor would the advantages of an improvement in the education of the soldier be confined only to the army itself; from the larger number of men who, with shortened periods of service, will annually pass from the ranks into civil life, the educational condition of the soldier will to some extent affect that of the community at large, and the army may in time become an auxiliary in promoting popular education.

130, 181, 182, 198, 214, 303, 408, 515, 727, 785, 822, 966, 1260; Replies.

Amount of knowledge to be required.

130, 727.

We do not think it either necessary or desirable that any high standard of attainments should be universally required of soldiers; and we propose to confine the educational qualification compulsory on all to simple reading, writing, and arithmetic, as tested by the ability to obtain a certificate of a distinctly lower degree than the third class certificate at present in existence.

Time at which attendance at school should commence.

198, 386, 727, 728; Replies.

215, 407, 408, 514, 633, 815 to 821, 889, 967; Replies.

While, however, the opinions of the majority of our witnesses appear to prove conclusively that there would be neither difficulty nor hardship in enforcing on young soldiers compulsory attendance at school, opinions are more conflicting as to the time at which this attendance should commence. It is urged by many witnesses that the education of the young soldier should begin from the date of his entering the service; while others consider that its commencement should be deferred until he has acquired some knowledge of his drill, and the earlier and more severe portion of his military training has been concluded. In infantry regiments there can be little doubt that time can easily be found for the attendance of the recruit at school, even during the period when he is learning his drill; and though in mounted corps it has been urged that the time of the recruit on first joining is more occupied with the multiplicity of military duties which he has to learn, we find that even in these branches of the service it has in several instances been customary to require the attendance of recruits at school. We cannot consider that a system which has been adopted without difficulty in some cavalry regiments, and is advocated by several commanding officers of experience, can be impracticable in others. It appears to us moreover desirable to establish uniformity of system, as far as practicable, in the various branches of the service. It has been represented to us that it is advisable that the recruit should be taught to regard his education as a necessary

815, 889.

Sir J. Scarlett, Lt.-Gen. Eyre, Maj.-Gen. Russell, Maj.-Gen. Murray, Maj.-Gen. Carey, Col. Phillpotts, Col. Smyth, Col. Eaton, Col. Baker, Col. Oakes, Col. Jenyns, Col. Cureton, Col. Randolph,

luty equally with his military training, and that on first joining he is probably less nclined to dislike schooling than he would be at a later period of his service. The time f a recruit also is not, like that of the drilled soldier, subject to interruption from guards, ccessitating broken rest, and other duties, so that regularity of attendance (to which we scribe the greatest importance) can more readily be secured. We therefore recommend hat the compulsory attendance of a recruit at school should commence from the time f his entering the service, and be continued *pari passu* with his drill, until he is in ossession of a certificate of the lowest class. At the same time opportunity should be iven to a recruit on first joining to show whether he possesses the requisite amount f education, and those who give proof of this, by passing the required examination for he certificate, should be exempt from compulsory attendance. In the case of enlisted oys, we consider that the compulsory attendance may with advantage be continued for longer period than with ordinary recruits, and the obligatory educational qualification ay be placed higher. We therefore recommend that, in accordance with the practice t present prevailing in many regiments, boys should be required to attend school until hey obtain a second class certificate.

309.

In order to establish uniformity of system, and to ensure regularity of attendance, we hink it absolutely essential that a certain number of hours in each week should be set part by general regulations for school purposes, during the period for which the recruit s under instruction. It would probably be necessary that the number of hours required hould vary, according to both the season of the year and the branch of the service to which the young soldier belongs; and while the total amount of weekly attendance to e enforced in each case should be definitely specified by superior authority, we consider desirable that discretion as to the actual daily distribution of the time should be left to ommanding officers.

Amount of attendance requisite.

217, 2257.

2256.

859 to 861, 2255, 2316.

Owing to the varying conditions of the different branches of the service we do not ttempt absolutely to determine the specific number of hours weekly during which atten- ance should be enforced in each case. We desire, however, most particularly to call ttention to the strong evidence we have received of the advantages of regular attendance, ven for a few months, as compared with irregular attendance extending over a much onger period. To ensure the satisfactory progress of a pupil the chief requisite is that he course of instruction should be systematic and uninterrupted. Several of our witnesses have stated their opinions as to the number of hours in the week which it would be possible to devote to school, and the length of time within which, with egular attendance, a rudimentary education could be acquired. We consider that an ttendance of not less than five hours should, as a rule, be enforced, an amount which, we believe, it will be found possible to exact, at least during the winter, even from recruits n the mounted branches of the service. With this weekly time devoted to school, and with regularity of attendance secured, we believe that in the great majority of cases a ecruit by the time he has been dismissed drill will have made such progress as to enable him to pass the necessary examination. Cases may no doubt occur in which natural naptitude or disinclination to learn may prevent a pupil from acquiring even the small amount of knowledge implied in the possession of a fourth class certificate. Such cases will, however, we believe, prove rare, and may be exceptionally dealt with.

275 to 277.

275, 394; Sir H. Grant, M.-Gen. Russell, M.-Gen. Murray, Col. Eaton, Col. McDonald, Lt.-Col. Sprot, Replies.

638 to 640, 2250 to 2252.

Although we have not considered it advisable to extend the compulsory education of he recruit beyond the acquisition of the mere rudiments of knowledge, it is highly desirable that every encouragement should be given to the trained soldier for further self-improvement. While reliance must in the main be placed upon his own spontaneous efforts, these efforts should be aided and stimulated. We have carefully considered in what way further encouragements than those now existing could be given to education n the army after the period of compulsory attendance at school has terminated. Suggestions have at various times been made to the Council of Military Education, and have also been brought to our notice, with the object of instituting a system of pecuniary rewards, either for educational attainments proved by the possession of certificates, or for voluntary attendance at school. Apart, however, from many practical difficulties which would, we believe, occur in carrying out such a system, we are decidedly of opinion that t would be in principle objectionable to create in the mind of the soldier the idea that education was to be regarded not as an object in itself to be desired, but merely as a means of increasing his daily pay.

Encouragements to educational attainments.

2253.

Lieut.-Gen. Eyre, Col. Robertson, Replies; Mr. McLeod, Memo.

We consider, however, that a more general use might be made of school certificates as an instrument for encouraging education. We have already explained the nature of the present three classes of certificates. To these we propose to add a certificate of a fourth and lower class, the qualification for which should be ability to read an easy narrative, to copy a passage from the same, and to work the four simple rules in arithmetic. This

Changes in regard to certificates.

certificate should be required from every recruit before being dismissed school; and we consider that it should be issued by the commanding officer on the recommendation of the Sub-Inspector of the district; the three higher certificates should continue to be granted exclusively on the recommendation of the Inspector of Army Schools. The qualifications for these latter certificates we propose to leave as at present, with the exception that for obtaining a certificate of the first class a knowledge of only one extra subject, instead of two, should be required—a change which has been recommended by Colonel Gleig, and the Superintending Schoolmaster whom we examined. It has, however, been brought to our notice that the examinations for certificates of all classes are at present so stringently conducted as to render success unnecessarily difficult, and to lead to much discouragement among candidates. We consider that the strictness of the examinations should be so far modified as to avoid this result, and that marks should be given for the various subjects, half marks in each separate subject and an aggregate of three-fourths in the general result being fixed as the minimum requisite for qualification. We also recommend that the wording of the certificates should be altered and simplified, as it at present implies a stricter examination than we advocate. At the end of our Report we append specimens of the simplified forms of certificates we recommend for adoption.

Certificates to be indispensable to promotion.

The most important question in connection with certificates is whether they should be made an indispensable qualification for promotion to the rank of non-commissioned officer. On this subject we have taken the opinion of numerous general officers and commanding officers of regiments, to whose replies we desire particularly to call attention. Among the officers to whom the question was addressed not more than one-third have expressed themselves decidedly opposed to the general exaction of an educational test under ordinary circumstances as a condition of promotion. They urge that no educational attainments can compensate for the want of qualities which are necessary for the management of soldiers and the maintenance of discipline; that it would unduly tie the hands of a commanding officer to be restricted in the selection of his non-commissioned officers to candidates in possession of certificates of education; and that if such a qualification were rigidly exacted valuable non-commissioned officers might be lost to the service. We fully recognise the force of these arguments; we should be far from wishing to give educational proficiency a preference over gallant conduct in the field, or to make it the only test of eligibility for promotion, to the exclusion of other qualifications equally important. We also feel most strongly that, as the commanding officer is primarily responsible for the state of his regiment, it would be highly inexpedient to fetter him unduly in the selection of his non-commissioned officers, upon whom so much depends in the maintenance of discipline. At the same time we must observe that a large proportion of the commanding officers whose opinions we have taken, are in favour of making an educational test of some sort an indispensable condition, as a general rule, in time of peace, for promotion to the rank of non-commissioned officer; and they consider that this rule should only be departed from in certain very special and exceptional cases. Every commanding officer of cavalry, with one exception, and every commanding officer of artillery, to whom our question was addressed, has expressed this opinion, although in these branches of the service, from the variety of duties, least leisure is afforded to the soldier for improving his education. The same opinion has been expressed by several commanding officers of infantry battalions, and other officers of great experience. The experiment has already been tried in several corps in all branches of the service, and has, in general, been found to work successfully. Moreover we are disposed to believe that in time of peace a non-commissioned officer can hardly perform his routine duties in an adequate manner without at least such a simple knowledge of reading, writing, and arithmetic as is implied by the possession of a third class certificate. We therefore consider that, as a general rule, except on active service, a third class certificate should be a necessary condition of promotion to the rank of full corporal, and that a second class certificate should be required for promotion to the rank of serjeant.

Sir J. Scarlett, Sir H. Grant, Lt.-Gen. Eyre, Maj.-Gen. Carey, Col. Egerton, Col. Radcliffe, Col. Phillpotts, Col. Smyth, Col. Eaton, Col. Shute, Lt.-Col. Clarke, Lt.-Col. Nugent, Lt.-Col. Fiennes, Col. Baker, Col. Oakes, Col. Jenyns, Col. Randolph, Col. Cameron, Col. Robertson, Col. McDonald, Lt.-Col. Pearson, Col. Elrington; 184, 310 to 316, 409 to 411, 516, 749, 786, 823.

Exceptional cases.

729, 730, 736, 788, 823.

While, however, making this, in time of peace, the general rule, we are aware that circumstances may occur, though probably rarely, in which the rule could not with advantage be rigidly enforced. To meet such cases we recommend that, when very special circumstances occur, and distinguished qualifications for promotion exist unaccompanied by the necessary educational proficiency, a commanding officer should be permitted, with the sanction of the general officer commanding the district or brigade in which the corps is stationed, to promote a candidate.

425 to 427. Queen's Regulations, par. 460.

The arrangement we recommend is entirely in accordance with the spirit of Your Majesty's Regulations, which state that "no man is to be considered eligible for promotion to the rank of corporal, unless in the field, who has not passed a satisfactory school examination;" and that "for the rank of serjeant higher qualifications may be

expected." We substitute, however, for the somewhat indefinite and varying standard present applied the uniform and fixed test of a certificate of education. And while fully recognise the wisdom of the intention expressed "not to fetter the discretion of commanding officers in the promotion of men who display conspicuous courage, or show that peculiar tact and moral influence which give non-commissioned officers weight with their comrades," we consider that the exceptions we have admitted will be fficient to meet such cases.

Educational classification.

We further recommend that the school certificates should be made the basis of the ucational classification of soldiers, which is at present not on a satisfactory footing, ing to the want of uniformity in the principles on which it is based. And in order to crease the interest of the soldier in the improvement of his education, we think that s school certificate should be inserted in his pocket ledger, and that the possession of it ould be noted in his discharge document. 320, 596.

Special classes.

The evidence we have received leads us to believe that very great advantage has isen from the establishment of special classes, and that they have been peculiarly luable in affording a supply of well-educated candidates for the rank of non-commissioned icer. Their successful results are undoubtedly owing to the regularity of the instruc- n secured by the exemption of those attending them from ordinary duties. We should ve been glad to devise an arrangement by which a uniform system of special classes ight be established throughout the army. But we fear that the exemption from duty nich is essential to the working of these classes could not be uniformly carried out in e different branches of the service, or even in the same corps at different stations. e consider, therefore, that while the responsibility of the schoolmaster should distinctly tend to special classes, and he should be required, if called upon, to give instruction them as part of his duty, the formation of such classes must be left to the discretion the commanding officer of a regiment, who alone is able to judge whether they can carried out without unduly interfering with military duties. We consider it, however, ost desirable that the system should be extended as far as practicable, and that the eat advantages which have followed from their partial institution should be brought ominently to the notice of commanding officers. Admission to a special class should, think, be purely voluntary among men selected by the commanding officer; but to sure on the part of the pupils such elementary knowledge as may enable them to ofit by the instruction, we consider that a fourth-class certificate should be a necessary ndition of admission, except in the case of non-commissioned officers who may have en exceptionally promoted on the ground of special qualifications. 3, 35, 184, 185, 517, 2311. 416. 2313.

Religious instruction.

With regard to the religious instruction of adults no change appears to be called for. he arrangements for this purpose should continue to devolve upon the Chaplains to c Forces as a portion of their regular duties, and attendance at such instruction must, e consider, be left purely voluntary with adults. We recommend, however, that in l barracks, where circumstances permit, a room with suitable furniture, and supplied ith the necessary fuel and light, should be appropriated for the use of the chaplains their intercourse with the soldiers. The same room might be used for other religious rposes with the permission of the commanding officer. 289.

Chapel Schools.

We must further observe that the present system of Chapel Schools, by which the me building is used both for secular purposes and for religious service, appears to us some respects undesirable, and we would recommend that, where practicable, special commodation for schools should be provided.

Detachment Schools.

We do not think it necessary to make any special remarks on the subject of Detachment chools. As they are merely temporary substitutes for the more efficient establishments the head-quarters of corps, the recommendations which we have made in regard to the tter will equally apply in their general principles to the former.

In concluding our remarks on adult schools, we desire to express our belief that ie changes we propose will effect a considerable improvement in the state of education the Army. We do not think it would be possible for soldiers universally to reach ny high standard of educational proficiency, but by making attendance at school ompulsory on recruits the number of totally illiterate men in the service will, in the ourse of a few years, be perceptibly diminished; while, with the encouragements we ropose to hold out to superior attainments, it may be hoped that the proportion of those vailing themselves of the means of education within their reach will steadily increase. or the success, however, of the educational system it is of essential importance to rovide an adequate and well-qualified teaching staff; and we therefore now propose to onsider the inducements offered to teachers to enter the military service.

Status of Schoolmasters.

Introduction of trained Schoolmasters. Royal Warrant, 21 Nov. 1846.

In former years the duties of schoolmaster were performed by a serjeant in eac regiment, but in 1846 a Normal School was founded for the purpose of providing th Army with a staff of specially trained schoolmasters. We shall defer any remarks o the present system for the training and appointment of schoolmasters until we treat o the Royal Military Asylum at Chelsea, of which establishment the Normal Schoo forms a part; and the present portion of our Report will be confined to a considerati of the status of schoolmasters after they have entered the service.

Changes in the rank of Schoolmasters. Royal Warrant, 31 May 1854. W.O. Circular, 29 October 1863.

Shortly after the establishment of the Normal School schoolmasters were divide into four classes, designated respectively First-class, Second-class, Third-class, an Assistants. First-class schoolmasters were appointed warrant officers, ranking next t commissioned officers and above the regimental serjeant-major. By regulations issue in 1863 a new arrangement was introduced, intended to apply to all schoolmaste entering the service after that time, those already in the service being allowed the optio of adhering to the old system or of accepting the new regulations as to pay, pension, an

625, 711. promotion. There are consequently in the service at the present time schoolmaste serving under dissimilar conditions.

Present classification. 86, 87.

By the new regulations, which are at present in force, trained schoolmasters a divided into two classes only, viz.:—"Superintending Schoolmasters," who are con missioned officers with the relative rank of ensign, and "Army Schoolmasters," who ran as non-commissioned officers next below serjeant-majors. The warrant rank conferr

708. on first-class schoolmasters by the original regulations no longer exists. Simultaneous with the change in the rank of schoolmasters, an alteration was made in their unifor which was found inconveniently to resemble that of officers, and at the present tim

504. they wear chevrons like non-commissioned officers.

Enlistment.

All schoolmasters are enlisted soldiers, being required before appointment, if n already in the Army, to enlist for a period of twelve years; those serving in the Arm at the time of their appointment are discharged from their regiments and at once r enlisted for a similar period. They are subject to the Mutiny Act, to the Articl of War, and to the General Regulations and Orders of the Army.

Pay and pension. 87.

The pay of a Superintending Schoolmaster is 7*s.* a day on first promotion, and 8*s.* day after five years' service in the grade. His retiring allowance varies from 3*s.* a da after 10 years' total service to 8*s.* a day after 30 years.

84.

The pay of Army Schoolmasters is 3*s.* a day on first appointment, and increas by 6*d.* a day biennially up to a maximum of 6*s.* 6*d.* After 21 years' service they a entitled to retire on a pension of 3*s.* a day.

Existing dissatisfaction among Schoolmasters. 321 to 336, 374, 496 to 511, 535 to 539, 621 to 632, 683 to 688, 781 to 783.

The evidence which we have received shows clearly that a widespread feeling of di satisfaction with their position prevails at present among Army Schoolmasters. T grounds on which this feeling are alleged to rest have been most carefully investigate by us; besides independent witnesses, we have specially examined on this subject o Superintending and two Regimental Schoolmasters of great experience, to whom th fullest opportunity was afforded of stating without reserve the circumstances by whi the class they represent consider they have reason to feel aggrieved.

Examination of its causes.

We have come to the conclusion that while some of the alleged grievances are mo imaginary than real, and some of the circumstances complained of are necessary co ditions of military life, the position of Army Schoolmasters is not in all respects such to attract at the present time the class of teachers who formerly entered the servic We base this conclusion not only on an examination of the statements of schoolmaste themselves, but also on the evidence of disinterested and independent witnesses. A though the member of the Council of Military Education whom we examined on th

81, 147, 187, 191. subject expressed a strong opinion that the complaints of schoolmasters are groundles other equally impartial witnesses do not appear to share this opinion. The Inspector

228 to 235, 783, 804, 1316. Army Schools, the Chaplain-General, and several regimental officers have mention points in which the position of a schoolmaster is not all that could be desired. It h

281, 346, 401 to 404, 485, 502, 503, 801, 1281; Canon Moseley, Replies; Mr. McLeod, Memo. also been strongly represented to us that, owing to various changes which have be made of recent years in the regulations affecting schoolmasters, the department is n held in as high esteem as it once was. The class of men entering it are stated to ha deteriorated both in educational attainments and in *physique*. It is certain that t

79, 233, 234, 257, 383; Returns, p. 166. number of candidates for admission to the service from civil life has for some years be steadily decreasing, having fallen from 34 in 1861 to only 3 in 1869. And while t

150 to 153, 383, 553, 838. appointments are so little sought after by civilians, they appear to present scarcely great attraction to those serving in the ranks of the Army. Though the military qual

ions required from soldiers for admission to the Normal School have been several 333.
es lowered, the returns we have received show a diminution in the number of military Returns, p. 166.
npetitors from 32 in 1867 to 14 in 1869. If the position of schoolmaster were one
ich were coveted by soldiers it is probable that the school assistants employed in the
gimental schools would furnish annually a large supply of successful competitors for
post. Yet, although there are upwards of 500 school assistants employed, there are 150 to 153.
the present time only thirteen soldier candidates for the appointment of schoolmaster
der training at the Normal School. In fact it is to be feared that, unless measures
taken to attract a larger number of applicants, the supply of trained schoolmasters
l in the course of a few years be inadequate to meet the vacancies in the service.

One principal cause of the existing dissatisfaction is stated to be the abolition of the Abolition of Warrant Rank.
mer regulation by which warrant rank was granted to a schoolmaster promoted to the
st class. This rank placed him above the regimental serjeant-major, to whom all 188, 189, 768 to 710.
my Schoolmasters alike are now subordinate. It is represented that by this measure
t only are the attendant privileges of the higher rank lost, but that the schoolmaster 497, 629, 630, 714*a*.
kept in a stationary position, has no prospect of advancement after many years'
vice, and is liable to be passed over by non-commissioned officers whom he may have
ught as recruits. It is urged on behalf of the schoolmasters that while retaining their 321 to 327, 336, 506, 713, 714.
esent position on first appointment, they should be permitted to attain the rank of
rrant officer after a certain number of years' service. We must, however, observe
at the School Regulations of 1863, while abolishing the warrant rank, created the
ade of Superintending Schoolmasters, and thus held out to schoolmasters generally,
the reward of zealous discharge of their duties in the subordinate appointments, the
ospect of promotion to a higher rank, that of commissioned officer, than had previously
en within their reach. Nor can we, after careful consideration of the evidence before 148, 149, 191, 481.
, think it advisable to revive the anomalous rank of warrant officer, which, from the
conveniences attached to it, it has been found necessary to abolish almost universally
the Army. Although some regimental officers express themselves as not unfavour- 773, 802; Replies.
le to warrant rank being given to schoolmasters, other witnesses of great experience,
nong them His Royal Highness the Duke of Cambridge, hold a most decided opinion 2262, 2317; Sir J. Scarlett, Sir H. Grant, Lord W. Paulet, Lt.-Gen. Eyre, Maj.-Gen. Russell, Col. Egerton, Col. Shute, &c.; 190, 722, 978.
at such a measure would be highly disadvantageous, and likely to prove prejudicial
discipline. A large number of the schoolmasters at present in the army have served
the ranks, and their elevation to the rank of warrant officer, even if it did not lead to
resumption on their part, might probably create dissatisfaction among the non-commis-
oned officers to whom they had previously been subordinate. It has also been brought
our notice that, during the existence of the regulations which conferred warrant rank
pon schoolmasters, difficulties and inconveniences were found to occur, leading even 187, 723, 2263; Canon Moseley, Replies.
some cases to breaches of discipline. It would in our opinion be most unwise to risk
ne recurrence of such results. We think it absolutely essential to the interests of dis-
pline, and for the due preservation of the chain of responsibility in a regiment—as
ointed out by His Royal Highness the Duke of Cambridge—that no intermediate
uthority should intervene between the commissioned officer and the serjeant-major, who 723, 763 to 765, 978, 2269, 2317.
ould be the sole link of communication between the commissioned and non-commis-
oned ranks. The present rank of schoolmasters is, we consider, sufficient to secure
or them proper influence and consideration with those who may come under their in-
ruction; they hold a position superior to that of all non-commissioned officers excepting
ne regimental serjeant-major, with whom, provided they confine themselves to their 881, 977.
roper sphere of duties, they need run no risk of being brought into collision. Indeed
ne evidence we have received leads us to believe that they meet, as a rule, with great 280, 679, 680, 724, 789, 1044, 2268.
onsideration from commanding officers, and respectful treatment from all ranks; and
e would especially call attention to the evidence of two regimental serjeant-majors Regimental Serjeant-Majors Moreton and McKay; 875 to 884, 931 to 940.
hom we examined, as characterised by a complete absence of any feeling of antagonism
owards schoolmasters. It is moreover doubtful whether the concession of warrant rank
would be a real boon to the schoolmaster himself, as it would place him in an anomalous
nd awkward position, rendering it impossible for him to associate either on the one
hand with the officers, or on the other hand with the non-commissioned officers of a regi- 722, 1240; Sir H. Grant, Replies.
ment. Instead of conferring upon schoolmasters a rank, the advantages of which, it
eems to us, would be more imaginary than real, we think it preferable to make more
substantial and tangible improvements in regard to their pay and position.

It has been represented to us that the loss of warrant rank has been accompanied by Other grievances.
measures tending, in the opinion of schoolmasters, to lower their dignity in the eyes of
he Army; and that the misdeeds of a few individuals have, in certain cases, been 254, 497, 503, 683, 685, 783, 2233.
visited on the whole class, on whom an undeserved stigma has been cast by some of the
regulations issued of late years. It also appears that while the duties of schoolmasters

have been gradually increased by lengthening the daily school hours (more particularl in consequence of the institution of special classes), by rendering them liable to be calle
369, 543. on to take part in Sunday school teaching, and by requiring them to deliver lectures
377, 2267. the troops, the emoluments of their office have been diminished. The rates of lodgin
571 to 574. money originally granted to them have been reduced; the privilege of superior acco
576, 688. modation on board ship has been taken away; the fees for the instruction of childre
359, 361. a portion of which were formerly paid to the schoolmaster, are now entirely credited the public; and they are denied the opportunity of deriving pecuniary advantage fro
252, 259, 787. private tuition. In many of these respects it appears to us desirable that alteratio should be effected.

Changes proposed in minor regulations.

We therefore recommend the relaxation of such regulations, not necessary to t maintenance of discipline, as appear to place schoolmasters in an invidious positic We consider it unnecessary that they should wear chevrons, which are the badge of
234, 335, 504, 683, 1250, 1317 to 1320, 2265. combatant rank; indeed we would recommend that the schoolmasters' dress should made less military in appearance, and that the sword like the chevrons should be d carded, as unsuitable to the purely non-combatant position they occupy. We also adv
194, 254, 434, 783, 1328, 2264. that the regulations requiring a schoolmaster to show his kit, and prohibiting him fr
2231 to 2234. being president of the committee for the management of the regimental recreation roo
328 to 330, 505. should be rescinded, and that it should be no longer compulsory on an unmarried scho master to mess with the serjeants. The existing regulations on these subjects appear us unnecessary, while their tendency is to lower the dignity of the office of schoolmast We also recommend that schoolmasters should be exempted from the punishment reduction to the ranks, for which dismissal, loss of service, or suspension, should substituted. The former punishment seems to us to press with undue severity upo
1275, 2270 to 2276. body of men who, though enlisted soldiers, may in education and feeling be wid
2269. removed from the large majority of those who serve in the ranks of the Army. W the above exception, however, we consider that schoolmasters should continue to subject to the Mutiny Act and Articles of War. It would be most prejudicial good order, and in the highest degree dangerous, that any individual holding a recognis
1247, 1248. position in a regiment, and more especially one able to exercise such influence as schoolmaster, should be exempt from the ordinary rules of military discipline.

Sunday school teaching and lecturing.

We have in a previous part of our Report expressed our opinion that schoolmast should be relieved from Sunday school teaching; we also consider it advisable that th should be exempted from all obligation in regard to lecturing, but to this we shall m particularly refer when speaking of the present system of lectures to troops.

Private instruction.

With regard to the question of permitting schoolmasters to engage in private tuiti
252, 354 to 358. we have had some hesitation in recommending any change in the present regulatio It appears that when the permission was formerly granted it was much abused, a that the regular school work was in many cases sacrificed to the instruction of priv pupils. Two schoolmasters themselves, whom we examined on the subject, app
354 to 358, 523, 524. inclined to be unfavourable to the relaxation of the present rule, on the ground t the time and energies of a schoolmaster who performs his duties conscientiously already severely taxed, and that the privilege is liable to abuse. On the other hand
357, 642. is probable that occasional relief from the routine work of his ordinary instruction, a occupation in teaching pupils of a higher social class, would prove of advantage t teacher. Moreover, at many stations, where civilian masters are not available, it wo
528, 1264. often be a great convenience to officers to obtain instruction for their children, with the necessity of their attending the regular school classes. Cases also might arise which officers themselves might desire to take advantage of the assistance of a Regimen
458, 641, 642, 1026 to 1028. Schoolmaster. For these reasons we recommend that permission to engage in priv tuition should, under strict limitations, be granted to schoolmasters. To prevent abu the permission should be granted only with the sanction of the commanding office
357, 358, 527, 787, 1259. the regiment, and should extend only to the later portion of the day after the conclus of the regular school hours.

Pay and pension.

We consider it further desirable to improve the position of schoolmasters in regard pay and pension. In the latter respect especially it has been brought to our no
498, 623, 705. that they are in an inferior position as compared with that of most other ranks in service.

Pay of Superintending Schoolmasters.

We are of opinion that the rates of pay granted to Superintending Schoolmasters not afford an adequate remuneration for the duties they at present perform. The chan we have recommended in regard to the inspection of schools will increase the responsibi of these duties; and in consideration of this fact we have proposed that the titl

Superintending Schoolmaster should be changed to that of Sub-Inspector of Army Schools, as more properly representing the duties he will perform. We recommend that a Sub-Inspector on first appointment should receive 10*s.* a day, and that he should be entitled to retire on full pay after 30 years' total service, during 10 at least of which he shall have served as Sub-Inspector. We also consider that retirement should be compulsory at the age of 60. Sub-Inspectors superannuated, invalided, or retiring by permission before the completion of 10 years' service in that rank should receive a proportionate retiring allowance. 377, 378, 396; Col. Gleig, Memo.

It has been brought to our notice that a Superintending Schoolmaster, if a married man, is liable to actual pecuniary loss on his promotion, from the fact that his wife is no longer permitted to act as a schoolmistress, while at the same time, unless she has been invalided prior to his promotion, she is not entitled to a pension. The result is that the Superintending Schoolmaster after being promoted is in receipt of less emolument than the amount of the joint income of himself and his wife before his promotion. We are of opinion that a regulation which makes an individual a sufferer pecuniarily by his advancement is objectionable, and we recommend that the wife of a Sub-Inspector, if a schoolmistress, should, on ceasing to be allowed to act in that capacity, become entitled to the same pension as if she had been invalided. We also consider that this alteration should apply retrospectively to the wives of the present Superintending Schoolmasters, of whom there are only 12 in the service. 375, 379, 380, 558 to 563, 703 to 705.

Pay of Schoolmasters.

With regard to the lower ranks of schoolmasters the evidence before us shows rather that the pay on first entering the service is insufficient to enable a young schoolmaster to maintain his position, than that the department as a body are inadequately remunerated. We consider that by a re-adjustment of the existing rates a more satisfactory arrangement can be effected at a very slight increased expense to the public. At present a schoolmaster on first appointment receives 3*s.* a day, which is increased biennially by 6*d.* a day. We recommend that the pay on first appointment should be 4*s.* a day, but that the increase of 6*d.* a day should not commence until after three years' service, and should continue triennially to a maximum of 7*s.* a day. It should, however, be distinctly understood that the periodical increase should in every case depend on efficient service and good conduct, and should be granted on the recommendation of the Director-General of Military Education to those schoolmasters only of whom satisfactory reports in these respects are received. 555, 684. 374, 556.

Comparison with Civil Schoolmasters.

In determining the rates of pay for Army Schoolmasters we have been guided to some extent by the salaries offered to civilian schoolmasters in an analogous position. But in instituting a comparison between the emoluments of the two classes it must be remembered that the Army Schoolmaster invariably receives clothing, fuel and light, and rations, and has the prospect of a pension after 21 years' service; while on the other hand he necessarily incurs expenses, consequent upon moving from one station to another, which do not fall upon his civilian colleague. The value of the contingent allowances he receives, which we consider should be regulated as at present, may be approximately estimated at about 14*l.* 10*s.* per annum. The pay we have proposed for an Army Schoolmaster on first appointment—4*s.* a day, or 73*l.* a year—will thus, with the other contingent allowances, raise the total emoluments of his situation to about 87*l.* 10*s.* per annum; while we understand that from 100*l.* to 105*l.* may be considered as the amount representing the emoluments (without lodging) of a thoroughly trained National Schoolmaster in a good school under Government inspection. It must, however, be observed that the salary of the latter is stationary, whereas the Army Schoolmaster has the prospect of a constant periodical increase in his pay, and will, on the scale we propose, in 21 years' service receive on an average 99*l.* per annum; this, with his contingent allowances, will make the average yearly emoluments of his office amount in all to about 114*l.*, exclusive of the pension to which he is entitled on retirement.

Contingent allowances.

In most respects we consider that the various contingent allowances to schoolmasters are sufficient in amount, and we do not think it necessary to propose any alteration in the principles by which they are regulated. The accommodation, however, afforded to married schoolmasters appears to be sometimes insufficient, and we recommend that whenever a schoolmaster married with leave cannot be provided with the additional room to which he is entitled by the existing School Regulations (para. 23), he should invariably be entitled to draw lodging money. 783, 804.

Passages on board ship.

Numerous representations have been made to us as to the treatment of schoolmasters on board ship, and considerable dissatisfaction appears to be felt at the abrogation of a regulation which formerly entitled them to a second-class passage when travelling by sea. Considering, however, the difficulties attendant on the provision of accommodation on board ship, and the inconveniences to which under these circumstances all ranks alike 255, 575 to 577 687, 688, 781. 722, 1252.

must be prepared to submit, we are not of opinion that the loss of the privilege at one time accorded to them ought to be regarded by schoolmasters as any real hardship.

Pension. 498, 623, 705.

The rates of pension at present granted to schoolmasters do not appear to us to be sufficient; we recommend that a schoolmaster retiring after 21 years' service, during at least three of which he shall have been in receipt of the highest rate of pay, should receive a pension of 3*s.* 6*d.* a day, being the half of that rate. Should he not have been in receipt of this rate for the required three years, we propose that his pension should be the half of the highest rate that he has drawn for three consecutive years.

School Assistants. 57, 95 to 104. 186; Col. Gleig, Memo. 417; Maj-Gen. Russell, Col. Cameron, Replies. 346. 238, 346.

In connexion with the pay of schoolmasters we think it necessary to advert briefly to that of school assistants. These assistants are appointed to aid the schoolmaster in the instruction of the grown children and adults; they are selected by the commanding officer from the men of the regiment, and receive an allowance of 3*d.* a day. The number of assistants is dependent on the number of names upon the school books, one assistant being allowed for every 60 names. This system of appointment is represented as being extremely defective, the number of names on the books in the adult school affording no criterion (as we have already stated) of the number of pupils attending the school. The consequence is that in many cases a much larger number of assistants are employed than are actually necessary. We recommend that, in place of this, the number of assistants should be calculated according to the average attendances, and that they should be appointed in the proportion of one to every 20 pupils attending the adults' and grown children's school. We also consider that the possession of a second-class certificate of education should, as a general rule, be a necessary qualification for appointment. From the evidence before us we are inclined to believe that there is sometimes considerable difficulty in providing the schoolmasters with qualified assistants. Commanding officers are, not unnaturally, indisposed to lose the active services of non-commissioned officers and soldiers whose superior attainments make them particularly useful for regimental duties; and well-educated privates are discouraged from accepting the post of teacher by the loss of the chance of promotion which it generally entails. In order to encourage qualified men to undertake the duties of school assistants, we recommend that under each schoolmaster one assistant should be appointed with the special allowance of 6*d.* a day, and that while employed in this capacity he should, if below the rank of serjeant, be given a step of acting rank. The pay of the other assistants we also propose to increase to 4*d.* a day. We further consider it highly desirable that, in order to obviate the disadvantages of frequent changes among the assistants, a greater degree of permanence in the tenure of their appointments should be introduced.

The improvements we have recommended in the position and emoluments of Army Schoolmasters will, we believe, remove every substantial ground of dissatisfaction, and will place them in a position which will contrast favourably with that of their civilian colleagues.

Status of Schoolmistresses.

Appointment of Schoolmistresses. School Regulations. 56, 387, 388.

No Normal school for training Army Schoolmistresses is maintained at the public expense; they are appointed between the ages of 21 and 30 either from persons holding certificates of proficiency under the Committee of the Council of Education, or from those who have been employed as assistant teachers in Army Schools. The former class of candidates are appointed without further examination; the latter class are examined before appointment as schoolmistresses, with the object of proving that their education and skill in teaching are satisfactory.

Their pay.

Schoolmistresses are of three classes; their first appointment is to the third class, and they are afterwards promoted according to their merit and services. Their pay is as follows:—

First class Schoolmistress - - -	36*l.*	per annum.
Second „ - - -	30*l.*	„
Third „ - - -	24*l.*	„

Pension.

Their pension varies after 12 years' service from 9*d.* to 1*s.* a day according to circumstances, with an increase of 1*d.* for every additional year of service up to a maximum of 2*s.* a day.

Inadequacy of present rates of pay. 667, 1058, 1182; Mrs. C., Replies. 366, 367; Mrs. D., Replies.

It has been strongly represented to us that the pay of schoolmistresses, more especially on first appointment, is quite inadequate to enable them, without support from other sources, to maintain themselves in a respectable position. This fact indeed appears to be recognised by the existing regulations, which grant to an unmarried schoolmistress, when she is not provided with lodging and fuel in kind, an allowance for these

purposes entirely out of proportion to her pay; the object apparently being to make her contingent allowances compensate for the inadequacy of her salary. The result is stated to be that an unmarried schoolmistress of the third class may in some cases be in a better pecuniary position than a married schoolmistress of a higher class, to whom the lodging allowance is not granted. 367, 667; Mrs. C., Replies.

All the witnesses we have examined on the subject concur in recommending an increase in the existing rates of schoolmistresses' pay; and while effecting such an increase we think it desirable to reduce, though not in a corresponding degree, the present disproportionate lodging allowance. We propose that a schoolmistress on first appointment should receive 30*l.* a year, that when promoted to the second class she should receive 36*l.* a year, and that the pay of the first class should be 44*l.* a year. At the same time we recommend that appointments to the first class should in future be only made to meet the special wants of certain stations, where from exceptional circumstances a separate girls' school is an absolute necessity. The lodging allowance we propose to reduce from its present amount of 8*s.* 6*d.* a week to 7*s.* a week. Proposed rates. Col. Gleig, Memo.; Mr. Belling, 348; Schoolmaster A., 597; Schoolmaster B., 663.

It is not only in regard to lodging allowance that a difference exists between married and unmarried schoolmistresses. In other respects also the position of the former appears to be inferior to that of the latter. When travelling they are treated merely as women of the regiment, while unmarried schoolmistresses are entitled to superior accommodation. We are decidedly of opinion that these anomalies should be removed, and that married schoolmistresses should be placed in the same position as regards quarters, allowances, and all privileges as the unmarried, whether the husband be entitled to such allowances himself or not. We think it, however, undesirable that an unmarried schoolmistress, or a married schoolmistress whose husband is absent, should be required to live in barracks; and we recommend that she should at her option be permitted to draw lodging allowance instead of being provided with quarters. We also consider that every schoolmistress, whether married or unmarried, should be entitled to draw rations. In other respects, with the exceptions mentioned, we propose that the allowances to school mistresses should be regulated as at present; and in regard to pension, the only change we recommend is that the minimum rate granted should in future be 1*s.* a day. Assimilation of allowances to married and unmarried Schoolmistresses. 1064, 1069, 1070; Mrs. C., Mrs. D., Replies. 1160 to 1162, 1223, 1224; Mrs. D., Replies.

To assist the schoolmistress in the charge of the infant and industrial school pupil-teachers and monitresses are employed. The latter are invariably selected from the girls attending the school, and the pupil-teachers are in general taken from those who have filled the position of monitresses. A monitress is allowed when the number of children attending the school exceeds 25, and a pupil-teacher when it exceeds 50. Monitresses must be between the ages of 13 and 17, and pupil-teachers between 17 and 21. The pay of the former is 4*l.* per annum, that of the latter is 6*l.* per annum on first appointment, and rises yearly by 3*l.* up to a maximum of 18*l.* Monitresses and Pupil-teachers. 56.

We consider it advisable, in accordance with the opinions expressed by the schoolmasters and schoolmistresses we have examined, that a reduction should be made in the age at which both monitresses and pupil-teachers are eligible for appointment, as considerable difficulty is stated to occur in finding candidates willing to accept the situations at the ages at present fixed. We therefore recommend that the former should be eligible for appointment at the age of 12, and the latter at the age of 15. It also appears that the pay of monitresses is inadequate, and that there is in consequence at times difficulty in filling the vacant appointments. We consider that they should receive 4*l.* during the first year of their appointment, and 5*l.* in every subsequent year. We do not think it necessary to make any addition to the pay of pupil-teachers, considering the earlier age at which they will in future be eligible for appointment, and we merely propose that the existing rates should be slightly modified, and should stand as follows:— Age of appointment. 368, 1130, 1219. Rates of pay. 368, 597, 664, 667, 1098, 1185; Mrs. D., Replies.

Recreation Rooms and Libraries.

The organisation of the present system of recreation rooms and libraries was the result of the recommendations of a Committee appointed in 1861 by the late Lord Herbert, when Secretary of State for War, to consider the question of libraries, reading rooms, and day-rooms for the troops. The general principle of the existing system is that while libraries are garrison institutions furnishing supplies of books to the various regiments in the garrison, recreation rooms are regimentally conducted for the use of the men of each separate regiment. Origin of present system. Report of Committee on Libraries, Reading-rooms, and Day-rooms, 1862.

Organisation.

At every important barrack in the United Kingdom and the colonies recreation rooms are now established. In many instances buildings have been specially erected for the purpose, containing two spacious rooms, one of which is devoted to reading, the other to games. Where special buildings do not exist, barrack rooms are employed, and in these cases, owing to the want of space, one room only is in general provided, which is used both for reading and games. The rooms are furnished, and supplied with such games as bagatelle, chess, draughts, &c., at the public expense. In further aid of the recreation rooms a sum at the rate of 2*l.* 10*s.* per annum for each troop or company is granted by Government. From this sum 5*s.* a quarter per troop or company is paid towards the garrison library, which forms a central depôt from which the several regimental recreation rooms receive their supply of books, which are exchanged from time to time. Many regiments have in addition a small regimental library, which is kept in the recreation room and is moved about with the corps. A small subscription, which as a maximum is not to exceed 3*d.* a month for a private, and 6*d.* for a serjeant, is charged to those who wish to avail themselves of the recreation room; these subscriptions, together with the balance of the Government grant, are employed in supplying the reading room with magazines and periodicals, and in paying the regimental librarian, an experienced non-commissioned officer appointed to take charge of the room. In many recreation rooms refreshments, exclusive of beer and spirits, are sold to the subscribers at a fixed rate. The general management of the institution is left to a committee of non-commissioned officers and soldiers elected by the subscribers themselves, and presided over by a serjeant-major or colour-serjeant appointed by the commanding officer.

Queen's Regulations, par. 1048 to 1084

The number of regimental recreation rooms in existence on the 31st of March 1869 was 218, of which rather more than half consisted of two rooms. The average number of subscribers to them is approximately estimated at eight-thirteenths of the troops.

Returns, p. 142.

718.

The number of garrison libraries at home and in the colonies at the same date was 123, in addition to which, at many places which are permanent stations for the Royal Artillery and Royal Engineers, special libraries for the use of the troops of these branches of the service are maintained.

Returns, p. 36.

Existing arrangements generally satisfactory.

On the subject of recreation rooms we have addressed questions to numerous commanding officers, and have examined several witnesses, among them an officer of the Royal Engineers who has been much employed in their construction, and a regimental schoolmaster who has had great experience in their management. The evidence we have received is unanimous in representing the practical working of these institutions as highly satisfactory, and as having had most beneficial effects upon the soldiers of Your Majesty's Army, who are thus provided with means of innocent recreation counteracting the temptations to low and vicious amusements to which they are so much exposed. One of our witnesses states, from his own experience in the management of recreation rooms, that "their success is unequivocal, and that they have conferred greater benefit "upon the private soldier than any other moral agency which has been brought to bear "upon him." It may be anticipated that the advantages of these institutions will be still more appreciated, and that their effects will become even more satisfactory, as an improvement takes place in the education of the Army.

2216.

Recommendations.

The results of the present system of recreation rooms appear so satisfactory that it is unnecessary for us to recommend any important alterations in their general organisation. We wish, however, to point out that the system has up to the present time been only partially applied, as owing to the want of accommodation nearly one-half of the existing institutions only consist of a single room. We strongly recommend that this deficiency should be remedied without loss of time, and that in all barracks in which the head-quarters of a regiment or considerable detachments of troops are usually stationed two good rooms should be invariably provided for purposes of recreation.

236, 1265; Col. Shute, Replies; Returns, p. 142.

Sir R. Airey, Col. Gloster, Lt.-Col. Nugent, Lt.-Col. Clarke; Sir J. Scarlett, Col. Radcliffe, Lt.-Col. Mostyn, Qr.-Mr. McBlain, Replies; 420, 2095 to 2097, 2262.

It has been stated to us by several witnesses that the supply of furniture and games is frequently not adequate to the number of subscribers. But the most general cause of complaint appears to be the insufficiency of the allowance of fuel and light, in supplementing which great expense is often entailed upon regimental funds. In order to ensure the full effect of the advantages anticipated from the institution of recreation rooms, we think it of the highest importance that the appearance and comfort of the rooms, as well as the means of amusement provided, should make them thoroughly attractive to the soldier, and enable them to compete successfully with less innocent places of amusement outside the barrack walls. We therefore strongly recommend that immediate measures should be taken to supply the deficiencies to which we have called attention.

It has also been represented to us, on the authority of a member of the late Council of Military Education, that the annual Government allowance towards the expenses of the

reation rooms is the same for a battery of Artillery and a troop of the Engineer ain. as for a company of the Line; and that, though sufficient in the latter case, it is dequate in the former, in which the number of men is much greater, while, at the ne time, these batteries and troops are frequently stationed alone, and are therefore own on their own resources. The same witness calls attention to the insufficiency the sum of 10*l.*, at present allowed for the purchase of books on establishing a new rary. We recommend that increased Government assistance should be granted in th these respects, and that the allowance in aid of the recreation room should be culated according to the number of men quartered in the barracks instead of according the number of troops or companies. 716, 717, 2217; Col. Eaton, Replies. 716.

In connexion with the subject of recreation rooms our attention has been particularly wn to the question whether it would be desirable to place such rooms, as a general le, in close proximity to the canteens. The evidence we have received on this point conflicting; several witnesses consider that by such an arrangement the attractions of e recreation room would be increased, and establishments at Windsor, Gravesend, and inchester are mentioned as instances of its successful results. The majority of our tnesses, however, maintain the contrary opinion, and consider not only that the recreation om would lose many subscribers, who now resort to it for the sake of quiet, if it were aced under the same roof with the canteen, but also that the proximity of the latter tablishment might throw unnecessary temptation in the way of those frequenting the reation room. His Royal Highness the Duke of Cambridge, while observing the eat difference of opinion that prevails on the subject, and stating that a committee of ficers reported in favour of the juxtaposition of the two establishments, says, "There is a great advantage in having them under one roof, but there are also very great disadvantages, and I am almost inclined to think that the disadvantages are more marked than the advantages. The advantages are these, that you can bring the management of the whole thing under one direction. The disadvantages are, that many a man goes to the canteen who would never think of going to the recreation room, and many a man goes to the recreation room who is not generally in the habit of going to the canteen. I think that it would not improve the bad men, but that it might have a demoralising effect on the good men." Proximity of the recreation room to the canteen. 2100; Replies. 2087, 2165. Lord Strathnairn. Lord W. Paulet, Lt.-Gen. Eyre, Maj.-Gen. Russell, Maj.-Gen. Murray, &c.; 460, 719, 1016, 2216. 2277.

We agree with His Royal Highness in considering that the disadvantages of placing he recreation room in proximity to the canteen preponderate over the advantages, and e are therefore of opinion that, as a general rule, it is preferable to keep the two stablishments entirely distinct. At the same time we believe that special circumstances nd considerations of locality may occasionally render it advisable to place them in roximity to each other, and we therefore do not recommend any interference with such n arrangement in cases in which it has already proved successful. We are, however, ecidedly of opinion that whenever the two establishments are under the same roof the ntrance to the recreation room should invariably be separate from that of the canteen. Ve further consider it highly desirable that, whenever practicable, a room separate from he recreation room should be appropriated in barracks for the purposes of fencing, parring, single-stick, and other similar exercises. The arrangement not recommended. 2166, 2277. 1266.

Whether or not the canteen and recreation room are combined in the same building, /e recommend that the financial management of the two establishments should be malgamated, and that the profits arising from the canteen should be in part devoted o the purposes of the recreation room. With this augmentation of the recreation room unds it might probably be advisable to increase slightly the present annual contribution of 5*s.* per company from these funds to the garrison libraries, the subscription to which s at present stated to be insufficient to keep up a proper supply of books. We would ecommend that the general management of the funds both of the canteen and the ecreation room should be entrusted to a committee of three officers, and that some rrangement should be made, through the agency of the Paymaster or otherwise, for elieving these officers from responsibility in regard to the custody of the funds. At the ame time, the arrangement of minor regulations connected with the recreation room, and he suggestion of the mode of applying the funds towards its improvement, should be eft, as at present, to a sub-committee elected by the subscribers. We recommend the abolition of the regulation which prohibits a schoolmaster from being president of the ecreation room sub-committee, both because (as previously stated) it is considered invidious towards the schoolmaster, and because it appears to us that from his position and experience he may often give valuable assistance and advice in the management of the institution. Financial management. 2086, 2103, 2148, 2216, 2225, 2292. 2216. 2288 to 2291. 2231 to 2234.

In concluding our remarks on the subject of recreation rooms we desire to observe that, while much has been done by the Government to improve the condition of the Extension of the present system.

soldier by the establishment of these institutions, the recommendations of the Committee of 1861 have as yet been only partially carried out; and we strongly recommend that full and immediate effect should be given to the various suggestions contained in their Report bearing on the defects which we have noted.

Lectures.

System of lectures.

As a further means, in addition to those of a strictly educational character, for improving the moral and intellectual tone of the Army, a system of lectures to the troops has of late years been introduced. The lectures take place in the evening during the winter season, from time to time, and are generally given in the schools, though sometimes the recreation rooms are used for the purpose. The lecturers are generally schoolmasters, sometimes chaplains or regimental officers. Government aid is afforded in the shape of magic lanterns, with appropriate sets of slides, prepared to illustrate various subjects, and sent round from station to station. Admission to the lectures is free.

369.

Its results not satisfactory.

237, 487, 671, 791; Replies.

From the opinion expressed by nearly all our witnesses, we fear that the results of the lectures have not proved so successful as was anticipated on their institution. Much of course must depend on the personal capacity of the lecturer, which under the present system does not appear to us to be sufficiently taken into consideration. Though lecturing is not actually enforced by order as a duty on schoolmasters, the prevalent idea is that it is expected from every one, whether he has a talent for it or not; and its frequency although not really made a test of promotion, is certainly looked upon by schoolmasters themselves as bringing them into favour with their superiors. In fact, as stated by one of our witnesses, quantity is more thought of than quality; and though in many instances much trouble is taken by a schoolmaster in preparing his subject, and great ability in lecturing is displayed, it is frequently the case that so-called lectures are delivered which are altogether unworthy of the name. In order to remedy this, we recommend that lecturing should not be expected from schoolmasters in general, and should not, except in clearly proved cases of ability and success, be any recommendation in favour of an individual. No returns of the number of lectures delivered should be sent in, but in marked instances of success a special report from the general officer commanding should be forwarded upon the lecturer's ability.

372, 580.

544, 582, 675.

592.

791, 908, 995, 996; Replies.

911, 912.

Apart, however, from the personal qualifications of the lecturers, the subjects of the lectures do not appear in general to be well selected. They are often too abstruse and scientific, while, on the other hand, the magic lantern illustrations do not appear to be generally appreciated by soldiers. Lectures on military subjects might, we think, with advantage be more extensively introduced; and we would especially call attention to the fact that lectures by officers appear to be more popular than others. We strongly recommend that officers should be invited and encouraged to render their assistance in affording to the soldier a gratification which is evidently appreciated by him.

Other entertainments preferred by soldiers.

588 to 590, 673, 674, 692, 791, 909; Replies.

On the whole, however, we consider from the evidence we have received that readings accompanied by music, are more attractive and popular with soldiers than even the most interesting lecture. We recommend, therefore, that they should be as much as possible encouraged, and be more generally introduced into the service. At present their organisation appears to be mainly left to the private exertions of the officers and soldiers of the regiment. Considering the evident attractions they present, we think that greater and more general encouragement should be given to them; and we further consider that a portion of the canteen funds might in every regiment be employed to aid in their development. We also think it of great importance that in every large garrison a well fitted lecture room, capable of accommodating a sufficient audience, should as soon as possible be specially set apart both for lectures and for other entertainments which may be provided for the troops.

2172, 2319.

Soldiers' Institutes.

Objects of Soldiers' Institutes.

Soldiers' Institutes or Homes, as distinguished from regimental recreation rooms, are establishments beyond the precincts of the barracks. They have been founded in certain large garrisons, and owe their origin almost entirely to private liberality. Even in cases in which Government aid has been afforded in the erection of the buildings, the institutes are under private management, and are not subject to official control. Some of them have been intended merely to supply the soldier with a club in the town, affording him the same kind of comfort and amusement as is provided for him by the canteen and recreation room within the barracks. In other cases religious have been combined with secular objects.

Secular Institutes.

Of the former, or purely secular class of institutes, the only examples now existing appear to be one at Chatham for the troops of the garrison, and the Guards' Institute

London, established for the benefit of the soldiers of the Guards and other regiments the metropolis, through the instrumentality of the officers of the brigade of Guards. overnment aid was granted towards the erection of both of these establishments. Similar stitutions at one time existed at Montreal, Halifax, Gibraltar, and, on a smaller scale, Parkhurst, Chichester, and St. Helier's in Jersey. From the answers, however, hich we have received to our inquiries it appears that most, if not all, of these tablishments have gradually been closed since the institution of regimental recreation oms within barracks. Lieutenant-General Sir Richard Airey states that the number subscribers to the Soldier's Home at Gibraltar, an establishment conducted on a very tensive scale, which at one time amounted to 2,300, "subsequently, as regimental recreation rooms became established in the different barracks, fell off to a few hundreds, and the funds thus became inadequate for the support of the Home."

Maj.-Gen. Murray, Lt.-Gen. Hamilton, Replies.

2222; Replies.

Replies, p. 149.

The evidence we have received shows clearly, in our opinion, that the advantage of soldiers' club of any kind is directly proportional to its proximity to the quarters in hich the men live. A room placed within the barracks, which he can frequent henever he pleases, and without restrictions as to dress, is greatly preferred by the ldier to any establishment at a distance, however liberally it may be conducted. ajor-General Freeman Murray states that "the number of non-commissioned officers and men of the Royal Engineers subscribing to the Soldiers' Institute at Chatham is 91, and the number subscribing to their recreation room within their barracks is 529." He also mentions that the number of subscribers to the Institute from the oyal Marines diminished very considerably as soon as they were furnished with a uitable recreation room within barracks. The evidence of the Duke of Cambridge equally decided upon this point. "There is no doubt," His Royal Highness says, that unless you have these recreation rooms in barracks they are of no use. If you have the recreation room away from the barracks, however good it may be, the men will not go to it" The circumstances of the Guards' Institute in London are probably ceptional, owing to the peculiar temptations of the metropolis; and though the tablishment has not in all respects answered the expectations of its founders, it appears have been productive of some good. But with the unmistakeable preference shown by oldiers for recreation rooms within barracks, we must express our decided conviction hat they are more suited to the wants of the Army than clubs or institutes beyond the arrack precincts; and we cannot recommend that the Government should incur xpenditure in attempting to organise establishments of the latter character, the advanges of which are in general little appreciated.

Recreation rooms more popular, and preferable.

Replies, p. 144.

2295.

2098, 2099, 2171.

Institutes of a religious character, supported by private benevolence, and combining the bjects of a temperance refreshment room with those of a mission hall, still exist at veral stations, although in some garrisons—such as Dublin, Woolwich, and Portsmouth —their want of success has led to their discontinuance. The answers we have received n the subject of existing establishments of this class at Aldershot, Dover, Sandgate, nd Edinburgh, will sufficiently indicate their general features and the principles on hich they are conducted. However laudable their objects, the conditions under which ey exist are too special to admit of their advantages extending to more than a limited lass among the soldiers of the Army. We consider that such institutions must, as at resent, be left exclusively to the administration of private benevolence; for, while iving every credit to the praiseworthy intentions of their promoters, we do not think hat such establishments should either be subjected to Government control or receive upport from the State.

Religious Institutes.

Sir J. Scarlett, Maj.-Gen. Russell, Maj.-Gen. Rumley, Col. Smith, Replies.

Royal Military Asylum, Chelsea.

The Royal Military Asylum at Chelsea, originally established in 1803 as a school for he orphan sons of soldiers, was entirely re-organised in 1846, and now consists of two ranches—the Normal School for training Army Schoolmasters, and the Model School, ommonly called, after its founder, the Duke of York's School, and still serving the riginal purposes of the institution.

Present organisation.

Royal Warrant, 21 Dec. 1846.

The general management of the affairs of the Asylum is vested in a body of Commissioners, some of whom discharge their duties *ex officio* in virtue of their official ppointments in connexion with the administration of the army, while others are specially ppointed. The Secretary of State for War and the Commander-in-Chief are *ex officio* President and Vice-President respectively of the Board of Commissioners. The control f all matters connected with the interior economy and discipline of the institution is in he hands of the Commissioners, with whom also rest the appointment and removal f the greater part of the subordinate officials. The supervision of the educational lepartment of the Asylum has, since 1861, rested with the Council of Military Educa-

Board of Commissioners.

Royal Warrant, 20 April 1861.

Powers of Council of

Military Education. Royal Warrant, 20 April 1861. 9, 74; Canon Moseley, Replies.

tion, who were in that year authorised by a Warrant from your Majesty to have free access at all times to the schools of the Asylum for the purpose of inspecting and reporting on them. The functions of the Council have, however, been entirely confined to matters connected with instruction, and have never extended to the discipline of the establishment.

General staff. Col. Muller, Replies.

The general staff of the Asylum consists of a Commandant, an Adjutant (who also acts as Secretary to the Board of Commissioners), a Quartermaster (discharging at the same time the duties of Paymaster), a Chaplain, and a Medical Officer. The Commandant is the military head, and as such has the immediate direction of the discipline and interior economy both of the Normal and Model schools, although for purposes of instruction the two establishments are separate, each of them having its own special staff of teachers.

The Normal School.

Origin and objects. Royal Warrant, 21 Nov. 1846.

The Normal School was established in 1846 for the purpose of supplying the regimental schools throughout Your Majesty's service with a staff of masters thoroughly trained in the art of teaching. Every candidate for the situation of Army Schoolmaster is at present required to pass through a course of training at this institution.

Conditions of admission. 70, 78, 79, 347; Mr. Reynolds, Col. Adams, Replies.

Admission to the school is obtained by a competitive examination held half-yearly open to both civilians and soldiers, between 20 and 25 years of age. Candidates from civil life must be either certificated schoolmasters, or pupil-teachers who have completed their apprenticeship. The rank of serjeant was originally a necessary qualification in the case of military candidates, but this qualification has been gradually lowered; firstly corporals, and subsequently privates in possession of a good-conduct badge, were accepted as competitors; and at the present time the examination is open to any soldier recommended by his commanding officer. The great majority of the candidates for admission are now soldiers. The school is further recruited by pupil-teachers from the Model School and monitors from the Hibernian School in Dublin, who, on attaining the age of 20, are permitted to compete with the other candidates for admission to the institution.

333.

1337.

79, 80.

Entrance examination.

The subjects of the entrance examination consist of reading, writing and spelling, English grammar, Scripture history, English history, geography, arithmetic, and Euclid.

Duration of course of training. 72, 73.

The course of training lasts, under ordinary circumstances, for two years. During the first year the students are under instruction in the Normal School; during the second year they are employed as teachers in the Model School, where they are trained in the art of teaching.

Subjects of instruction. Mr. Reynolds, Replies.

The subjects of instruction in the Normal School consist of arithmetic and mensuration, algebra, geometry, trigonometry and logarithms, industrial mechanics, English history, history of India and the British colonies, English grammar, geography, chemistry and physics, fortification, singing, drawing, reading, penmanship, and Scripture knowledge. Instruction is also given in the art of lecturing and in the performance of lecture experiments.

Staff of instructors. 75, 1356.

The special staff of instructors for the Normal School has hitherto consisted of a Head master and an Assistant master; but, in consequence of the decrease in the number of students, the services of the Assistant master have been recently dispensed with, and the ordinary education of the school is now conducted by a single master. Fortification is, however, taught by the Adjutant of the Asylum; religious instruction is given by the Chaplain; and singing and drawing are taught by two non-resident masters who also teach these subjects in the Model School.

Number of students. 76, 1344, 1345. 82, 83.

The authorised establishment of the school consists of 40 students, but owing to the small number of candidates who have of late years competed for admission the number of students has much decreased, and at present consists only of sixteen. Of these 13 are soldiers, and only three civilians. During their period of residence civilian students are provided with messing and uniform at the public expense; soldier students receive the same clothing and pay, subject to a similar deduction for messing, as if with the regiments.

Appointment as schoolmasters.

On completing their period of training, and successfully passing an examination, the students are appointed Army Schoolmasters, the civilians being required to enlist for a period of 12 years, and the soldiers being discharged from their regiments and re-enlisted for a similar term of service.

Inadequate results obtained by the Normal School.

The Normal School does not appear to us, at least of late years, to have fulfilled the expectations of its founders. The great diminution which has taken place in the number of the students of itself naturally suggests the question whether the results obtained by the institution are sufficient to justify its maintenance. The present reduced number

e no doubt in great part owing to the diminished estimation in which, as we have ated in a previous part of our Report, the position of Army Schoolmaster appears of te years to have been held, and the consequent reluctance on the part both of civilians id of soldiers to offer themselves as candidates for the appointment. The measures e have recommended will, it may be anticipated, effect an alteration in the existing ate of feeling, and, by rendering the schoolmaster's position more attractive, increase ie number of applicants for admission to the school. In this case one of the arguments or the abolition of the establishment would be removed, as the present disproportion :twee the expense of the institution and the number of pupils under instruction at would cease to exist. Apart, however, from this consideration the wider question has ngaged our attention, whether the system of training provided by the Normal School the best preparation for the duties of an Army Schoolmaster; and whether its advan- ges are so manifest as to necessitate the maintenance of a special training institution or the limited number of candidates required to provide for the vacancies annually ccurring in the staff of teachers in the service. We desire to give full credit to the bility with which, as is proved by the evidence we have received, the system of instruc- on at the Normal School has been carried out; but we are of opinion that greater dvantages than those resulting from the present system could be obtained without the naintenance of this institution. We consider that the establishment is on too small a cale, and not sufficiently complete in its organisation, to fulfil the various objects which training school is designed to meet. We must also express our opinion that a defect n the present system of the Normal School is the absence of sufficient instruction in the rt of teaching. The students are, indeed, after completing the first portion of their ourse, employed for 12 months as instructors in the Model School; but the experience hus obtained relates only to the teaching of children—for which purpose the time occu- ied appears to us unnecessarily long. Although this deficiency is to some extent emedied by the custom, usually adopted in practice, of employing young schoolmasters, n first entering the service, under an experienced teacher, no actual regulation has been hown to us which secures this system being invariably carried out.

1315; Col. Muller, Replies.

Considera- tion of the necessity of such an in- stitution.

Defect in the present sys- tem of train- ing.

346, 569, 654 to 661, 1349 to 1351, 1376 to 1378; Mr. Reynolds, Replies.

Several of the witnesses whose opinions we have received appear to question the ecessity of maintaining the Normal School, while some strongly advocate its abolition. t has been suggested that reliance might be placed exclusively upon civil training nstitutions to afford a sufficient supply of qualified candidates for the situation of Army Schoolmaster. Even, however, if the increased encouragements we propose to offer should succeed in attracting civilian applicants in numbers sufficient to recruit the teach- ng staff of the Army entirely from this class, we should consider it highly inexpedient o exclude soldiers from the prospect of attaining the position of Army Schoolmaster. Witnesses of great authority, among them His Royal Highness the Duke of Cambridge, nave referred to the advantages of previous military experience and habits in an individual ppointed to the post of schoolmaster in a regiment. His Royal Highness says, "I "decidedly prefer a man being a schoolmaster who has first been a soldier, because he "understands discipline. It is desirable that there should be as little interference as "possible with the schoolmaster, but there should be perfect submission on his part if "the necessity arises; and that, I think, you can only instil into the mind of a man who "from early life has known what discipline is." Mr. Reynolds, the Head Master of the Normal School, speaks of the beneficial influence exercised by soldier students at that institution, in introducing among the civilians the feeling of military obedience, the want of which feeling he mentions as having been "the serious defect as Army Schoolmasters "of many otherwise excellent men." The same witness also expresses his opinion that "with reference to his future as an Army Schoolmaster the best soldier is, on the "whole, better than the best civilian." Not only does the soldier possess, instinctively as it were, the spirit of military discipline, but he has the further advantage of an acquaintance with the habits and feelings of soldiers, and is therefore more likely to be able to exercise influence over those he is called upon to instruct. And while recognising the superiority which the soldier appears in these respects to possess over the civilian as a military schoolmaster, we should also think it extremely undesirable to deprive the army of one of the few advantages which educational attainments offer to it. Indeed the strongest argument in favour of maintaining the Normal School seems to us to be that it affords facilities for soldiers to qualify themselves for the position of schoolmaster. But this argument loses its force if, as we believe to be possible, a scheme can be devised for supplying the army with trained schoolmasters, which, while offering every encourage- ment to civilian candidates, shall afford all reasonable facilities to soldiers in qualifying themselves for the appointments. We consider that the admixture of the two classes is

1396 to 1398.

Admixture of soldier

and civilian candidates desirable.

desirable, and recommend that the endeavour should be made to attract candidates from both alike.

Civil training schools to be employed under certain circumstances for soldiers.

We have considered the question whether it might not be possible to have recourse generally to civil training institutions for the purpose of affording military candidates a fitting preparation for their duties. To make this an indispensable condition of appointment might prove an obstacle in the way of soldiers who may wish to qualify themselves for the position of schoolmasters; and we consequently do not recommend that soldier candidates for the appointment should necessarily be subjected to a course at a civil training school. At the same time, as it might be felt that soldier candidates would be at a disadvantage in competing with civilians for the post, we recommend that the opportunity of a previous course of instruction at a civil training institution should be afforded to such soldiers as may prove themselves eligible for this privilege, and may be desirous to avail themselves of it. We propose that, while reliance should be placed upon civil institutions for the supply of civilian applicants, soldiers should, as a general rule, be trained within the Army itself, and that inducements should be offered to Army Schoolmasters to interest themselves in assisting the efforts of those who may wish to become candidates for the appointments which they themselves hold.

And reliance to be placed on them for civilian candidates.

Abolition of Normal School.

We, therefore, consider that the Normal School should be abolished, a part of the saving which will result therefrom being applied to enable soldier candidates, if they desire it, to benefit by the advantages of civil training schools; and, in place of the existing arrangements, we propose the following detailed scheme for the training and appointment of Army Schoolmasters.

Proposed substitute for present system.

We recommend that appointments to the situation of Army Schoolmaster should be thrown open to public competition among civilians who have passed a period of not less than 12 months in some recognised training institution, and soldiers who have either been employed as school assistants for a similar period in an Army School, or have passed six months in the latter capacity and six months at a civil training school. The former class of candidates should be required to produce from the Principal of their training college certificates as to their moral character, and their competency to instruct both adults and children. Soldier candidates should be required to produce similar certificates as to their capacity for teaching from the Sub-Inspector of their late district and as to character from their commanding officer. To the latter qualification we think that the greatest importance should be attached, more especially as it seems that the recommendation at present required from commanding officers as a condition of admission to the Normal School has in some cases been given without due regard to the antecedents of the applicant. We therefore recommend that the certificate as to character should be stringently worded, and should in all cases be accompanied by a certified copy of the candidate's defaulter sheet. It has been suggested by some witnesses that the possession of the rank either of serjeant or corporal should be made a necessary qualification of admission to the examination; but, considering the difference in the rate of promotion in various corps, we are of opinion that the exaction of such a condition would press unequally upon candidates, while we believe that a certificate of character, if strictly enforced, will be found to answer every necessary purpose.

Qualifications of candidates.

In the case of civilians.

In the case of soldiers.

Col. Adams, Mr. Langmead, Replies; 333, 1446.

374, 1534; Col. Adams, Replies.

Conduct of examination.

We recommend that the examinations for appointment to the situation of Army Schoolmaster should comprise nearly the same subjects as those at present taught at the Normal School, and should be held half-yearly, under the supervision of the Director-General of Military Education. The same restrictions in regard to age and physical fitness as at present should be enforced. We further consider that pupil-teachers at the Model School at Chelsea and monitors at the Hibernian School should, as under the existing arrangements, be admitted to the competition, on attaining the age of 20, under the same conditions in regard to character and general qualifications as other candidates.

Subsequent training.

In place of entering the Normal School we recommend that candidates who successfully pass the examination should be appointed on probation for a period of six months, and should serve during that period under a schoolmaster of not less than five years standing, who, in the case of soldiers, should not be the master under whom the candidate has been trained. During this period they will acquire practical experience in the art of teaching adults, which, as we have already stated, is not invariably provided for by the present system. An arrangement such as we propose has been recommended by several witnesses. At the expiration of the six months probationary service a special report should be required from the Sub-Inspector of the district, entering into details as to the fitness of the probationer in every respect for the discharge of his duties. This report should be forwarded to the Inspector of Army Schools, be supported by him, and

346, 570, 658, 1376.

Mr. Belling, Schoolmaster A., Schoolmaster B., Mr. Reynolds, Mr. McLeod.

pproved by the Director-General of Military Education, before a permanent appointment schoolmaster is conferred. An adequate rate of pay should be allowed during the x months probationary service, but no claim for compensation should be admitted, in ie event of the probationer, on its expiration, being declared unfit to be admitted into ie Department.

Inducement to Army Schoolmasters to prepare candidates.

Mr Reynolds, Replies.

In order to encourage Army Schoolmasters in rendering every assistance to soldiers ho may wish to become candidates, we recommend that for every school assistant who successful at the competitive examination, the master under whom he has been trained ould be entitled to a gratuity of 10*l*., provided the candidate obtain the confirmation his appointment after the expiration of his six months probationary service.

Soldiers not to forfeit service on appointment.

564, 565, 1428, to 1430; Mr. Longmead, Mr. Reynolds, Replies.

It has been represented to us that, by the present regulations for the appointment of rmy Schoolmasters, a soldier on being appointed forfeits, in reckoning his service wards pension as a schoolmaster, half of his service prior to his admission to the Normal chool, and the whole of the period spent at that institution. We consider that this is regulation which presses unfairly upon soldiers, and one which must in many cases scourage them from becoming candidates. We therefore most strongly recommend iat no portion of his previous service should be forfeited by a soldier who presents mself for the examination, or subsequently acts as a probationary schoolmaster, whether e eventually receives a permanent appointment or not.

Necessity of making the conditions of appointment known to the Army.

1452; Mr. Reynolds, Replies.

It has also been represented to us that the conditions of appointment to the position f Army Schoolmaster are not at present sufficiently generally made known to the service. 'e therefore recommend that copies of the regulations on this subject, together with ie text-books required in preparing for the examination, should be supplied to the brary of every regiment, and that notice of each approaching examination, and of the onditions under which soldier candidates are permitted to present themselves, should e published in general and regimental orders throughout the service. It is not surrising that Commanding Officers should be indisposed to lose the services of men hose educational attainments would make them valuable in their regiments; but we ust that their cooperation may be fairly anticipated in furtherance of the education of ie Army, and we would suggest that their attention should be called to the importance oth of recommending none but deserving candidates, and of placing no obstacle in the ay of soldiers to whom the position of schoolmaster presents attractions, and who by eir character are fitted for the appointment. We also strongly recommend that, in all ases in which it is practicable, a soldier who has been successful in obtaining the post f schoolmaster should be reappointed to the regiment in which he had previously erved.

Co-operation of Commanding Officers desirable.

1550, 1551; Sir F. Abbott, Replies.

1430, 1431.

Results anticipated from the proposed changes.

The changes we propose in the system of training Army Schoolmasters will effect a aving of expenditure, not only by the abolition of the staff of the Normal School, but lso by the diminution of the ordinary period of training, during which candidates are aintained at the public expense. They will moreover during their course of training e utilized as instructors in Army Schools, thereby affording some return to the State. At the same time, as the competition with civilians, combined with the opportunity of aking advantage of civil training institutions, will secure a high educational standard on ihe part of the soldier candidates who succeed in obtaining the appointments, we believe hat the plan we propose will supply the Army with a staff of teachers, at least as fficient in the performance of their duties as at present, and in one important qualificaion—the art of teaching adults—possessed of greater experience than under the existing ystem.

Defective arrangements of the Normal School.

1360 to 1365; Chaplain-General, Mr. Reynolds, Mr. Longmead, Col. Adams, Canon Moseley, Replies.

The evidence we have received discloses several defects in the existing arrangements of the Normal School, more especially in regard to the accommodation provided for the students; but, as we recommend the abolition of the establishment, we have not thought t necessary to enter upon a consideration of these subjects.

The Model School.

Objects.

1278.

The Model School, or, as it is commonly called, the Duke of York's School, is intended for the gratuitous education of the orphan sons of soldiers. It originally alone constituted the Royal Military Asylum, but on the re-organisation of the establishment in 1846, and the foundation of the Normal School, a thorough reform was made in the boys' school, which was placed upon its present footing of a "Model School" for the regimental schools of the army.

Staff of instructors, &c.

1510, 1511.

The present establishment of the School, in addition to the general staff of the Asylum, consists of a Head Master and four resident Assistant Masters, with two non-resident

Masters for singing and drawing. The permanent staff of Masters are assisted by a portion of the students of the Normal School—employed in the Model School to learn the art of teaching—and by a certain number of pupil-teachers. The latter are appointed on passing an examination open to both soldiers and civilians between the ages of 17 and 19. There are at present 13 pupil-teachers. On reaching the age of 20 they compete with other candidates for admission to the Normal School. The establishment of the School further comprises a staff of non-commissioned officers (appointed from pensioners of the Army) and of female nurses, employed in the superintendence and care of the pupils.

79, 1512
1514, 1515.

Conditions of admission.
Col. Muller, Mr. McLeod, Replies.

The admission of boys to the School is determined by the Commissioners of the Asylum, on a consideration of the claims of the applicants, orphans having a priority of claim over those in whose case one of the parents is living. The privilege of admission to the School is also extended to children both of whose parents are living, provided the father is on foreign service. The limits of age for admission, which were formerly from 5 to 10, are at present from 7 to 12 years.

Number of pupils.
Col. Adams, Replies.

The number of pupils at the School was formerly 500, but owing to the necessity, on sanitary grounds, of affording increased space in the dormitories, the number has within the last two years been reduced to 458.

Organisation.
Col. Muller, Replies.

The organisation of the School is military. The boys are divided, for purposes of interior economy and discipline, into six companies, superintended by the Serjeant-Major and six Serjeants, under the direction of the Adjutant. In awarding punishment and in the treatment of offenders a military system is followed.

Instruction.
Mr. McLeod, Replies.

For purposes of instruction the pupils are divided into five classes or "schools," one of them constituting an Infant School. Each class is placed under the charge of a Master, the Head Master having the general control of the whole. The subjects of instruction comprise—religious knowledge, reading, writing and composition, arithmetic, Euclid and mensuration, geography, English grammar, English history, object lessons, singing, drawing, and natural history. The elder boys are, in addition, either trained as musicians in the band, or are taught the trades of tailoring and shoemaking.

Length of course.
1305, 1306.

Under ordinary circumstances boys are not kept at the School after the age of 14. An exception is, however, made in the case of those in the band, who are permitted to remain until 15 or 16. On quitting the institution those who are found physically fit and who volunteer for military service, are enlisted in the Army. The remainder are either delivered to their friends or apprenticed to trades. Although no restriction is put upon the pupils in their choice of a future career, the fact that they are all the sons of soldiers, and the military spirit of the institution, naturally give a military tone to their ideas, and the great majority of those who are not physically disqualified volunteer for the Army.

Disposal of the boys.
Returns, p. 167.

Advantages of the institution.

It is unnecessary for us to dilate upon the great advantages which such an institution as the Model School must, if properly conducted, confer upon Your Majesty's Service. Not only are a gratuitous education and maintenance afforded to the orphan children of soldiers, who would otherwise often be thrown helpless and destitute upon the world, but a body of young recruits is diffused through the ranks of the army, who carry with them into the service the groundworks of a sound and useful education, and a military spirit instilled into them from early childhood. The returns with which we have been supplied, and the evidence furnished both by regimental officers and from other sources, afford proof of the excellent character almost invariably borne, throughout their future career, by soldiers who have been brought up at the School.

Returns, p. 167; 421, 739, 796, 1004, 1518, 2306; Replies.

Satisfactory results of system of instruction.
Chaplain-General, Mr. Langmead, Sir F. Abbott, Col. Muller, Replies; 72, 1284.

The witnesses we have examined are unanimous in their testimony as to the highly satisfactory results of the theoretical instruction afforded to the pupils, and the excellence of the system of teaching originally introduced and still pursued by the present Head Master, of whose abilities and qualifications for his post every one acquainted with the school has spoken in the highest terms.

Unsatisfactory condition of the school in many other respects.

But although the educational state of the School appears to be excellent, we regret that we are unable to pass an equally favourable opinion upon its condition in many other respects; and we consider that numerous improvements are necessary in its mode of government, its organisation and discipline, and its general sanitary state.

Defective organisation.

We have already stated that while the supervision of the instruction at the School rests with the Director-General (who now represents the late Council) of Military Education, this officer has no control over the discipline or general arrangements of the institution, which still remain under the Board of Commissioners. The same division of authority runs throughout the organisation of the establishment. The military staff is entirely distinct from the staff of teachers; the Commandant, as head of the former, is directly

bject to the Commissioners, while the Head Master is responsible, and reports, to the rector-General. The Commandant is restricted from interfering in any way with the urse and method of instruction; and, on the other hand, the authority of the masters, d the exercise of their influence over the pupils, are rigidly confined to the class-room. at of school hours none of the masters have any responsibility for, or control over, the nduct or discipline of the boys. It is clear that practical inconveniences must be likely arise from this division of authority. Moreover it appears, from the evidence we have ceived, that the existing arrangements have led to a want of complete harmony between e civil and military staff, and that at least one instance has occurred in which the ead Master has not been treated with the respect to which his position entitles him. ich a state of things must necessarily, in our opinion, have a prejudicial effect upon e general discipline of the School.

1421 to 1423.

Col. Adams, Mr. McLeod, Replies. 1405 to 1407.

1539.

1326, 1327, 1540 to 1546, 1552.

1453, 1476, 1530.

In order to remedy the defects we have mentioned, we recommend that the Board of ommissioners should cease to have any connexion with the discipline or internal ministration of the institution, their duties being confined to the consideration of the ims of candidates for admission. The general control over both the discipline and the struction of the School should, in our opinion, be placed in the hands of the Director-eneral of Military Education, with whom should also rest the appointment and removal all individuals employed on the staff of the School. In order to ensure the maintenance a constant and systematic supervision over the state of the institution, we recommend at the Director-General should annually make a thorough inspection of the school, tending to every part of its interior economy, and should submit a detailed report ereon. We also think it desirable that some system of weekly inspection by regularly ppointed Visitors, similar to that existing at the Hibernian School, should be introduced.

Remedies proposed. School to be placed under Director-General.

Canon Moseley, Replies.

Annual inspection.

Within the School itself we recommend that the authority at present divided between e Commandant and the Head Master should be combined in a single individual, rectly responsible for the well-being of the establishment in all its departments. We nsider it of the greatest importance that in selecting an individual for this post the rictest attention should be paid to educational qualifications, and to capacity for perintending both discipline and instruction. When the necessary qualifications exist a military man, we think it advisable that the appointment should be filled by an ficer. In any case, we recommend that some limit in regard to age should be fixed for ie tenure of the appointment. We must express our opinion that a purely military stem of discipline, and an organisation by which the general supervision and the struction of the pupils are placed in separate hands, are ill adapted to the management boys of the age of the pupils at the School. Witnesses of experience speak of the sadvantage of confining the duties of the masters exclusively to those of tuition, both tending to weaken their individual authority, and as involving the loss of valuable d in maintaining discipline. We consider that in an establishment of this sort it is sirable to make the connexion between teacher and pupil as close as possible, and to ford every opportunity for the former to exercise his influence over the latter. We, herefore, recommend that the duties of imparting instruction and of maintaining discipline ould be combined in the same hands, and that the responsibility of the masters should xtend to the conduct of the pupils in the playground as much as in the school room. uch an arrangement will, we believe, contribute materially to an improvement in the iscipline of the School, which, it has been stated to us, is not at present in a satisfactory ate. The change which we recommend will, by utilising more fully the services of ie masters, enable some slight reduction to be made in the general staff of the School, nd will consequently diminish the annual cost of the establishment. At the same time, the event of the Normal School being abolished, the services of the students of that nstitution will be lost to the Model School, and a larger number of pupil-teachers will herefore be required.

Combination of disciplinary and instructional duties.

1566.

1299 to 1302, 1477.

Chaplain-General, Replies.

1458, 1473, 1476.

There is one point connected with the moral and spiritual welfare of the boys to which e would especially invite the attention of the authorities. It appears highly desirable hat when the boys go to their dormitories at night a brief period of perfect quiet hould be secured, so as to give opportunities for undisturbed private prayer. During his interval no talking or noise of any kind should be permitted; and it should be part f the recognised duty of some one in authority to see that this regulation is scrupulously bserved. We also recommend that the strictest attention should be paid to the religious nstruction of the pupils, and that care should be taken to adapt both this and the chapel ervices to the age and understanding of the boys.

Moral and religious supervision.

1567 to 1569.

1309, 1562.

With regard to the sanitary state of the School, it is certain that a few years since it vas in an extremely unsatisfactory condition, so much so, as to induce His Royal Highness the Commander-in-Chief, in 1868, to appoint a Committee of officers to inquire

Sanitary state.

1458 to 1461.

Appendix, p. 170. 1462, 1463. into it. In consequence of the Report of this Committee (which will be found at leng in the Appendix) several changes have been made, one of the most important being t provision of increased cubic space in the dormitories by the reduction of the number pupils from 500 to 458. This, with a more varied diet, and other alterations, w probably in course of time effect an improvement in the sanitary state of the Scho 1464, 1465. The recommendations of the Committee have, however, been only partially carried o Sir F. Abbott, Canon Moseley, Mr. McLeod, Replies; Hospital Returns. and numerous defects still remain, urgently calling for immediate remedy. From t evidence and returns which we have received, and from our own personal inspection the establishment, we must express our opinion that the health and *physique* of t pupils are not, even at the present time, in so satisfactory a state as could be desire Returns, pp. 168, 189. The hospital returns at Chelsea present a very unfavourable contrast with those of t Hibernian School in Dublin, the average daily per-centage of sick at the former, duri the last four years, having been fully double that at the latter institution. The retur Returns, pp. 167, 182. of the number of boys reported unfit for the Army on quitting the two institutions sh similar results. During the last ten years the proportion of boys declared unfit for t Army on quitting the Hibernian School has been 8·5 per cent., while at Chelsea it h amounted to upwards of 14 per cent., and in one year even reached 27 per cent. is, however, fair to add that these results may in part be accounted for by a differe standard of efficiency and a different system of returns being adopted at the t establishments.

Causes of unsatisfactory sanitary condition. Report of Committee of 1868; 2278, 2279; Mr. Reynolds, Replies. We do not think the lower sanitary tone observed at Chelsea can be attributed sole to situation, although doubtless the Hibernian School possesses great advantages in th respect; for the opinions expressed by competent medical authority, and others acquaint with the locality, do not lead us to believe that the site of the Royal Military Asylu can in itself be regarded as positively unhealthy. Our attention has been called various other causes which must, we think, exercise an unfavourable effect on the heal of the pupils. On this subject we wish particularly to call attention to the eviden Dr. Crosse, Sir F. Abbott, Replies. 1487, 1488. furnished to us by the Medical Officer of the School. Among the causes to which refer may be mentioned the want of sufficient cubic space in the dormitories; the i adequacy of the ventilation (notwithstanding recent improvements), more particularly the schoolrooms, workshops, and play-rooms, in which much time is spent by the boy the insufficiency of the arrangements for bathing; the absence of proper precautions 1495. ensuring personal cleanliness among the pupils, owing partly to the inadequacy of t 1546. supply of clean linen, and partly to the carelessness of the serjeants and nurses; a probably also, to some extent, the omission to study sufficiently the tastes of the boys 1490 to 1493; Duke of Cambridge, 2283; Sir F. Abbott, Mr. McLeod, Replies. regard to diet. But the most serious sanitary defect, and the one to which we a disposed mainly to attribute the unsatisfactory state of the health of the pupils, is t 1464. want of facilities for healthy recreation and exercise. The only playground to which t boys have access is a gravelled yard within the school walls; and on the rare occasio on which they are taken beyond the precincts of the School, it appears that the excursi is little more than a military parade, and that so much restraint is placed upon th movements as to deprive them of the opportunity of indulging in games and amusemen Such occasions, therefore, afford but slight relief to the confinement and monotony 1285, 1324, 1489; Chaplain-General, Sir F. Abbott, Canon Moseley, Mr. McLeod. the every-day school life of the pupils. It is mainly for this reason that we decided recommend the removal of the school into the country, a measure which has be strongly advocated by several witnesses; for, although there is nothing to prove that t present site is actually unhealthy, we do not consider that a situation in the metropo is well adapted for a school for young boys, entailing, as it does, a deprivation of t facilities for recreation so essential both to their happiness and their health. The remov of the school into the country would also obviate another disadvantage in its prese 1486; Dr. Crosse, Replies. position, arising from the danger of the introduction of infectious diseases among t pupils by strangers upon whose visits it is difficult in a town to put a restriction.

Increased opportunities of recreation recommended. Although, however, we recommend the removal of the establishment into the countr we consider that, even while it remains in its present locality, much may be done improve its sanitary condition. We wish to call attention to the necessity of regardi the health and physical welfare of the boys as of primary importance, and we think essential that a sufficient portion of each day should be devoted to play and out-do exercise. We are decidedly of opinion that largely increased means of recreation shou 2283; Dr. Crosse, Replies. be afforded to the pupils, by taking advantage both of open plots of ground in immedia proximity to the School, and of the vicinity of Battersea Park; and we most strong recommend that all excursions beyond the precincts of the School should have recreati distinctly for their object, and that the boys on arriving at their destination should freed from all unnecessary and irksome restrictions, and be permitted without restra to indulge in games and amusements.

In the internal arrangements of the School we also think that many improvements may be effected, with the view of increasing the healthiness and contributing to the comfort of the boys. We have in this case been again struck by the absence of sufficient provision for the recreation of the pupils, more especially in wet weather, and during winter evenings. The play-rooms in which on these occasions they are congregated are not only cheerless and ill-ventilated, but are much too confined to afford sufficient space for the pupils. We strongly recommend that increased and more suitable accommodation in this respect should be afforded. And with the view of extending as far as possible the means of recreation within the School walls, we would suggest that additional gymnastic apparatus should be provided, placed under cover to afford shelter in bad weather, and that the boys should be not only permitted but encouraged to indulge in gymnastic exercises, under proper supervision, during their play hours. We are also of opinion that a library and reading-room supplied with amusing and instructive books and periodicals, such as exists at the Hibernian School, should be provided for the use of all the elder pupils, and that the younger boys, who have not the privilege of admission to the room, should be allowed to obtain books from the library. In several other respects we think that the accommodation calls for improvement, and we strongly recommend that in the dormitories 600 cubic feet should be the minimum space allowed for each occupant. This amount is not at present afforded to more than 120 of the 258 boys, the remainder having only 500 feet. The abolition of the Normal School will render the building at present occupied by that establishment available for effecting, at a slight expense, this and other improvements in the accommodation of the pupils of the Model School. We recommend that further attention be directed to the ventilation of all the buildings, either by the use of small jets of gas continually burning near the ceiling (as at the Hibernian School), or otherwise; and that the most scrupulous care should be bestowed upon the personal cleanliness of the pupils. With the latter object, we wish to direct notice to the necessity of providing the boys more frequently with clean linen, and of enforcing the regular practice of bathing, which is at present discontinued in the winter, throughout the whole year. We would suggest that the ablution accommodation should be improved, and that an arrangement recommended by the medical officer, and similar to that adopted at the Hibernian School, should be introduced for the purpose of keeping the water at a moderate temperature in all seasons. We also consider that greater caution than at present should be exercised in the selection of the non-commissioned officers and nurses, upon whom so much responsibility necessarily devolves in regard to the general care of the boys.

Improvement of internal arrangements.

Dr. Crosse, Replies.

Col. Muller, Dr. Crosse, Replies.

2278, 2296.

1497, 1498.

In regard to diet we are of opinion that the quality of the food at present supplied is good, but we think that attention should be paid to the sufficiency, the suitability, and above all to the frequent variation of the diet; we would also suggest the introduction of drinking fountains in the play ground, an arrangement which has been adopted at the Hibernian School and is greatly appreciated by the pupils there.

Diet.

Sir F. Abbott, Replies.

In connexion with the sanitary state of the School we think it necessary to call attention to one branch of instruction, that in trades, to which we have hitherto only briefly referred. The only kind of industrial occupation taught to the pupils, with the exception of those selected for the band, consists of tailoring and shoemaking. Considering the large amount of time which is already spent upon in-door work in mental instruction, we are disposed to think that sedentary trades are not those best suited for the occupation of the pupils when relieved from the confinement of the school-room. The trade of shoemaking is particularly mentioned by the surgeon of the establishment as being prejudicial to the health of the boys and the development of their *physique*. We therefore recommend that instruction in this trade should be curtailed, while on the other hand we would suggest that extension should be given to the industrial instruction in the direction of more active occupations, such as carpentry, engineering, smith's work, and gardening. In accordance with the opinion expressed by the Surgeon of the establishment we think it desirable, out of regard to the health of the pupils, that no boy below 11 years of age should be employed in the tailor's or shoemaker's shop; nor should anyone be permitted to work for more than two hours continuously at either of these trades. We are further of opinion that instruction might with advantage be given in telegraphy, a knowledge of which at the present day presents so many openings to its possessor; while a short course of field-gun exercise (including the knotting and splicing of ropes), similar to that adopted at the Hibernian School, would probably prove both interesting and practically useful to the boys. We wish also to direct attention to the necessity, referred to by His Royal Highness the Duke of Cambridge, of effecting an improvement in the musical training of the boys. The pupils of many civil industrial schools are stated by His Royal Highness to evince in this respect a superiority over

Industrial training.

Sir F. Abbott, Replies.

Dr. Crosse, Replies.

Chaplain-General, Col. Adams, Replies; 1311, 1509, 2307 to 2309.

Dr. Crosse, Mr. McLeod, Replies.

2306.

those of the Duke of York's School, which we do not think ought to be found. The extension of the industrial instruction in the direction we have suggested would not only give the pupils while at the School greater and more varied interest in this portion of their training, but would also be a great benefit to those who on leaving the establishment are found unfit for military service. At present the only trades to which they are apprenticed are those of tailor and shoemaker, neither of which appears to be much in favour with the boys. We further consider that it would be advantageous to effect an alteration in the system of industrial employment by approximating to the plan now
2318. followed at many civil schools, of devoting a whole day to instruction in trades, alternately with school work, instead of, as at present, dividing each day between both kinds of occupation. It appears to us that by the adoption of such a system more regular progress would be made by the pupils, both in their scholastic education, and in their practical instruction.

Model recommended for industrial instruction.

In reference to the changes we recommend in the industrial training both at Chelsea and the Hibernian School, and to the introduction of a system of similar instruction in connexion with regimental schools (as advocated in a previous part of our Report), we are of opinion that great advantage would result from adopting as a model the system in force at one of the large civil industrial schools which have of late years been established. From our own inspection of one of these institutions—the Central London District School—we can have no hesitation in expressing our decided opinion that the method of industrial instruction there employed is more complete, more satisfactorily organised, and more successful in its results than that prevailing either at the Duke of York's or the Hibernian School.

Age of admission to and of quitting the School.

We have now expressed our opinion regarding the organisation and general arrangements of the School, and the system of instruction pursued. It remains to speak briefly of the conditions of admission to it. These, we think, so far as regards the consideration of the claims of the applicants, are founded upon sound and just principles, and we do not find it necessary to recommend any alteration in reference to them. It has, however, been represented to us by the Head Master that the regulations as to the age of admission are not altogether satisfactory. At present candidates are admitted between the ages of 7 and 12; and as pupils are, in the great majority of cases, obliged to leave
1504. the school at 14, the average period of residence does not exceed five years, while it is in some cases reduced to two. The shortness of the period of residence is stated to
1555 to 1558; Mr. McLeod, Replies. have a prejudicial effect on the education of the School, more especially as no educational qualification is exacted on admission, and many of the pupils enter at the higher limit of age with so slight an amount of knowledge that it is impossible in the time at disposal to educate them satisfactorily. This inconvenience might be met by requiring every candidate before admission to pass a qualifying examination, sufficient to prove
Canon Moseley, Replies. his possession of such an amount of knowledge as to enable him to profit by the course of instruction at the School. We cannot, however, recommend the exaction of any such test, which it appears to us would place an undue restriction upon the charitable objects of the institution. A reduction in the limits of age for admission would, without being liable to a similar objection, effect the same purpose; and we therefore recommend that the higher limit of age should be reduced to 10 years, at which it was until recently fixed. We do not recommend a reduction of the lower limit, as it has recently been found desirable, on sanitary grounds, to raise it from 5, at which it was previously fixed, to the present standard. Nor do we consider it advisable to propose any extension of the age for leaving the School, partly because such a change would diminish the number of annual vacancies for fresh candidates, and still more because difficulties in regard to
2307. discipline might arise from a wide discrepancy in the age of the pupils. While, therefore, retaining the present exceptions, we consider that the pupils should in general, as under the existing regulations, quit the School at the age of 14.

Disposal of the boys.

The only suggestion we have to make in reference to the close of the course of instruction is that, in order to offer every encouragement to the boys to enter the military service, the most unfettered
2305. freedom in regard to the choice of the regiment in which they wish to serve should be afforded to boys who volunteer for the Army; and that in the case of those who either do not voluntarily enlist, or are found physically unfit for the service, as wide a selection as possible should be permitted of the occupations to which they may wish to be apprenticed.

Royal Hibernian Military School.

Objects.

Lt.-Col. Wynyard, Replies.

The design of the Royal Hibernian Military School in Dublin is, in the main, the same as that of the Model School at Chelsea—to afford a gratuitous education to the sons of soldiers, orphans having a prior claim over others to admission. The majority of the

ldren admitted to it are the sons of Irish parents, although no condition as to ionality is attached to admission to the School. The Hibernian School, originally nded in 1769, was, like the sister establishment at Chelsea, entirely reorganised in 46, and its present constitution is regulated by a charter granted in that year. Charter, 14 Dec., 1846.

The general management of the School is vested in a Board of Governors, of whom Lord Lieutenant and the General Officer commanding the Forces in Ireland are pectively President and Vice-President. The other Governors likewise hold their ointments *ex officio*, the great majority of them being either Officers of the Staff or ld Officers of the regiments belonging to the garrison of Dublin. From the general ly of Governors a Committee of seven is each year appointed, who meet once a month, l upon whom the administration of the affairs of the institution more immediately volves. No question of importance, however, can be decided without a meeting of the neral Board. In addition to the control exercised by the Committee, one of the neral Board of Governors is each fortnight appointed Visitor of the School, and during tour of duty is required personally to inspect the establishment each week. Governing Body. Lieut.-Col. Wynyard, Replies.

The general staff of the establishment consists of a Commandant, an Adjutant (who is o Secretary to the Board of Governors), a Quartermaster, a Surgeon, a Protestant aplain, and an officiating Roman Catholic clergyman. The instructional staff consists a Head Master, three assistant masters, and a non-resident singing master. The sters are assisted in their duties by monitors, who correspond to the pupil-teachers at elsea, with this exception, that the latter consist of individuals previously unconnected h the establishment, whereas the former are appointed exclusively from pupils who, reaching the age for ordinarily quitting the School, volunteer to remain for the purpose being trained as monitors. After about a year's probation they are, on the recommendation of the Head Master, permanently appointed by the Commandant to the post, ich they retain until the age of 20, when they may compete for admission to the rmal School at Chelsea. There are at present 12 monitors. The establishment of the hool further comprises a number of non-commissioned officers and nurses employed the supervision and care of the pupils. Staff and establishment.

The Commandant, Adjutant, and Surgeon are appointed by the General Officer commanding the Forces in Ireland, with the sanction of the Commander-in-Chief; the pointment of the other officials rests with the General Board of Governors. Appointment of Staff.

The conditions of admission are in principle the same as at the Duke of York's hool, orphans having prior claims over other candidates. The consideration of the ims of the various applicants rests with the Committee of Governors. The limits of e for admission are from 7 to 12. Conditions of admission.

The organisation and system of discipline, as at Chelsea, are military, and as far as ssible resemble those of a regiment. The pupils, 410 in number, are for purposes of litary training and discipline distributed in six companies, each of which is under the arge of a serjeant assistant. The power of inflicting punishments, and of granting wards for good conduct, both of which are in a minor degree similar to those adopted in e Army, rests with the Commandant. Organisation and discipline.

For purposes of instruction the pupils are arranged in four divisions, each under the arge of its own master, the Head master exercising a general supervision over the ucation of the whole School, and periodically examining the junior divisions. The bjects of instruction consist of reading, writing and dictation, arithmetic, algebra, mentration, elementary mechanics, geography, English grammar, English history, singing, d Sacred history. In practical military exercises, in addition to drill, instruction is ven in gunnery (which includes, besides field-gun exercise, the knotting and splicing ropes), gymnastics, and swimming. A number of the boys are also trained as musins in the band, while others learn the trades of tailoring and shoemaking, and a small unber, not exceeding eight or ten, are taught carpentry. The whole clothing of the tablishment is made up by the pupils, of whom 112 are employed as tailors. Instruction. Mr. Gibbons, Replies. Practical training. Lt.-Col. Wynyard, Replies. Industrial instruction.

The pupils are not permitted to remain at the school after the age of 14, the only ception being in favour of those who are candidates for the office of monitor. The ethod adopted in regard to the disposal of the boys on quitting the school is the same at the Duke of York's School. As at the latter establishment the great majority mounting to nearly 80 per cent.) of those declared fit for military service volunteer for ie army. Their subsequent careers, no less than in the case of the Duke of York's hool, afford satisfactory evidence of the value of their early education and training. Those at present serving in the army, 983 in number, almost invariably bear an xcellent character, while upwards of 25 per cent. are non-commissioned officers. We ust moreover observe that the proportion of non-commissioned officers among soldiers ho have been educated at both the Duke of York's and the Hibernian Schools is even a Disposal of boys on quitting the school. Lt.-Col. Wynyard, Lt.-Col. Speedy, Replies. Returns, pp. 181, 184.

more satisfactory result than it at first sight appears; as owing to the great majority the boys being enlisted as musicians, and kept in the bands of regiments, their prospect promotion is much smaller than that of men serving in the ranks. This has been notic by several of our witnesses, and may probably in some cases act as a discouragement the pupils to enlist. We would suggest that, if practicable, the door of ordinary a vancement should be more generally opened to the pupils of these two institutions aft their enlistment; more especially as we believe that their education and early milita training would peculiarly fit them for the duties of non-commissioned officers.

Lt.-Col. Wynyard, Lt.-Col. Speedy, Mr. Gibbons, Mr. Langmead.

Changes recommended.

Lt.-Col. Wynyard, Replies.

From the above brief outline of the constitution of the Hibernian School—for ful information regarding which we refer to the detailed account furnished by the Co mandant—it will be seen that its organisation is in its general principles nearly ide tical with that of the Model School at Chelsea. The recommendations which we ha made in regard to one establishment will therefore almost equally apply to the other.

General superintendence of the school.

War Office Letter, 8 Feb. 1860.

9; Lt.-Col. Wynyard, Replies.

The authority of the Council of Military Education over the Hibernian School appe to have been even more purely nominal than that exercised by them over the Ro Military Asylum; for although, on Army Schools being placed under their direction 1860, the inspection of the school was enumerated among the duties devolving up them, the supervision of the instruction almost equally with that of the general admin tration of the establishment seems to have remained in the hands of the local governi body. We think it desirable that the general control over every department of t School should rest with the Director-General of Military Education, and that t functions of the Governors, as we have recommended with regard to the Commission of Chelsea, should be confined to business connected with finance and the admission pupils.

Constitution of Governing Body.

Lord Strathnairn, Replies.

Lt.-Gen. Colomb, Mr. Gibbons, Replies.

It has been represented to us by the Vice-President of the Board of Governors th the constitution of this body is faulty, and we are disposed to concur in this opini The large number of which the Board consists must tend to make its action cumbro and unwieldy; and although this evil is to some extent remedied by the appointment a small Sub-Committee for the transaction of ordinary business, the members of t smaller body vary each year. A large number of the Governors only hold their positi for a short period, during the presence of their regiments in Dublin, and can therefo hardly be expected to take the same interest in the welfare of the institution as if th had a permanent connexion with it. We think it would be desirable to reduce co siderably the number of the Governors, while at the same time we recommend that, changes in the constitution of the Board, its members should be made less varying, a greater independence should be given to their deliberations.

Admission of candidates.

Lord Strathnairn, Replies.

In regard to the mode of determining the claims of candidates for admission, we thi that a change might with advantage be introduced. It appears that the selection candidates from the general list of applicants rests in the first instance with the Co mandant, by whom their names are submitted to the Governors. Although from t evidence before us we feel bound to express our conviction that this selection is made strictly impartial grounds, we think it undesirable, on general principles, that such responsibility should devolve on an officer immediately connected with the establishme We therefore recommend that the duty both of selecting candidates from the gene list, and of finally determining between the respective claims of individuals, should entrusted exclusively to the Governors. We also think that, in order to avoid even t suspicion of religious partiality, the religion of a candidate should not be known to t authorities who decide upon his claim to admission. We further recommend that t higher limit of age for admission should be reduced from 12 to 10, for the reasons whi have induced us to make a similar recommendation in regard to Chelsea.

Internal organisation.

Mr. Gibbons, Replies.

In the internal organisation of the School, we are of opinion that changes should introduced similar to those we have already suggested for the Model School: we reco mend that the military system of discipline should be modified by extending the authori of the instructional staff; and that in the appointment of the head of the establishme the most careful attention should be paid to educational qualifications.

System of instruction.

Lt.-Col. Wynyard, Mr. Gibbons, Replies.

Extension of industrial training.

Lt.-Gen. Colomb, Replies.

In regard to the system of teaching and the subjects taught, we have no improveme to suggest; they seem well adapted to boys of the age and class of life of the pupi and from the statements furnished to us, and the reports of examiners who have inspect the School, we believe that the results of the method pursued may be regarded as high satisfactory. We would, however, suggest that, as we have already recommended regard to the Model School, a more extended and better regulated system of industr instruction should be introduced; carpentry is already taught to a small number of t pupils, but we think that instruction should be also afforded in other occupations whi

have previously enumerated. It was brought to our notice, when visiting the school, at the boys employed as tailors and shoemakers are kept for three hours and a half a time continuously occupied at their work. As this must be likely to prove prejudicial to their health, we recommend that no boy should be permitted to work for more than two hours at a time at a sedentary trade.

Sanitary condition.

We have previously expressed our opinion, founded upon the Returns and evidence communicated to us, that the sanitary state of the Hibernian School is more satisfactory than that of the Duke of York's School. We could not, however, fail to be impressed, on the occasion of our visit to the establishment, with the great prevalence of one particular type of disease—that of scald head—which appeared by no means to be confined to the younger boys recently admitted to the school, but to extend in an almost equal degree to the older pupils. We consider that the attention of the medical authorities should be particularly directed to this subject. The prevalence of such a disease must, we think, to some extent arise from want of sufficient care in selecting and apportioning food in quality and amount to each individual; and we recommend that due precautions should be taken to provide the boys with suitable, nourishing, and sufficiently varied diet, as we have already recommended in the case of the Duke of York's School.

Returns, pp. 169, 182.

Indeed, an inspection of the diet tables of the two institutions appears to us to show that the diet provided at the Hibernian School is less varied, and probably less suited to the wants of boys, than that which, in accordance with a scale recently introduced, is now given at Chelsea. In regard to the quality of the breakfasts, especially, and the greater number of days on which meat is allowed for dinner, the Chelsea scale appears to be superior. Our attention was also called to the number of boys at the Hibernian School who appear to suffer from colds and throat affections; and we think it desirable that attention should be directed to the warmth of the clothing supplied, more especially as the situation of the School is much exposed. We would invite particular notice to the communications furnished to us by the Surgeon of the School, both on this subject and on that of the other prevalent form of disease to which we have referred; and we recommend that careful consideration should be given to the measures proposed by him for mitigating the effects of the exposure to which, from the situation of the School, the boys are liable.

Dr. Templeton, Replies and Memo.

Accommodation.

The internal arrangements of the School are, in their general character, similar to those of the Duke of York's School, though in some respects the accommodation provided is decidedly superior. This is more particularly the case in a new wing of the buildings, erected within the last few years, which contains a portion of the dormitories, and in the accommodation provided for washing and bathing. We have already expressed our opinion that the arrangements in the latter respect might with great advantage be copied at Chelsea. The older part of the buildings, however, are in many ways defective; the rooms used as dormitories seem ill suited for their purpose, although apparently great pains have been taken to improve them as far as possible, and to provide them with a satisfactory system of ventilation. The boys' play-room is badly lighted and ventilated, and is too confined to hold the whole number of boys with comfort; we decidedly recommend that it should be improved in the mode suggested by the Surgeon of the School, as to enlarge the internal space, and to admit more air and light to it. We also wish to call particular attention to the want of sufficient shelter in the play-ground for the boys in wet weather; this is represented as a great deficiency by the Commandant, whose recommendation in favour of the enlargement of the present small shed, which is incapable of containing any large number of boys, we desire strongly to support. The arrangements for gymnastics might with advantage be still further extended, gymnastic exercises being well adapted to secure health; and, in addition, we strongly recommend that a covered gymnasium should be erected. The sitting-room provided for the monitors, and the quarters occupied by the assistant masters (the latter of which are extremely inconvenient in their interior arrangements), furnish other instances in which improvement is desirable in the existing accommodation.

Dr. Templeton, Replies.

Lt.-Col. Wynyard, Replies.

Means of recreation, &c.

In other respects we are of opinion that the means provided for the comfort and recreation of the boys are satisfactory. The provision of a comfortable and cheerful library and reading room, open to the boys of the two higher classes—the erection of drinking fountains in the day room and play-ground—and the free facilities afforded for indulging during play-hours in gymnastic exercises, are in our opinion deserving of imitation at the Duke of York's School. But the great advantage which the Hibernian School possesses over the establishment at Chelsea consists in its locality; it is situated in an airy and open space in the Phœnix Park, which affords the amplest opportunities for recreation and healthy exercise. The facilities thus provided for indulging without restraint in out-door amusements must necessarily have a highly beneficial effect both

2285, 2286.

upon the temperament and upon the physical development of the young boys, and they contrast most favourably with the monotonous confinement within the school walls, to which, with but rare interruptions, the pupils of the Royal Military Asylum are condemned.

School of Musketry at Hythe.

Objects.
1852.
Col. Haliday, Replies.

The School of Musketry at Hythe was established in 1853, with the object of supplying a central school of instruction in the new system of musketry practice adopted at that time, in consequence of the introduction of rifled arms into the service. At present the establishment serves a double purpose:—it is at once a Normal School to which a certain proportion of officers, non-commissioned officers, and privates are annually sent from various branches of the service to be trained in the established system of musketry, and which supplies the regular army with a staff of regimental instructors; and, in addition, it constitutes a department exercising functions of general supervision and inspection over the musketry practice of the army, and ensuring uniformity in the mode in which the authorised regulations are carried out.

Staff.

The staff of the school consists of a Commandant (who is also Inspector-General of Musketry), a Deputy-Assistant-Adjutant-General, one Chief Instructor (a Field Officer), two Captain Instructors, two Subaltern Instructors, a Quartermaster (who also acts as Adjutant), a Surgeon, and a number of non-commissioned officers and privates employed partly as instructors and partly on duties incidental to the establishment.

Department of Inspection.
District Inspectors.

The Commandant and the Deputy-Assistant-Adjutant-General, though discharging duties connected with the school, are more especially the head-quarter staff of the department which exercises general superintendence over the system of musketry throughout the service. This department further consists of a number of District Inspectors of Musketry, officers for the most part of the rank of captain, who are stationed in various large military garrisons, and supervise the mode in which the musketry regulations are carried out by the regiments quartered within their respective districts. For the purposes of inspection the United Kingdom is divided into six, the colonies into five, and India into ten districts. It is the duty of the District Inspectors to enforce uniformity of system throughout the service, to secure compliance with the established musketry regulations, to call the attention of commanding officers of regiments to any deviations from the authorised routine, and to examine the returns periodically furnished by the regiments under their superintendence. These returns, together with their own reports, they forward direct to the Inspector-General of Musketry at Hythe.

Their duties.
1930, 1936, 2007 to 2014.
1625, 1626.

Regimental Instructors.

In order to carry out the system of musketry uniformly throughout the service, there is attached to each battalion of infantry, and to the corps of Royal Engineers, a paid musketry instructor, who, as a necessary condition of his appointment, must have gone through a course of training, and obtained a certificate of qualification, at the Central School at Hythe. To cavalry regiments no permanent instructor is attached, but an officer, who must also have passed through the prescribed course of training, is deputed to conduct the musketry instruction of each regiment during the period of the year for which it is carried on, and while so employed receives an addition to his daily pay.

Annual musketry course in regiments.

Every battalion of infantry, and, as a rule, every regiment of cavalry, as well as the corps of Royal Engineers, passes annually through a regular course of musketry instruction. This course, though varying in its details in the different branches of the service is in principle the same in all—comprising preliminary drill, with the view of habituating the soldier to the proper use of his rifle, theoretical instruction, and terminating with ball practice. Recruits on first joining go through a more extended course than that to which the trained soldier at a later period of his service is subjected.

Periodical courses of training at Hythe.
Col. Haliday, Replies.
1662.
1588.

The officers who regimentally conduct the musketry instruction throughout the service are, as we have stated, trained in the duties they perform at the Central School at Hythe. At this establishment four separate courses of instruction are carried on annually, each course lasting two months. During every course nearly 300 individuals are generally under instruction. Of these the proportions from the various ranks are, about 60 officers, 160 non-commissioned officers, and 80 privates. Among the officers, besides those of the various branches of the regular land forces, are included a certain proportion of officers of the Royal Navy and Marines, and of the Militia and Volunteers; the great majority of the non-commissioned officers and privates belong to the regular Army.

Nature of the instruction.

The course of training at the school consists of practical and theoretical instruction in the mode of conducting the established system of musketry practice, and of imparting to others the knowledge thus acquired. With this is combined, in the case of officers, a voluntary course of lectures intended to afford a more scientific acquaintance with the theory of projectiles, and the history and progressive improvement of small arms

Throughout the course the officers and non-commissioned officers are subjected to a constant series of examinations, designed to test both their theoretical acquaintance with the subjects taught at the school, and their power of communicating instruction to others. According to the proficiency thus shown, combined with the results of a final examination at the end of the course, they receive certificates of qualification as instructors, the certificates granted to officers being of three classes, representing various degrees of merit. 1632. 1632, 1633.

The School of Musketry at Hythe, owing to the two-fold purpose which it fulfils—at once of a special training institution, and of a department exercising general functions of inspection and supervision—is so intimately connected with the system of Musketry instruction established throughout the service, that we have found ourselves necessarily compelled to extend our inquiries in some degree to the latter subject while investigating the constitution and management of the school itself. In doing so we have thought it desirable to elicit, as far as possible, on both topics the opinion of officers representing all grades, and all branches of the service. We have therefore obtained evidence from His Royal Highness the Commander-in-Chief, from all the general officers commanding districts throughout the United Kingdom, from numerous commanding officers of high reputation, from distinguished representatives both of the Militia and Volunteer Forces, from the Inspector-General and District Inspectors of musketry, and from several regimental musketry instructors, some of the latter being officers of long service and experience, while others had recently passed through the school at Hythe with distinction. We have also been favoured with the valuable evidence of Colonel Lane Fox, the officer to whom the origination of the School of Musketry was mainly due, and who was deputed by the late Viscount Hardinge, when Commander-in-Chief, to draw up the code of instruction which was first introduced into the service. Connexion between Hythe and the general system of musketry instruction. Evidence obtained. Replies to Questions, pp. 193 to 213. 1850 to 1852.

The first question which engaged our attention was whether the maintenance of a Central School of Musketry was necessary, or whether reliance could be placed upon a system of regimental instruction to provide the Army with a thoroughly qualified staff of instructors. The witnesses whose opinions we have received unanimously acknowledge that a central school was necessary on the first adoption of a rifled arm as the general weapon of the service, and the consequent introduction of a carefully devised and elaborate system of instruction in the use of the new arm. But many commanding officers, and other witnesses whose experience entitles their opinions to weight, while confessing that the school of Hythe was originally a necessity and bearing testimony to the advantages which have resulted from its institution, maintain that the system of musketry instruction has now so completely become incorporated with the drill of the Army, and is so thoroughly understood, that the time has arrived when a special establishment of this character might be dispensed with. They consider that a regimental system of instruction is adequate to supply each corps with its duly qualified instructor, and urge that, if this measure were adopted, commanding officers of regiments would feel themselves more immediately responsible for, and would therefore take greater interest in, the conduct of the instruction in their respective corps. In support of this opinion they point to the instance of adjutants, whose duties are represented as more arduous and responsible than those of musketry instructors, and whose efficiency, it is urged, bears testimony to the adequacy of a regimental system of training. The possibility of training competent instructors within regiments is also maintained by several other witnesses, although they do not advocate the abolition of the school at Hythe. On the other hand, in the opinion of the majority of the officers with whose views we have been furnished, the maintenance of a central school is regarded as absolutely essential, not merely for the purpose of providing regiments with trained instructors, but in order to ensure that uniformity in the system of instruction without which the present high standard of efficiency in musketry practice could not be maintained throughout the service. Several other officers also consider that the maintenance of a central school, even if not absolutely necessary for the objects referred to above, is still desirable for the purpose of affording an authority capable of pronouncing an opinion on the various progressive improvements in fire-arms, and of investigating the method in which they may be made applicable to military purposes. We therefore agree with the opinion strongly expressed by His Royal Highness the Commander-in-Chief, and the majority of officers of rank and experience, that a central school cannot be dispensed with without detriment to the efficiency of the musketry training of Your Majesty's troops. Their superiority in this respect over the soldiers of foreign armies is stated at present to be very marked, and we should view with regret any change which might endanger the continued progress of a system so successfully inaugurated, and hitherto followed by such satisfactory results. Consideration of the necessity of a Central School of Musketry. Sir G. Buller, Col. Knox, Col. Harding, Col. Glyn, Col. Gloster, Col. Thomas, Col. Hawley, Lt.-Col. Bowles, Lt.-Col. Pearson, Lord Bury, Capt. Adair, Lieut. Scotland; 422, 792, 1688, 1769, 1808, 1809, 1817. 438 to 442, 794, 862, 1048, 1749, 1758, 1801, 1802, 1833. Duke of Cambridge, 2297; Lord Strathnairn, Sir C. Staveley, Sir J. Garvock, Lord W. Paulet, Maj.-Gen. Russell, Maj.-Gen. Campbell, Maj.-Gen. Borton, Maj.-Gen. Rumley, Maj.-Gen. Murray, Maj.-Gen. Farren, Col. Armstrong, Col. Shute, 1262 Col. Weare, Col. Anderson, Col. Elrington, 743; Col. Haliday, 1572 Col. Stephenson, 1898, &c. 2003. 1601, 1941, 2006, 2209, 2303.

Situation of the school.
Maj.-Gen. Rumley; Col. Shute, 1267, 1268; Col. Lane Fox, 1870, 1883; Col. Stephenson, 1908; Col. Newdigate, 2126; Lt.-Col. Buller, Capt. Blundell, Lieut. Douglas.

Having expressed our opinion as to the necessity for the maintenance of a Central School of Musketry, the next question which presents itself is whether the present situation at Hythe is that most suitable for such an establishment. Several of our witnesses have suggested the transfer of the school to other stations, among which Aldershot is particularly advocated; and undoubtedly many advantages would result from this change of locality. It appears indisputable that the school at Hythe has hitherto existed too much as a department by itself, unconnected with the general system of the Army, and exempted from that periodical inspection to which every regiment in Your Majesty's service is subjected, and which in every institution is the chief guarantee for its satisfactory management. It also appears from the statements of a witness, whose evidence, from the important share he took in the original establishment

1877, 1878.

of the school, must be regarded as unaffected by prejudice, that a reluctance to adopt suggestions for improvements from without was, at least in former years, displayed by the authorities of the school. These defects would probably be remedied by the removal of the establishment to Aldershot, where it would be brought more under the general observation both of the Army and the public, and would be placed under the immediate supervision of the general officer commanding at that station. Its proximity to the metropolis, and the publicity given to experiments, would likewise offer greater inducements than at present to inventors to place themselves in communication with the authorities of the school, and to submit to their judicature such improvements as they had to suggest in fire-arms. But apart from these general advantages, it has been

Col. Newdigate, 2127 to 2129; Lt.-Col. Buller, Replies.

strongly represented to us that the direct benefits of the institution to the service at large would be widely extended by its being placed at a station where a large body of troops is constantly quartered. From the periodical passage of regiments through the camp a great proportion of the Army stationed in the United Kingdom, as well as a number of Militia regiments, would within a short period be brought under the influence

1579.

of the school; the annual expense of sending officers and detachments of troops to the establishment would be saved; and, above all, facilities would present themselves for combining instruction in musketry with that in the construction of field works and other

2130.

similar operations, thus enabling Aldershot to serve the purpose of a general camp of instruction in the various duties devolving upon a soldier on active service. While these advantages would attend the removal of the establishment to Aldershot, it has been

1647, 2300.

pointed out to us by His Royal Highness the Commander-in-Chief, and by the Commandant of the school, that proximity to a camp would offer many inducements to idleness on the part of those under instruction, and be prejudicial to study. We therefore consider that it is advisable, at least for the present, to maintain the School of Musketry as a separate institution, not liable to the interference with its special object

1579 to 1581, 1648 to 1650, 1926 to 1929, 2084.

to which it might be exposed at a large camp. The convenience of the present situation in affording a number of ranges, and the expense which would be entailed in providing accommodation for the school at a new station, are further reasons for inducing us to abstain from recommending a change of locality. Although, however, we think it desirable to retain the school of musketry in its present situation, we must express our decided opinion that the establishment should be subjected to the same kind of supervision as all other departments of Your Majesty's service; and we therefore strongly recommend that it should form part of the command of the South Eastern District, and that the general officer commanding the district should make a half-yearly inspection of the establishment, reporting upon everything connected with its efficiency, discipline, interior economy, and general administration.

Objections to present system of musketry inspection.
1689, 1690, 1729 to 1735, 1808, 1817, 1831, 2029, 2044.

We consider that the present constitution of the establishment, comprising as it does the duties of a department of inspection with those of a training school, is open to grave objection. The evidence we have received shows clearly that the system of supervision exercised by the school over regiments is viewed with considerable jealousy by commanding officers, and tends to create the impression in their minds that they are made less directly responsible for the musketry training of their regiments than for the efficiency in other portions of drill and military duties. The various District Inspectors whose duty it is to superintend the musketry practice of regiments, form a department distinct from the general staff of the Army; they are under the direct authority of, and

1625 to 1628, 1936, 1989.

in immediate communication with, the Inspector-General at Hythe, to whom they transmit their reports without forwarding them through the general officers commanding their respective districts; they also communicate directly with commanding officers

1930, 2007 to 2014.

regiments, calling their attention to any irregularities or deviations from the established system of instruction they may discover. The position in which he is placed gives an appearance of independent authority to a District Inspector, and his duties, unless

1735, 1789, 1790, 1874, 1933, 1994, 2022, 2023, 2044.

great tact and discretion are displayed in their performance, are liable to bring him in

greeable collision with regimental officers. Moreover although, as pointed out by Royal Highness the Duke of Cambridge, communications from the Inspector-General Musketry carry with them the authority of the Commander-in-Chief as distinctly as ers issued by any other department, yet practically the result is that the system of sketry inspection is regarded generally throughout the service as something distinct n, and independent of, the general control exercised over other portions of drill, and requently viewed by commanding officers as interfering with their responsibility for efficiency of their regiments. 2300. 049; Col. Thomas, Replies. 1689, 1690, 1745, 1746, 1782, 1784.

We have carefully considered the question whether the appointment of District pectors could be abolished without detriment to the efficiency of the system of sketry instruction, an opinion maintained by several officers of experience. A great of their duties is at present caused by the competition which exists between ments in musketry practice, and by the system of giving pecuniary rewards for oting. In order to check irregularities, which would render the comparison between ments illusory, an elaborate system of returns is required, the examination of which, addition to personal supervision over the practice of various regiments, entails much our on a District Inspector. Even, however, if, as we think desirable, modifications uld be introduced in the arrangements to which we have referred, we still consider some kind of district inspection would be necessary, at least for the present, to rd against the introduction of slight deviations from the prescribed regulations, which ht materially impair the shooting of the Army. The time has not yet, in our opinion, ved when perfect uniformity of system could be relied upon without the safeguard frequent inspection. Sir A. Cunyngham, Maj.-Gen. Farren, Col. Jenyns, Col. Harding, Col. Gloster, Col. Hawley, Col. Thomas, &c. 1792, 1872, 1987, 1988. Ld. Strathnairn, Lord W. Paulet, Sir G. Buller, Sir J. Garvock, Sir C. Staveley, M.-Gen. Russell, Maj.-Gen. Campbell, Maj.-Gen. Borton, M.-Gen. Rumley, Maj.-Gen. Murray, &c., Replies; 1610, 1872.

In order, however, to obviate the anomalies and difficulties which result from the sting arrangements, we are decidedly of opinion that it would be advisable entirely divest the Central School at Hythe of inspectional duties. We recommend that the pector-General of Musketry should be an officer attached to the Adjutant-General's partment of the Head-quarter Staff of the Army at the Horse Guards; and that the pection of musketry in the various military districts should be similarly entrusted to cers on the Adjutant-General's Staff of the respective districts. For this purpose it probably be necessary in most cases to add to the Adjutant-General's Department ach district an officer specially qualified to undertake the duties of musketry inspection. Changes proposed in the present system. 1691 to 1693, 1736, 1771 to 1779, 1884, 1917, 2051 to 2058. 2134.

The arrangement we propose, which has been advocated by several important witnesses, make the officers charged with musketry inspection a component part of the General ff of the Army, will place them more directly under the authority of general officers manding districts, and will, we believe, have the effect of putting their relations h commanding officers of regiments on a more satisfactory footing than at present. Col. Haliday, Col. Thomas, Col. Hawley, Col. Fox, Capt. Drake, Capt. Thompson. 1730 to 1736, 1784, 2018, 2044, 2054, 2055.

By thus divesting the establishment at Hythe of all duties of general inspection, and fining its functions exclusively to those of a normal school, we consider that a reduction y be made in its staff, which even at present appears to us disproportionate to the nber of individuals under instruction. This reduction may be carried still further if, we strongly recommend, the school should be regarded solely as a training institution officers and non-commissioned officers in the duties devolving upon them in the truction of their regiments. At present a considerable number of privates are sent each course, an arrangement which is represented both by the Commandant, and by er witnesses acquainted with the school, as inconsistent with the proper objects of the titution, and as entailing considerable expense on the public, with no corresponding vantage either to the soldier himself or to the service at large. We recommend that number of privates attending each course should be reduced to a minimum, and that se sent to it should be carefully selected for their intelligence and capacity to profit the instruction, a precaution which at present appears, from the statement of the mmandant, not to be invariably adopted. A certain number of privates may be uired for fatigues, guards, and other duties incidental to a military establishment; t we would observe that these duties are much increased by the presence of privates, d that every reduction in the number of the latter will make it more easy to rely on the permanent staff of the establishment for the performance of the strictly cessary duties. Reduction of staff at Hythe. 1663, 1664. 1900, 2027. Col. Haliday, 1574 to 1578; Capt. Thompson, 1957; Capt. Drake, 2027; Lt.-Col. Bridges, Capt. Madden, Capt. Carleton, Capt. G. Smith. 1574. 2314.

With regard to the course of instruction at Hythe, we must observe that although it s been eminently successful in its practical objects of providing the Army with a ghly qualified staff of instructors, there are points in regard to the internal management the school which seem to call for improvement. We think it desirable that the method theoretical teaching should be improved, and the discipline be more assimilated to at of a well regulated regiment. Proposed improvements in the course of instruction. Col. Lowry, Col. Knox, Lt.-Col. Bridges, Lt.-Col. Buller, Capt. Carleton, Lieut. Wyndham, Lieut. Douglas, Replies: 1652, 1699, 2033, 2034, 2040, 2059, 2072, 2109, 2110, 2117.

Length of the course.

1652, 1958, 2107.

Maj. Fairtlough, Capt. Madden, Capt. Carleton, Capt. G. Smith, Lt. Wyndham, Replies: Capt. Drake, 2033, 2041.

With regard to the length of the course, the evidence we have received is somewh conflicting as to the time requisite to impart the necessary amount of knowledge, and test the qualifications of an instructor. Some of our witnesses appear to consider t the present period of two months is not more than is absolutely requisite for this purpo while others express a very decided opinion that the course might be considera curtailed, more especially if the instruction is confined to strictly necessary subje Without pronouncing a decided judgment between these opposite opinions, we consi that a reduction of the period, if practicable, would have the great advantage of diminish the length of time for which officers are required to be absent from their regiments.

Defects in theoretical instruction.

2040, 2042.

Sir J. Scarlett, Sir A. Cunynghame. Col. Anderson, Lt.-Col. Buller, Maj. Fairtlough, Replies; 1000, 2027, 2066, 2116.

It has been represented to us as a serious defect in the teaching at Hythe that theoretical instruction there given in the more scientific parts of the course, and p mulgated to the Army in text books compiled at the establishment, is in several respe erroneous, and has failed to keep pace with the progress of scientific research on subject of fire-arms. We cannot think it satisfactory that an establishment, which intended to preside over and to lead the system of musketry instruction in the serv should be exposed to such criticisms in regard to the doctrines it enunciates. This cumstance, as well as other arguments adduced in the evidence before us, makes it our opinion, extremely desirable that an officer of high scientific attainments, and thoroug versed in the theory of gunnery and projectiles, should be included in the staff of school. To this condition we attach the greatest importance, as we consider that establishment should be not only a place for acquiring mechanical training and a ver acquaintance with the contents of a text-book, but should constitute a school of exp mental inquiry and scientific research on the subject of all new inventions in regard fire-arms. We further recommend that, in order to obviate the criticisms passed u the present theoretical instruction, both the text-book in use at Hythe, and the prescri code of Musketry Regulations, should be carefully revised; at the same time we th that the latter Regulations should be simplified and considerably reduced in length.

Duke of Cambridge, 2309; Sir A. Cunynghame, Col. Shute, Col. Weare, Col. Baker, Col. Hawley, 1719; Col. Haliday, 1656, 1660; Capt. Drake, 2059; &c.

In regard to the arrangements for carrying out in regiments the annual course musketry instruction, numerous suggestions have been made to us by individual witnes Into a consideration of many of these we do not wish to enter, and would therefore r for detailed information regarding them to the answers received in reply to the questi issued by us. Without, however, going into details we think it desirable to remark u a few of the subjects brought to our notice. We wish to point out that the present syst of competition between regiments, caused by the annual publication of the "figure merit" of each regiment, appears to be open to many objections; the conditions of competition are often unequal, owing to the different circumstances as regards clim weather, ranges, and ammunition, under which the musketry practice takes place various regiments; and, notwithstanding the vigilance of inspectors, irregularities quently occur in practice which, in consequence of the mode of determining the "fig of merit," render the comparison between different regiments illusory. The pres arrangement also entails a multiplicity of returns, and a larger staff of inspectors t would otherwise be necessary. On the other hand, the competition no doubt acts stimulus to regiments and promotes excellence of shooting. It appears to us that e if it should not be thought desirable to abolish the system entirely—a measure advoca by some important witnesses—considerable modifications are called for in the exist arrangements under which it is conducted. The returns at present required from r ments are also stated by several witnesses to be more numerous and complicated t is necessary or desirable; and we recommend that their simplification and reductio number should be carried even to a further extent than has recently been done; object would be materially facilitated in the event of the competition between regim being abolished. The value of the lectures at present delivered by Musketry Instruc is much questioned by several witnesses, and we are of opinion that they should rendered more intelligible to the ordinary capacity of recruits. We further consid highly advisable that, in accordance with the opinion expressed by His Royal High the Duke of Cambridge and numerous other witnesses, the quantity of ball ammuni annually allowed for the use of the troops should be increased, more especially the object of encouraging match-shooting. The excellence attained by the member the Volunteer Force in shooting is very generally attributed to the opportunities t possess for practice, and we think it extremely desirable that similar facilities sh be afforded to the soldiers of Your Majesty's regular Army.

Combination of musketry instruction with instruction in other subjects.

Before concluding our remarks upon Hythe and the system of musketry instruc adopted in the service, we desire to invite earnest attention to recommendations w have been made by several officers—in some cases without any suggestion from us—h during the course of our previous inquiry into the education of officers, and in the evid

e have recently received—in favour of combining instruction in musketry with prepara- Col. Stephenson, Col. Newdigate, Lieut.-Col. Ewart, Capt. Thompson, Capt. Blundell; 2136, 2137.
on for many other important duties devolving upon a soldier on active service. Had we
nsidered it advisable to recommend the transfer of the School of Musketry to Aldershot,
e should certainly have proposed to incorporate instruction in the simple portions of
ld engineering with the present course of training at Hythe. The evidence of witnesses Capt. Thompson, Replies, and 1976, 1995 to 1997; Capt. Drake, 2033, 2041, 2067, 2069, 2073.
ell acquainted with the School of Musketry shows that the time at disposal would be
nple to allow of such an extension of the course of instruction. But having found
rselves precluded by other considerations from proposing a change in the locality of
e school, we feel that such an arrangement could hardly be adopted. Hythe does not
fer the same facilities for instruction in the duties to which we have referred as would be 2067, 2176.
forded at Aldershot. The same objection does not apply in the case of regiments, more
rticularly when they are quartered, as is now so frequently the case, in large camps and
rrisons. Although some of our witnesses consider that the time of a Musketry
structor is already sufficiently occupied, the evidence shows that his duties do not 1646, 1711, 1785, 1945.
tend over the whole year; and several experienced officers, including His Royal High- Duke of Cambridge, 2304; Sir C. Staveley, Sir G. Buller, Col. Hawley, Col. Stephenson, Lt.-Col. Ewart, Capt. Thompson, Capt. Blundell; 1700, 1919, 1946, 2146.
ss the Duke of Cambridge, are of opinion that he might, at least during the season
hen the annual course of musketry is not going on, be with advantage employed on
her duties. We had occasion in our previous Report to point out the great benefit that
uld arise from attaching to each regiment an officer thoroughly qualified to convey to
l ranks useful and practical instruction connected with operations in the field. Since
bmitting that Report the opinions we expressed have received a striking confirmation.
m the successful results of a course of regimental instruction experimentally adopted 2141, 2153, 2179 to 2187.
uring the past winter in one of the battalions of Your Majesty's Foot Guards. The
idence with which we have been furnished shows the great interest taken both by 2142, 2154, 2196.
fficers and soldiers in the instruction afforded to them; and we must express our
nviction that the same feeling would be found to exist in other regiments if similar
cilities for practical instruction were generally made available. The machinery for it 1974, 1975, 1978, 2145, 2155 to 2163, 2174 to 2177, 2182.
ready exists, without adding to the establishment of regiments, in the existing staff
f regimental Musketry Instructors. With this view we recommend that, should a system
f regimental instruction be introduced, as advocated in our previous Report, officers
ppointed to the post of regimental instructor should be required not only to have
ndergone a course of musketry training at Hythe, but should also possess the further
ualifications, specified for the appointment in our former Report, of certificates from the First Report, p. 47.
aff College and from the School of Military Engineering at Chatham.

Having now completed the consideration of the various subjects referred to us in Summary of recommendations.
e instructions received from Your Majesty, we beg, in conclusion, to append the
llowing brief summary of the main recommendations contained in our present
eport:—

(1.) In regard to the superintendence of Army Schools, that the duties of inspection
Ireland should be assimilated to those in Great Britain, the office of Assistant Inspector
the former country being abolished, and the Superintending Schoolmasters in both Report, pp. vi., vii.
ountries becoming Sub-Inspectors, under a single Inspector; that the number of
nnual examinations of schools should be diminished; and that the Indian should be
malgamated with the Imperial School system.

(2.) In regard to children's schools, that the payment of fees for the children of Report, p. x.
fficers, non-commissioned officers, and soldiers serving in the Army should be
bolished; and that an organised system of industrial instruction for children of both p. xi.
xes should be introduced.

(3.) In regard to adult schools, that attendance at school should be compulsory on Report, p. xiv.
ecruits until they acquire a certain amount of rudimentary education; that school
ertificates should, except in very special cases, be made, in time of peace, an indis- p. xvi.
ensable condition of promotion; and that the utmost encouragement possible should p. xvii.
e given to the formation of special classes.

(4.) In regard to the status of schoolmasters and schoolmistresses, that the rates of
ay and pension granted to them should be augmented; that the advantages of their Report, p. xxi. to xxiii.
osition should be generally increased; and that certain recent regulations should be
epealed, which appear to press unfairly upon schoolmasters or to lower the dignity of p. xx.
eir office.

(5.) In regard to recreation rooms, libraries, lectures, and soldiers' institutes, that the
ystem of regimental recreation rooms should be decidedly maintained in preference to Report, p. xxvii.
hat of institutes beyond the precincts of the barracks; that fuller development should
e given to the present system of recreation rooms, by the general provision of adequate pp. xxiv., xxv.

accommodation for them, and by the application of a portion of the canteen funds to
p. xxvi. purposes of recreation; and that suitable accommodation for lecture halls should be provided in large garrisons.

(6.) In regard to the Normal School at Chelsea, that the establishment should be abolished; and that, in place of the present system for training Army Schoolmasters,
Report, p. xxx. civilian candidates for the appointment should be obtained from civil training institutions, while military candidates should, as a general rule, be trained in regimental schools, with the opportunity afforded to them of a short course at a civil training school.

(7.) In regard to the Model School at Chelsea, that the establishment should be
Report, p. xxxiii. placed, both in regard to discipline and instruction, under the immediate control of the Director-General of Military Education; that alterations should be made in its internal
p. xxxiii. organisation, with the object of placing the supervision over both discipline and instruction in the same hands, and of extending the authority of the instructors; that an
pp. xxxv., xxxvi. improved and extended system of industrial training should be adopted; that the School
pp. xxxiv., xxxv. should be removed into the country; and that, in the meantime, improvements should be effected in its sanitary state, and in the accommodation and means of recreation provided for the pupils.

Report, p. xxxviii. (8.) In regard to the Hibernian School, that a diminution should be made in the number, and alterations in the constitution, of the governing body; and that improvements should be effected in the organisation, sanitary state, and accommodation of the
pp. xxxviii., xxxix. establishment, similar, in principle, to those recommended in the case of the Model School.

(9.) In regard to the School of Musketry at Hythe and the system of musketry
Report, p. xliii. instruction, that the establishment should be divested of all functions of inspection, and should be considered as a Normal School for the training only of officers and non-commissioned officers as instructors; that the inspection of musketry should be made a portion of the duties of the Adjutant-General's staff; that various improvements should
pp. xliii., xliv. be adopted in the method of instruction and the general management of the school
p. xlii. at Hythe, and that the establishment should be subject to periodical inspection; that certain alterations should be introduced in the general system of musketry throughout
p. xliv. the service, (including a thorough revision and abbreviation of the present regulations on the subject); and, finally, should a system of regimental instruction be adopted, that
p. xlv. with the present duties of regimental Musketry Instructors should be combined those of giving instruction in other practical military duties.

ANALYSIS OF THE ORAL EVIDENCE TAKEN BEFORE THE COMMISSION.

NOTE.—Unless the context clearly point to a contrary meaning, in this analysis—
"Chelsea" signifies the Royal Military Asylum at Chelsea.
"Hythe" „ the School of Musketry at Hythe.

POCKLINGTON, BREVET-COLONEL E. H. F., Member of the Council of Military Education.

Army schools generally.

Has charge of army schools, 2. The Council does not superintend Military Asylum or Hibernian School, 9; but exercises control over all army schools, 10; which are conducted under general and uniform regulations, 11, 118, 119. It has only a nominal control over inspectors and schools in India, 137–139; but witness advocates amalgamation of Indian and Imperial systems, 197. Every regiment of cavalry and infantry, and every brigade of artillery has its school; detachments have detachment schools; for a detachment school there must be 12 children or 16 adults, 4, 178. As a rule the schools are in healthy situations, 68, and well supplied with school furniture and materials, 69; they are not self-supporting, 179. The commanding officer is responsible for the management and teaching of his regimental school, 156, 157; and any irregularity reported by the inspector would be notified to him, 155. Inspecting generals do not report to the Council, 158. Commanding officers cannot alter school regulations; but they give Council every assistance, 159, 160.

Children's schools.

The children's schools are very successful, 3, 117. The attendance of children is compulsory, and their educational status far beyond that of village or national schools, 25; there are 20,000 children under instruction, 4, 18, 19; 8,574 grown boys and girls, and 5,400 infants, 20; the distinction between whom is settled by the schoolmaster and schoolmistress, 21–23; according to intelligence and ability, 120–123. Children of pensioners and of those connected with garrison employ may attend, 26, 27; about 3,000 such attend, 28; and are included in the 20,000, 29, 30. In an average regiment 25 to 30 infants and 35 grown children would be a fair attendance; there are 200 or 300 at Woolwich, 58, 59. Details payments for the various classes of children, 124 (about 1,400*l.* in all, 175–177); not a fifteenth of the expenditure, 125; which is about 34,000*l.*, 127; but fluctuates greatly, 178. The children are supposed to be over two years old, 6. Very young infants are kept occupied by amusements, 171. After eight boys cannot stay in infant school, 123. In boys' schools, monitors are selected from the ranks, and called soldier-assistants, 57. Monitresses can stay till 17; pupil teachers till 21; girls may then become third class schoolmistresses, and make the best, 56. In the infants' and children's schools are taught English, grammar, geography, reading, writing, and arithmetic, 42–44, 47, 53, 133; with singing, 45. In the industrial schools the girls are taught to work (sewing and cutting out, 49–51), and there is a capitation grant of 5*s.* a head yearly, in all 1,650*l.*, 180, to procure materials, 46, 48; cooking not taught, 52, nor washing, nor household work, 134. Boys are not taught any industry, 54, 133. The children's school opens every morning with prayers, and twice a week the chaplain of each denomination gives religious instruction, 64; religious predilections being attended to, 65. There is Sunday school, and the children go to church with the schoolmaster, 66. Playgrounds are attached where practicable, 67. Schoolmasters and schoolmistresses have absolute power to maintain discipline; any complaint they carry to commanding officer, 166; they have a little power of punishment, 167; but corporal punishment is not allowed, 168, 169; beyond an occasional cuff, 170. Ladies are not permitted to interfere with schoolmistress, 172.

Adult schools.

In adult schools are taught reading, writing, arithmetic, English history, and geography, 61; in a chapel-school, or barrack room, 62, 63. Adult schools not satisfactory, and will not be so unless attendance of recruits be made compulsory, 3, 130. Special classes are on the increase in regiments, 3; and witness has decidedly a good opinion of them, 185. Attendance of adults is optional, 7, 31. Cannot state number of adult pupils, 13–17, 32. The average attendance may be 30 a day, including recruits 36, 131; or 5 per cent. on the strength, 132; and special classes have about 25 in each, 36, 37. Special classes are relieved from all duty except guards, and undergo compulsory continuous instruction, 38–41. Doubts if a commanding officer can compel a soldier to attend school, 33, 34; even under 32nd article of war, 60; though he may have means of indirect encouragement, 35. Witness would compel every recruit to attend school until the schoolmaster should certify his power to read, write, and do a certain amount of arithmetic, 181, 183, 198, 199; does not think this would interfere with drill, 182. Would make a school certificate indispensable for promotion to non-commissioned officer, 184; but would certainly not give increased pay for holding it, 195.

POCKLINGTON, BREV.-COL. E. H. F.—*cont.*

Inspection and superintendence.

Colonel Gleig has general superintendence of schools in Great Britain; Mr. Vicars in Ireland, 108, 109. Their duties: all school certificates are granted by Colonel Gleig, 110, 111, 174. Their pay is 600*l.* a year, and Colonel Gleig has half-pay, 112. They are appointed by Secretary of State, 113, and are in constant communication with the Council, which is much guided by their opinion, 114. Most of the examinations are by the 12 superintending schoolmasters, 115, who have 8*s.* a day (and allowances) after 10 years' service, rank as ensign and are commissioned, 87, 88, they do not mess with the officers, and are stationed in large garrisons, 89. They supervise all the schools in England, 90, 91. Mr. Vicars (assistant inspector) examines in Ireland, 92. There is a superintending schoolmaster in Canada, 135, 136, and local inspectors for Malta and Gibraltar, 136. Every scholar's progress is recorded in an "examination book," 105; a school certificate is only obtained by a special examination and does not give any privilege, 106, 107. Adult schools are examined twice a year by regimental schoolmaster, once yearly by superintending schoolmaster, 140–142. Detachment schools are not examined, 143. Thinks there is too much examination, 196.

School staff.

Candidates for appointment as schoolmaster are admitted by competition to the normal School at Chelsea, where they study for a year and then pass to the model school to learn teaching, 70, 71, and, after a year there, pass out as army schoolmasters, 72. The model school is the Duke of York's school with 500 or 600 boys whom the masters are taught to instruct, 73. The Council only attends there to see how their masters instruct, 74. Normal school is taught by two masters, of whom the junior will probably be reduced, 75. In normal school there are now not more than a dozen students, but eight in model school under instruction, 76, 77. Civilian teachers always bring certificates of character, and are taken from 20 to 25 years old, but pupil teachers at 6*d.* a day are taken from 17 to 19, and 13 are in model school training for schoolmasters, 78, 79, having previously been through normal school, 80. Candidates from the army are on the increase, 152, 153. The Chelsea education has not been lowered, 154. Attributes the falling off in civilian candidates to their not receiving pay while training, and having to pay 4*l.* a year for a policy of assurance, 82. Students from regiments receive their pay less 6*d.* a day stopped for rations, 83. Schoolmasters at normal school learn fortification but not French, 161–163, or drawing, 164, 165.

POCKLINGTON, BREV.-COL. E. H. F.—*cont.*

There are 272 schoolmasters, 218 schoolmistresses, 282 detachment schoolmistresses, pupil teachers, and monitresses, besides detachment schoolmasters, 12. There are 11 first class masters at 8*s.* a day, and 29 second class masters at 6*s.* 6*d.* a day, 92. A first class schoolmaster formerly ranked as a warrant officer, a grade unknown out of India and difficult to manage, 148, 149. A schoolmaster moves with his regiment, 173. Schoolmasters are under military discipline and in the regiment rank next after serjeant-major, 85, 86, 188, 189, which is a very appropriate position, 147, 187, 190; they wear a blue uniform, 87; and are very well paid, 3*s.* a day on appointment rising to 6*s.* 6*d.* a day after 14 years' service, 81, 192. Is strongly opposed to raising their status, 191. Would not allow them to teach officers' children, except in the regimental schools, 193. Quotes the General Order of 1864 requiring schoolmasters' kits to be inspected quarterly, 194.

A detachment schoolmaster has 6*d.* a day; a detachment schoolmistress 10*l.* to 18*l.* a year, 5. Detachment schoolmasters exist according to circumstances, and are selected from soldiers, 93. They report to regimental schoolmaster, 144–146.

School-assistant is a soldier appointed by commanding officer to help regimental schoolmaster, on his recommendation, 95–97, 102–104; when those under instruction exceed sixty, 98; at the rate of one assistant for every 40 in excess, 99; has known eight assistants in a school, 100; average two to four, 101. There must be 500 school-assistants, 150; cannot say how many of them will become schoolmasters, 151. Instead of present system of appointing school-assistants at 3*d.* a day according to the numbers on the books would appoint two at 6*d.* and 4*d.* a day to hold office for two years certain, 186.

GLEIG, BREVET-COLONEL A. C., R.A., Inspector of Army Schools.

Inspects army schools in Great Britain, 200. Details his own duties, 202; and those of the assistant-inspector in Ireland, 203, 205. Is not aware of any reason for the difference of system, 204; prefers the system in England, as more concentrative, 205. Believes the inspector could take charge of the schools in Ireland, on the English system of supervision by superintending schoolmasters, 206, 207, who are commissioned officers, 208. Witness' time is fully occupied, 209; he grants certificates in Ireland, 210. No one man could visit every school in Great Britain and Ireland every year, 211. Does not consider the results of army schools adequate to the expense, 212; the improvement needed is to render adult attendance more regular, 213. After a recruit has learned part of his drill, would make school attendance compulsory until he obtains a third-class certificate, 214, 215, 275–278; letting the commanding officer fix the hours for school, 216, 217. Would insist upon recruits attaining a certain standard of instruction, 265. A soldier could attend school without losing his military work, 267–272. Would make all non-commissioned officers attend until they reached a certain qualification, and men enlisted hereafter might be forced to attend, 218, but would not extend compulsion to men now in the service, 219. Old soldiers would be dissatisfied, if school attendance were compulsory, 266. The opposition in regiments to men attending school has died out, 243, 244. It is of great advantage to the school where men are allowed to be absent from parade if they attend school, 220. Would render more practical the qualifications for certificates, 221, 222. Promotion to non-commissioned officers should not depend mainly on the school report, 245. If a good soldier were illiterate would promote him, and them make him attend school until he obtained a certificate, 246–248. In the French army-schools many things are undertaken to be taught which we do not teach; but there are many very ignorant men in the French army, 251.

Children's schools are on the whole good. The children in them change continually, 223. Their average is above that of village schools, 224, 241. Civilians about camps and barracks seek after the schools for their children, 242. Would like superintending schoolmasters to examine detachment schools as well as head-quarter schools, 225. There are about 30 detachment schools in Great Britain, 227. Describes the system of religious teaching, 289, which works without any obstacle; 292. Bible lessons not compulsory, if parents object, 290; which a very trifling proportion do, 291. If the schoolmaster is of same persuasion as the chaplain, he takes instructions from the latter as to the Bible reading to be given, 293; though all the clergy do not exercise the authority, 294. Superintending schoolmasters rank as ensigns, 285, and are paid 7*s.*, rising to 8*s.*, a day, 288; and all schoolmasters have a chance of attaining the rank, 287. Schoolmaster is employed six hours a day with adults and children, 273, 274. Army feeling has changed of late years in the schoolmaster's favour, 280. Schoolmasters are quite on a level with those in civil schools, 282, 283. The prohibition of private teaching is a grievance with old schoolmasters; but not with younger ones, who entered under the rule, which witness would not at all rescind, 252, 253, 261. Objects to the inspection of schoolmasters' kits, 254. Schoolmasters are a sensitive body of men, 256. There are now less civilian candidates than formerly, 233, which is a disadvantage, 234. Nearly all come from the army, 279. Present schoolmasters are of less education than their predecessors, 257, 281; attributable to alteration in clothing and to prohibition against private pupils, 258, 259. The best of the soldiers may not be inclined to become schoolmasters, 262–264. After certain service would put a schoolmaster on a par with serjeant-major, and take off his arm the chevrons to which he objects, 228–231, 235. The pay is high enough, 232. Does not fear that improvement in schoolmasters' status would lead to presumption or ill discipline, 284. Would require soldier-assistant to remain at work for a year certain, guarding him against loss of regimental rank, 238–240. Recreation rooms give great comfort and satisfaction to the men, 236. Does not think much of the lectures by schoolmasters, 237.

GLEIG, BREV.-COL. A. C., R.A.—*cont.*

BELLING, JOHN, Esq., B.A., Superintending Schoolmaster.

Is in charge of half the Aldershot district, 295, comprising nine schools, 300. Describes his 20 years service as schoolmaster and superintending schoolmaster, 296–299. Army education is worse than before Crimean war, 337, 341. Commanding officers take more interest than formerly, but men are less excused from parade, 342, 343; possibly from having more military duties, 344. Some schoolrooms are small, 319.

Children's schools.

The children's schools are good, and superior to those in civil life, 302: attributable to regular attendance, 389, being almost compulsory, 392. Would remit the fees for regimental children, 374, as causing them to be kept from school, 390, 391. Sons of civilians are not admitted, 360, without permission of commanding officer, 361. Certificates should be granted to children, 320. Would reduce the industrial grant, which works badly, and is looked upon by parents as a clothing fund, to 2*s.* 6*d.* each child, and give every schoolmistress 6*l.* a year more, 366.

Adult schools.

In adult schools attendance so irregular that result is nil, 302. From a certain date would compel all uneducated recruits to attend school, 303–305, 385, 386, 394, 395; until they attain a third-class certificate, 309, 393; but would make attendance voluntary for old soldiers, 306–308. Certificates should be invariably required before promotion, 310, 311; which with special classes would not exclude good men, 312–314, nor be unpopular with them, 316. Special classes are popular, 315. Would divide adult schools into a lower school for uncertificated men; and an upper school for certificated men (voluntarily attending) and non-commissioned officers not qualified for next promotion (attendance compulsory), 317. Third-class certificates should qualify for corporal, second class for serjeant, first class for staff serjeant; one extra subject is enough. Certificates should be noted on soldier's record and discharge, 320.

School staff.

Schoolmasters formerly abused the right of giving private lessons, 357, 358; the prohibition has worked well; if removed, private lessons should be strictly limited to after certain hours, 355, 357. Schoolmasters have very little spare time, 356. They should receive as formerly, 359, 361, the extra fees paid by officers and others, 354, 359. Would increase their pay and pension, 374, and improve their status, 321–323, by giving their present rank on first joining, without the chevrons, 324, 334, which do no good, 335; after six years should become warrant officers, 325–327, 336. Would restore former regulations in their entirety, and make messing at serjeants' mess optional, 328–331. Scarcely any are recruited from outside, 332; the regulations have scared away all men of a good class, 333. The masters from Chelsea are often physically incapable of the hardwork of teaching; soldier-assistants mostly make egotistical masters of imperfect education; soldier-assistants should

Belling, John, Esq., B.A.—*cont.*

be made more permanent, 345, 346. Civilians cannot enter Chelsea unless certificated schoolmasters or pupil-teachers, 347. The scarcity of candidates for schoolmaster arises from unpopularity of the service, 382–384. Would make every schoolmaster work six hours for five days a week, 317. As regards lectures given by schoolmasters, credit should rather be given for the quality of the lecture than for the number of lectures, 369–373.

Schoolmistresses pass an easy examination, and are supposed (unless certificated) to have been employed in an army school, 387, 388. They should have higher pay, 348, 349. Single schoolmistresses are allowed too much for lodgings and fuel and light, 366; should have quarters if possible, or half the lodging money, 367. Girls of 15 should be eligible for pupil-teachers, and at 12 for monitresses, 368.

Inspection. Superintending schoolmaster's pay is the same as schoolmaster's formerly, 374; and he loses by promotion if his wife be a schoolmistress, 375, 379, 380. When private pupils and extra fees were allowed, witness could make twice what he now can, 377. Superintending masters should be called sub-inspectors, and be on the footing of Pay Sub-department of Control, 378, 396. At present there is no increase of salary, 381. Examinations should be reduced both in number and volume. Superintending schoolmasters should be relieved from reporting to commanding officer the details of each visit, 350, 351; which would allow of more supervision. Inspection involves very hard work, 352. Would let the superintending schoolmaster decide who should have certificates, 353.

Pearson, Lt.-Colonel C. K., 3rd Buffs.

Education of soldiers. Since establishment of trained schoolmasters, conduct of soldiers has improved, 464, 465; and non-commissioned officers are better educated, 466, 467. Would make school attendance optional for recruits (who are hard (worked, but compulsory afterwards until the men obtain third-class certificates, 406–408, 473; which would not prejudice recruiting, 474. As a rule, a certificate is required for promotion, 409–412; and it would be against the spirit of regulation to make a man a corporal who could neither read nor write, 423–427. A first-class certificate is difficult to obtain, 415; but there is time for a man to obtain a higher certificate between promotions to corporal and serjeant, 453–455. Is satisfied with his regimental school, 413, 414, and its inspection by superintending schoolmaster, 418. Special classes are good, when not used as a shirk from work, 416.

Children's schools. In infant schools the industrial grant needs more supervision, 447–450; especially by the ladies of the regiment, 475, 476. It provides about enough materials, 462, 463. The superintending schoolmaster goes round, 451; and regimental schoolmaster examines, when the commanding officer thinks fit, 452. Children's schools are valued in the service, 457.

Schoolmasters. Regimental schoolmasters are appointed by Council, without consulting commanding officer, 468–470. The "warrant" schoolmasters were superior to the present class; but their rank might clash with the serjeant-major, though that difficulty must be overcome if the warrant-rank be necessary to secure good men, 401–405, 480–482. The present schoolmasters are competent to teach what is ordered, 481, 486; but are less highly educated than their predecessors, 485. The existing grievance of schoolmasters is with their uniform; knows no other, 428–432, 435–437; except the examination of kit, which is unnecessary, 433, 434. But if they entered in expectation of warrant-rank it is a grievance not to have it, 443, 444. If schoolmaster is to rank as a non-commissioned officer he should be obliged to be a member of serjeants' mess, 445. Schoolmaster would prefer a grievance to adjutant or commanding officer, 477, 478. They are not looked down upon, 471; and are generally civilians, 472; but do not mix sufficiently with their pupils, 400, 471. Some schoolmasters are useful in Readings, 490. Does not object to schoolmasters giving private instruction, under proper control, 458. Commanding officer can recommend, under certain restrictions, any private for examination at Chelsea, 483, 484. Objects to soldiers as assistant teachers, 417, 446.

Garrison libraries and recreation rooms answer well, but need more light and fuel, 420. Should be established wherever possible, 459; not under same roof as canteen, 460. Lectures are not well attended, 487–489. Questions whether Hythe School of Musketry is of any use now, 422. Musketry instruction could be learnt in the regiment under the adjutant, 438, 442. Soldiers' children insufficiently fed and not quite strong; few enlist, 456. Boys enlisting from Duke of York's School are good, and fairly educated, 421.

Pearson, Lieut.-Col. C. K.—*cont.*

A., Mr., Regimental Schoolmaster.

Is satisfied with his present pay, but his position is uninfluential; there is no increase of rank throughout service; inspection of kit is most degrading; and the pension very unsatisfactory, 496–500. Lodging money has been reduced, but that is not a major grievance, 571–574. The treatment of schoolmasters on board ship is a general grievance, 575–577. The schoolmasters who now enter are not physically qualified, 501, 502. A better class would be attracted, were former regulations reverted to, 503, 535. The employment is increasingly unpopular, and dissatisfaction widespread, 536–539. The stripes are honourable for a non-commissioned officer, but after seven years' service a schoolmaster should not be so reckoned; if then unfit for promotion, he should be discharged, 504, 506; having a superior grade to the serjeant major would not cause ill-feeling, 507–511. Messing with the serjeants should be optional, 505. By volunteering for Chelsea a non-commissioned officer loses half his service and all his training time, 564, 565. Prospects of a non-commissioned officer are superior to schoolmaster's, 553, 554. Position would be better if pay were 4*s.* a day to start with and slower increase afterwards, 555, 556. Witness' wife being a schoolmistress, he would lose by promotion to superintending schoolmaster, 558–563. Pension is 6*d.* a day over serjeant-major's after 21 years' service, 557. The training in method at Chelsea is excellent, 566–568. To learn how to deal with adults, young schoolmasters should work under old ones for a time, 569, 570. Schoolmasters are individually popular, and have moral influence, 529. Objects to their being required to teach in, Sunday school, as they have to teach all the week round, 530, 531. Examination work and compulsory lecturing make schoolmasters' work needlessly heavy; mortality and pulmonary complaints have been excessive, 532, 533. Medical examination should be strict and extraneous work done away with, 534. Lectures are expected from all schoolmasters, and sometimes involve expense; attaches value to lectures, 543–550. Schooolmaster has nothing to do with infant schools, 542. Schoolmasters should not examine their own schools, 512. The system of superintending schoolmasters works well, 540, 541. A schoolmaster should not give more than one lecture in a week to the same regiment, 578–580. Some lectures are unworthy the name, 582. All schoolmasters should not be required to lecture, 592. Objects to lecturing after tattoo, 584–587. Good lectures are well attended, and thinks they give a taste for healthy reading, 583, 584. Readings are better attended than lectures, because of the music and singing, 588, 589. Lectures and readings may well go hand-in-hand, 591. Subjects of lectures should not be limited, 594, 595. Officers rarely lecture, 596. Schoolmasters have work enough without private tuition; but, if allowed to give it, the permission should be strictly guarded, 523–528. Classification returns of education, as now made, are fallacious; men without a third-class certificate should be returned as uneducated, 596, 597. Would make attendance of a recruit compulsory, after dismissal from drill until he obtained certificate, 513–515, 615, 616. Promotion to depend on higher certificates coupled with regimental ability, 516. Special classes are excellent; but selection of men to attend should rest more with schoolmaster, instead of colour-serjeants, 517–522, 551 552. Industrial grant of 5*s.* per child is too large and is misunderstood, 597, 598. Schoolmistresses, pupil-teachers, and monitresses are underpaid, 597. The Indian school system is far worse than the home system; there is no supervision, schoolmasters are relatively badly paid, &c.; but school assistants are selected by the schoolmaster (which is better) and are better off, 601–614.

B., Mr., Regimental Schoolmaster.

Before joining was articled to a civil engineer, 620. Inducements held out by regulations have not been fulfilled, 621. Status unsatisfactory, 622. Dissatisfied with pension, 623, 705. Messing with serjeants should be optional, 626–628. Schoolmaster and serjeant-major should rank according to date of appointment, 629–632. Soldiers have no antipathy to a schoolmaster who un-

B., Mr.—*cont.*
derstands them, 679, 680; but officers might give him more encouragement, 681. Schoolmasters should not be required to attend Sunday school, 682, 698; they rarely do so, 699, 700. Schoolmasters' grievances are: stripes on the arm, 683; inferior quarters, too small pay when commencing service, 684; the indignity of having kit inspected, 685; and treatment in troopships, 687, 688. There should not be school on Saturdays, 701, 702. Believes he would lose if promoted to superintending schoolmaster, 704. Recent orders have nullified his warrant rank, 706–712; which should be real and not nominal after 10 years' service, 713, 714. It would be a gain, in all ways, that schoolmasters should be allowed, under proper regulations, to give private tuition, 641, 642. Thinks superintending schoolmasters need not supervise old schoolmasters as much as young ones, 643–646. Schoolmasters should have more chance of obtaining commissions, otherwise than as superintending schoolmasters, 714*a*. The Chelsea training is useless: practice under an older army schoolmaster is the only effectual training, 654–661. Lectures are not a success, the duty being often forced on men who are unfit for it, 671–673; good lectures are, however, well attended, 675. Readings with music are successful, 674, and tend more to elevate the mind, 692. Multiplication of lectures leads to false returns, 689–691. Lectures or readings after tattoo objectionable, 693–697. Recruits should not be sent to school until dismissed drill, 633. First entry to school should be optional; but if a soldier commence school he should be forced to attend till he obtain a certificate; few would refuse, 634–640. Would abolish extra subjects for certificates, 647. Special classes are the only means of imparting instruction, 648; but schoolmaster should have more to do with selecting men for them, 649-654. Half the industrial grant would suffice, and the other half should be added to pay of schoolmistresses, 662, who, with pupil-teachers and monitresses, are underpaid, 663–667. Children's and infant schools are well conducted, and the children in advance of those from civil life, 669. Soldiers' children are the healthiest and strongest to be found anywhere, 670. If fees for soldiers' children were abolished, a quarterly report from schoolmaster would suffice; it would be good to abolish the fees, 676, which are useless and amount to little, 677, 678.

Hamley, Brevet-Colonel E.B., C.B. (Royal Artillery), Member of the Council of Military Education.

Manages libraries and recreation rooms, 715, and is, on the whole, satisfied with them, 715*a*. When a new library is established books in proportion to the number of men should be granted; the allowance for artillery and engineers is insufficient, 716, 717. No library reports come from India; books for libraries average 2*s.* 6*d.* a volume; subscribers to recreation rooms average $\frac{8}{18}$ of the troops, 718.

Elrington, Brevet-Colonel F. R., Commanding 4th Battalion, Rifle Brigade.

Does not think warrant-rank for schoolmasters worked satisfactorily, 722. They should rank after the serjeant-major, 723, 763–765; they have been at times disrespectful to their commanding officers, 723. Would not change their present status, 724, 725. A high class man is not needed; preferred the former schoolmaster-serjeants, 726. Is satisfied with his schoolmaster, 762. Regiments are now so weak that there is little school attendance, 741; the men do not like it, 742. Has an evening school (voluntary) in his battalion, which is better attended, 746. Would not attempt to carry education regimentally higher than the rudiments, 751. Attendance of recruits is not now compulsory, 752. Some attend daily, 753. Not more than four or five per cent. of the men are unable to sign their names, 754. Recruits should be made to attend school while under drill, until attaining a certain standard, 727, 728. Objects to compulsory education beyond reading and writing; all beyond should be voluntary, 766–770. Would not require high certificates for promotion to non-commissioned officer, tact being more necessary than learning, 729–735; but a third-class might fairly be insisted upon from corporals, 749. A pay serjeant can do without fractions, 755–757. Would not have extra subjects for certificates, 771. Non-commissioned officers are difficult to get and have deteriorated in the last 20 years; lance corporals should have 1*d.* a day extra pay, 736, 737, 748. Education has not deteriorated since Crimean war, but quality of non-commissioned officers has, 758–761. Boys from Duke of York's school are generally good, 739. Would maintain Hythe as a central standard for musketry instruction, 743–745.

Elrington, Brev.-Col. F. R.—*cont.*

Scotland, Lieutenant D., Adjutant 7th Dragoon Guards.

Education has improved since Crimean War, 826 827; from the normal schoolmasters being superior to the former schoolmaster-serjeants, 828, 829; but there has been a slight falling off of late in the schoolmasters, 830, 831. Sees neither good nor harm from a schoolmaster having warrant rank, provided the serjeant-major continue supreme at mess; otherwise the two can scarcely come into collision, 778–782, 800–803. Schoolmasters' grievances are inspection of kits, chevrons, quarters, and low pay on first appointment, 783, 832, 833. Schoolmasters are worse off than an ordinary London mechanic for quarters, 804; a competent schoolmaster occupies quite a different position from a non-commissioned officer, 805. It would be possible to give him the necessary material advantages, without conferring rank above the serjeant-major, 806-808. A married schoolmaster ought to have two rooms and a kitchen, 809, 810. No reasonable single schoolmaster could object to mess with the serjeants, who are as good as himself, 834–836. Does not see why serjeants should not be trained for schoolmaster, 837–839. Sees no objection to schoolmasters giving private lessons, 787. Schoolmasters are a useful body and agree with commanding officers, 789, 790. Recreation rooms work well, only more games are needed, 797, 798. Reading room and canteen should be apart, 799. Penny readings take greatly, lectures less, 791. In mounted regiments would not compel school attendance until after a year's service, 784, 785, 812–816; and would then exact it until a certificate was gained, 817–822. Would make a third-class certificate a *sine quâ non* for corporals, and a second-class for serjeants, 786; subject to special exceptions, 788, 823. Sees no difficulty in certain hours being set apart for school, the choice of hours being left to commanding officer, 858–861. Has found difficulty in obtaining educated men for corporals, 811. Has no special classes in the regiment, except for recruits, 824, 825. The regiment endeavours to train its men for regimental artificers, 856. Thinks highly of men from Hibernian and Duke of York's schools; their education is above the average, 795, 796. Boys' school is well conducted, but would keep the boys at work till 4 p.m. if there were a larger teaching staff, 840–846. There is room for improvement in regard to religious instruction, 847, 848. The infant school works well and is very necessary. The officers' wives supervise it, 849–853. Boys do not learn trades till after leaving school, 854, 855. They practise gymnastics, but voluntarily, 857. Objects to Hythe: all that is taught there could be better taught in the regiment, 792–794. Musketry instructors perform their duty properly, 863, and their lectures are useful (if not too dry), 865, 866; but regiments could train their own instructors, 862.

Moreton, Regimental Serjeant-Major Andrew, Inniskilling Dragoons.

Army schools.

The regimental school is very well conducted, 871. The present rank suffices to secure good candidates, but thinks warrant rank might be given to schoolmasters after eight or ten years' service, 873–875; though it might cause some inconvenience at the serjeants' mess; there would not be jealousy, as schoolmasters are a class quite apart, 876–884. Soldiers whose children attend the school are satisfied with it, 887, 902. The school interferes with recruits' drill, 888; would keep recruits from school until they had learned drill, 889; but make attendance compulsory afterwards until the soldier obtained a third-class certificate, 890; though a cavalry soldier could not attend more than two days a week, 896–899. The schoolmaster's kit should not be examined, 891. The nominal rank of a non-combatant would be immaterial at mess, so long as the serjeant-major was recognised as presiding, 892–895. Schoolmasters are not popular; they are thought to give themselves airs, 900–902. The boys in cavalry regiments do not see much of the men during school hours, 903; it would be better if they could be more separate at other times, 904–906. The girls mix less with the men, 907. The boys value magic lantern lectures, the men not at all, 908, but they appreciate

MORETON, REGIMENTAL SERJ.-MAJ. A.—*cont.*

penny readings, 909, especially when the officers read, 911, 912. Lectures on military subjects interest the soldiers very much, 910. Sunday school arrangements for the children are good, 913. The boys have no playground but the barrack square, 914, 915. Children taught no trade, except sewing for the girls, 916. The assistant-farrier could make a horse-shoe, 917–921.

McKAY, SERJEANT-MAJOR WILLIAM, 33rd Regiment.

Would pass all soldiers through the school, after learning drill, 925–928. Should not object to the schoolmaster having warrant rank, 929–933; but serjeant-major must preside, without question of rank, at mess, 934–941. Intends to send his children to the regimental school when old enough, 942–945. Children's and adults schools work well, 947, 948, 954, 955. Would require a third-class certificate before promotion to the first stripe, and a second-class afterwards, 949, 950. Schoolmasters are not well liked; but cannot assign a reason, 951–953. Boys taught in regimental school turn out well, 957, 958; it would be an advantage if they mixed less with the men, 956.

CHRISTIE, LIEUTENANT J. E., Adjutant 42nd Royal Highlanders.

Regimental school well attended; average 100·51; schoolmaster good, 960–965. Would make every man attend school after dismissal from drill, 966, 967. Disapproves of certificates altogether, 968; which stop emulation and application, 969–971, 1008. As a class, schoolmasters are good, 972, 973. Would not give them warrant-rank, 974–978. Quite satisfied with children's school, 979; children could be taught shoe-making or tailoring, 981. There are not many children in the regiment, 982, 983. All, except grown boys, are taught industrial work, 984–986. System of inspection is good, 987. Approves of certain hours (fixed by commanding officer) being set apart for adult school, 989. Chaplain is often in the school, 990. The ladies and officers take much interest in the schools, 991. There is a voluntary evening special class, with six for average attendance, 992, 993; out of about 20 on the books, 994. Magic lantern lectures rather lame; men care more for those on practical military subjects, 995, 996. Musketry could be learnt in regiments; but would retain Hythe to test fire-arms and projectiles, 999–1002, 1048. Would make commanding officer responsible for good shooting, and abolish figure of merit, 1048, 1049. Approves of men from Duke of York's and Hibernian schools, 1003, 1004. Not aware of schoolmaster being discontented; and his pay is quite sufficient, 1005–1007. A serjeant could easily replace the schoolmaster, 1007. Three instances have happened since the regiment came home of promoting men without rudimentary education, 1009. Would not insist on education as a preliminary to rank of lance-corporal, 1010–1012. Sees his way to obtaining industrial teaching for boys, if old enough, 1013. Library well attended; recreation room always full; canteen a long way off; music allowed; arrangement answers well, 997, 998. The subscription to recreation room is sufficient, 1014. Recruits use it more than old soldiers, 1015. Canteen should not be near recreation room, 1016. It is quite possible the industrial grant may be looked on as a children's clothing fund, 1017–1019. Sees no objection to schoolmaster giving private tuition, or doing what he pleases in his own hours, 1020, 1024–1027. Officers in India send their children to regimental school, 1020, 1021. Schoolmaster not a very hard worked man, 1028. There is a school at Aldershot for officers' children, 1029; to mix officers' and soldiers' children is not desirable at home, 1030. A few non-commissioned officers attend school when extra subjects are taught, 1031. Thinks inspection of kit might be dispensed with from first and second class schoolmasters, 1032–1040. Schoolmaster receives his pay from the paymaster, 1041, 1042. Thinks a well-conducted schoolmaster is highly regarded, 1043, 1044. Sees no harm in children mixing with the men; there is very little bad language, 1045, 1046. If needless sentries and orderlies were abolished, school efficiency would be increased, 1047.

C., MRS., Regimental Schoolmistress.

Receives 30*l.* a year, and being married to the schoolmaster, nothing else, 1052–1056. 36*l.* a year is the least a woman can live respectably on, 1057, 1058. A single schoolmistress has 8*s.* 6*d.* a week for lodging money which is a liberal allowance, 1059–1062. Does not think a married schoolmistress should be classed as a woman of the regiment, 1064. The question arises in travelling by sea and land, 1066–1068; where a married schoolmistress is in a worse position than a single one, 1069, 1070. Complains also of liability to be discharged without notice; was placed on unemployed list without pay, when she landed from India, 1073, 1074. The pension is 1*s.* a day after 12 years' service (if medically unfit), or 2*s.* a day after 24 years' service, the pension being fairer than the pay, 1078–1083. Has five children, and the quarters are two very small rooms without a kitchen, 1084–1088; being worse in camp than the quarters of staff serjeants, 1089, 1090. In India the schoolmistress was treated differently from the serjeants' wives, in her capacity as teacher, 1100–1105. Schoolmistresses have not deteriorated, 1106, 1108, but are more soldiers' daughters than formerly, 1107; and the change in the regulations has caused them to be treated with less respect, 1109, 1110. As a rule married schoolmistresses are wives of schoolmasters or non-commissioned officers, 1125, 1126. Is liable to have to help in Sunday school, which is considered a hardship (but is rarely called on to do so), 1133–1136; after the week's labour teachers should not have teaching on Sundays, 1172. In India a civil schoolmistress has four to six times as much as a married army schoolmistress, 1154–1158. A single schoolmistress has two rooms, 1159. Schoolmistress if allowed to arrange for rations would be much convenienced, 1160–1162. Is satisfied with the girls' and infant schools, 1091; but infants come too young, and it should rest with schoolmistress to receive those under three or not, 1092–1097. One girl might take charge of the very small infants, if there were a separate room for them, 1123, 1124, 1139, 1142. Not aware at what age infants are taken in civil schools, 1127, 1128. A separate nursery for the young infants would be convenient for the women of the regiment, and for the instruction of the others, 1148–1150. A pupil-teacher or intelligent woman of the regiment should be in charge, 1151, 1152. Industrial grant too large merely for materials, 1099. Has only one monitress to assist her with 40 children, which is insufficient help, 1111–1114, 1137, 1138; as the children have to be divided into so many classes, 1115. Twice every morning loses her monitress, who goes to the schoolmaster for tuition, 1143–1147. Monitresses and pupil-teachers are underpaid, 1098. Decent pupil-teachers of proper age cannot be obtained for the pay offered, 1129, 1130. The children of outsiders are irregular in their attendance, 1116–1119. Boys pass at 8 from infant school to the schoolmaster; girls go to the grown girls' school when they can read words of two syllables, 1120–1122. Does not know that the children run much among the men, 1163–1165. Does not think soldiers would often use bad language before children, 1175, 1176. Ladies sometimes visit the school, which elevates it in the eyes of parents, 1166, 1167. Chaplain never visits infant school, 1168, 1169. Sees no means of teaching washing, 1173. Mending clothes, &c. allowed every Friday, 1174. Saturday morning school may well be dispensed with; it is always irregularly attended, 1131, 1132; and girls would learn cleaning, &c. at home, 1170, 1171.

D., MRS., Regimental Schoolmistress.

Is a Crimean widow, 1178, with children, 1181. Has quarters, 1179; as respectably as possible in a camp, 1180. Could not live on her salary, 1182; a single woman could live respectably on 36*l.*, 1183, 1184. Monitresses are badly paid, 1185, 1187; some have fair abilities, 1186. Travels second class as an unmarried schoolmistress, 1188–1190. Schools well conducted, 1191; inspection satisfactory, 1192; commanding officer and ladies of the regiment assist, 1193, 1194. Chaplain does not visit witness' school; he collects all the grown children into another school every Friday for religious instruction, 1195, 1235; witness is not then present, 1236. For the sake of teaching, too many babies come to school, 1196–1199. Saturday should be a holiday, 1200; only the babies come on that day, 1201. Washing could not be taught, 1202. A nursery for young children in such a place as Aldershot would be excellent, 1203. Fears soldiers do not avoid using bad language before children, 1204, for the children use it, 1205. Little girls, as well as boys, go about among the men in camp 1206; and are pets, 1207. Children sometimes clean, 1208; and generally obedient, 1209. If not, complains to commanding officer, 1210; not to parents, 1211. Does not attend Sunday school, 1212–1214. Industrial grant too small to satisfy parents, who look on it as a

D., Mrs.—*cont.*
clothing fund, 1215, 1216. Has avoided interference from children's parents, 1217. The grant is issued only to girls and to boys in infant school, 1233. One monitress resigned from inadequate pay, 1218. Could not get a good pupil-teacher for the pay offered, 1219. School does not suffer by monitress going to schoolmaster for instruction, 1220–1222. Has been refused rations at government rate, 1223, 1224, 1228, 1229. Would alter hours of attendance, 1225–1227, 1230–1232.

Shute, Brevet-Colonel C. Cameron, C.B., 4th Dragoon Gaurds.

Takes great interest in Army Schools, 1243, which have increased the desire for instruction, 1242. Has a very good schoolmaster, 1244 (who seems satisfied) and a good schoolmistress, 1245. Would make schoolmasters less military, 1274; but it would be very inconvenient to give them any rank, which would remove them from strict discipline, 1246–1248, 1274. Warrant officers were therefore done away with in the cavalry, 1256. Would rather increase their pay, 1249. Chevrons and the sword make them too military, their uniform should be more akin to chaplains, 1250. Sees no object in examining kits, 1251. None are so comfortable on board ship as on shore, 1252. Would rather not make a soldier a schoolmaster in his own regiment; a civilian should be as good a schoolmaster as a soldier, 1253; but there were advantages in the way of discipline in the old serjeant-schoolmasters, 1254. Considers schoolmasters responsible for conduct of children out of school, 1255, 1273; though parents must be responsible in a great degree, 1270—1272. The schools are carefully inspected, 1257. Schoolmaster's giving private lessons would improve his capabilities, if it did not interfere with his duties, 1258, 1259. For misconduct a schoolmaster should be dismissed, not reduced, 1275. Would send all recruits to school, after being dismissed from preliminary drill, and would not object to set apart a fixed number of hours daily, 1260. Boys from Duke of York's School have turned out well, 1261. The School of Musketry could not be spared, 1262; but might be better at Aldershot than Hythe, 1267, 1268. The distance of Shoeburyness would be an inconvenience, 1269. Sees no reason why young children of officers should not be taught by schoolmasters and schoolmistress, 1263, 1264. For recreation rooms buildings are wanting, fencing and singlestick are the greatest attractions, 1265; and magic lanterns the least. Manly exercises should be encouraged for military reasons. Recreations in barracks are the best preventive of drunkenness, 1266. Would add French and German to subjects on the back of first-class certificates, 1275*a*.

Gleig, Rev. G. R., M.A., Chaplain-General to the Forces.

From 1846 to 1858 was Inspector-General of regimental schools, 1277. Schoolmasters take their instruction from chaplains as to religious teaching, 1288–1290. At chaplain's option there is sometimes a special religious service for the children in the schoolroom, 1291–1294, 1297, 1298; sees no difficulty in lay co-operation, 1295, 1296. The chaplain only comes in contact with infant school in giving special religous instruction, 1321–1323. The control exercised by chaplains over schools is sufficient, 1279; it is social and moral, 1287. Army schools are very superior to those in civil life, 1280; but fears present schoolmasters are inferior to their predecessors, 1281. The system of schoolmasters works well; but making the chevrons retrospective was a mistake, 1316. Would deprive schoolmasters of chevron, sash, and sword, 1317–1320. Examination of kits is a grievance, 1328. Normal school might be improved, 1282, by giving teachers more power, 1283; and especially headmaster, 1299, 1300, 1326; the fault lies in power being too much concentrated in military officers, 1301, 1302. It was a misfortune to rescind the order requiring serjeants to salute the masters, 1326, 1327. Duke of York's School is on a good footing, and fortunate in its master, 1284; but the situation is unhealthy, and school should be removed to country, 1285, 1324. In normal school, most of the Church of England students have been confirmed, 1303. In model school there is a confirmation annually, after carefully conducted examination, 1304. Boys brought up there are as intelligent at 14 as country boys at 18, 1305. Their religious service is the ordinary church service, 1307, which might be shortened for children; and sermon should be most simple, 1309. There is evening Sunday school, 1308. More trades might be taught in the Duke of York's School, 1311; trades are better taught at Hibernian school than at Chelsea, 1313. There are too many public-houses around the training school, 1314; but questions the policy of keeping it up, 1315. All students should wear the same dress, 1330, 1331. Hibernian School is healthy; but there are difficulties in the education, 1325. Children in barracks are not contaminated by the soldiers and are more orderly than in civil life, 1310.

Gleig, Rev. G. R., M.A.—*cont.*

Reynolds, W. J., Esq., M.A., Head Master of the Normal School at Chelsea.

Schoolmasters. Considers that successful candidates for schoolmaster have intellectually improved of late years, 1335, 1336, 1354, 1355. Very few candidates are civilians, 1337–1339. Soldiers do not amalgamate well with civilian candidates, 1399; their uniform is a hindrance, 1400; but a mixture of civilians and soldiers is an advantage, 1340, 1341, 1398; the best soldier makes a better schoolmaster than the best civilian, 1342. The discouragements are low pay, reduction to ranks, &c. If schoolmasters have been reduced to ranks there will not be many more applicants, 1343. Soldiers are hindered from coming forward by the loss of service and by want of encouragement, 1428–1431; and the conditions of entry to Chelsea are not well known in the army, 1452. Knows nothing of previous history of candidates, 1446*a*. There has not yet been difficulty in keeping up the supply of schoolmasters, 1388. Masters waste their time in the model school: should have practical instruction in teaching at Wellington Barracks and Woolwich, 1376–1379. Very few schoolmasters misbehave, 1352, 1353.

Normal School, Chelsea. All the superintending schoolmasters have passed through witness' hands except one, 1404. Does not see how the same scholastic powers in teachers could be obtained without the normal school, 1391–1396. The educational establishment is under council, not commissioners, 1423. Witness is in no respect under the head master of the Duke of York's School; position of both towards commandant is unsatisfactory, 1405, and inconvenient, 1406. The commandant has no authority in school, and witness none out of school, 1407, 1408, 1421, 1422; the masters of the normal and model schools do not collide, 1409. The pupil teachers from model school are in the way in the normal school, 1410, 1411. Witness has no assistant in the daily routine of study, 1356, nor requires any, 1357. Had formerly two assistants, 1508. Is inspected half yearly by the inspector under the council, 1359. There are now but 16 students; there have been 40, 1344, 1345. They fell off after the change in the regulations, 1346. The tests for schoolmasters are satisfactory, 1347; but it is a defect that there is no opportunity of acquiring the art of teaching, 1348–1351. For instruction goes through the subjects put down, 1371. Has not suggested any alteration in the course, 1373; chemistry, algebra, mechanics, and geography are the most popular subjects, 1374; thinks these subjects widen the students' minds, 1375. After a lecture students can say what they like, 1366, 1367. Witness teaches till 4 o'clock, but has work afterwards, 1443. Students have too much to do, to have time for much reading, 1444, 1445. Has not time to teach actual surveying; but includes practical trigonometry in his course, 1424–1427; students pass a qualifying and competitive examination, 1380. Students must attend church twice on Sundays, 1402. Chaplain instructs in religious knowledge, 1403. The Sunday School is looked upon as a grievance, 1432–1434. Accommodation for the students is very bad, 1360-1362. Some dormitories have been given up to the boys, 1368, 1369. Their messing is good, 1364, also health, 1417–1419; would have one distinctive dress for all students, 1401. The discipline is strict, 1413; but is administered by commandant without reference to witness, 1414–1416, 1450. Students play at football, fives and cricket, but are badly off for indoor amusements, 1370. Has no difficulty in maintaining discipline, 1381. Is saluted on the principle of an undergraduate saluting a censor, 1382, 1383. Drunkenness is not common, 1447; but has increased, from all the students being paid at once, 1384, 1385, and having to go out for provisions. Would not move the school, 1386, 1387. From the bad accommodation, students are induced to frequent a public house, 1363, 1449, where they have engaged a room, 1453, 1454. The hours out are 7½ to 10 p.m., 1448. Drunkenness would probably involve removal from the school, but witness would pass over a first offence, 1435–1438. There are few cases of immorality,

Reynolds, W. J.—*cont.*
1439–1443. Bad language at mess would scarcely be tolerated, 1455. There have recently been cases of dishonesty, 1451. Has nothing to do with schoolmistresses, 1389.

McLeod, Walter, Esq., Head Master of the Model School, Royal Military Asylum.

Model School. Has been Head Master for 23 years, 1457. Is assisted by 4 masters, 1511, and 13 pupil teachers, 1512; who all become army schoolmasters, 1514–1516. About two-thirds of the boys enter the army, 1517; and turn out well, 1518. Boys, when they first come, seem very healthy, 1519, 1520. Education of boys begins at seven; formerly, at five years of age, 1500–1503; they stay about five years, 1504. Subjects taught are suitable, and they get a fair education for their class in life, 1505–1507; but would have more trades taught, 1508, 1509. Would either admit boys earlier than at seven or have some educational test, 1555–1558. The chaplain instructs merely in catechism, Sunday-school exercises, and religious services in chapel, 1559; which might be shortened, 1562, 1563; witness is not responsible to him as to daily instruction in Scripture, 1560, 1561. Condition of school unsatisfactory, especially discipline, 1458; but its material state has improved since a Committee reported on it 18 months ago, 1459–1463, 1470; but all their recommendations were not carried out by the military authorities of the school, 1464–1466, and they did not go into discipline or education, 1471, 1472. The Commandant does not always carry out the regulations, 1468. Is not at all satisfied with his position towards Chelsea authorities, 1539. Relates disagreeable conflict with the military servants in 1866 and subsequent years; the serjeants neglected to attend to the boys' cleanliness, 1540–1554. Discipline out of school bad; no reverence at chapel or prayers, 1473, nor quiet at bed time, 1567–1569; military staff do not maintain discipline, 1476, which would be better without them, 1566; superintendence of boys out of school should be entrusted to the masters, 1477–1479. Witness punishes for misbehaviour in school with a cane, 1480; would discard the birch altogether, 1482; has very little difficulty in maintaining discipline in school, 1483. Food and sanitary condition of boys at present satisfactory, 1484, 1494; a good many always with sore heads, 1485. Boys' friends should only be admitted once a month, 1486. Schoolrooms, though improved, are still defective, 1487, 1488. Would remove school to the country, 1489. Boys have not sufficient play, 1490–1493, nor are kept as clean as they ought to be, 1495, by the nurses, 1496; among whom is much drunkenness, 1497, not always followed by dismissal, 1498. Each boy has now a separate bed, 1499, 1500.

Normal school. Is not satisfied with Normal School, 1521; it might be abolished, 1522. Candidates have fallen off, from reduced pay and allowances, 1523. Their passing to the model school to learn teaching is indispensable, 1524, 1527. The tone has gone down, 1528; from the diminution of civilians, 1529, and the probability that it is not the best soldiers who come, 1530, 1531.

Admission of schoolmasters. Witness details how he would admit schoolmasters, 1534, increasing civilian element, 1535, which is incomparably superior to the military element, 1536–1538.

Haliday, Brevet-Colonel W. R., Commandant of the School of Musketry at Hythe, and Inspector-General of Musketry.

Hythe. Considers Hythe essential as a normal school to maintain the musketry standard, 1572, 1573, 1597, 1601; but would only train instructors in musketry there and not pass privates through it, 1574–1578. The staff should be increased rather than decreased, 1661–1670. There are five officers and 24 non-commissioned officers employed in teaching, and the work is very arduous, 1662, 1663; duties detailed, 1664, 1665, 1668. The supply of trained instructors is not equal to the demands of Militia and Volunteers, 1602, 1603. Applications to come to Hythe exceed the vacancies, 1604. The drills could not be simplified, 1666; there are four daily, 1667. Eighty per cent. of the officers-students qualify for instructors; less than half of the serjeants, 1669, 1676; but the number of pupils is not more than sufficient to produce the instructors required, 1672; a certain proportion fail to qualify, 1674, 1675. Lectures are certainly necessary, 1677–1680. Non-commissioned officers sent to Hythe ought to be selected for intelligence, 1620, 1621; they are satisfactory, 1622. Knows no suitable place more central than Hythe, 1579–1581. Aldershot not suitable, 1647, 1648. Ten ranges are requisite, 1649, of 800 yards, 1650. Shooting in the Army is not, on the whole, inferior to what it ought to be, 1582; but efficiency in regiments depends on inspection, 1583, 1584, the interest taken in musketry by the officers, 1585, 1586, and the exertions of the instructor, 1587. Considers the system of certificates, after examination (independently of regimental authorities, 1610), most important, 1608, 1609, 1612. Doubts if an officer could often instruct himself sufficiently for a Hythe certificate, 1651; the present examination occupies several weeks, 1652. Matches between regiments are allowed, 1657–1660, and the competition of regiments is a valuable stimulus, 1611, as well as extra pay to marksmen, 1614; for which a central supervision is indispensable, 1615–1619. The figure of merit is not a certain criterion, 1613. Each Hythe course takes 60 officers, and there are four courses yearly, 1588–1590. There is deficiency of barrack accommodation, 1591, 1605. The men are never under canvas, 1606, the place being unsuitable for it, 1607. The sanitary condition is very good, 1592. Does not know the grades of the sailors who attend, 1593, 1594. Prefers men for guard, orderly, and fatigue duties being supplied by some regiment in the neighbourhood, 1595, 1596. Returns from regiments of musketry practice have been simplified as much as possible, 1623–1626; witness points out to regiments inaccuracies in their returns, 1627, 1628. Cannot tell how many trained officers or men there are in regiments, 1629–1631. The certificate of a serjeant shows him to be a good instructor, 1633. Considers that a battalion musketry instructor could not undertake other duties, and the recruits occupy him throughout the year, 1644; duties during the course, 1634–1637, which lasts 21 weeks, 1646. Regimental instructors have their fair leave, 1682, 1683. The District Inspector's time is fully occupied, 1638, 1639. He reports monthly to the General in command, 1643; but can only see portions of regiments at practice, 1654. The one at the Cape cannot perform his duties, 1655. Musketry instruction should be by companies, 1640, 1641; the system is applicable to cavalry, 1642. A serjeant instructor would not suffice for recruits, 1645, 1684–1686. The ammunition suffices for annual practice; but men might be allowed to purchase extra quantities cheaply, 1656. Has no control over the instruction in India, 1653.

Hawley, Brevet-Colonel R. B., Commanding 4th Battalion, 60th Rifles.

Musketry instruction. Considers that the army has reached its maximum of good shooting, 1727; there has been the greatest improvement since Hythe was established; the school was necessary, 1728. Would now abolish Hythe 1688, 1689, 1757, and throw musketry instruction more on colonels of regiments, 1690, 1758, maintaining the standard by inspection by one officer at the Horse Guards of rank of assistant adjutant-general, 1691–1694, 1701–1703, 1759, 1760; whose position would give him greater weight than District Inspectors have, 1736, 1755. District inspectors do not completely guard against registers being improperly kept, 1720–1722; their rank being too low relatively with colonels of regiments, 1729–1735, 1754. Commanding officers complain that they are interfered with in musketry instruction, 1744–1747. Without Hythe, colonels would have to select their own musketry instructors as they now do their Adjutants, 1748–1750. Instruction in the new arm will be easier than in the present, 1695–1697; has not been at Hythe, 1699. Shooting depends on practice and would prefer simple explanations to the lectures on theory, 1704–1708; but the officer's lecture is more profitable than the serjeant's, 1709. Correctness of firing depends much on the company officers, 1751; who, witness believes, take great interest in it, 1763, 1764. Uniformity will be kept up anyway, 1752. Musketry is practical, not mechanical, 1756. The musketry course is not popular with officers, 1765; but is necessary, 1766. It is a defect that all classes are not taught to fire kneeling, 1737, 1738. In firing when lying down, the position should be left to the soldier, 1739–1742. More blank cartridge is required for field-days, 1743. Rewards for marksmen are fairly distributed, but men should receive their money daily, 1723, and it should depend on opinion of commanding officer, 1767. The number should not be limited, 1725. Instructors of musketry have more leave than other

HAWLEY, BREV.-COL. R. B.—*cont.*
officers, 1711–1713; but are content with their position, 1714. Adjutants are now obliged to go to Hythe, 1715. Witness does not interfere with the musketry course, 1716, 1717. Would give each colonel certain ammunition for disposal, 1718; at present none is allowed for match shooting, 1719. Would have a captain as adjutant and musketry instructor, with a subaltern as assistant, 1700, 1710, relieving the adjutant every three years, 1726.

THOMAS, BREVET-COLONEL J. W., C.B., Commanding 67th Regiment.

Musketry instruction.
Would abolish Hythe, 1769; and maintain similarity of practice by inspection under an Inspector-General (superior in rank to colonels of regiments, 1836) and his deputies, 1770–1775, 1778–1784, 1837, effecting a money saving, 1777. Army shooting is fair; but might be improved, 1776. During instruction instructor of musketry is fully occupied, 1786, 1787; and is then the hardest worked man in the regiment, 1794. Has the same leave as other officers, 1795. They give a regular course of lectures, 1798, which all the men do not understand, 1799; but witness would not alter them, 1800. District Inspectors report direct to Inspector-General, 1788–1789, an anomalous position, 1790; they should be field officers, 1791; the office might be made a sinecure, 1792, 1793. The commanding officer could have no difficulty in selecting a musketry instructor, 1801, 1802, 1839–1842, and the system would be uniform, 1833, 1836. The responsibility of a commanding officer for musketry instruction is only theoretical: in practice, he does not interfere, 1805–1813, 1819–1824, and there is a delicacy in regard to the inspector, 1826. If the term of army service be shortened, duties of musketry instructor will be increased, 1814. Considers that musketry ought to be an ordinary regimental course, and not a special subject, 1815–1817, 1825, 1827: and that the colonel should really be responsible for everything, 1838. The major would be the man to superintend it, 1828–1830. The regulated course of instruction is good, 1818; but it is taken out of the commanding officer's control, 1831, 1832. Would examine an officer for post of musketry instructor, 1843–1845, and dismiss him if unsatisfactory, 1846. Has always had officers volunteering for Hythe, 1847, 1848.

FOX, BREVET-COLONEL A. LANE, late Grenadier Guards.

Musketry instruction.
Drew up [in 1854] the system of musketry instruction first adopted, 1851, after studying continental systems, 1852. Musketry instruction ought to be better conducted with a central school than without, 1855, 1863; but musketry might be satisfactorily taught under regimental system, 1856. Instructors would have to qualify as adjutants do, 1858–1862, by a course of instruction, not mere reading up, 1879, 1880. Considers that men in regiments should go through a more thorough course as recruits, the annual instruction being curtailed, 1865–1868, 1893–1895. Instruction should be by entire regiments, that commanding officer might superintend, 1870, 1871. The returns on paper are excessive; but some system of inspection is necessary, 1872–1876. There has been jealousy of outside interference as to Hythe, 1877, 1878. Prefers Aldershot to Hythe for a central school, 1882, 1883. Inspectors might be under generals commanding districts, 1884, 1885. Shooting when lying down ought to be practised, 1890–1892. It is good to let recruits fire a little before instruction, and then show them how they improve under the course, 1896.

STEPHENSON, BREVET-COLONEL F. C. A., C.B., Commanding Scots Fusilier Guards.

Musketry instruction.
Would maintain Hythe, 1898, in order that future instructors should pass through it, 1899–1902; but it might advantageously be moved to Aldershot, 1908. Does not see how one chief inspector could perform the duties of the district inspectors; has found no trouble in the present system, 1904–1907, 1909; but an inspector-general at Horse Guards, with assistants under him, would be an improvement, 1910–1918. If instructor of musketry's present work were shortened, he would be an excellent man on whom to engraft other duties, 1919–1921.

THOMPSON, CAPTAIN D. (67th Foot), District Inspector of Musketry at Aldershot.

Musketry instruction.
Has been district inspector 11 years, 1923. Would maintain a permanent school of musketry, 1924; without which there could not be uniformity, 1940–1943; and without uniformity shooting would deteriorate, 1985. Any place with sufficient ranges would do for it, 1925, 1977, 1978; doubts if there are ranges enough at Aldershot, 1926–1929. Would not send rank and file to Hythe, only officers and higher non-commissioned officers, 1957. The school of musketry should rather be a school of arms and rudimentary fortification, 1995, 1996; with a slightly lengthened course, 1997. In his duties acts through Adjutant-General of his division; records facts, not opinions, 1930, 1931. Collision with commanding officers is scarcely possible, 1932–1935, 1966, 1967; his duties are directly under the general commanding the division, 1936; who always takes action on his reports, 1940; his reports to Inspector-General of musketry would be communicated, if anything were wrong, to Adjutant-General at Horse Guards, 1937, 1938; but mere remarks pass through witness to the regiment, 2007–2014. In former times some inspectors have mistaken their position, 1993, 1994. It would be good to remove district inspectors from their regiments and give them rank as field officers, 1968. An Assistant Adjutant-General at the Horse Guards in charge of musketry, with deputies in the districts, might be more satisfactory, 2018. Doubts if brigade-majors would have aptitude for duties of district inspectors, 1990–1992. Instructors of musketry could not be trained as adjutants are, 1944, 2006. They might have other duties added, 1945, 1946. Would have the instructor in musketry to be assistant adjutant, and instructor in arms generally, 1974–1976, 1998, but separately responsible, 1999–2002. Instructors before obtaining certificates are tested in lecturing, 1969–1971. There are not too many lectures, 1972, 1973. Competition of regiments a doubtful gain, 1947; and of companies, 1981, 1982; the returns being liable to foul-play, 1948–1956. Rewards would still keep up good shooting, 1986. Without regimental competition, returns and staff might be diminished, 1987, 1988. Approves the present system of firing, 1958–1965. Our shooting is superior to that of foreign armies, 2003, 2004, and attributable to special training, 2005. Would not allow latitude to commanding officers, 2019–2021. Musketry instruction is not now unpopular with commanding officers; but was four years ago, 2015–2017, 2022, 2023.

DRAKE, CAPTAIN J. M. C. (Royal Engineers), Instructor of Musketry.

Hythe.
Would retain Hythe with alterations, 2026, and reduced staff; as a normal school to teach future instructors only, which is necessary for uniformity, 2027, 2028, 2051, 2080–2083. The Hythe course is too long, and minute, 2033–2039, 2072; and savours too much of school, 2040. Three weeks or a month ought to suffice, 2041. All field officers should pass through Hythe, in batches by themselves; also all adjutants, serjeants-major, and brigade-majors, 2059. Serjeants should be trained at Hythe, because they will be wanted as instructors, 2077–2079. Theory of projectiles should be taught at Hythe, 2066. It might be a school of arms generally, if time enough were allowed, 2068, 2069. A simple course of field-engineering could easily be added to Hythe course, 2073. Prefers Hythe as a site to Aldershot, 2084. Would not have inspection, except regimentally by the colonels, 2029–2031; who would all have passed through Hythe, 2083. Would abolish inspectors and inspector-general, 2043; and leave "remarks" on musketry returns to Adjutant-General, 2044; whose deputy would collate them, 2052. For local inspection, as far as required, would trust to brigade-majors, all of whom should have passed Hythe, 2045. There is cheating, because instructors are watched, 2046–2049.

Musketry instruction.
Approves competition of battalions, 2050. Musketry should be part of the general drill, 2054, 2055; and officers obliged to make themselves acquainted with a musketry handbook, 2056. Returns could be simplified, 2057, 2058. The lectures in the book are unintelligible, 2042. More ammunition should be allowed for practice; a cup given for competition in each garrison; assistant-instructors should have forage, 2059. A good instructor need not be a good shot, 2070, 2071. Musketry instructors are already too hard-worked to teach field-fortification, 2074–2076. Witness has 500 or 600 recruits at Chatham to instruct; but has time for other things, 2063–2065.

Recreation rooms.
Recreation rooms answer, so far as witness knows, 2085; but should be attached to canteen, and supported entirely from canteen profits, 2086–2089, 2097, 2100; under one committee

DRAKE, CAPT. J. M. C.—*cont.*
of officers, 2101. Would admit female friends to the canteen, 2090–2093. Coals enough for comfort are not supplied, 2094–2096. Would not have a soldier's institute outside in addition, 2098; but would provide as much amusement as possible and good beer inside, 2099.

ELLIOT, LIEUT. J. M. (94th Foot), Musketry Instructor.

Musketry instruction. Obtained at Hythe last year a first class extra certificate, 2104. The course is too short, 2107, 2108, 2116. Liked it, except too much catechising, 2109. Thinks the platoon exercise desirable, 2111–2115, 2120, 2121; except for officers of long service, 2117. The lectures were interesting, but had better be read up at leisure, 2119.

NEWDIGATE, BREVET-COLONEL E., Assistant Adjutant-General at Aldershot.

Musketry instruction. Thinks by arranging the times for using the ranges the school of musketry could be accommodated at Aldershot, 2123–2125; which would be the best place, 2126, 2129. It should be a training school, 2128. There is plenty of ground for ranges at Woolmer, 2132. Adjutant-General's staff could not take inspection in musketry without assistance, 2134. The officer instructing in musketry could instruct also in field engineering, 2136, 2137. Disapproves of battalions competing, 2138, 2139.

STEWART, LIEUT.-COLONEL C. B., C.B. (Commanding Royal Engineer, London District).

Field engineering. Describes instruction in field engineering given in 1852 at Chatham, and recently at the Tower to the Guards, 2141, 2158; in the latter all ranks took great interest, 2142, 2152, 2154. Found the men very intelligent, 2153. Musketry instructor could also teach field-fortification, 2144–2147, 2177, if he had been through a short course at Chatham, 2175, 2176. There should be regulations for issuing tools, 2148. Same instruction could be given throughout army, 2155; and is particularly desirable, 2159, 2174. Some small compensation for wear of clothes should be granted, 2157. There would, in war, only be engineers enough to superintend, 2160, 2161; and that not wholly, 2162, 2163.

Recreation rooms. Has lately built new recreation rooms at Windsor, 2164–2166. Has not heard serious complaint as to want of fuel, 2167. Thinks it would be good to apply the profits of the canteen (which are large) to support of recreation rooms, 2168–2170. Institutes should be within barracks, 2171; and available for lectures, theatricals, or dancing, 2172, 2173.

METHUEN, CAPTAIN THE HONOURABLE P. S., Adjutant, 2nd Battalion, Scots Fusilier Guards.

Field engineering. Instruction in field-engineering was beneficial to health, 2180, 2197–2199; should be extended to whole army, 2182, 2183, as part of drill, without extra pay, but with compensation for clothing, 2184, 2195; recruits being instructed on first joining, 2191. Men were much interested, 2185, 2196; also officers, 2189; were picked men, 2187. Were examined in theodolite, 2186. The serjeants thus instructed could teach others, 2190, 2193. The average time for each class was 21 days, 2200, 2201. Materials ought not to have cost 140*l.*, 2205, 2206; they were not worn out, 2207–2210. Fuel complained of as insufficient for recreation room, 2202 should have old allowance, 2203, 2204.

CARSON, MR. THOMAS, Regimental Schoolmaster, Royal Engineers.

Recreation rooms. Success of recreation rooms unequivocal. Would deplore their union under one roof with canteen; though both might well be under one committee of management, the canteen profits supporting the recreation rooms, and the latter being free to all. Recreation rooms should have the privileges of schools, as to baggage. Contribution to the library is insufficient, 2216, 2218, 2226; would make over recreation room subscription to library, 2217. No matter how tempting the recreation room inside the barracks, men will seek amusement outside, 2219–2222, 2235, 2236. Recreation rooms were well lighted and warmed, 2223; but larger rooms may require more fuel, 2224. Success depends on being well warmed and lighted, 2225. Would not allow beer, 2227. Men receive friends, male and female, in reading room, 2228–2230. Schoolmasters feel a stigma in being excluded

CARSON, MR. THOMAS—*cont.*
from management of recreation rooms, 2231–2234. Articles sold should be sold on account of canteen, and at canteen prices, 2237, 2238. Recreation rooms and library open till half-past 10; billiards a great attraction, 2240–2243.

CAMBRIDGE, FIELD-MARSHAL HIS ROYAL HIGHNESS THE DUKE OF, K.G., &c., Commanding-in-Chief.

Adult schools. Would encourage soldiers to attend school; but not compel them, if the Commanding Officer were satisfied of their incapacity to learn, 2244–2253; leaving arrangements, as far as possible, to Commanding Officer, 2254, 2255, 2257, 2316. In summer there would be little school, 2256. It is desirable that men promoted to serjeant, &c. should have educational certificates; but would not make the rule absolute, 2258, leaving the promotion to the Commanding Officer unfettered, 2259–2261. Approves highly of special classes, 2311; would excuse men attending them from evening parades, 2312; but not from certain other duties, 2313.

Schoolmasters. Warrant-rank for schoolmasters worked badly; the altered system has worked admirably, 2262, 2317. Likes best a schoolmaster who has first been a soldier, 2263, 2276. Examination of kit is not necessary, 2264. Uniform gives the schoolmaster authority, 2265. Pay is too low, 2267. Schoolmaster should not be interfered with when it can be avoided; but must be submissive when it cannot, 2268; should be under Mutiny Act, and never superior to serjeant-major, 2269, 2317. Objects to reducing a schoolmaster to the ranks; but it is more indulgent than dismissal; in minor cases, fines might be inflicted, 2270–2273, or loss of service, 2274. Reduction is a less hardship to those who formerly were soldiers, 2275.

Recreation rooms. On the whole thinks it a disadvantage to have recreation room and canteen in juxta-position, 2277. A steady non-commissioned officer should be permanently in charge of canteen. A captain in each regiment should have an allowance, equal to the adjutant's, for superintending canteen and recreation room and taking charge of their funds, 2288–2290, and the appropriation thereof, 2291. Would not allow beer and spirits to be served in recreation room, 2292; but would permit food and smoking, 2294, 2295. To be attended, a recreation room must be in the barracks, 2295. At large stations there should be a good room for lectures and entertainments, 2319.

Chelsea. Would not remove Duke of York's School to the country; premises need a little extension; but site is very healthy, 2278. London is a very healthy place, 2279. The boys get no continuous holidays, 2280, 2281. Premises are in bad condition; but are under Office of Works, 2282. Boys should play more in Battersea Park, 2283. There is excellent playground at the Hibernian School, and the boys are a great contrast, 2284–2286. Doubts if Chelsea boys behave badly on entering church, 2286, 2287. Sorry to hear the school was dirty, 2288. Duke of York's and Hibernian Schools ought to be under military authority and the boys should be required to enter army or navy unless physically unfit; music should be more encouraged; they turn out well, 2305–2307; the boys might do their own tailoring, and, in a degree, repairs to buildings, 2308, 2309. Industrial work should be encouraged, 2318. Would abolish Normal School and give its premises to Duke of York's School, 2296.

Musketry instruction. Considers a School of Musketry absolutely necessary, 2297; it is useful to send there, as now, a few selected privates. Hythe has raised the whole character of non-commissioned officers and men. The drill taught there to all officers is of great advantage to the service, though unpopular, 2298, 2299, 2314, 2315. The school should not be in a garrison, musketry instruction being a thing apart. Hythe is directly under Horse Guards, and an order from Hythe is virtually from the Adjutant-General. Inspectors are on staff of army like Brigade Majors, and give orders by virtue of the General's authority, 2300. Where Colonel and officers do not take an interest in the shooting, the regiment shoots badly, 2302. Would not make the slightest alteration in the musketry system. Should be sorry to see musketry instructors taught by Commanding Officers, 2303. When musketry instruction is not going on, the instructor might have other duties, 2304. In musketry more ammunition should be allowed, and competition between regiments encouraged, 2309, 2310.

CONTENTS OF APPENDIX.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION ON MILITARY EDUCATION.

Thursday, 3rd February 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	REV. DR. BUTLER.
LORD NORTHBROOK.	MAJOR-GENERAL EARDLEY WILMOT.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.	LIEUT.-COLONEL CHESNEY.

BREVET-COLONEL E. H. F. POCKLINGTON examined.

Col. Pocklington.

3 Feb. 1870.

Army schools.

1. (*Chairman.*) You are a member of the Council of Military Education?—Yes.

2. Do you preside over any particular department within the Council?—Yes; I have particular charge of the schools of the army generally throughout our colonies and at home.

3. Will you favour the Commission with a general statement with regard to those schools, their present condition, their efficiency, their constitution, and the management under which they exist at present?—It is a very large subject to dilate upon, but if there is any particular branch upon which you wish me to speak I will do so. As regards the working of the schools, I think with respect to the children's schools they are very successful. I am sorry to say that I do not conceive (and I think that it is the opinion of the Council) that our adult schools are in so satisfactory a state as could be desired. At present the attendance is voluntary, and unless recruits upon first joining are compelled to attend school I fear little improvement will take place. The commanding officers of regiments have, in consequence of the reports of the Council, seen the advantage latterly of special classes, and where there were only at one time three or four corps in which special classes were established, they are now very much on the increase. I think commanding officers see the necessity of encouraging these special classes, as being a good source from which to select non-commissioned officers. The attendances of the adults have been sometimes only twice or three times a month, and of course very little good, as regards education, can result when the attendance is so limited as that.

4. Can you give us a list of the schools which exist at present?—I cannot give you a precise detail, but every regiment in the service, cavalry and infantry, every brigade of artillery, and every depôt battalion, has its school. Neither is there a battery of artillery, company of engineers, or detachment of troops scarcely, that has not its detachment school. In fact, throughout the army, scholastic instruction is general. At the present moment there must be as many as 20,000 children educated in our schools. The Council furnishes a report on the army schools every two years. By the last report (1867) it appears that 19,025 children were under instruction, and I presume since that period there must have been an addition of 2,000. Throughout our colonies there is not a regiment or detachment which has not a school. There should, as a rule, be fully 12 children to attend before a detachment schoolmistress is appointed, and there should be 16 to 18 adults requiring instruction before a detachment schoolmaster is sanctioned; but no detachment school is formed unless an application is made to the Adjutant-General, who refers it for the Council's consideration before final approval.

5. I understand that to every regiment, and to every detachment of a regiment, in every part of the British dominions where troops are quartered, there is a school, provided 12 children can be mustered?—Yes. If there are adults we generally attach a detachment schoolmaster, who receives 6*d.* a day, and a detachment schoolmistress receives from 10*l.* to 18*l.* per annum, according to the number of children whom she instructs.

6. What are the regulations as to the age?—The children are supposed to be over two years of age. The matter has been referred to us, as to the age, and we have always thought proper to leave this decision to the commanding officer, the idea being that whenever the infants are able to take care of themselves they should be allowed to go to school, and we have thought that the age of between two and three years was sufficient.

7. Of course with regard to adults there is no limit of age?—No, it is quite optional with them.

8. In addition to these schools to which you have already alluded, are there any other schools of a similar character?—No; there are only the regimental schools and the detachment schools.

9. Are there not the Chelsea and the Hibernian schools?—Yes; but we have no control over the Royal Military Asylum or the Hibernian school, except to visit the former institution twice a year to superintend the final examination of students who are about to be appointed army schoolmasters, and to report upon the state of the boys' school as noticed at the above examination. The general superintendence of the two institutions, I believe, rests with their respective Commissioners.

10. Then the only army schools over which you exercise control are the regimental and detachment schools?—The Council exercise control over all "army schools" of every denomination, regimental as well as detachment.

11. Are the schools conducted under any general system?—Yes, there are regulations applicable to the whole of the schools of the British army, and to all who are instructed in them. In the second Report of the Council of Military Education the whole of the regulations are embodied.

12. Can you tell us the actual number of schools of the description to which you have referred, which are at present in operation?—I cannot state exactly what the number of schools is, because they are perpetually fluctuating, and they increase in number according as the regiments are detached. Corps at home now are much scattered, and the formation of detachment schools

Col. Pocklington.

3 Feb. 1870.

Army schools.

is being perpetually called for; the removal of corps again causes these schools to be abolished. Some idea of the extent of our army school system may be formed when I state that our instructional staff consists of 272 trained schoolmasters, 218 trained schoolmistresses, 282 detachment schoolmistresses, pupil-teachers, and monitresses, besides detachment schoolmasters, but the exact number of the latter I cannot state.

13. How many pupils do you calculate are under instruction at this moment, distinguishing between adult pupils and children?—I could not state the number of adult pupils, because they perpetually change.

14. Can you give us an average?—I think not. There is a constant difference between the numbers which we have on the school books and the numbers which attend school. It is difficult to answer the question as regards the adults; the attendance is only voluntary, and there are a great number of men whose names are put upon the school books, but who only attend perhaps twice or three times a month, or once a week. We can only tell by our monthly returns what the average attendances are; they fluctuate very much; in the summer time they cannot attend school so often as in the winter season.

15. Then you do not have returns of the number of attendances each day in school?—No, it is the average attendances during the month.

16. That can only be arrived at by noticing the attendances each day?—That is done in the regiment.

17. You mean to say that those returns are not furnished to you?—No.

18. Can you give us an approximate guess as to the number of persons under instruction?—I can state the number of the children. I should say that there are fully 20,000 children. In our report in 1867 the number of adults mentioned was 37,840, and I should say that there is a considerable increase now.

19. You mean, I suppose, that that was the collective number of children?—Yes; the number of children was 19,025 in 1867.

20. (*Lord E. Cecil.*) How many of each sex were there?—In 1867 there were of grown boys 4,960, of grown girls 3,614; the total of these is 8,574. Of infant boys there were 5,051, and of infant girls 5,400, making a total of 10,451.

21. (*Chairman.*) What is the line of demarcation between the infants and what you call the grown children?—There is no particular age mentioned; but it is according to their size, ability, and capability of passing from one school to another; that is decided by the schoolmaster and schoolmistress, and they are removed accordingly. The schoolmaster to a certain extent educates the grown children; the grown girls are, every afternoon, under the schoolmistress.

22. In the class of grown girls there may be children of 13 or 14?—Yes, and of a lower age; I should think of eight years of age.

23. In fact you describe as a grown child a child who is not an infant?—Yes. They are transferred by the united opinion of the schoolmaster and schoolmistress.

24. You represent that this number have been educated; but I suppose that in reality it merely indicates the total number of attendances?—These are the actual number of children attending the schools. It is compulsory upon the children to attend. Every commanding officer makes the children of every soldier attend school.

25. Therefore we may consider that all these children who have been educated at these schools have been in attendance every day for the appointed number of hours, unless interrupted by ill-health, or causes of that description?—Yes. Of course the mothers will keep them at home sometimes; but as far as it is in the power of the commanding officer to enforce the attendance, they attend. I believe the educational status of our army schools to be far beyond that of village, or the National schools.

26. Do any other children, except those connected with the soldiers, attend those schools?—Yes, the children of pensioners, and those who are connected with troops in garrison, have the privilege of attending.

27. But their attendance is not compulsory?—No. Our monthly report shows the fees which they have to pay on attendances; but it is a privilege given to old soldiers and those connected with garrison employ. The children of officers' servants are allowed to attend at a certain rate.

28. Can you give us the per-centage of pupils of this description?—I think that there are about 3,000.

29. Are they included in the numbers which you have already given us?—Yes.

30. (*Lord E. Cecil.*) Are they included in the 20,000?—Yes.

31. (*Chairman.*) The attendance of adults is not compulsory?—No.

32. And you cannot give us any very accurate information as to what that attendance is?—I can not.

33. (*Lt.-Col. Chesney.*) Has not the commanding officer power to make the attendance compulsory?—No, I think not; he is not so empowered.

34. (*Chairman.*) The commanding officer could not officially order a man to attend school?—He could do so, but should the man decline to attend, I doubt the possibility of his bringing the soldier to trial for disobedience of orders.

35. Has he any indirect means of inducing men to attend?—There is the encouragement held out to them of eventually improving their condition by becoming non-commissioned officers, and there is a recommendation from the Council in our Reports to form special classes in the regiment, which if made general, would tend to great advantage in the service.

36. Can you give us a rough approximation as to the number of men in a regiment who attend school?—Scarcely, as perhaps there might be 200 or 300 mens' names (if a regiment was together) on the school books; but out of that number there would not probably be an average attendance daily of more than 30 men.

37. Do you think that the Commission may fairly assume that at present about 30 men out of each regiment, allowing of course for exceptional circumstances in different regiments, attend school?—Yes, and more than that in corps where special classes have been established; in special classes the number would be about 25.

38. What is the nature of the special classes?—They are selected either so many men in a company or so many men in a regiment, about 25 or 30, and they are kept off all duty with the exception of taking their guard on a Saturday, and it is then compulsory for them to attend school so many hours a day; for perhaps five hours a day.

39. (*Sir D. A. Cameron.*) Are they excused from fatigue parties?—Yes; they are taken off every duty, I think, guards excepted.

40. (*Chairman.*) Do these special classes attend in the same school-room as the adult pupils do?—Yes, but chiefly, I believe, at times when the other men cannot attend.

41. Is there anything special in the instruction communicated to these classes?—No; but it is a regular and constant instruction, and after passing through such a systematic course, they would be able to qualify themselves for a "school certificate."

42. What is taught in the infant and children's schools?—I have caused "time tables" and a synopsis of instruction given, to be drawn up for the information of the Commission with reference to three different schools, one at Aldershot, one at Dublin, and one at Woolwich, which is a fair criterion of the rest.

43. Can you state shortly what are the subjects of instruction?—They are taught to read, write, transcribe, to write from dictation. They are instructed also in arithmetic, grammar, &c.

44. (*Sir D. A. Cameron.*) I suppose that they learn geography?—Yes; and they are taught dictation

-lling, composition, grammar, transcribing, English
story, and other subjects fitted to their positions.

45. (*Chairman.*) Is there singing?—Yes.

46. Are the girls taught work?—Yes, in the indus-
al school, and there is every encouragement for
m, as they get a capitation grant of 5*s.* per head
purchase the materials for instruction in various
ds of needlework, according to the average number
attendances during the year.

47. In this particular school the subjects which you
ve enumerated are all that are taught?—Yes.

48. Is there any other regimental school, such as
industrial school, in addition to that school?—
.

49. What is the nature of the industrial school to
ich you have alluded?—It is a portion of the girls'
ool where they are taught sewing.

50. I suppose that it is plain sewing which they
e taught?—Yes, and they sew very neatly.

51. (*Lt.-Col. Chesney.*) Are they not also, as in
sewing class of civil schools, taught cutting out?
Yes.

52. (*Chairman.*) Are they taught cooking?—No,
t to my knowledge.

53. What are the subjects which are taught in the
ys' school?—Just the same as in the girls' school.

54. Are the boys taught any industry?—No.

55. How high do they go in arithmetic?—It de-
nds very much upon the individual.

56. Until what age do the boys and girls generally
ay in the schools? Do they stay until the age of 17
18?—No. Many clever and intelligent girls are
commended as monitresses upon a scale of 4*l.* a
ar, and they can hold that position till they are 17;
d after 17 they can pass an examination to fit them
r the position of pupil-teachers; they can remain
that position until the age of 21, when if they are
sirous of becoming schoolmistresses, they are re-
amined, and are appointed 3rd class army school-
istresses. We rather prefer young girls who come
in that way; they make the best schoolmis-
esses.

57. Is there any similar regulation in the boys'
hool with respect to monitors?—No, the monitors
e all selected from the ranks; they are called
oldier assistants, and they are employed according to
ie requirements.

58. Can you tell us the average size of what you
ould call an ordinary regimental school?—The
hools vary very much. In cavalry regiments there
re fewer attendances than in infantry; and depôt
attalions and brigades of artillery again have larger
hools. I consider that about 25 to 30 in the infant
chool, and about 35 in the grown school, would be
very fair attendance of children in a regimental
chool. At Woolwich the number is very large; there
re some 200 or 300 children.

59. They would not be the children of one regi-
nent, would they?—No. Woolwich being a head-
quarter establishment for the Royal Artillery, &c., a
arger proportion of married families are accumulated
here.

60. The 32nd Article of War states, "Any non-
commissioned officer or soldier, who, without due
cause, or without leave from his commanding officer,
shall absent himself from the garrison or regimental
school when duly ordered to attend there, shall be
liable to be tried before a court-martial for dis-
obedience of orders, or be subject to such punish-
ment as it may be competent for his commanding
officer to award." I suppose, from your reply to
my previous question, that Article is almost a dead
letter?—It is; it is a point which has never been
sufficiently decided, and I think that no commanding
officer would like to bring a soldier to trial who did not
attend school. If he puts his name down to attend
school the commanding officer can then order him to
attend, but not otherwise.

61. Will you describe to us what is taught in the
adult schools?—Reading, arithmetic, writing, tran-
scribing, English history, mental arithmetic, and
geography.

62. In what localities is the instruction conducted?
—There is always either a chapel school, or a room
appropriated in the barracks.

63. And for detachments, what room is there?—
There is a barrack room.

64. What regulations are there with regard to the
religious instruction of the children?—The school is
opened every morning by prayers, and twice during
every week the chaplain of the forces, or the clergy-
man of any out-station who is paid, gives them
religious instruction, each denomination, Presbyterian,
Roman Catholic, and Protestant.

65. Are religious predilections attended to?—Yes.

66. Is there a Sunday school?—That is part of the
regulations. They go to church regularly with the
schoolmaster, and the clergyman attends if there is
time to do so, but I do not know that that is always
carried out.

67. Are there play-grounds attached?—Yes,
wherever it is practicable to appropriate places for
them.

68. And are the localities where they are in-
structed, where barrack school-rooms are specially
built, generally healthy, and airy, and satisfactory in
that respect?—They are generally so, but in some of
our old barracks they are compelled to take whatever
space is available.

69. Are the schools well supplied with school
furniture, such as desks and tables, and so on?—Yes;
and every regiment at home or abroad has a proper
supply of school materials, books, &c. to meet all
requirements.

Army school-masters.

70. How are the schoolmasters appointed?—They
go through a training. There are two examinations
yearly for entrance into the normal school for soldier
candidates and civilian candidates. The civilians
make application to the Council of Military Educa-
tion, and are informed what certificates it is necessary
for them to produce. If they are satisfactory, they
are ordered to attend one of the half-yearly examina-
tions, and they have to undergo a competitive ex-
amination for admittance, according to the number of
vacancies in the normal school. There are two
divisions in that school, the first and the second
divisions. They remain six months in each division,
and after undergoing certain examinations pass into
the model school, and are instructed in the art of
teaching.

71. Where is this normal school situated?—At
the Royal Military Asylum, Chelsea.

72. There is only one?—Yes; but it comprises
the model as well as the normal school. The stu-
dents remain for a year in that normal school, and
then they pass a final examination, and go into the
model school. The model school is under a very
able man, who instructs them in the art of teaching
boys, &c. These students remain a year undergoing
this initiation, and then pass out as army school-
masters.

73. Is the model school, as distinguished from the
normal school, a military school?—Yes, the model
school is the Duke of York's school. There are 500
or 600 boys there, and the schoolmasters are taught to
instruct these boys.

74. Is the Duke of York's school under you?—I
cannot say that it is exactly under us. We only
attend there to see how our masters instruct, and
observe the state of the schools generally.

75. The normal school is superintended by how
many masters?—At the present moment there are
two masters; but, owing to the diminution of stu-
dents in that school under instruction, the Council
have recommended that the junior master should be
removed.

76. At the present time are there more than a
dozen candidates for teachers?—Not in the normal
school. But in the model school we have eight
students; five in the first division, and three in the
second.

Col. Pocklington.

3 Feb. 1870.

Army schoolmasters.

77. They being themselves under instruction?—Yes.

78. Are your civilian teachers, generally speaking, of a respectable station in society?—Yes, we always insist upon having characters with them. Generally speaking, they have received certificates as National school teachers. They pass out of the National schools at 18, but we do not take them under 20 years of age.

79. What is the other limit?—25. When the Council noticed that there was a falling off of the civil element coming in, we had to consider the necessity of providing for our casualties in schoolmasters, and we made application for the entrance of pupil-teachers into the model school. We have now 13 of those. They are eligible between 17 and 19, and they come in there as pupil-teachers, receiving 6*d.* a day; they remain as pupil-teachers and instructors in the model school until the age of 20, and then they have the privilege of competing with other candidates for entrance into the normal school, to be trained for the position of schoolmaster.

80. This latter class do not go into the normal school at all?—Yes, they have to pass through the normal school the same as any outside candidate.

81. Are the schoolmasters properly paid?—I think that they are very well paid. An army schoolmaster receives on first appointment 3*s.* a day, and his pay increases every two years by 6*d.* per diem, if recommended for good conduct and efficiency, until his services arrive at the maximum of 14 years, when the full extent of pay is reached, viz., 6*s.* 6*d.*

82. Then how comes it that there is such a falling off of candidates?—I think there are two reasons which prevent many civilian candidates from entering. The first is, that for the two years that they remain under instruction in the Royal Military Asylum they receive no pay, but only free rations and a certain amount of clothing. The second is, that, to ensure their ultimate entrance into the army as schoolmasters, they are required to enter into a policy of assurance to the amount of 50*l.*, and to pay a premium of 4*l.* annually for the two years they are under training. Very many civilian applicants have a difficulty in doing this.

83. (*Lt.-Col. Chesney.*) Do the students from regiments not receive pay?—Yes, they receive the pay of their rank, minus 6*d.*, which is deducted for rations.

84. (*Chairman.*) How much is the pay of army schoolmasters a year?—They first commence at 54*l.* 15*s.* per annum, and after 14 years their pay reaches, by biennial increases, to 118*l.* 12*s.* 6*d.*

85. Are they under military discipline?—Yes, when they are in the asylum.

86. And afterwards when they become regimental schoolmasters?—Yes; they rank next after the serjeant-major in the regiment.

87. Do they wear a uniform?—Yes, a blue uniform with chevrons; first-class masters excepted as respects chevrons; but this does not apply to the 12 superintending schoolmasters; they receive 8*s.* a day over 10 years' service, and the rank of an ensign.

88. (*Lord E. Cecil.*) When you say rank, do they get a commission?—Yes, and receive allowances according to their relative rank.

89. (*Chairman.*) They do not mess with the officers?—No; their means would not admit of that; moreover, they are not specially appointed to regiments, but are stationed in large garrisons.

90. What are the duties of these superintending schoolmasters?—They examine every year the schools in their respective districts, and visit repeatedly the regimental schools of the garrison in which they are located. Out-stations are only inspected by superintending schoolmasters by "direct authority," so as to obviate any unnecessary travelling expenses.

91. Does their superintendence extend over all the schools in the kingdom?—Yes, in England, as it has lately been divided into districts. At present Ireland is not similarly apportioned.

92. Are they sufficient in number to be able to undertake the supervision of all the schools of the kingdom?—Yes, in England certainly. Mr. Vicars, who is Assistant Inspector of Army Schools in Ireland, takes a large portion of the school examinations in that country, as the district system has not as yet been applied there. We have, moreover, 11 first-class masters, with pay at 8*s.* a day. There are 29 second-class masters with pay at 6*s.* 6*d.* per day; so that the second-class schoolmaster's pay is equal to that which an army schoolmaster can only gain after 14 years.

93. In addition to the staff which you have already described, are there what are called 'detachment' schoolmasters?—Yes, but they only exist where circumstances require them to be appointed. All that I have mentioned are on our permanent staff. The detachment schoolmasters are generally selected from privates, or non-commissioned officers, and they are appointed according as they are capable of giving instruction.

94. Then you do not import any foreign element?—No, our schoolmaster is the only man who is connected with the education of the regiment.

95. Is the function of the third-class master confined to detachment schools?—I presume you allude to a "school assistant," whose functions consist in assisting the regimental schoolmaster in giving instruction to the regiment at head-quarters. He is appointed according to the numbers in the school book, by the commanding officer of the regiment.

96. He is a soldier?—Yes, and I think that an improvement could be made in that appointment which would be economical.

97. (*Lord E. Cecil.*) Does he always pass an examination?—No, but he is appointed by the commanding officer, consequent upon his known superior attainments and capabilities of superintending instruction.

98. (*Chairman.*) Under what circumstances is a schoolmaster entitled to apply for an assistant?—When the number on the school books exceeds 60 including adults and grown children.

99. Under what circumstances can he apply for an additional assistant?—For every 40 in excess.

100. What is the greatest number of assistants which to your knowledge are attached to any one school?—I have known eight assistants, besides two trained schoolmasters.

101. What is the staff of what may be called an ordinary regimental school?—I think that from two to three assistants at the most would be sufficient. In 17 regiments at Aldershot, I believe the average number did not reach four assistants.

102. These assistants are selected by the commanding officer?—Yes, upon the recommendation of the schoolmaster.

103. Are they required to pass any examination?—None.

104. So that it is at the recommendation of these two authorities that the assistant is selected?—Yes. It is natural to expect that the schoolmaster will get the best assistant that he can, so as to produce the best effect upon his school, and the commanding officer appoints accordingly.

105. Are not the pupils in the adult school, and in the special classes, subjected to any special examination?—The school is examined. Everybody that attends an army school has a small book, which is called an examination book. Every scholar is tested in this book as to his attainments, and his subsequent progress is then recorded therein on each successive examination of the school.

106. Does he receive a certificate?—He can only obtain a school certificate by undergoing a special examination.

107. Does it entitle him to any privilege?—None.

108. We will now revert to the general system of superintendence. As I understand you, there is one officer in England, and another in Ireland, who have

he general superintendence of these schools?—Yes, hey have the general supervision of these schools.

109. What are the names of those two gentlemen?—Colonel Gleig, for Great Britain, and Mr. Vicars or Ireland.

110. What are their duties?—They are supposed o visit each school in their respective divisions once very year, and are responsible to the Council in a reat degree for the satisfactory working of such chools. They are supposed to have also a thorough nowledge of the instructional staff in the schools hey visit. Formerly the assistant inspectors were mpowered to grant school certificates to non-commissioned officers and soldiers of corps stationed in their ivisions; but this has been altered recently, and Colonel Gleig has now the entire control of school ertificates throughout Great Britain and Ireland. It vas found that school certificates were given rather oosely, but Colonel Gleig has laid down a very good ystem, and no man can receive a certificate without oing through a rigid and proper examination.

111. Have these gentlemen any other duties, except that of examination and reporting?—They have o make special returns to the Council, the forms of which I have here, and likewise a summary of them o the commanding officer of the regiment.

112. What is their pay?—I think that Colonel Gleig now receives 600*l.* a year and his half pay of 1*s.* 8*d.* per diem, and Mr. Vicars receives 600*l.* a year.

113. How are they appointed?—By the Secretary of State for War, through the recommendation of the Council and the Commander-in-Chief.

114. I suppose that they are in constant communication with the Council of Military Education?—Yes, nd they report annually to the Council their opinions s to the working of the schools individually or collectively. These reports are published in the Council's "biennial reports," and we are guided a great deal by heir opinions and recommendations.

115. (*Lt.-Col. Chesney.*) Has there not been some recent change in the system of inspection of the schools, as regards the employment of the inspectors in that work?—Yes; the superintending schoolmasters now take the chief portion of the examination of the schools, and the inspectors are supposed only to examine such as have not been examined by the superintending schoolmasters.

116. (*Lord E. Cecil.*) You have spoken of detachment schools; how long have they been in force?—The Council took over the schools in 1860, and they were in existence before that period.

117. You said that the girls' schools went on well; does that apply to boys' schools as well?—Yes.

118. As to the regulations which are issued to every regiment, are they uniform?—Yes, they are printed, and every regiment has them.

119. Are there any regulations which are decided upon by the schoolmasters themselves?—No, that is a point upon which the Council are very particular.

120. You have spoken of infants and adults, and, if I understood you, you rather implied that there was a certain standard of education which was optional with the schoolmaster which made an infant into an adult; can you elucidate that a little more?—I presume you allude to the transfer of a child from the infant to the grown children's school. The intelligence and ability of the child is the chief test as to its fitness for removal from one to the other.

121. Is there any standard of examination which it is necessary for a boy or girl to pass before he or she is considered an adult?—No regulation is laid down by the Council to be acted upon as a fixed test for a child to be "rated" as an "adult."

122. I refer to grown children?—There are three recognized grades in army schools—the infant, the grown child, and the adult; but there is no special examination standard adopted.

123. As I understand you, it is entirely optional with the schoolmaster?—Yes, to pass a child from the infant to the grown children's school; but boys after 9 years of age cannot remain in the former school.

124. What amount do the out-children (if I may use such an expression) pay for their schooling?—Children of soldiers, deceased soldiers, militia staff, warders of military prisons, barrack serjeants, and pensioners in garrison or regimental employ pay 2*d.* a month; for two children it is 1½*d.*, and for three or more 1*d.* a month. For officers' children, if educated at the schools, it is 5*s.* a month for one child, and 2*s.* 6*d.* for every additional child of the same family. Civilians pay 5*s.* Pensioners when not in garrison or regimental employ, officers' (private) servants, canteen keepers, coast guardsmen, and foremen labourers, and others employed in the garrison and duties connected therewith, pay 3*d.* per week; children of soldiers serving abroad, who have been left at home on the embarkation of their fathers, free.

125. How far does the money so contributed go to meet the total expenditure of the army schools?—I suppose not a fifteenth part of the amount expended on the army schools.

126. What is the amount of the money so contributed annually?—I cannot state that. We furnish these reports annually, and they are checked in the pay list. I will ask whether it is possible to furnish that information.

127. What is the total expenditure, according to the last year's estimates, for the army schools?—I think that for our regimental schools the estimated amount was about 34,000*l.* The total educational estimate was 40,000*l.*; but I think that included the Hibernian School and the Royal Military Asylum.

128. Supposing that 20,000 children were educated, the expenditure in the net would be about 1*l.* 15*s.* a head per child?—But the estimate includes the education of adults.

129. Will you state what the infants cost, and what the adults cost?—I will endeavour to give that information.

130. Are not recruits obliged to attend school before being dismissed drill?—Not at present. I believe that it is the wish of commanding officers that they had the power to compel men to do so. I consider that all recruits should be required to attend school until they got a certificate from the schoolmaster that they understood how to read and write and do ordinary sums in arithmetic. There is no direct power to require a recruit to attend school.

131. You have said that in an ordinary regiment there are about 30 attendances per day, I suppose that includes recruits?—Yes.

132. That would make a total of about five per cent. supposing the regiment to consist of 600 men?—Yes, about that number. There is a much larger number upon the school books, but you only get about 30.

133. I understood you to say that neither school girls nor boys were taught anything beyond the usual subjects of elementary education?—No.

134. And that the girls were not taught household work, nor washing, nor cooking, nor anything of that sort?—They are taught thoroughly the use of their needle, but they are not taught washing nor cooking; I suppose that their mothers make them do that at home.

135. How is the inspection abroad and in the colonies managed?—In America we had two superintending schoolmasters until the last year, when the reduction of the force has left only one superintending schoolmaster.

136. That is to say, one for the whole dominion of Canada?—Yes; we have local inspectors at Malta and Gibraltar, each receiving pay at 3*s.* per diem.

137. You have nothing to do with army schools in India?—No; the India Office have not conformed to the desire of the Council to amalgamate their schools or schoolmasters with ours, and it is a pending question which has been going on now for many years.

138. Then you cannot speak as to the system which has been pursued in India with regard to army schools?—Yes; there are local inspectors,—one in each presidency,—but they are paid by the Indian

Col. Pocklington.

3 Feb. 1870.

Army schools.

government; they report to us every year the state of their schools, but we have no direct power over them.

139. You have a nominal authority over them, but not a real authority?—Just so. I think that they are progressing very well, and they conform as much as possible to our home regulations.

140. Are there any examinations in the various adult schools conducted from time to time?—Yes, twice a year by the schoolmaster of the regiment, and once a year by the superintending schoolmaster of the district.

141. How are those examinations conducted?—The examining schoolmaster judges of the progress of the pupils from their examination books, and according to his own discretion he sets them any particular lesson to show their state of advancement.

142. Are the results of those examinations reported to the central office?—Yes, they are sent to the Council and to the commanding officer of the regiment.

143. Does that occur in the detachment schools?—No. Detachment schools are not examined; it is not considered necessary.

144. What means have you of knowing the progress of the children in those schools?—If you allude to detachment schools, as these detachments seldom remain any lengthened period from the regimental head-quarters, it is to be presumed that the children of such detachment schools will be examined at least once a year.

145. Would the detachment schoolmaster report to the schoolmaster of the regiment or to the head office in London?—He would report direct to the schoolmaster of the regiment.

146. But still there is such a supervision over them that the schoolmaster is obliged to report?—Yes; and there is always the possibility of the inspector's visit at an uncertain period.

Status of schoolmasters.

147. With regard to the position of the schoolmasters, have you ever heard of any complaints in the army upon the subject of their position?—I have been shown in a newspaper certain observations with regard to schoolmasters, endeavouring to make out that they were in an inferior position; but I am of opinion that their status in a regiment next after the sergeant-major is very appropriate, not only as a safeguard in the way of discipline, but as insuring for themselves due respect from those over whose education they preside. I think that there is a general feeling of regard on the part of commanding officers for the schoolmasters. I never heard any positive complaint. I have no information upon that point, except what I have read in a newspaper.

148. (*Lt.-Col. Chesney.*) With regard to the position of schoolmasters, did not a first-class army schoolmaster formerly rank as a warrant officer?—He did, and that was the very thing which was objected to; we have no such thing in the military service as a warrant officer.

149. Out of India?—Out of India; and it would be a grade which it would be very difficult to manage.

150. In a rough way, what number of school assistants do you suppose that there are in the army; there are, I suppose, some hundreds?—Yes, I suppose that there must be 500.

151. Out of the 500, can you state how many seriously turn their attention to becoming schoolmasters by going to Chelsea?—That we do not know.

152. Are there not very few from the regiments?—They are on the increase. For instance, in the present class undergoing examination we have nine soldiers and one civilian candidate.

153. If the position of a schoolmaster were really one which was coveted by the soldiers, does not it strike you that out of the 500 assistants there would be a great many more than nine coming forward?—I think that as education in the regiment progresses we shall have more candidates for the position of schoolmaster.

154. Have you in any way lowered the education at Chelsea?—No; it is the same.

155. (*Maj.-Gen. Wilmot.*) Supposing that the report of the inspectors is unfavourable on the inspection of a school, to whom do the Council make any representation?—It would be made to the commanding officer, and it would depend upon whether it was connected with the schoolmaster, or with the attendance of the children, but the Council would communicate directly to the colonel of the regiment.

156. Is the commanding officer of the regiment considered responsible in any way for the good conduct of the school?—Yes, for the good management and regularity of the schools.

157. And for the teaching too?—Yes, he ought to look to it. He gives his opinion upon the working of the school in his monthly report.

158. When a general officer makes an annual inspection does he make any report upon the school?—I think that in his confidential report mention is made of the school, but the general officer does not communicate at all direct with us. If there was anything connected with the schoolmasters he would naturally do so; we should have those reports.

159. Has the commanding officer any power to alter the school regulations?—No. The general supervision of the school is under him, but the management is under the Council. I think that I can safely say that the commanding officers give the Council every assistance.

160. Does the converse hold true, that the Council give every assistance to the commanding officers?—Yes, unquestionably. We always look to the commanding officer to aid and assist us. I think that the Council are very desirous also of co-operating with him, and listening to any suggestions he may wish to offer for the well-being of his schools.

161. (*Sir D. A. Cameron.*) Are the schoolmasters at the normal school trained in French, or the elementary parts of field surveying?—They are not taught French, but they are instructed in the outlines of fortification.

162. Are they capable of giving the instruction if they are required to do so?—Yes, partially; they have to undergo a certain examination in it at the normal school.

163. In what subjects?—Just in plain field fortification; they get a slight knowledge of it. The maximum marks for fortification is 75.

164. But they are not instructed in military drawing or landscape drawing?—No.

165. Or in drawing of any kind?—No; they can practise it privately if they have an aptitude for it.

166. (*Dr. Butler.*) How far is the schoolmaster absolute in maintaining discipline in the school among the young children?—He and the schoolmistress are absolute in their several departments and if they have any complaint to make they make it to the commanding officer.

167. Is that after the children have been punished or before they have been punished?—They have little power; we have had complaints of children being punished by being rapped over the knuckles we have shut our eyes to it unless the punishment has been very severe, but it is supposed not to be tolerated.

168. (*Lt.-Col. Chesney.*) Is it not permitted upon the hand?—If any punishment has ever been given I presume it has been on the hand.

169. (*Lord E. Cecil.*) Is it not permitted with a birch?—No; no corporal punishment is permitted.

170. (*Dr. Butler.*) Can you state what is the extreme punishment which a schoolmaster feels himself justified in inflicting?—I think a cuff occasionally. The Commission are perhaps about to examine some superintending schoolmasters, who will give them much better information upon that subject than I can.

171. You have mentioned that some of the children are from 2 to 3 years of age, which of course means that they are not taught anything. Is there

nd to be any difficulty in separating these real ants from the mass of the scholars?—No; they not be kept entirely separate. There seems to be inclination to take in the children as soon as they take care of themselves, so as to liberate them m their mothers, and they are given little things to y with, so that they are to a certain degree kept upied.

172. Are ladies ever allowed to visit these schools? We are very glad to see commanding and other icers' wives taking an interest in the regimental school, but we cannot allow any interference with the schoolmistress.

173. Does the schoolmaster follow the regiment when it moves?—Yes, he is part and parcel of the regiment.

174. Do you know in what way the inspectors, Colonel Gleig and his colleague, conduct the examinations; is it by written questions or otherwise?—They see work done, and examine individuals if they think proper, they look at the examination book, and see at what point the pupils have arrived since the last examination, and what has been done latterly.

Col. Pocklington.

3 Feb. 1870.

Army schools.

The witness withdrew.

Adjourned.

Tuesday, 22nd February 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GENERAL EARDLEY WILMOT.
LORD NORTHBROOK.	C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.	LIEUT.-COL. CHESNEY.

BREVET-COLONEL E. H. F. POCKLINGTON further examined.

Col. Pocklington.

22 Feb. 1870.

Army schools.

175. (*Chairman.*) The last time we had the pleasure seeing you, you were kind enough to say that you uld prepare some written statements, and statistics? -I am afraid that I cannot give Lord Eustace Cecil e statistics which he wishes. I have made a calcuion of the amount of the children's school fees; ey amount to 1,400*l.* That, I think, covers what is lled the capitation grant for the industrial school aterials of the children. On going through the rerns we have ascertained that the fees only amount about 1,400*l.*, that is to say, the fees of children th of soldiers, of pensioners, and the other children tending the schools connected with the garrisons and e camps.

176. (*Lord E. Cecil.*) Is that for the United ingdom?—It is the entire amount at home and road.

177. For the United Kingdom and the Colonies?—or the United Kingdom and the Colonies.

178. What is the exact proportion of the total exenditure for these schools?—We can scarcely arrive that; the estimate covers a certain amount, and I ink that the estimate for general education is about 4,000*l.*, but we are not able to give the Commission return of the actual cost of our schools, because they uctuate so much. When a detachment of a regiment sent out, if they have sufficient adult soldiers and hildren, a school is established. If there are not fficient children to have a schoolmistress, a schoolaster only is appointed, but if there are sufficient hildren for a woman to overlook and instruct, a etachment schoolmistress is appointed. Under those ircumstances the amount fluctuates very much, and in onsequence of there having been so many detachents recently throughout the country, both in Ireland nd Great Britain, we have constant demands for a chool to be established.

179. The point which I wish to ascertain is how ar these schools are self-supporting?—They are not elf-supporting, with the exception that the amount f school fees covers the capitation grant to children or industrial school material to make up; they are nstructed in sewing, and they make up the material.

180. (*Lt.-Col. Chesney.*) I see that the amount n the estimate is 1,650*l.* for industrial material?—I thought that it was about 1,500*l.*

181. (*Chairman.*) Are you in favour or not of endering the attendance of recruits at school comulsory?—Decidedly so. I think that all recruits hould be required to attend school until they can read nd write, and do some ordinary sums in arithmetic, and I think that the criterion should be a certificate from the schoolmaster to the captain of the company that they have acquired that knowledge.

182. Would that interfere with their drill?—No; I do not think that it would, because the drill is the most important thing in the first instance to make a man capable of bearing arms as a soldier, and the next thing is his accomplishment as a soldier. There are certain hours in the day, say an hour in the morning or an hour in the afternoon, when a man might attend school. The time of recruits is however very much taken up with drill.

183. You would not render the attendance of the rest of the men in the regiment, who were no longer recruits, compulsory?—I would not start with that at the present moment and insist upon every man attending school, but all recruits who have joined recently, and who may hereafter join, I think should be compelled to attend school. There are some old soldiers who might be sent to school, but they are incapable of learning anything.

184. Would you make school certificates an indispensable qualification for the promotion of privates to the rank of non-commissioned officers?—I think so, as a rule. The commanding officers of regiments now, I think, have a strong bias towards encouraging the men to gain certificates in order to obtain promotion. That I think will improve every year; as the special classes are formed the men will be better educated, and I think that there will be a greater stimulus to take out certificates; it is already considerably on the increase.

185. You have a good opinion of the special classes in regiments?—Decidedly.

186. Would you employ soldier assistants as teachers?—Yes; but not according to the present rule, the present rule is very defective. I think that it is open to great abuse, and that a number of men are put upon the list as assistants receiving their 3*d.* a day which the actual school attendances do not require. The Council have been for a long time anxious to make an alteration in that rule; but it is rather difficult do so. At present the number of assistants is calculated according to the number upon the school books, and, as I have before stated, the numbers on the school books are not a criterion, inasmuch as some men only attend once or twice a month, consequently if there are 250 or 260 men upon the school books, one assistant for every 40 men is allowed. The assistants are employed according to that amount. Now it is evident that a school where the attendances do not exceed 35 does not require so many

Soldier assistants.

Col. Pocklington.

22 Feb. 1870.

Army schools.

as five or six assistants at 3*d.* a day; and I should propose that two soldiers (non-commissioned officers or privates) should be permanently rated as school assistants, and employed permanently as such in every corps or brigade of artillery — the senior to receive 6*d.*, in addition to the pay of his rank, and the junior to receive 4*d.* per diem—each to remain at least two years in that capacity, and not to be changed simultaneously. Should the promotion of either be absolutely required for other duties before the lapse of his two years' employment as school assistant, I think that such should be allowed, but that a special report thereof should be made to the Adjutant-General. It would be hard when you have permanent assistants, to prevent these men having the advantage of bettering themselves as non-commissioned officers in higher grades. I should propose that the service of either of these permanent assistants should be made available in cases of a division of a regiment into wings or detachments of not less than three companies, when they could have charge of the detachment schools. No increase of pay I think ought to be given to the assistant in receipt of 6*d.* per diem for school duties, but I think that the junior assistant in receipt of 4*d.* ought to have his pay increased to 6*d.*, when so detached and in charge of a school. Should any unforeseen necessity arise for extra instructors over and above the before-mentioned two permanent school assistants, the officer commanding the corps or brigade, might appoint as now, a soldier-assistant, with pay at 3*d.* per diem for such special days only, as the increased attendance justified such additional employment. This fact should be entered in the monthly school report to the Director-General of Military Education, specifying the numbers attending, and the dates on which such extra assistance was needed. I consider that in the majority of corps, two permanent instructors, in addition to the trained schoolmaster, would suffice to meet the general requirements of average attendances, and such as the ordinary school accommodation would admit of. In my opinion the present plan is open to objection, as the average on the school books is not a fair test of the absolute requirement of assistant instructors to meet the wants of the average attendances. Of course when schools are closed these permanent instructors' services can be made available on other regimental employment, but their pay I think should continue the same.

Status of schoolmasters.

187. Do you think that the complaints of the schoolmasters with regard to their present status are well founded?—I have not heard exactly what they are, but I should say decidedly not. I am very strongly of opinion that the status of the schoolmasters is equal to the necessities and requirements of the service. I have not heard what their complaints are particularly, or I might meet them with observations. I think that the ability displayed by those who are serving is quite sufficient to conduct the educational requisites in regimental schools. Any increase of status would in my opinion only lead to constant complaints as to presumption or arrogance of position and breaches of discipline as heretofore. In the first instance when the schoolmasters were appointed in the army and attached to the regiments they rather exceeded their position, and in fact were the cause of breaches of discipline, on the part of others, by setting a bad example.

188. Do you consider them as ranking above or below the senior grades of non-commissioned officers?—Above. There is only one non-commissioned officer in the regiment senior to them, namely, the serjeant-major.

189. The schoolmasters are below the serjeant-major?—They are next below the serjeant-major, and they are above the quartermaster-serjeant.

190. And you think that that is the best place for them?—Decidedly; and I should be very sorry to see them put higher, because I think that it would be prejudicial to the interests of the service. Many of these men are young soldiers, and to be suddenly elevated to the rank of all but an officer I think would not be conducive to their interests or well-being. The general opinion given by the commanding officers is highly favourable towards the present status of the schoolmasters.

191. And you would clearly retain their position as partaking in no degree of the rank of an officer?—Decidedly. The reports of the commanding officers as a general rule are highly favourable as to the efficiency of the schoolmasters attached to their corps. They are stated to be zealous, respectful in their demeanour, amenable to discipline, and contented, and they appear to obtain for themselves a proper respect from the non-commissioned officers and men of their corps. Their position next to the serjeant-major in a regiment is compatible with their interests. I am of opinion that the wearing of chevrons should be maintained. I believe that our army schoolmasters are in reality quite satisfied with their position, and that it is only the agitation from without of designing persons that has given rise to any presumed feeling to the contrary. As confirmatory of the strong impression which I have formed in the above particular, and of the prejudicial effects which might be entailed on the service by raising the schoolmasters' status and giving them what is called the position of warrant officers, I beg to be allowed to hand in copies of Lord Hardinge's correspondence with Mr. Herbert on the subject, showing his opinion and that of Sir George Wetherall on the unusual and nondescript grade of warrant officers in the British army:—

(*The witness delivered in the following letters*):—

"Horse Guards,
"Sir, 3rd February 1854.

"I HAVE had the honour to receive your letter of the 23rd December, relating to the improvements you propose in the salaries and rank of regimental schoolmasters.

"I concur with you that the improvement in the pay which you propose for the schoolmasters will be advantageous, and I am glad to hear that you intend to take a vote in the army estimates for this year.

"With regard to the rank of regimental schoolmasters, the intermediate rank which you propose to introduce between the officer and non-commissioned officer will involve many points of detail requiring much consideration in the practical working of such a novelty.

"At present our regimental system, which has to adapt itself to every climate in the world, is less complicated than that of any other European army. Its simplicity consists in having fewer non-combatants than any other army; and I should request, if you have no objection, that this question should be suspended for a short time, when more consideration after inquiry can be given to its details.

"I have the honour to be,
"Sir,
"Your most obedient humble servant,
"(Signed) HARDINGE.

"The Right Hon. Sidney Herbert, M.P.,
"&c. &c. &c."

"Horse Guards,
"MY DEAR MR. HERBERT, 12th May 1854.

"IN reference to your letter of the 24th April I concur with General Wetherall in his objection to schoolmasters with the rank of warrant officers. His reasons are well founded from past experience.

"I should deprecate the revival of a rank of this nondescript kind. I can recollect how difficult it was to know how to treat this class. If he was disposed to resist anything and to be troublesome, our means of repression were embarrassing.

"If he was a man of merit and highly respected, he lived in an isolated and painful position. His social position was awkward. He would neither live with those above him or below him; and I need not describe the situations in which the service and the individual both suffered.

"You have, however, stated to me that you do not ntemplate the revival of any such officer as a class, at it is to be limited to 10 or 12 warrant school- asters at great garrisons and stations, and not to go rther, or to be applied to regiments and troops oving from place to place, &c., in short, that your oposal is to enable you to have the means of re- arding some 10 or 12 men of merit, and of giving ıcouragement to the remainder.

"Under these circumstances, the objection taken ill be relinquished, and the Military Departments will ford every assistance in their power to make the xperiment a successful one.

"I am,
"My dear Mr. Herbert,
"Yours very sincerely,
"(Signed) HARDINGE.

Right Hon. Sidney Herbert."

"*Minute.*

"This letter removes the difficulty as to the first- ass schoolmasters.

"Let the new regulations now be printed in half ıargin, and let a warrant be prepared embodying the anges.

"The first-class are to be warrant officers. Their umber in no case to exceed 12. Perhaps the number ad better be stated in the warrant, merely as a number ltimately to be attained, as we have not yet enough ıen deserving of such promotion.

"SIDNEY HERBERT."

192. Do you think that the pay of the school- ıasters is sufficient?—Yes; their pay is very good.

193. You think that they ought not to be allowed o give lessons to the children of officers?—No. If hey are to give lessons to the children of officers, fficers' children must attend their schools. It is quite s much as they can possibly get through to do their rdinary and proper duties, and it is natural to sup- ose that if they gave instruction to officers' children t would take away from their efficiency as school- asters in their proper sphere.

194. I think that a complaint was alluded to on the ast occasion when we had the pleasure of seeing you, hat a schoolmaster was obliged to have his kit in- pected, and that in that respect he was treated like a ıon-commissioned officer. Have you any observations o make upon that point?—The General Order of the 28th of May 1864 contains the following paragraph—

"A case having been recently brought to the notice of the Field Marshal Commanding-in-chief, in which a regimental schoolmaster died in debt to the public, he sale of the man's effects producing 12*s.* 9*d.* only, nd the books with which he was furnished at the Normal school being entirely missing, His Royal Highness desires that, in future, the kits, books, &c. of schoolmasters may be inspected once a quarter by the adjutants of the regiments to which they are attached."

Col. Pocklington.

22 Feb. 1870.

Army schools.

195. Are you in favour of giving increased pay to soldiers who hold certificates of education?—Certainly not.

196. Are you satisfied with the present system of examination?—Yes, with the exception that I think there is almost too much examination. I have a memorandum showing the different inspections which take place. There are visits by the inspector and assistant inspector to each head-quarter regimental school, and they examine such persons as have not been previously examined by a superintending schoolmaster during the year. (That will be seen by reference to Forms A, B, C, E, and K). The local inspector at Malta and Gibraltar performs the duties as above detailed, uniting the duties of inspector and superintending schoolmaster. The superintending schoolmaster inspects and examines such schools within his district as the Council may detail, say once a year, but, if in a garrison, the superintending schoolmaster constantly visits the regimental schools of such garrison unattended by expense. (Vide Forms A, B, C, E, and L). The regimental schoolmasters examine their respective schools half yearly (irrespectively of any other examination), forwarding Form D to the Council of Military Education and the district inspector. The examinations by regimental schoolmasters are not, in my opinion, absolutely necessary. I imagine that they were originally framed owing to such practice being in use in national schools. I think, therefore, that such examinations might be dispensed with, they are apt to be extended over many days; and I think that the schoolmaster's time might be more valuably applied in affording general instruction to special classes, &c., &c.

Appendix, p. 122.

197. Are you in favour of the amalgamation of the Indian with the Imperial school system?—I am. The Council have been recommending that amalgamation for a number of years. The Indian schools are to a great extent working with us, but there is not that amalgamation which would be desirable, inasmuch as many of the schoolmasters and schoolmistresses are educated in India and are examined there, and we know nothing of what takes place until they come home, and then they are only provisional schoolmasters and schoolmistresses, and the schoolmasters have to be re-enlisted to work according to our system.

198. (*Lt.-Col. Chesney.*) You advise that recruits should continue at school until they attain a certain educational condition?—Yes.

199. Supposing that a man ceases to be a recruit before he has passed out, what would you do?—I should continue him at school, and by the order being compulsory, the commanding officer could insist upon his going to school; and if he failed to obey his instructions until he had educated himself to a certain extent, he could then, under the 32nd Article of War, be brought to trial.

The witness withdrew.

BREVET-COLONEL A. C. GLEIG, Royal Artillery, examined.

Col. A. C. Gleig.

Army schools.

200. (*Chairman.*) You are inspector of army schools?—I am inspector of army schools in Great Britain, that is to say, my title is inspector of army schools, but the inspections do not extend beyond Great Britain.

201. Under you there used to be two inspectors, and now there is, I think, only one?—In former days there were three assistant inspectors; one of the assistant inspectors left the service, and then I was appointed inspector; but the assistant inspector who still remains is not under me in any way at all; he makes his inspections in Ireland and I make my inspections in Great Britain, but I have certain duties connected with Ireland which I will explain to the Commission.

202. Will you state the exact nature of your duties?—You are aware that there are superintending schoolmasters at certain stations. I have to visit every station at which a superintending schoolmaster is posted at least once in a year, and practically I do so more frequently. I also have to visit every regiment which is at a station where there is no superintending schoolmaster posted. I go both to the stations of superintendents and to out-stations; and at the out-stations I go to every regiment, visit the schools, and consult the commanding officers about them. I receive periodically reports of the examinations of all the schools in Great Britain; which examinations are made by the superintending schoolmasters. The superintending schoolmasters examine at the stations where they themselves are posted, and they also go to out-stations. I have to report once a year to the Council of Military Education upon what I have seen, and upon the character of the reports which I have received from the superintending schoolmasters, and so forth. That is an outline of what I have to

Col. A. C. Gleig.
22 Feb. 1870.
Army schools.

do in Great Britain only. But besides that I have to furnish the questions for examination, and to look over the papers of all the men in Great Britain and Ireland who want to obtain what we call school certificates. The examinations are not conducted by me personally; they are conducted where there is a superintending master by the superintending master, and where there is not one they are conducted by an officer detailed for the purpose, upon questions furnished by me. The papers of the men examined are looked over and marked by a superintending schoolmaster whom I name, and then I look over them and communicate to the commanding officers what certificates the men should get. Besides these details my letter of instructions desires me to advise the Council generally upon matters connected with army schools.

203. With regard to the gentleman who performs duties in Ireland analogous to yours, but who is not subordinate to you, I suppose that we may take the description of what you do as descriptive of the functions which he performs?—No, because he has nothing to do with granting certificates. His duties are not similar either to mine or to those of the superintending masters. There are two superintending masters in Ireland. There are a certain number of schools in Ireland which do not belong to the districts where these two gentlemen are posted, and those schools are examined and reported upon by the assistant inspector, but he has no power of granting a certificate.

204. Is there any reason for having a different system in England and in Ireland?—I am not aware of any, except that an assistant inspector is there and you must make some use of him.

205. Of the two systems, which do you consider to be the best, the Irish system or the English system?—I think that the English system is the best, because it places the schools under one head. In Ireland there are two superintending masters, besides the assistant inspector. The duties of the superintending masters in Ireland are precisely analogous to those which they perform in Great Britain; but the assistant inspector has duties of his own in Ireland. The assistant inspector's duties in Ireland are to examine those schools periodically which are not periodically examined by the superintending masters, and to visit, without examining, the schools that are examined by them; but he has no authority to grant certificates.

206. Would the machinery which now exists in England be sufficient to embrace the army schools in Ireland?—Do you mean to ask whether we could dispense with the assistant inspector in Ireland?

207. Yes?—I am hardly in a position to speak upon that point. I think we could, with our staff of superintending masters; but I have made no inspection in Ireland. Considering the number of schools in Great Britain and Ireland altogether, and considering how we manage our affairs in this part of the kingdom, I think that the present staff of superintending schoolmasters and myself could conduct the whole thing. In Great Britain there are 11 superintendents of schools, and in Ireland there are two.

208. Is there anybody between you and the superintendents?—Nobody. But these superintendents are commissioned officers, although they have all been schoolmasters.

209. I suppose that your whole time is occupied?—My time is fully occupied.

210. You grant certificates in Ireland?—I do.

211. Therefore it is merely a question whether the duties of visiting the schools in Ireland could not be performed by you?—Of course I could not undertake the charge of Ireland as well as Great Britain, and visit every school every year; but I do not think that there would be any necessity for doing that, if the schools were regularly visited by the superintending masters. No one man could perform that duty.

212. Will you inform us whether on the whole you are satisfied with the operation of the army schools in Great Britain and Ireland?—I do not think that the results are what they might be if some changes were made. I do not think that the results at present are adequate to the expense, but I think that they might be made so.

213. What suggestions have you to offer for their improvement?—The same suggestions as are applicable to all schools throughout the kingdom, namely, that steps should be taken to make the attendance of the pupils much more regular than it is, in adult schools especially.

214. Would you render it compulsory?—Yes, under certain limitations.

215. What would be these limitations?—I should allow a recruit to get through a certain portion of his drill and to get accustomed to the barrack room atmosphere, and to learn his barrack room duties, and at a certain stage of his proficiency I would order him to go to school, and I would make him remain there until he had obtained a third class certificate of qualifications, and I would apply that to every man unless a man was pronounced to be quite unfit to obtain a certificate at all.

216. Would you have definite hours set apart in the regiment for school?—I do not think that it would do to name one hour for all the regiments.

217. But do you think that a certain number of hours should be allotted for school, and that no other duties should interfere with those hours?—Certainly, allowing the commanding officer to choose the hours which were most convenient to himself. That is essential.

218. With regard to the soldiers who are not recruits at this moment, would you impose any compulsory qualification?—I think that all non-commissioned officers until they reached a certain standard of qualification should be compelled to attend school. It is a question of policy, rather than of school organization, whether you would make the other men attend. All men who enlist hereafter, I think you might force to attend if you thought it desirable.

219. But you are not prepared to recommend that the attendance of the actual soldier should be rendered compulsory?—No, not of the men who are now enlisted, but hereafter.

220. In substitution of compulsion is there any inducement which you can suggest to secure the attendance of the men?—The school hours are now fixed at the time of parade in some corps, and leave is given to the men to absent themselves from parade in order to attend school. You could hardly order a commanding officer to do that, but it is of great advantage to the school when he does it.

221. Have you any suggestion to make with regard to the subjects of examination which carry a certificate with them?—Yes, I think that some alterations should be made in that respect, and I know that the Council of Military Education are of the same opinion, and we lately arrived at a conclusion about it.

222. Perhaps you will communicate that conclusion to us?—For the lowest class of certificate a man is required to know a little arithmetic, and to read certain easy books, and to write from dictation. I think that the writing from dictation should be not merely from an ordinary book, but from the easier parts of a regimental order book. This would teach men spelling of a useful kind to them, and it would make commanding officers think that there was more practical use in the system than there is now. Then I think that for second-class certificates the order in which the arithmetical subjects are arranged should be changed; and to obtain that certificate I would require a man to be able to write regimental orders tolerably well. In the first-class certificate I am only disposed to make the following alteration:—At present, in addition to arithmetic and reading and writing from dictation, and so forth, we require a man to take up two extra subjects; a list of the subjects is given. I think it very much better to require a man to take up only one subject, for this reason, that among men such as our men are you would be much more likely to get that subject thoroughly understood if it were limited to one, and

o because then many commanding officers would be
cly to insist upon a first-class certificate for the
gher ranks, which is not the case now. They say, "we
not care about the extra subjects;" but if you made
nly one extra subject, I am sure that some would
ce the men to study it. I should have preferred
intermediate certificate between the second and
first, but it has been ruled at the Horse Guards
t that would not be convenient.

223. Are you satisfied with what are called the
own-up children's schools; have you any suggestions
make with regard to them?—They vary very much.
on the whole, I think that they are as good as you
expect them to be in the army. It is astonishing
w the children in a regiment change. It often sur-
ses me how very short a time children remain in
given school, and that operates very much against
eir progress, but it is unavoidable.

224. Do you think that the regimental schools for
own-up children and the infant schools are as good
the ordinary village schools?—Yes, I should say
t the average of them are as good as the average
village schools which I have seen, and that some
them are very much better.

225. Are you satisfied with the system of inspec-
n and superintendence over which you preside?—
should not like to say, at this moment, that I
uld suggest no improvement in it, but it has only
en in operation since last October. I think that
the public were not afraid of the expense (of
urse all travelling involves expense) it would be a
ry good thing to require the superintending masters,
whom I spoke, to examine detachment schools as
ll as head quarter schools. The schools which they
w examine are only head quarter schools. For in-
nce, a man stationed at Manchester will go to
reston to examine a school which is there, because
is a head quarter school, and the school of an entire
ttalion; but there is a school at Weedon, and there
a school at Ashton, and there are other very con-
lerable schools which are for the whole wing of a
giment, but they are never examined.

226. How many children on the average would
ere be in these detachment schools?—The number
ries very much; the detachment school at Bir-
ingham had I know the other day about 22, and
Weedon there were about 29.

227. Do you know how many detachment schools
ere are?—I cannot state positively, but I should say
out 30 in Great Britain. When I speak of a school
mean an adult school and a children's school. I
ill not say within five whether I am right or wrong
to the number. I have hardly yet looked over my
ew district.

228. With regard to the ordinary schoolmasters do
ou consider that their status is such as it should be?
-I should like to see it changed in some particulars.
robably the Commission is aware that the status of
ie schoolmasters is not now what it once was; it has
en altered considerably.

229. The schoolmasters think that it has been
tered for the worse?—Yes, there is no doubt that
eir position in the service has been lowered. I
ink that that is a pity unless an absolute necessity
an be shown for it, because it degrades the office and
wers the whole system.

230. Independently of anything which exists, or
hich has been done, what status would you be dis-
osed to assign to the schoolmaster of a regiment?—
he change which I should like to see made is this
whether I should invent it if I did not know all that
ad gone before I cannot tell you), that after a certain
umber of years' service a schoolmaster who was
onsidered worth keeping on at all should have his
atus improved. I would give him higher rank,
nd I should take off his arm the chevrons which they
ll object to.

231. You would not take them off until he had
ttained a certain status?—No. I think it only right
hat a youngster joining from Chelsea, who knows
othing of soldiering, should not be placed on a par
with the sergeant-major, the senior non-commissioned officer of the regiment. But after a certain number of years' service, if a man had proved himself worth keeping, I would put him in the same rank as a sergeant-major, and I would gratify his feelings as regards the chevrons.

Status of schoolmasters.

232. Would you increase his pay?—No. I think that his pay is quite high enough: it is 6*d.* a day lower than I myself originally recommended, but I think it quite high enough.

233. Do you think that that pay, and these advantages, command as good men as it is necessary to have?—We do not get quite the same sort of men that we once got. We now, I think, principally recruit from the army. At one time the position of army schoolmaster was very much sought after by civilians, but now it is not.

234. Do you think that an advantage or a disadvantage?—I think that it is a disadvantage. In the first place it shows that the department is not so highly esteemed as it once was, and that in itself is a disadvantage. Some of the best schoolmasters that I have ever seen were men who had been in the ranks, but some of the worst schoolmasters that I have ever seen were also men who had been in the ranks. I do not think it follows that a man is better from having been the one or the other. From all that I have heard I have no doubt that the mere fact of putting the chevrons on the schoolmaster's arm, making him in fact a rank and file non-commissioned officer, has had a great effect in deterring civilians from coming in.

235. But still you would retain their chevrons?—Yes, I would at first.

Recreation rooms and lectures.

236. With regard to the recreation rooms, have you any suggestions to make?—Only that wherever there are not already good rooms appointed for the purpose you should provide them. There is no doubt that where you have comfortable rooms they give a great deal of comfort and satisfaction to the men.

237. With respect to the lectures, do you think that anything more could be done in that direction?—I have nothing officially to do with the lectures. I have occasionally attended schoolmasters' lectures to see what they were like; some of them are very good, and some of them are very bad. I do not think so much of them myself as some people do.

Army schools.

238. What is the system of the promotion of school assistants?—It varies; there is nothing laid down by order. As a general rule a commanding officer does not object to make a private who is assisting in a school a lance corporal, but as a general rule he will not allow him to remain after he has obtained full rank, and very many commanding officers will not allow him to remain after he has obtained lance rank. The cases are very rare in which commanding officers will allow a man to remain after he has obtained full rank; and there is no doubt that their very frequent change tells very much against our schools.

239. How would you remedy that?—By ordering that a man should remain for a certain period; a year is quite long enough.

240. (*Lt.-Col. Chesney.*) In that case should you not guard against a man losing by it regimentally?—Yes, as a matter of detail you must of course do that, or otherwise you will not get men to come forward.

241. (*Lord E. Cecil.*) I gather from your evidence that you consider that on the whole the working of the army schools is satisfactory. Do you consider them superior to the ordinary village civilian schools?—Of course I can only speak of such schools as I have seen. I think they are. I can give you to a certain extent an illustration of it, namely, that at the examinations conducted at Aldershot by the local society in connexion with the Society of Arts in London, the children in our schools contending for prizes and certificates have completely beaten the children of the village schools. Of course that only applies to that particular locality; but so far it would support my opinion.

242. It is quite within your experience that these schools are sought after by the civilian population

Col. A. C. Gleig.

22 Feb. 1870.

Army schools.

who have to do with barracks or camps?—Certainly in many cases.

243. Do you think that sufficient importance is generally attached by commanding officers to the attendance of the men at school?—I think that the number of commanding officers now who put any obstacle in the way is very few indeed. At one time it was different, but there is no doubt that now commanding officers look upon the maintenance of school as they look upon any other duty, namely, that it is a thing to be done. Still there are a great many commanding officers who do not lay themselves out to foster the school in an especial manner. At one time it was quite a common thing for the serjeant-major (a very influential person in the regiment) rather to put down the school, and to let every duty which he could get in the way. That is no longer the case as a rule, and I know many adjutants who encourage the schools by all the means in their power. But there are great difficulties in the way of making suitable arrangements.

244. On the whole you think that the opposition amongst the leading authorities in regiments is not so great as it used to be?—It certainly is not. I do not think that there is any opposition now, but several commanding officers do not care about school. Very often a man has no taste for it, and does not care about it.

245. In the appointment of inferior non-commissioned officers (corporals for instance) do you give direct encouragement in all regiments to a man who has been at school, as against a man who has not been at school?—Of course, a man who has been at school and has learnt something there, will know more than one who has not. Every commanding officer will like to have the best non-commissioned officers that he can. Very often a man is a bad scholar but a good soldier, and I should take such a man and make him go to school. I therefore do not think that promotion in the army ought to be made to depend mainly upon the report from the school.

246. But do you not think that there ought to be a qualification that a man should be able to read and write before he is appointed as a non-commissioned officer?—I think that if a man is a smart soldier and is a deserving man he should be made a non-commissioned officer, and should be compelled to attend school until he has reached a certain standard; that would be for the first grade, and then when his turn came I would put him into the next grade, and make him go on attending school until he got a certificate for that grade.

247. Do you not think that a non-commissioned officer is rather put into a humiliating position if he has to attend school and to learn to read and write, and is placed in the command of others who are better informed in those matters than himself?—Not if he is a thoroughly good soldier. I do not think that a man's capacity to command depends upon whether he can read and write. No doubt there are many duties which you cannot perform without knowing reading and writing, but I think that a man might be an excellent soldier, though he could not read and write. Of course there are certain positions, such as a pay sergeant's, and so on, where a really good elementary education is necessary.

248. You do not think that the men under the command of such a non-commissioned officer would despise his ignorance?—I think not. I can only speak upon that point from my experience as a regimental officer, which is now a thing of 12 or 14 years ago.

249. Have you any knowledge of foreign army schools?—Not from observation, only from what I have read. I know something of the system of the French army schools.

250. Have you had any means of comparing them with the English system?—I have not. I know something of the details of instruction in the French schools.

251. Taking into consideration that the foreign armies are principally raised by conscription, do you think that the amount of education in the foreign schools is superior to that in our army?—I can only give an opinion with regard to the French schools, because that is the only system about which I think that I have read very particularly. There is no doubt that there are much more competent witnesses to speak upon that subject than I am. They undertake to teach many things in the French army schools which we do not teach. I can answer for this, that having served with the French army, I have seen many very ignorant men amongst them.

252. I think that you have mentioned one or two of the small grievances which are complained of by schoolmasters; are there any others which ever come to your notice?—Yes. I know that it is considered a great grievance that they are no longer permitted to give private instruction. I believe that that is one of their greatest grievances. When the present school system was first started private instruction was allowed to be given, and I believe that one principal inducement to enter our service which was held out to a good many men in the first instance was that they would be allowed to give private lessons (I am speaking now of some years ago). But we found in some instances that the schoolmasters devoted themselves almost entirely to their private pupils, and came into school so fagged that they were useless to us, and we issued an order which put a stop to that. That, I believe, is a great grievance to some of the old schoolmasters; it is not so to the younger men, because they have all joined under the present system.

253. And you are not disposed to rescind that order?—Not in the least.

254. As to the inspection of their kits and their treatment on board ship, are you disposed to sympathise with them?—Yes. I think that because some bad fellow has made away with his kit, it is a great pity that the whole body of schoolmasters should be made to show their kits once a fortnight or once a month. I should never have thought of ordering such a thing myself.

255. Their treatment on board ship is also complained of?—Yes. The Council of Education were I believe at one time in communication with the Quartermaster General upon the subject, but did not see that anything could be done about it.

256. Do you think that schoolmasters generally are a more sensitive body of men than other professional men?—Schoolmasters have the reputation throughout the country, both in and out of the army, of being peculiarly sensitive, and perhaps have an equivocal position, being not quite one thing, nor yet quite another. I think that there is less of that feeling amongst our schoolmasters than there was at one time and that although they do not like their position they now accept it. There is no striving to be something which they are not, which there was sometimes in schoolmasters.

257. Still you quite admit, that from one cause or another, the class of people who apply for a schoolmaster's position has deteriorated?—I would rather say has changed. I do not consider that a man because he is a soldier is inferior to anybody else. They are certainly not men of the same education as those whom we had formerly. I do not like to say anything against a body of men who are working very hard and very well, but they are certainly not the same class of men who came in at first.

258. And you have no very good reason to assign for that deterioration?—I think that the alteration in the clothing had a considerable effect, and I think that it is very likely that now it has become known that they cannot take private pupils that has had some influence upon them.

259. I rather refer to reasons of pay, because one can hardly suppose that having chevrons on the arm would be the only cause to deter people from entering the profession?—I think it very likely that it would deter persons. I am assured that the loss of private tuition has had a great effect. The older schoolmasters who have come to us have been

satisfied, and those who would otherwise become schoolmasters are kept out of the service simply because they find that a certain number of men are disappointed with it.

260. (*Lt.-Col. Chesney.*) Speaking of pay, are you are that it is said by the junior schoolmasters that by find themselves practically not so well off as a colour-sergeant of a company?—I never heard it said, it may be so.

261. With regard to the private lessons, do not you nk that that might be left, under certain restrictions, the commanding officer, in the same way as, in a tional school, the schoolmaster is allowed by the nagers in certain cases to take private pupils?—om what I know I think that it is much better not do so.

262. Colonel Pocklington said that he thought ere were over 500 school assistants employed. Is t it remarkable, as showing the unpopularity of the vice, that only 23 of those should come up in two ars for examination at Chelsea?—It shows that many n prefer soldiering to being a schoolmaster, but I not see that it shows that particular service to be popular.

263. Is it not the fact that there is no special traction at present to the educated soldier towards at particular branch?—It certainly shows that the sition of a schoolmaster does not attract some of e best educated men whom we have, but then that y be because a man does not care to devote his e to that sort of thing, not because he looks upon as an unworthy position to hold, but because it is t according to his taste to follow that line of life.

264. Perhaps it may show that he thinks that he ay do better in another way in the regiment?—hat I daresay tells in many cases. There is a large mber of soldiers who do not want promotion at all.

265. (*Maj.-Gen. Wilmot*). You have spoken of difficulty with regard to a man being made a non-mmissioned officer, who was still an uneducated an. Would not that difficulty be entirely got over a system was established by which all recruits ust be instructed?—Yes; one of the great evils of ie want of system now is that men come and go, nd not only attend very irregularly, but do not stay ng enough to learn sufficient to be of any use to iem. I would have a rule of this sort that when nce a man's name is upon the school books he must ttend regularly so many days a week, until he aches a certain standard, or is pronounced so dull by ature that he cannot reach it at all.

266. Would it not be quite possible to introduce system both for the recruit and for the soldier, mething like the half-time of the national schools, y which a man could learn his military work and ould be instructed at the same time?—I think that nany old soldiers would be dissatisfied with it.

267. I leave out the old soldiers. Would the nstruction which a man got at all interfere with his ilitary work?—No, you might probably get as many nen as would fill the schoolroom without interfering vith the due performance of other duties.

268. As a general rule would not a man learn etter by the half-time system?—Yes; it does not equire so much time for the adults as for the hildren; the adult is getting his wits sharpened utside.

269. Two hours a day in schooling would not take im much away from his other duties?—No; but it s not essential that an adult should go to school in rder to be made a very sharp fellow, although no doubt it would improve him very much.

270. If it is essential that he should go to school, t is essential to devise some plan by which he should ot lose his work as a soldier?—Of course. There s no doubt that with a little arrangement that could e done.

271. There need be no difficulty in it at all?—Not he least.

272. (*Lt.-Col. Chesney.*) If the school would not old the number of recruits and of men remaining after they were recruits, which would you make give way?—I would have two periods of school in the day.

273. (*Maj.-Gen. Wilmot.*) What do you consider to be the average time that a schoolmaster is employed during the day?—In this country he is usually employed six hours a day.

274. That is with adults and with children?—Yes.

275. (*Mr. Parker.*) How many hours compulsory attendance would you recommend for a recruit?—Supposing that you made a recruit attend three times a week for two hours a day, I have no doubt that you would do a great deal with him in the course of four months, but then you must ensure his regular attendance.

276. You would make other duty give way to that number of hours of compulsory attendance?—Yes, but I would not send a man to school at once, I would let him be a recruit at first for a month or two.

277. You prefer to have a steady attendance during a short period in order to qualify him, rather than to have an interrupted attendance over a longer period?—Undoubtedly, regularity of attendance is more than half the battle, I am quite sure of that.

278. So that as soon as an ignorant recruit knew the rudiments of his drill as a soldier, the most important point would be to give him his reading and writing?—Yes, I would send him to school and let him attend it regularly until he could get a third class certificate.

Status of schoolmasters.

279. (*Dr. Butler.*) With regard to the masters, can you give evidence as to what proportion come from the army, and what proportion are civilians?—I could not do so without looking at the returns. I believe that latterly all the new men have come from the army, that is to say, within the last two or three years; I am told so.

280. Do you know whether it was felt before the change which was made, that a civilian master stood at a disadvantage as compared with one who came from the army?—Long ago that used to be felt, but it has certainly not been felt of late years; for the last eight or nine years there has been a very great change in the feeling of the whole army towards the schoolmaster, in his favour.

281. And yet you cannot help fearing that the masters as a body have rather deteriorated?—Yes, we do not get so many of a superior class as we used to have.

282. Are you able to compare the masters in the army with the masters in civil schools?—Yes, to a certain limited extent.

283. Is there any material difference?—I should say that our men are quite on a level, taking one with another, with those in civil schools. Some civilians are very nice gentle and refined persons, and some are very much the reverse, and no doubt you will find the same thing amongst our own men; but, I should say that they are quite equal to them on the whole.

284. It has been urged that if the status of the masters was in any marked manner improved, it might be likely to lead to presumption on their part, and to want of discipline; what is your opinion in that respect?—I know that there is a feeling of that sort, but I am not myself the least afraid of it. I believe that that feeling has arisen from the circumstance that when the school body was first organised a few irregular and ill disciplined fellows got in and gave great annoyance in that way, but the great body of the men are not at all of that kind, and I am not in the least afraid that now it would have any effect, except the very best.

285. The few superintending masters rank as commissioned officers, do they not?—Yes; they rank as ensigns.

286. From what class of men do they generally come?—They were all army schoolmasters before they were promoted.

287. So that it is in fact a distinct promotion to which a master looks forward as something on which he may fairly reckon?—No, not as something on

Col. A. C. Gleig.
22 Feb. 1870.
Army schools.

which he may fairly reckon, because the number is so small; but it is something of which he has a chance just the same as in other departments of the army.

288. What is the pay of a superintending master?—7*s.* a day, and it is increased after five years' service to 8*s.* a day.

289. Can you state briefly the principle on which religious instruction is given?—Yes, I know very well how it is given. There is no religious instruction given by the schoolmaster to the men unless some special class for the purpose is formed, but the children's school opens with prayer and a Bible lesson, the Bible lesson being given by the regimental schoolmaster. The Bible lesson consists in this, that the master takes a passage from scripture and reads it, and explains it to see that the children take in the meaning of what he has read, and he then draws such moral lesson from it as he thinks it will bear. The catechism and all special dogmatic teaching is not allowed during that time, but twice a week the school duties are suspended in order that the chaplains of the troops and the ministers of places of worship which the children attend may attend and give instruction; and on those two days the Bible lesson by the schoolmaster is omitted. During the schoolmaster's lesson on other days no clergyman is present; but the chaplain of the troops, if the schoolmaster is a Church of England man, or a Presbyterian minister who attends the troops, if he is a member of the Scotch Church, is allowed to give him directions as to the portions of Scripture which he shall take for his lessons, with a view of making his instruction fit into that which the minister himself is about to give. The schoolmaster will not draw from the lesson all which the minister no doubt will draw from it when he gets the children together, but still, as he must select something, the chaplain of the persuasion to which the schoolmaster belongs is allowed to say, "you shall select such and such "portions of scripture."

290. Are all the children obliged to attend the lessons in Scripture?—No, those whose parents object are not required to attend them.

291. That proportion I presume is very trifling?—Yes.

292. Speaking generally, so far as army schools are concerned, would you say that this system of religious instruction works without any serious obstacle?—Without any obstacle at all.

293. Is the master, if he belongs to the Church of England, obliged to take his instructions from the clergyman?—Yes, the order is that he shall do so.

294. (*Maj.-Gen. Wilmot.*) That is as to the week-day reading?—Yes; there are printed regulations to that effect. The clergy do not all exercise the authority which is given to them, but there it is.

The witness withdrew.

J. Belling, Esq.
Army schools.

JOHN BELLING, ESQ., B.A., examined.

295. (*Chairman.*) You are a superintending schoolmaster in charge of half the district of Aldershot?—Yes.

296. In what grade did you originally enter the service?—As schoolmaster.

297. How long have you been a superintending schoolmaster?—Between five and six years.

298. And how long were you a schoolmaster?—I have been a schoolmaster and a superintending schoolmaster more than 20 years altogether; that is to say, since Christmas 1849.

299. During the earlier part of your career were you attached to a regiment?—I was attached to the 27th Inniskillings for about three years, and after that to a garrison. I was promoted to have charge of the garrison at Ballincollig from 1852 to 1854, and the Cavalry Depôt at Newbridge during the Crimean War, and of the garrison of Fermoy (consisting of three, and afterwards of two, depôt battalions, with a small force of cavalry or Royal artillery), from 1856 to 1864. In 1864 I was appointed to my present office.

300. How many schools are within your jurisdiction?—Nine at the present time.

301. Including the detachment schools?—There are no detachment schools, with the exception of the school for children at Sandhurst, which has been recently added to my district, but has not yet been visited.

302. What is your opinion of the working of these army schools, with reference to the two branches; we will take the infant and the children's schools first?—The children receive a good plain education, and they are able to compete successfully with schools of a similar class in civil life. In fact, at Aldershot we have proved that the best scholars in our schools can beat all comers from the civilian schools in the district in open competition in the examinations under the Society of Arts; and on the whole the children's schools are good. With reference to the adults, the attendance is so irregular that the results are almost nil.

303. How would you remedy that defect?—By compelling all ignorant soldiers to attend school, that is to say, commencing from a certain period, I would compel all uneducated recruits to do so, and would insist that they should remain at school.

304. You would not at the present moment compel attendance by every soldier of the army who was ignorant?—It would fill the schools to overflowing.

305. Would there be any objection besides that?—There might be a military objection.

306. (*Lt.-Col. Chesney.*) Take a man who had been 15 years in the service?—I think that that man had better be left alone.

307. (*Chairman.*) How would you deal with that class?—I would encourage those men to attend voluntarily.

308. What kind of encouragement could be given to them?—I do not know what encouragement such a man could receive which would be to his benefit whilst in the service, but he might be encouraged and persuaded to attend on account of the benefit which the education would be to him after he left the service.

309. You would make the attendance of the recruits compulsory up to what point?—A third-class certificate of education—reading, writing, and the first four rules of arithmetic. Drummers and band boys should be exempted from school when in receipt of a second-class certificate.

310. Would you make the other certificates a necessary preliminary to promotion?—Decidedly.

311. Invariably?—Invariably.

312. You do not think that that would exclude persons whom on other grounds it would be very desirable to promote?—Not in a short time, with the aid of the special classes, in a year or two, for instance. If the plan were in work for two years there would be a sufficient number in each regiment holding certificates, from whom the commanding officer could choose his non-commissioned officers.

313. Do you think that it might not happen that there were others in the regiment even more suitable, from a commanding officer's point of view, but not possessing certificates?—It is possible, but they might be pushed on by the aid of the special classes.

314. You think that there would be no practical difficulty in inducing such persons to attend those special classes and to qualify?—None whatever.

315. Would it be unpopular or popular?—The special classes are popular.

316. Would the necessitating the possession of this certificate be popular?—Decidedly so, to the better class of men; not perhaps to many old non-commissioned officers at present, who are unable to gain a certificate.

17. Have you any other suggestion to make with rd to the conduct of the schools?—I have. I ose, in addition to recruits being compelled to d school until they receive a third-class certifi-, that non-commissioned officers not in receipt of certificate necessary to qualify them for the next of promotion, should be compelled to attend ol, and that the adult school should be divided two parts; one to be called the lower school for men learning to read and write, for men not in ession of a third-class certificate; and the other to alled the upper school, to be held at a different , for men who are in possession of a third-class ificate, which would qualify them for the rank of oral, and who are anxious to improve themselves to gain a superior position, and also for non-com-sioned officers who are not in possession of the ssary certificate. The non-commissioned officers ld be compelled to attend, but the private soldiers ld attend voluntarily. It would likewise be a good g that the hours should be fixed for regiments at e; from two to half-past three for the lower school, from half-past three to five for the upper school, ome, would answer well for infantry corps; or from to half-past five for the second attendance, leaving an hour between. I propose that each schoolmaster ughout the service should have six hours' daily for five days in the week, leaving out the Satur-. Some schoolmasters work for four, some for and a half, and some for eight hours. I think they should all have six hours' work, namely, e hours for the children in the morning, and e hours for the schools in the afternoon or the ning; I think that there should be an hour and a for the upper school as well as the lower. It ht be necessary to have a school for the higher ses in the evening, but I would still confine it to six hours a day.

18. Would those attendances at school interfere h the drilling of the recruit?—That might be nged. The commanding officer must be consulted to that, or otherwise, whatever hour the school-ter mentioned, the adjutant or some one would e a cause of complaint.

19. Have you any further suggestion to make with ard to the schools themselves? Are the buildings per buildings?—The buildings as a rule are good; e are small. In the barracks at Aldershot the oolrooms are exceedingly small, especially in the alry barracks.

20. Would you have more extra subjects for the t-class certificate than one?—I think that one sub-t would be sufficient. I should like to see that certifi-e divided. I propose that the third-class certificate uld qualify for the rank of corporal, the second for t of sergeant, and the first for that of staff sergeant; t I should like to see the first divided. It is neces-y that the colour-sergeants should know something fractions, but I think that one extra subject would sufficient for all purposes. There is no difficulty getting men who have a second class certificate to rk up the arithmetic for a first-class certificate; t there is a difficulty in getting them to work up extra subjects. Certificates of education should the basis of educational classification in the army. ssession of a certificate should be noted on a dier's record of service, and on his parchment tificate of discharge. Certificates of education uld also be granted to children.

21. With regard to the masters, do you consider t their present status is the one which they ought occupy?—I do not.

22. You think that it ought to be improved?—s, decidedly.

23. You think that a higher rank ought to be ven to them?—Yes, to those who are worthy of it.

24. I suppose that from that point of view you uld draw this distinction, that on first admission to service they should probably remain in the rank ich is now assigned to them?—Yes, without the evrons. On first appointment schoolmasters should rank with the sergeant-major as second-class schoolmasters now do.

325. And that after they have proved themselves worthy of promotion they should be promoted to a higher grade than that to which they are now eligible?—Yes, I propose that after a period of six years they should be promoted.

326. In what grade would you put them?—In the rank of warrant officer.

327. Would you put them above the sergeant-major?—Yes, in the same rank as the present first-class schoolmasters.

328. With regard to their messing and arrangements of that kind, an unmarried schoolmaster is compelled to mess with the sergeants, is he not?—Yes, that is the rule now.

329. And the schoolmasters complain of that?—Some do.

330. Do you think that that is objectionable?—I think that it is objectionable. I would have it optional as heretofore.

331. Would you restore the former regulations?—Yes, in their entirety.

332. At present scarcely any persons are recruited from outside the service for the post of schoolmaster?—They are not.

333. That would not be the case if the regulations were altered?—Just so. There has been a material alteration in the regulations of late years. Candidates for the office of schoolmaster now must either be soldiers, or certificated masters, or pupil teachers; all other civilians are entirely excluded. Formerly they obtained men who had been assistants in private schools and persons who had obtained a higher degree of education than could be obtained in national schools; and I have no doubt they could get such again, after restoring the regulations to their former state. I do not suppose that they could get them immediately; they were scared away. According to the present regulations they first took sergeants, and then corporals, and then privates, with good characters, who had been employed as school assistants; and then privates in possession of one good-conduct badge; and then privates without a character who had been even tried by court-martial; they cannot get certificated masters or pupil teachers. As an instance of that, several months ago, when the Council made an alteration with reference to the admission of persons at Chelsea, lads of 17 were admitted as pupil teachers. I received several circulars from the Council during the Midsummer holidays. It appears that they could get no candidates. In a town in Worcestershire, where I was spending the vacation, there were three schools conducted by trained masters. I called upon the whole of them and saw those schools, and I gave the masters a copy of this circular and explained to them the benefits of a military life, and asked them whether they knew any men who would be suitable for and willing to accept the office of army schoolmaster. One was trained at Cheltenham; another I think, at Battersea; and another came from the British school in the Borough Road. They were in no way connected. One and all said that they had heard so much about the treatment which the trained masters who had joined the army had received that they would not recommend any friend to go. One said that he would not send a dog there. They told me of one person in a neighbouring town, whose character was rather shaky, who was applying for a workhouse school, and they said that if he did not get that he would possibly condescend to come to the army. I heard nothing more about it.

334. You would relieve all the schoolmasters from wearing the chevron?—Yes.

335. Even when they first enter?—Yes, it does no good.

336. Would you give them a warrant when they enter?—No; I would not do so until after a period of probation. I would not do so until six years. The time is rather long, and it might be shortened if found to answer.

337. Do you think that the education of the army

J. Belling, Esq.

22 Feb. 1870.

Army schools. Status of schoolmasters.

is worse than it was?—It has varied, it has gone up and down.

338. The natural conclusion would be that if this deterioration in the teaching matériel has taken place, the education would deteriorate?—It is considerably worse than it was before the Crimean war; there were then trained masters in some cavalry and in most infantry regiments at home, and the education was then better than it has been since.

339. You have no hesitation in saying that the education in the army is worse than it was before the Crimean war?—I have no hesitation whatever in saying so.

340. Are there fewer men attending the schools?—Yes, the attendance now is more irregular, and the qualifications are less now than they were at that time. I can certainly speak to one case with which I was acquainted at that time. I will take the 27th Inniskillings; out of eight companies more than 400 men attended school, in fact all the men in the regiment, with the exception of a few old soldiers who were too old to learn and could not be prevailed upon to attend school. All these men when I left the regiment in 1852 could read and write, and had a good knowledge of arithmetic, history, geography, and some other subjects. There were not 50 men in the regiment who were totally ignorant. They may have been a better class of men than they get now, and I think that they were. They were recruited principally from the north of Ireland, and they were a more intelligent class of men than they get now.

341. It is possible that this deterioration in the educational proficiency of the army, may be accounted for by other causes than by the deterioration in the teaching element?—Decidedly. There was not then a master to each regiment, but now there is a master to each regiment, and depôt battalion, and if the masters and the teaching power, and the men and the attendance were the same, the army ought to be educated by this time.

342. Do the commanding officers look upon these establishments with greater favour now than they used to do?—I cannot say that they do as a whole.

343. Are they on the whole unfavourable to them?—No; they take more interest in schools than they did formerly, but formerly men were in the afternoon excused as a rule from parade in order to attend school, whereas now it is the exception.

344. Why is it now the exception?—It is possibly on account of the great number of duties a soldier has to perform now which he had not to perform formerly, fatigues and gymnasium, and rifle drill, and many other duties. The adjutants of regiments say that they cannot spare the men as they did formerly.

Normal school, Chelsea.

345. Have you any observations to make with regard to the school at Chelsea, do you know anything about it?—I do not know how it is carried on now, except from what I see of the schoolmasters who come from there.

346. What do you think of them?—A great many of the men who come from there now are physically incapable of performing the work; teaching is very hard work. The training at Chelsea, so far as it goes, is no doubt good, but the fact of learning to teach children entirely under civilian masters is not sufficient to qualify men to come into the army, and to take charge of an adult school; they require some further training. I think that, should the rank be raised, persons would be induced to offer themselves as schoolmasters, who would bring their education with them; they should in my opinion remain for a short time at Chelsea to learn teaching, and to learn a few technical subjects, and I think that they should remain for at least six months under an experienced master before they are posted to a regiment. The private soldiers who now mostly go into Chelsea are school assistants, who are not generally possessed of very great qualifications; they work up for the entrance examination, they get in and pass through the course, and they come out imperfectly educated men. They are too narrowly educated. The consequence is that they are able to teach, but they have not sufficient educ tion to have respect to the soldiers' ignorance; th are egotistical, and the soldier has no respect for the and the consequence is that their teaching is of lit use. The men that I have seen for the last two three years are like that. School assistants changed too frequently. One or more in each regim should be permanent until promoted to the rank sergeant. An average daily attendance in either the schools (upper, lower, or grown children's) every 12 pupils should entitle the schoolmaster to t services of an assistant. The senior assistant in ea school should receive 6*d* a day.

347. Is it the fact that no civilian can obt admission to Chelsea?—No, unless he is a certificat schoolmaster or a pupil teacher. No one of a bet class can do so. Recently lads of 17 years of age ha been admitted as pupil teachers, a plan which w doubtless work well if the right sort of persons taken. Drummer boys and private soldiers are n in my opinion, as a rule, composed of the pro material.

348. With regard to the mistresses, what have y to say?—I think that their pay should be increased

349. Upon the whole, do the remarks which y have made with regard to the present class of m teachers apply to the female?—Not so much.

350. Are you satisfied with the system of spection?—I think that it might be greatly altered.

351. In what direction?—The examinations too voluminous; there are too many examinatio the work is overdone. If men were compelled to att as I propose, and if we had a separate attenda for men in possession of third-class certificates, (t is to say, the upper school,) I would propose t the schoolmasters' examinations should be entir abolished. Otherwise if we cannot have those t schools, and if matters are to go on pretty much a present, I should propose that the schoolmast should have only one annual examination, instead two examinations, as at present. But if the sch were conducted on the system which I propose should recommend that there should be no examinat by the schoolmaster except on the entrance of a pu but that the inspector (superintending schoolmast should examine the schools twice a year, instea once, that is to say, before the Midsummer and Chr mas holidays. This examination in the first pl should be for certificates. On the first day of exa nation all men in the upper school, that is to say, men in receipt of a third-class certificate should examined for a higher certificate; a report should t be made of the proportion,—at least one third them should be expected to gain those certific in six months. The next day the upper classes the lower school should be examined for a third-c certificate, and it should be expected that at least third of the whole of that school (the lower) sho gain a third-class certificate. The lower classes think, should not be examined on paper as at pres but the school should be examined in its work order, and a practical person could then tell be whether the work of the schoolmaster was prop done than by seeing a little work on paper. T would considerably lessen the examiner's work, many of the forms now in use might be dispen with. The Form A. for adults might be dispen with, as being too complicated; it would not t be necessary if certificates were made the basis of examination. Form B., which is somewhat simi might be retained for the children, as there wo be no harm in examining the whole of them tw a year on paper, and Form C. might be retained the infant and industrial children's schools. Forn is an abstract of the report sent for the informatio commanding officers, but Form H. is certainly ov done. That is the letter which the superintend schoolmaster has to send to the commanding offi after each visit, and he must send it in within hours. Three or four schools are sometimes visi by him in a day, and as he has no clerk, it t

veral hours, and sometimes half a day, to fill up ese letters. If a school is going on well it is a re repetition. That letter should only be required en there is something important to report, and thus ost one-fourth of the time of the superintending hoolmaster would be saved for other purposes. He ght send a copy of the half-yearly report to the com- nding officer, but in fact that half-yearly report ght be dispensed with if the examinations took ce half-yearly, immediately before the holidays. ly the front page of that report would be neces- , because that report would be merely a repetition the half-yearly examination report, as it is now nost a repetition of the annual report.

352. Then you attach greater importance to the ertainment of results, than to the continual super- sion of the school by the inspecting schoolmasters? The supervision would be greater. The superin- nding schoolmaster should visit some of the schools re frequently than at present, but his time should not taken up in making out those reports, which give tle or no information to the commanding officer, cepting the fact that he has visited the school, nich is already made known by an entry in the visitors, ok, and also by sending the commanding officer an stract of all his visits at the end of the half year. ie visits would be increased in number, and there ould be a better supervision. When I had the whole the 18 schools I was at work 12 hours a day, from onday morning to Saturday night, and I invariably rked until half-past nine at night, which was very rd work. I was appointed to the post, and I was termined that I would perform the duty. I was ere nearly four years before another superintending hoolmaster was sent to the place, and now we have ght or nine hours' work a day invariably.

353. Are you content with your relations with the spector?—Yes. There is one matter with reference the examination for the certificates which I should e to mention. The superintending schoolmaster now es all that work, in fact, he sets the questions from form supplied to him by Colonel Gleig, he conducts e examination, he reads the papers, and marks them, d sends them with a list of the names upon form L the inspector, and the inspector then decides who all have a certificate; and he sends the names to e commanding officer sometimes within a month; d sometimes, I believe, when the inspector is very sy the names of those men who are to have certifi- tes are not made known for two or three months. It ould facilitate matters if the officer entrusted with e examination for these certificates were empowered decide upon those men who should have certificates; would save a great deal of the inspector's time, d it would be of great importance.

354. Do you think that the schoolmasters ought to allowed to teach in their leisure hours the children officers, or of other persons?—As that has been ohibited so long, if the schoolmasters' pay were a tle increased I would not recommend that; but I n decidedly of opinion that the schoolmaster should ceive the fees paid by officers and others, who pay a higher rate than the soldiers in general, for their ildren who attend the regimental school.

355. Why would you object to his employing his isure hours in extra teaching?—The prohibition on e whole has worked well. It is rather against the inion of my whole lifetime to prohibit a school- aster from working during his private hours. If he ere permitted to do so, it should be upon the under- anding that it should be after certain hours, and not tween hours.

356. What does a schoolmaster do now? Six hours nd a half a day is not a very severe day's work; what ould he naturally do with his leisure hours?—In e winter season many masters spend a great portion f their time in getting up lectures, and there is riting to do connected with the master's department hich he is not allowed to do in the school hours, nd then of course he has to improve his own mind, and a master who does his duty conscientiously has not much spare time.

357. Would not the giving of lessons to persons in a higher sphere of life be in itself a means of education to a schoolmaster?—I have no doubt that it would if it were confined within certain limits, and the limits should be well defined, because the practice of giving private tuition was very much abused.

358. In what way?—If the masters were allowed to give private tuition between the hours of 12 and 2 some would leave their schools at 12 and work until 2, and come back and do their work conscientiously; but many, and especially those who were not strong, could not do that without some risk, and if they go away at 12 and come back at 2 they are unfit for their ordinary work, and you see them lagging and sitting when they should be standing, because they have exhausted themselves in the middle of the day; so that if they were allowed to have private pupils it should be after a certain hour, such as six o'clock at night.

359. So that the strength of the day should be given to their public employment?—Yes, but if officers' children attend the school with others and pay fees, those fees should decidedly be the perquisite of the schoolmaster; they are now paid to the Government, formerly the schoolmaster received those fees. I propose that officers should pay 1*s.* per week for a single child, and 6*d.* per week for each additional one.

360. Is there any limit to the admission of external pupils?—There is no limit to the admission of the sons of officers, but outside pupils, that is to say, the sons of civilians, are not allowed to be admitted to the school.

361. (*Lt.-Col. Chesney.*) Are not the children of those persons who are connected with the Government service admitted to the school?—They require the permission of the commanding officer. There is no limit to the number of children of foremen of works, and canteen keepers, and persons paying 3*d.* a week, except that such is only limited by the commanding officer; if he found that there were too many of those children, and that the school was swamped with them, he would recommend that some of them should go to another school. That 3*d.* a week is now received by the Government, but it was formerly paid to the schoolmaster.

362. (*Chairman.*) Have you anything to say with regard to the industrial portion of the schools?—I would reduce the industrial grant, I always thought that that was a great mistake; it works badly.

363. In what way?—The parents of the children look upon it as a clothing fund, and if they do not get 5*s.* worth of clothing they come and abuse the schoolmaster, and the schoolmistress, and sometimes the colonel, and very often the colonel's lady. In the 57th regiment last year the colonel's lady very kindly distributed the clothing made up during the previous year as rewards to the most deserving children. Some children, who were not entitled to rewards, had pocket-handkerchiefs given to them; but, by direction of their parents, several of these children soon returned to the school and threw the handkerchiefs down before the colonel's wife saying that their parents would not allow them to keep those articles if they could have nothing better. One handkerchief was brought back torn into strips by direction of the the mother of the child to whom it was given.

364. Then the system, in order to encourage work, is that the material is supplied by the government?—Yes, at the rate of 5*s.* a head; 1,000*l.* I believe is granted annually.

365. 5*s.* to each child?—Yes.

366. (*Lt.-Col. Chesney.*) Is not the amount 1,650*l.*?—I was not aware that it was so much. More money on the average is granted to the industrial school for pins and needles and patch work, and things which might be obtained for a few shillings, than is granted to the schoolmaster for pens, ink, blotting paper, copy books, and everything necessary to carry

J. Belling, Esq.

Army schools.

on a large school for grown children and adults. Too much money is granted for the industrial work, 2*s.* 6*d.* would be quite sufficient, in fact, I think that 2*s.* or even 1*s.* would be sufficient with care, but 2*s.* 6*d.* would be quite sufficient for every purpose, and I think that money enough would be saved to pay all the schoolmistresses 6*l.* a year extra. If not there is another amount which might be saved; the single schoolmistresses receive 8*s.* 6*d.* a week for lodging and fuel allowance, which is too much; it is out of proportion to their pay. When that amount was first established I heard married schoolmasters complain that their wives were not paid equal to the persons who had just been trained and who were appointed as their assistants.

367. (*Chairman.*) What was the difference in the pay itself?—A third-class mistress received 24*l.* a year, a second-class mistress 30*l.*, and a first-class mistress 36*l.* It might have been a second-class mistress, or it might have been a third-class mistress, who had trained the other, and a young one would come in at the same rate of pay, which would be nearly doubled bythe lodging money. I was also of opinion that that was unfair. On my mentioning the matter to Colonel Gleig, last year, he told me that that lodging money was given by the Council to the single schoolmistresses, because they considered the pay too small; then I said that was unfair to the married ones. The single schoolmistresses should be provided with quarters, if possible, and if not, one half of the amount of the lodging money would be sufficient, their increase of pay would make up for that.

368. It would equalize the scale?—Yes; and it would tend to satisfy those who are now dissatisfied. With reference to pupil teachers, no one can be a pupil teacher until arriving at the age of 17; that is too old; a young woman only gets £6 a year when she is 17. I would recommend that a young woman of 15, who passes a satisfactory examination upon the subjects laid down, should be appointed as a pupil teacher, and that her pay should increase gradually up to £18, as at present, and that monitresses who are now appointed at 13 without passing any defined examination should be appointed at 12, provided that they passed the examination. At present girls are frequently appointed at 13 years of age, without any inquiry being made as to their qualifications. A short time ago I found that a girl had been appointed by the Council who could not spell, and she was immediately struck off on my bringing the fact to their notice: the girl was appointed without an examination. Although the daughter of a pensioner, she had not been attending an army school, but had been attending a private school, and of course she was considered by the schoolmistress to be a highly educated person, but she could not spell at all. Monitresses should be appointed at an earlier age, and if qualified they might be appointed at 12 years of age, but now if they were 12 years and 11 months they cannot be appointed, however intelligent they are.

Lectures.

369. Have you any other observations to make?—Lectures are given by schoolmasters in great numbers. Many of them complained when that duty was imposed upon them by the Council without any corresponding advantages, just at the time when private pupils were taken away from them, but still as a rule masters lecture with great willingness, and many of them lecture well. During the winter of 1868–69 the superintendent and schoolmasters at Aldershot gave 179 lectures, and 35 entertainments of reading and music. During the same period 12 lectures and 25 readings were given by officers, assisted, as far as the readings were concerned, by ladies of the regiments, and there were other entertainments given by various people, amounting to 326 altogether, during the winter season, but the lectures were principally given by the schoolmasters.

370. I suppose that sometimes the lectures are rather bad?—Sometimes they are very good.

371. Generally speaking they are very good, but sometimes are they not bad?—Sometimes they are very indifferent.

372. Is there no means of regulating that?—The only means of regulating it would be by the authorities thinking more of quality than quantity. It appears that now more is thought of the number of lectures given than of the kind. I sometime ago heard that one schoolmaster told another that he did not take the trouble to get up his lectures, he said "I just look over the slides as I am taking my tea." That master exhibits those slides to the children and of course to any men who will attend, and he is returned as having given a lecture, and he gets the same credit from the authorities as other masters who have given good lectures.

373. Is there no means of testing a man's fitness to give a lecture before he has given it?—All the masters are supposed to lecture whether they can or not; they do the best they can, and those who have no inclination for it get off lecturing as easily as they possibly can. At Aldershot we have a system of each schoolmaster going about, and giving his lecture to the different regiments in the division; so that if he gets up a lecture he gives the same lecture eight or nine times, which induces him to give more time to his lecture because he gets credit for having given eight or nine lectures.

374. Have you any further observations to make?—The fees paid by regimental children are so small that I think they might be remitted—children now pay a penny, three-half pence, or two-pence per month. If all these arrangements were made the great thing would be to satisfy the schoolmasters. If the regulations are altered, and if we go back to the old regulations, and take off the chevrons and introduce a better class of men at Chelsea, and do not allow any one under the rank of sergeant to compete, there are still other things to be done. As a rule, the schoolmaster is contented with his pay, but still a small amount might be added to it. The schoolmaster now commences at 3*s.* a day, which is a small sum; they might commence at 4*s.* a day; and instead of commencing at 3*s.* and increasing biennially 6*d.* a day until they reach a maximum of 6*s.* 6*d.*, they might commence at 4*s.* and increase triennially 6*d.* a day up to a maximum of 7*s*; the average would be about 6*l.* a year additional for each schoolmaster. The money for that increase might be saved by reducing the number of masters and staff at Chelsea and the Hibernian school. The pension of the schoolmaster should also be increased to a maximum of 4*s.* 6*d.* a day. Again, with reference to my own position, my pay is the same as that which a schoolmaster obtained many years ago.

375. (*Lt.-Col. Chesney.*) The pay would be actually less in the case of a master promoted, whose wife was a mistress, inasmuch as if he was promoted she would lose her pay?—Yes.

376. (*Chairman.*) What is your pay?—8*s.* a day.

377. How much a year is that?—146*l.* a year, after 20 years' service. I received nearly the same pay in 1854 when I was appointed a first-class schoolmaster, and then I could get my 100*l.* a year easily by private pupils by preparing the young men who had left grammar schools to enter college. I could always get my 5*s.* a lesson, and I was making 100*l.* a year at the time when the circular was issued prohibiting all instruction to private pupils. I also received the fees for children, who paid 3*d.* a week; and officers who sent their children to school likewise paid me, so that the pay is now somewhat about half what it was then.

378. Are you entitled to a pension?—We cannot demand a pension until after 30 years' service, and then we can demand full pay, namely, 8*s.* a day. If we are invalided at 20 years' service, five years of which have been as superintending master, we can claim 5*s.* 6*d.* a day. I would propose that the superintending masters should be put on the footing of the Pay-Sub-Department of Control, which would give them a little more pay. They now do the work of the assistant inspectors; they do all the work of inspection, except what is done by Colonel Gleig; and a

of money equal to that paid to the assistant in-tors would pay the superintending masters the a amount, and there would be a saving of some dreds a year.

379. (*Lt.-Col. Chesney.*) With reference to the , is any allowance made for a schoolmaster who is noted to be a superintending schoolmaster who s his wife's allowance as a schoolmistress ?—None ttever ; her name is struck off the list of school-tresses.

380. Then he is a poorer man than before ?—He is.

381. There is no rise in your income now as super-nding master, is there ?—None whatever.

382. Is sufficient care taken in the army to explain school assistants the advantages which they might by training for schoolmasters ; are they as a body re that they might come up to Chelsea and be mined ?—I have not the least doubt of it.

383. Then you attribute the small number of men ng up, namely, only about 10 a year, to the un-ularity of the service ?—Yes.

384. They could do better regimentally ? — They sider that they could do better.

385. If you had not sufficient room in your school all your men, would you keep back the recruits l teach the men who had passed their drill, or uld you retain the recruits and turn out the other n ?—I would prefer keeping the men who had been ght for some time. In the event of there not being fficient school room a portion of the men might end at another part of the day (between 9 and 12), en they could be spared, if there were very few ldren. In some regiments the schoolmaster has y few children, and he and his assistants could, in h case, well attend to 20 or 30 men, with the ldren.

386. Do you think it of importance to teach a recruit soon as he joins ?—I think so. I think that if he sent to school at once, he does not find it so great hardship as after two or three months. Formerly recruit was compelled to attend school for two hours day, whether uneducated or otherwise. A recruit s not so much drill as formerly ; he has now, I be-ve, about three or four hours a day, and formerly had six hours a day ; that is to say, in infantry giments.

387. Is there now a sufficient guarantee that the hoolmistresses who are employed are efficient; is e examination strict enough ?—The examination is sy ; the test is that they can read and write and can a little arithmetic, and that they have a fair know-dge of the outlines of Scripture history, English istory, geography, and grammar.

388. Is any previous training required ?—Mistresses e not now trained at the training institutions. The ersons who are now appointed are those who have een assisting in an army school. There is no par-cular time named for their being so employed, but ractically I believe they are expected to have been ix months in an army school, but a certificated istress is appointed at once.

389. (*Mr. Parker.*) Do you attribute the good results in the children's schools to the regularity of attendance ?—In a great measure.

390. Has the payment of the fee any effect upon the attendance ?—It has an effect, and a most important effect, both with the children of soldiers, and with the children of officers. When a child is sick during the half or more of the month, the parents will often keep that child from the school for the remaining week or ten days in order to save the expense.

391. Is that the case even with officers ?—Officers have to pay 5*s.* a month for a pupil, and they are obliged to pay the same when the school is closed at the Christmas and Midsummer holidays, when they cannot send their children to school, and they have to pay for five weeks' schooling two months' fees. At Aldershot a great many have withdrawn their children from the school, and given them an extra holiday rather than pay the money; they would have no objection to the schoolmaster receiving it, but it is paid to the Government, and they object to pay the Government for what they do not get.

392. Do you see any difficulty with respect to the compulsory attendance of the children ?—The children are, as a rule, compelled to attend school. The commanding officer is empowered to deprive their parents of privileges if they do not attend.

393. And you think it desirable that recruits should be compelled to attend ?—Yes, if not qualified to take a third-class certificate.

394. For how many hours during the week ?—An hour and a half a day for five days in the week, namely, seven and a half hours.

395. And so far as is necessary for that purpose you think that they should be relieved from drill ?—I think that the drill hours should be arranged as far as possible so as not to interfere with the particular hour set apart for school purposes.

396. (*Chairman.*) Are there any further observations which you wish to make ?—There is one point which I have not mentioned, namely, with reference to my present title — it is "superintending schoolmaster." When the title was first given, it was intended that the person holding the office should superintend the school, but now his duties are entirely of an inspectional nature. There is a great deal in a name, and the name might be changed with advantage to "assistant inspector" or "sub-inspector." I propose that there should be three grades with the rank, pay, and allowances of the three grades in the Sub-Pay Department of Control; namely, deputy inspector, assistant inspector, and sub-inspector ; and the superintending schoolmasters of above five years' service in their present office I think should be appointed to the second grade ; but beyond that, if any appointments were made, I think that they should be by a selection of only those persons who had shown that they were well qualified for their duties ; and that they were men who were possessed of superior intelligence or education fit to assist the inspector, or with whom the inspector could consult when necessary. In my opinion only such men, if they can be found in the department, should get the higher appointment of deputy inspector.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 24th February 1870.

PRESENT :

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD E. CECIL, M.P.
LT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
MAJ.-GEN. EARDLEY WILMOT.
C. S. PARKER, ESQ., M.P.
LT.-COL. CHESNEY.

LIEUT.-COLONEL C. K. PEARSON, 3rd Buffs, examined.

397. (*Chairman.*) You, of course, have had considerable experience of the working of the army schools ?—Yes.

398. There is one in your regiment ?—Yes.

399. One of the principal points which has attracted the attention of the Commission is the alleged in-

Lt.-Col. Pearson.

24 Feb. 1870.

Status of schoolmasters.

feriority of the schoolmasters who have been employed under the new regulations, as compared with those who were attached to regiments before those regulations were in force?—Your Lordship is not alluding, I presume, to the non-commissioned officers of many years ago, that is to say, the non-commissioned officers of regiments who taught at that time; you mean the present race as compared with the warrant schoolmasters.

400. Yes. Do you confirm that opinion?—I do not think that the schoolmasters mix sufficiently with the pupils. I think that they are very good as schoolmasters, but I think that they would do a great deal more if they mixed more with the pupils, and took more interest in what was going on in the regiment apart from the school; they are quite capable of doing so. There are games, and penny readings, and amusements of different kinds in which they might and, I think, *should* take part. As a rule, I do not think that the schoolmasters mix sufficiently with the soldiers in that way.

401. It has been represented to us that the former class of schoolmaster, who occupied a higher position in the regiment, was altogether a superior person?—Yes, I think that he was, according to my experience.

402. Do you consider that there was any objection to the introduction into a regiment of persons holding that sort of hybrid rank?—You mean the rank of warrant officer.

403. Yes. As a commanding officer would you think that prejudicial to the service?—I would rather see the present rank maintained, namely, the first-class staff sergeant than the warrant officer in a regiment, though I certainly consider that the former schoolmasters who happened to hold that rank (whether it was because they held that rank, or not, I cannot say) were better than those whom I have come across lately.

404. So that for educational purposes a schoolmaster holding a warrant was superior to the present type?—Yes, I should say so.

405. But from another point of view, as commanding a regiment, you prefer the present arrangement?—I do. I think that the old rank clashed, perhaps inconveniently, with the sergeant-major, who is the head of all the non-commissioned officers, but I presume that that difficulty might be got over. Of course one must sacrifice a good deal if necessary to get a good man, a man who is thoroughly capable of teaching.

406. I suppose that you would consider that the education of the soldier, up to a certain point, is a matter of great importance?—Most certainly.

Army schools.

407. Would you have any objection to having a specified number of hours set apart for the education of recruits, and attendance rendered obligatory, provided that the choice of those hours was left to you as commanding officer?—I should object to recruits being compelled to go to school at all *as recruits*. When a man joins he is drilled for four months, and then he is passed into the ranks; he *must* be passed into the ranks in four months' time. A man has from three to four hours' drill every day, and of course he has a great many things to clean, such as his appointments, and those sort of things, and he takes a much longer time to do that than a drilled soldier will take. A great many men come into the army in order that they may have a little more time to themselves than they would have in civil life. If you compelled them to go to school for four months I do not think that they would get a third-class certificate in that time, unless, of course, they were previously educated, and I think it would result, in many instances, in disgusting them with the school rather than otherwise.

408. Would you make the attendance at school by recruits optional?—Yes, I would make it optional with recruits, and afterwards I would compel them to go to school until they had got third-class certificates.

409. Would you render a second and a third-class certificate necessary for promotion to the higher grades?—Certainly, *as a rule*.

410. That is not the case now, is it?—In my regiment we always do so. Speaking of the army generally I cannot very well answer the question.

411. It would never occur to you, as commanding officer, to desire the promotion of a smart and handy man in preference to a man perhaps possessing all the necessary qualifications, although not quite so smart, but who had the additional advantage of being educated?—There are so many duties which such a man has to perform that he could not perform them thoroughly unless he was educated.

412. And in the case of such a person as I have alluded to, I suppose that if a qualification was rendered necessary he would qualify himself?—Yes. I only go by what I have done in my own regiment. The rule is that a man is only promoted when he holds the necessary certificate. Sometimes a commanding officer may feel himself compelled to promote a man who has not the necessary certificate, and then the man is compelled to go to school until he has it.

413. Are you generally satisfied with the conduct of the school?—Yes, I think so.

414. Have you any suggestions to make as to any alteration in the subjects which are taught?—I think not.

415. Would you give two extra subjects, or one extra subject for a first-class certificate? It has been suggested to us that one would be better than two?—I think that it is a difficult thing now to get a first-class certificate; it is very much more difficult now than it formerly was.

416. Have you anything to remark with regard to the special classes?—I think that they are very good things sometimes; it is not always that you can form them. In a garrison, for instance, where the duties are hard, if you form special classes I think that men very often volunteer for them simply to avoid military duty.

417. Do you think that the system of employing soldiers as assistant teachers answers?—I do not. I think that, as a rule, they are broken-down non-commissioned officers, and you cannot get other people to volunteer for the position.

418. Are you satisfied with the mode in which the schools are inspected by the superintending schoolmasters?—Yes.

419. With regard to the inspection by the inspectors, what have you to say?—I have only come across one instance of a school being inspected by the inspector, namely, at Bristol; that is since I have been in command, for two and a half years. We got a letter from a gentleman in Ireland, saying that he was coming, but he never came. We were very much detached at the time; we were in nine different barracks, and our head-quarter school was very small, so that the inspector might have thought it unnecessary to come.

420. Have you any suggestion to make with regard to the working of the garrison libraries and the recreation rooms?—No. I think that they answer extremely well as they are. They are, however, insufficiently lighted, and there is not enough coal allowed to heat them in winter.

421. Have you had any opportunities of observing the results of the education at the Duke of York's School upon the men in your regiment?—A number have joined us, and I think that, as a rule, they have turned out very good boys, and are very fairly educated for their age.

422. I will ask you a few questions with regard to the School of Musketry at Hythe. Do you think that it is advisable to continue that institution?—I was never at Hythe. I was not educated there, but I think it is a question whether that institution is of any use now; the system of instruction is so thoroughly understood throughout the army, that I do not think it is more of a speciality than teaching any other drill; in fact, any non-commissioned officer would tell you that it is much easier to teach musketry than to teach elementary drill.

423. (*Lord E. Cecil.*) You said, I think, that the

rule in your regiment with respect to non-commissioned officers was, that on obtaining a third-class certificate privates were eligible for corporals, and that on obtaining a second-class certificate they were eligible for sergeants?—Yes; we generally give a man a trial as lance corporal in the first instance. A man is made to show a specimen of his writing in the orderly room, and to read a short passage in a book. I think that nobody would make a man lance-corporal unless he could read and write. A school certificate is not required for a lance-corporal, but before a man can be promoted to be corporal he must have a third-class certificate.

424. Have you ever known of cases in which privates have been promoted to be corporals without knowing how to read and write?—Formerly it was the case, I believe, but it is not so now; formerly such a man was sometimes made a corporal of pioneers or drill instructor.

425. Do you think that it would be any great interference with the discretion of the commanding officer if there was a general order that non-commissioned officers should be obliged before promotion to obtain the certificates which you have stated?—It is implied by the Queen's Regulations that a corporal must be educated, and that a sergeant must have higher qualifications.

426. There is an actual order to that effect?—Yes. It is not stated in the Queen's Regulations what certificates the different grades are to hold, but it is, I think, implied that a corporal should have at least a third-class certificate, and a sergeant at least a second-class certificate.

427. Then, a commanding officer who appointed a corporal who did not know how to read and write, would be acting against the spirit of those Regulations?—Most certainly.

428. I suppose that in the course of your experience you have had some opportunity of noticing the exact position of the schoolmasters in regiments?—Yes.

429. Will you state whether, as a body, you think that they are aggrieved by the present regulations?—They are in an inferior position to that which they filled when they were warrant officers. I think that the present grievance is with respect to the uniform, which is not quite so smart as it used to be. They have a plain blue dress with red cord on it, instead of gold; it makes them look more like non-commissioned officers than officers, whereas formerly they looked more like officers than like non-commissioned officers; but with the exception of that, I have never heard an expression of a grievance.

430. Do you think that they feel at all their peculiar social position as compared with the other non-commissioned officers in the regiment?—I think not.

431. For instance, do you think that they feel any grievance from the order which obliges them to mess with the sergeants?—I think not. I think that it is a great convenience. If they were restored to their former rank of warrant officers I cannot speak as to what would be their feeling with regard to messing with an inferior grade. They are first-class staff-sergeants, and of course the schoolmaster is junior to the sergeant-major, who is the head of the non-commissioned officers.

432. And you think that the schoolmaster has no objection to ranking after the sergeant-major?—Not the least, as far as I am aware.

433. It has been stated to the Commission that the inspection of kits, and the fact of the schoolmasters being treated as other non-commissioned officers in that respect is rather looked upon as a grievance; what is your opinion on that point?—You do not look at a superior non-commissioned officer's kit, but you are compelled by the regulation to have the kit of the schoolmaster examined; the adjutant does it once a quarter.

434. Do you think that that is a grievance?—I do; I do not see the necessity for it.

435. As to the position of the schoolmasters on board ship, and their being obliged to associate more or less with the privates, have you ever heard any grievance of that kind complained of?—No.

Lt.-Col. Pearson.

24 Feb. 1870.

436. On the whole, as I understand you, you think that those schoolmasters of whom you have had an opportunity of forming an opinion are not very discontented with the present regulations?—I have never heard so, but I cannot say positively whether they are or not. I have heard complaints with regard to the uniform; that is the only grievance which has ever been brought to my notice.

Status of schoolmasters.

437. Have you heard of any grievance, for instance, with respect to the smallness of their pay?—No.

438. You said as regards the School of Musketry, that you thought the instruction could be quite as well carried out in a regiment; have you ever turned your attention to any means of providing for the education of instructors upon that supposition?—I think an officer can educate himself from the text books which we have quite well enough to teach musketry to a regiment. You do not specially educate an adjutant, and I think that his duties are of a far higher kind than musketry. Of course I do not undervalue musketry in the least, but it is now so generally and uniformly practised in the army that I do not see that it is any longer a specialty.

School of Musketry, Hythe.

439. Do you think that each captain might obtain sufficient instruction to teach his own company?—The actual drill of the regiment is best conducted by the adjutant and his staff; the company officers conduct the practice, but the instructor of musketry goes down to the practice ground perhaps more as an umpire than anything else. The adjutant teaches the platoon exercise; he is the first man who teaches the recruit the use of his rifle, so why not let him complete the instruction?

440. You do not think that the amount of additional labour which would be thrown upon the adjutant, in the event of the musketry instructorship being abolished, would be too much?—There must be a musketry instructor, call him by what name you will. Many regiments have assistant adjutants,—(an officer who is preparing himself to fill the vacancy when it occurs),—and I think that they might very well conduct the musketry instruction under the adjutant.

441. How would you train those officers if the School of Musketry at Hythe were done away with?—They would train themselves in their own regiment, there is nothing mysterious about it.

442. Then you would not require that there should be any examination for the post?—Of course the commanding officer is responsible for the musketry as well as for everything else; and I do not think that the commanding officer would appoint an officer as musketry instructor unless he was well qualified for the position any more than he would appoint an adjutant who was not qualified.

443. (*Lt.-Col. Chesney.*) It being known that a good many schoolmasters now in the service entered under the idea that they were to be warrant officers, with special privileges, is it not apparent that to those men it is a grievance that they should not attain that rank?—If they entered under those conditions I think that it is.

Status of schoolmasters.

444. I refer to the regulations of 1857?—I have been asked whether I know of any instance which has occurred; I do not know of any such instance.

445. Speaking of the attendance of the schoolmaster at the sergeants' mess, would not the grievance of the schoolmaster of which you have spoken be removed if his attendance was optional; it is only lately that it has been made compulsory?—I think that generally the schoolmasters are married men, and therefore don't live at the mess, and only use it to read the papers, or in the same way as the married sergeants. If the schoolmaster is to rank as a non-commissioned officer I consider that he should be obliged to be a member of the sergeants' mess.

446. Do you think that it would be a practical difficulty in regimental promotion, if the commanding officer was bound to give the school assistant his turn

Lt.-Col. Pearson.

24 Feb. 1870.

Army schools.

in promotion?—Yes; they are generally men who have been broken non-commissioned officers, and who want to get into favour again; those are the men who generally come forward. If education was compulsory of course more men would attend, and as it does not require very much training to be able to teach a man enough to get a third-class certificate, the non-commissioned officers, I consider, might teach that as well as they teach drill.

447. Perhaps you can inform the Commission upon one point which has been brought before them. You are, I think, acquainted with the working of the infant schools?—Yes, we have an infant school.

448. It has been said that the amount of the grant for materials which has been given to those schools is rather large, and that in some cases it prevents their taking any other work; can you inform us of your experience upon that point?—I do not think that. Of course you cannot expect every child to attend always, but if you have a fair attendance what you can get for the grant is about enough to employ the children all the year round.

449. That is to say of itself, and irrespectively of other work being found for them?—Yes. Of course a great many of the children are beginners. In my regiment a great many of them are beginners, and there are very few, except the children of old soldiers, who are old enough to be good sewers; so that there may be delay in that way.

450. Generally, can you make any suggestions as to regimental infant schools; do you consider them to be in a satisfactory state?—With respect to the industrial grant I think that more supervision is required. The ladies of the regiment, who often take part in regimental charities in which the soldiers' wives are concerned, might *unofficially* assist the commanding officer in judiciously expending the grant.

451. What examination have the infants in an ordinary regiment; what check is there upon the schoolmistress?—The superintending schoolmaster goes round.

452. Does the regimental schoolmaster interfere at all at present with the infant school?—He examines when the commanding officer thinks fit.

453. (*Maj.-Gen. Wilmot.*) About what is the average length of time that a non-commissioned officer is waiting for promotion, say, from a corporal to a sergeant; is it three or four years?—It is sometimes quicker, and sometimes even longer than that.

454. Do you think that there is sufficient time for him to get a certificate, such as Lord Eustace Cecil was speaking of, between the two steps?—Yes.

455. So that as far as that is concerned it would not be a hardship upon the man?—No; sometimes if a regiment is very much detached there is not the same opportunity as at head quarters.

456. Have you many children of the soldiers who enlist in the regiment?—We have not; and I have heard that medical officers, as a rule, think that they are not quite up to the mark in a medical point of view; that they are insufficiently fed, and not strong enough, chiefly from that cause.

457. Do you think that the schools for the children are valued in the service?—Most undoubtedly they are.

458. Do you see any objection to a schoolmaster, under proper regulations and control by the commanding officer, giving private instruction?—None whatever; as long, of course, as it is under control; it must not interfere with his public duties in the school.

Recreation rooms.

459. You have spoken of recreation rooms; are you of opinion that they should be established at every station?—Yes; wherever it is possible.

460. Do you think that they should be in connexion with the canteen, or entirely distinct from it?—Entirely distinct. I think that they should not be under the same roof. At Aldershot, and at most other places where we can do so, we have singers in the canteen, and of course the noise of one thing or another would very much disturb men who wished to read.

461. Do you think that the proximity of a canteen is rather a temptation to drive away men from the recreation room?—I do not know. Sometimes men go to one place and sometimes to another. The habits of soldiers are sometimes very queer, and if a man is under stoppages, for clothing or from other causes, he will altogether shirk the canteen for a month and will go to the recreation room for amusement.

462. The grant of which you have spoken is simply for work to be made up, and not school materials, in the way of boards and letters, and so on?—No; it is for calico and cloth, and so on, to make dresses.

463. Do you think that there is a sufficient supply for the instruction of the young children?—Yes; I think that there is about enough.

464. (*Sir D. A. Cameron.*) Do you think that there has been a general improvement in the conduct of the soldier, as well as in his education, since the establishment of trained schoolmasters?—Yes; I think so.

465. Do you think that there has been a very considerable improvement?—I cannot give statistics or anything of that sort. By a certain class of soldiers the schools are very much prized.

466. Do you think that you get better non-commissioned officers?—You get better educated non-commissioned officers now than formerly.

467. But are they more useful and efficient; does the fact of their being educated men make them perform their duties more efficiently?—Yes, provided they have the other qualifications for command.

468. (*Dr. Butler.*) With whom rests the appointment of the schoolmaster in a regiment?—With the Council of Military Education.

469. Has the commanding officer any sort of control?—He has so far control that if the schoolmaster misbehaved himself in any way he could have him removed.

470. But he would not be consulted in the original appointment of the schoolmaster?—No.

471. What would you say, generally, as to the feeling with which the privates regard the schoolmaster; is he looked up to or is he looked down upon by them?—I do not think that he is looked down upon. I think that if the schoolmasters mixed more with the men in their games and amusements there would be a more kindly feeling between them. I do not think for one moment that the schoolmaster is looked down upon. Of course he is valued according to his method of instruction and his aptitude for it.

472. In the majority of cases I believe he has been a civilian?—I believe that generally he is a civilian. Non-commissioned officers can be educated as candidates. I only know one instance from my own regiment (where a man passed a very high examination), but he was physically unfit (that was in the West Indies) and therefore he could not take up the appointment.

473. Supposing that attendance at school was made compulsory upon the recruits after they had joined their regiments, for a certain number of months, do you think that it would deter them from entering the army; would it be unpopular to do so?—I think not; but, as I previously stated, I don't advocate the compulsory attendance at school of recruits.

474. Supposing that it was understood by the young men who were likely to enlist in the Army that they would have to spend a considerable number of hours for some months, or even years, in a school-room, would it be practically found by the recruiting sergeants as a serious difficulty?—I do not think so. I do not believe that the men would think about it one way or the other.

475. I understood you to say that there was a great advantage where ladies connected with the officers of a regiment were able to visit the infant schools?—Yes, but they must do it unofficially.

476. Supposing that there are no ladies to visit the schools, who visits them? Under whose control are the infant schools?—Like everything else, they are under the control of the commanding officer; but as regards the sewing, and that sort of thing, of course they get very little inspection indeed, and a great deal would have to be left to the schoolmistress, and I have known two or three instances where they have made a very good thing of the industrial grant. Of course if a lady takes the matter in hand it is not so.

477. You mentioned that no complaints had reached your ears on the part of the masters, except with regard to the uniform; may I ask what kind of opportunities the masters would have of addressing a complaint?—They would have the same opportunity as anybody else, if they thought that they had a complaint or a grievance. A statement made by a schoolmaster would come direct to the orderly room to the adjutant, or perhaps to the commanding officer. Men having such a grievance may talk it over with other schoolmasters when they have opportunities of doing so, but such a complaint would not be likely to reach the commanding officer's ears in this way.

478. If they felt aggrieved by any feature in their position, would it be to the adjutant, in the first place, that they would apply?—That would be the rule. There is no objection whatever to their going direct to the commanding officer, if not against the commanding officers' orders on the subject.

479. Are you aware whether a difficulty is found in securing a sufficient supply of competent men for masters?—I am not in a position to know. If we wanted a schoolmaster we should simply apply to the Council of Military Education for one, and we should not know of their difficulties in getting supplies.

480. Have you any reason to think that commanding officers generally are dissatisfied with the quality of the schoolmasters with whom they are supplied?—Not more than I have said before, namely, that I think the old style of schoolmasters was better than the present. I think that the present style of men are competent for their position so far as that they can teach what they are required to teach.

481. Would you have any reason to fear that men of a somewhat higher calibre would cause difficulties in respect of discipline, by presumption, for example?—I do not know. I think that if you gave them the position of a warrant officer it would be, as it used to be, a peculiar and inconvenient one.

482. (*Lt.-Col. Chesney.*) It places them distinctly above all the non-commissioned officers?—Yes. *Lt.-Col. Pearson.*

483. You have the power of recommending any private in your regiment to be examined at Chelsea, have you not?—Yes. There are certain restrictions. A man must, I think, have his good conduct badges. I do not exactly remember the restrictions at this moment. 24 Feb. 1870. Army schools.

484. He must have a certificate from the commanding officer?—Yes.

485. (*Maj.-Gen. Wilmot.*) As respects the powers of teaching or knowledge, do you think that the present class of schoolmasters are inferior to the old class?—I think that what they have to teach, they teach very well, but they are not so highly educated; they are not so gifted.

486. Are they quite up to the point in what they have to teach?—I think so.

487. (*Lt.-Col. Chesney.*) Looking upon the schoolmaster as he is now, a mere non-commissioned officer, is there not something inconsistent in sending him round to other regiments to give lectures?—I think that as a rule those lectures are thinly attended. My schoolmaster gave a series of lectures a short time ago to the regiments in Aldershot. In the engineers, only two men attended, and about 40 in another regiment; I think the 7th. Our men do not attend very much. These lectures are accompanied with illustrations by the magic lantern, and you must put out the fire, and that creates cold, which the men do not like. Lectures.

488. I suppose that the attendance upon the lectures varies very much, according to the lecturer and the subject?—Yes.

489. (*Lord E. Cecil.*) I see that it is stated at page 116 of the fifth report of the Council of Military Education, that there were attending at lectures at Aldershot numbers varying from 38 to 2,000; do you know of any room at Aldershot which would hold 2,000 persons?—No; I think that that must be a mistake.

490. (*Lt.-Col. Chesney.*) From your acquaintance with the so-called Readings, can you tell us whether or not the schoolmasters make themselves useful in that respect?—In our own regiment the schoolmaster does not do so. There is a schoolmaster at Aldershot, whom I know, who makes himself very useful in other regiments, and he is invited to do it.

The witness withdrew.

Mr. A. (Regimental Schoolmaster) examined. *Regimental Schoolmaster A.*

491. (*Chairman.*) You are a regimental schoolmaster?—Yes.

492. How long have you been in the service?—Twenty-two years next April.

493. Did you come in under the old regulations?—I did; I joined as a sergeant in the Coldstream Guards.

494. Did you go to the Training School?—I did, at Chelsea.

495. How long were you there?—I was there 21 months. Two years is the regular term, but they wanted some schoolmasters, and I was selected, with four others, to go out three months before our term had expired.

496. Have you any suggestions to make with regard to your own position and the position of your colleagues? Are you satisfied with it?—No.

497. What complaints have you to make?—The position is a very uninfluential one. We have the position of staff sergeants, but that position remains the same during the whole 21 years of our service, and that is very unsatisfactory to the whole body. Again, we are subject to a regulation to which no staff sergeant is subject, and this regulation is a most degrading one; that is to say, we are not credited with sufficient self-respect to provide ourselves with those necessaries which are requisite for our health and our comfort. We are obliged to be under the supervision of some one to see that we provide those necessaries. No sergeant is subjected to this regulation; that is to say, the inspection of his kit. In some regiments even a corporal is credited with sufficient self-respect to provide all these articles which he actually requires, but not so with a schoolmaster. Status of schoolmasters.

498. Is there anything else of which you have to complain?—Yes; the pension is very unsatisfactory; indeed, in proportion to the rate of pay, our pension is the smallest of any rank in the service.

499. Are you satisfied with your pay?—In my present position I am quite satisfied with it.

500. What is your pay?—6*s.* 6*d.* a day, but I have outlived the lower rates of pay.

501. Do you think that the present schoolmasters who have entered the service within the last few years are inferior to the former schoolmasters?—Does your lordship mean in reference to education or to physical capabilities?

502. General capabilities for teaching the men?—I have had experience of five, and of those five I think that only one will ever make a thorough schoolmaster, that is to say, from his physical ability. Teaching in a school is very hard work, and I think that in the course of a few years those men must

Regimental Schoolmaster A.

24 Feb. 1870.

Status of schoolmasters.

succumb. I think that if they do their duty well those men cannot stand it.

503. Are you prepared to say that under the former regulations, or under regulations more favourable to the schoolmaster, we should attract to the service a better class of men?—Quite so. I think that if we reverted to the old regulations a much better class of men, both in physique, educational attainments, and character would be induced to come forward, but at present we get the refuse of what the National schools do not want; they come to us. Again, we get men of a fair amount of education who are dissatisfied with their position in regiments, and who take that opportunity of getting out of it. In many cases the regimental authorities are very glad to get rid of these men; and in connexion with this there is a great grievance which every schoolmaster has to complain of, namely, that the shortcomings and the bad conduct of these men are visited upon us, the old as well as the young. With reference to the showing of the kit, the order was promulgated on account of a young man who died very suddenly having his kit taken from him; his brother, I think, took away a great number of his books under the impression that they belonged to him, and not with any felonious intent. The consequence was that when this man's kit was sold there was not a sufficient sum realized by the kit to pay for the man's funeral expenses. I believe that a charge of 12*s.* 6*d.* was sent in either to the War Office or to the Horse Guards (I am not exactly sure which), and directly afterwards a circular order came out which affected the whole body, that every schoolmaster was to show his kit. I think that neither the stripes which we wear, nor, indeed, any other circumstance, was so keenly felt by schoolmasters as being degrading as that was.

504. Do you object to the stripes?—I wore stripes as a sergeant in the Coldstream Guards, and, of course, these stripes are an indication of the position from which I rose, namely, that of private soldier. But, with respect to many men who joined as schoolmasters, they have not such an indication, simply because those men never were private soldiers, and I think that you will allow that those men who joined formerly as schoolmasters held a social position superior to that of the generality of soldiers on joining a regiment. Therefore this is a false indication in reference to those schoolmasters. I worked very hard to get the stripes off my arm, and to get a higher position, and for many years, of course, I endured a great number of things, and spent very nearly all my money in getting books, and so on, to fit myself for Chelsea, thinking that I should obtain a position above that of a non-commissioned officer; but, although I gained that position, and thought that in a few years more it would gradually be getting better, all at once an order came out which reduced me to the same position that I was in before I attempted to do anything. I do not think that the stripes are a degradation. I think that they are an honourable badge for a combatant; but I think that no schoolmaster, after a certain number of years' service, should be reckoned as a non-commissioned officer.

505. The unmarried schoolmasters mess with the sergeants?—Yes, under compulsion. I think that it should be optional with them. Among our body we find many men of retired and studious habits, and the noise which is incident to the mess is repugnant to them, and many of them would rather mess in their own quarters.

506. I suppose that you would not suggest that a young schoolmaster on first joining should be placed in a position superior to that of the sergeant-major of the regiment?—No; I think that he should undergo a probation of at least seven years before any other position was given to him. If at the end of that time he was not considered by the authorities equal to the position which they intended to confer upon him, let him be discharged.

507. I suppose that no man attains the rank of sergeant-major unless he possesses very considerable qualities, and has educational attainments, and also a considerable amount of professional capacity, and is of very good character?—I think not.

508. Would not the sergeant-majors of the army feel themselves aggrieved if they found that a young schoolmaster, who entered the army in a grade inferior to themselves, was to be promoted over their heads?—Does your Lordship mean after seven years' service on the part of the schoolmaster?

509. Yes?—I do not think so. The two bodies are widely dissimilar, the one is combatant, and the other is to all intents and purposes civil. I do not think that there would be the slightest clashing, and I do not think that it would engender any feeling of jealousy on the part of the sergeant-major. In India a warrant officer is attached to every European regiment, an apothecary, and during nearly nine years' service there I neither saw nor heard of any clashing between the two ranks. Any sensible schoolmaster, whether warrant officer or not, would admit the superiority of the sergeant-major in everything connected with the discipline of the regiment.

510. Did any feeling of that sort declare itself formerly when schoolmasters got a warrant?—No.

511. And you would, I suppose, have known of it if it had existed?—Undoubtedly. I was in the service as a sergeant at that time.

512. Are you satisfied with the inspection?—I am not. No man is a correct judge of his own cause, and at present a schoolmaster is the judge of his own school, and of course that is worthless; his judgment is expressed upon paper, and is obtained by disorganising the school for about three weeks, and with a great deal of trouble on the part of the schoolmaster, and then it is literally worthless, because it is a man's own opinion of his own school. I think that all the examinations should be made by the inspector or superintending schoolmasters, with the exception of the first examination, that is to say, when the man first attends school. That must of course be in the hands of the schoolmaster; but any other examinations, I think, should be made by another authority.

513. Do you think that it would be advisable to make the attendance of the men compulsory?—I think not for the soldiers now serving generally, but only for the recruits. By compelling every future recruit to attend, the education of the army is a matter of time. The machinery possessed by the Government is ample if opportunity were given for fully using it.

514. We have had very authoritative evidence which deprecates the attendance of a man while he is a recruit?—I quite agree with that evidence; but as soon as that man is dismissed from drill, I think that he should commence to attend school until he obtains a third-class certificate.

515. Would you render that attendance compulsory?—I would.

516. Would you render promotion dependant upon the possession of the higher certificates, that is to say, of the second and first-class certificates?—I would, of course, coupled with regimental ability.

517. What have you to say with regard to the special classes?—I think that they are an excellent means of educating men, especially for certain purposes.

518. Do you think that they could be improved in any way?—Greatly.

519. In what manner?—By allowing the schoolmaster to have the selection educationally of the men who attend.

520. Would you give the schoolmaster the power of preventing a man from attending?—No; that, I think, should be in the power of the commanding officer. At present the selection of the men is made by the colour-sergeants, and they are not in all cases good judges of those men who will make good non-commissioned officers in an educational point of view.

521. Does not the selection practically rest with

commanding officer?—Virtually it does not, but minally it does.

522. Many commanding officers do not interfere?—ey give their sanction. Some commanding officers e great interest in education, and forward it by ry means in their power, and support the schoolsters, but others consider the schoolmaster a bore, d think that his office is of no good whatever.

523. Would you think it desirable that a schoolster should be allowed to give private tuition?—I nk not.

524. Why?—Simply because if a man does his ty in a school his energies are quite exhausted at end of his day's work.

525. How many hours do you consider to be a day's rk for a schoolmaster?—From six and a half to en hours. If I instance myself, my work is not er until 20 minutes after 8, and I commence at 9 in morning.

526. On what account is your work prolonged?—elong to a hard-working corps; the men are out ry nearly all day at work, and they have no portunity of attending until night; the consequence that I have established an evening class from lf-past 6 till 8, at which the majority of these men end.

527. But I suppose that, that being an exceptional e, one may conceive that schoolmasters, whose ties only occupy them six and a half hours, would capable of the same exertions as you have volunily undertaken?—Yes. I think that there would no objection to a man's undertaking a certain ount of private tuition after a certain hour, say 6 lock, or perhaps half-past 6.

528. But on the whole you think that the discharge their duty by the schoolmasters is quite sufficient? Quite sufficient; indeed, if I recommended such a ng, it should be not altogether for the benefit of schoolmaster, but for the convenience of many icers and others who wish to employ the schoolster in this capacity. On foreign stations it is a ficult thing to get tuition, and the only means which icers have of getting tuition for their children is nply by way of the schoolmaster, and therefore I nk that under those circumstances it would be ghly necessary to allow the schoolmaster to engage a certain amount of private tuition. But the persion should be strictly guarded.

529. Do you think that the schoolmasters, as a ss, are popular with the men, and exercise any oral influence among them?—I think that they ercise a great moral influence with them. If the dy of schoolmasters is spoken of you may hear them oken of badly, but if you ask any man of any parular regiment, or any number of men of a particular giment, "What sort of man is your schoolmaster?" u will get the answer that he is a remarkably good an.

530. Are you at all in communication with the aplain?—Not very much; we are supposed, if the aplain requires us to do so, to attend the Sunday hool, and to teach in it.

531. Do you consider that objectionable, or a hardip?—I do not consider it a hardship, but I decidedly ink it objectionable, simply because chaplains could ovide out of the station a sufficient number of ficers and their ladies who would assist them, and ould, perhaps, instruct quite as well and probably ith more spirit than the schoolmaster, who has been nployed in the same office for the whole six days the week. The chaplains in my district evidently ink the same, for they are considerate enough not ask the attendance of the schoolmasters.

532. (*Dr. Butler.*) Do you think that the amount work required of the schoolmaster is at all in cess of what it ought to be?—Not as regards tual teaching, but with respect to the examination ork and the compulsory lecturing, I certainly think at a schoolmaster's work is from these causes made necessarily heavy.

533. Have you noticed many men break down in health under it?—Yes; I have known several break down. It may be from these causes. Pulmonary complaints and mortality have been excessive amongst schoolmasters.

Regimental Schoolmaster A.

24 Feb. 1870.

Army schools.

534. Is there any distinct suggestion which you can offer with a view to improve that state of things?—I think that men should be subject to a very strict medical examination before they are allowed to enter as schoolmasters, and that the extraneous work should be done away with.

535. Do you believe that if the old regulations were reverted to, it would be found that there was a decidedly greater desire to become an army schoolmaster?—I certainly do.

536. But at present you think the profession is unpopular?—Quite so, it is very unpopular.

537. Is it increasingly so?—It is increasingly so.

538. Have you any special means of gathering the feeling throughout your profession, and of judging of it?—I have, because I happen to be at a station where there are many schoolmasters, there are 16 at the least, and I think that they are tolerably at one, in fact, I am perfectly sure that they are at one in reference to their opinion of their position and prospects.

539. In short, there is a widespread feeling of discontent with their present position?—There is.

540. Do you think that the relation of the schoolmasters to the superintending masters is satisfactory?—Yes.

541. You think their system of superintendence works well?—Yes.

542. What is the relation of the schoolmaster to the infant schools?—None whatever; he has nothing at all to do with them.

543. Is it the case that lectures are required from the majority of schoolmasters?—They are not actually required by order, but they are expected from every schoolmaster. Lectures.

544. Can you state what would be a fair average as to the number of lectures given by one master in the course of a year?—Some masters have no taste for lecturing, others think that the lectures are an excellent means of breaking in on the ignorance of the men, and giving them ideas, and inducing them to use the libraries which are provided for them; and those masters who have this feeling generally take lecturing as almost a necessity, and give a great deal of time and thought to it. Although 30 or 40 lectures are sometimes registered against a man's name, I think that the explanation which I am about to give will satisfy you that those 30 or 40 lectures may, in reality, have been simply repetitions; and that, perhaps, two or three lectures only have been really got up, but have been repeated so many times to different regiments; and thus, of course, a person unacquainted with this system would suppose that 30 or 40 separate lectures had been given.

545. What is the kind of lectures which are found to be most attractive?—I, myself, have found lectures on battles and sieges, and lectures on natural history, and lectures on travels, to be most fully attended.

546. Do these lectures frequently lead to conversations afterwards, between the lecturer and the pupils, on the subjects of the lectures?—Yes, I think that they do, simply because a good lecturer will refer men to books from which they can get extended information on the subject of the lecture.

547. On the whole you attach decided value to the system of lectures?—I certainly do. They are valuable to both men and masters, for it must be admitted that in preparing good lectures the latter must from his researches obtain information which will be of service to him as a teacher. If, on the other hand, a schoolmaster simply exhibits the illustrations with a few words on each he brings contempt both upon the system and his own reputation.

548. Do the lectures in many cases involve expense to the lecturer?—They do sometimes involve expense.

549. And that is entirely borne by the lecturer

Regimental Schoolmaster A.

24 Feb. 1870.

himself?—If there is any expense involved, it is entirely borne by the lecturer himself; but it is not in all cases, nor in many cases, that expense is really involved.

Lectures.

550. (*Lt.-Col. Chesney.*) You, I believe, get no books allowed you as a lecturer?—If the books are in the garrison library you can get them, and, I believe that there is an order that the books which you actually want shall be supplied, but I have, myself, bought a book at the expense of 5*s.* or 6*s.* to aid me in giving a lecture. I, however, wish it to be understood that that is quite an exceptional case.

Army schools.

551. (*Sir D. A. Cameron.*) Did I rightly understand you to say that the schoolmaster ought to have the selection of the men for the special classes, because he is a better judge of those who make good non-commissioned officers than the colour-sergeants?—No, I did not mean that; I say that the men who are selected should be sent to the schoolmaster, and that he should judge whether their acquirements are such, or likely to be such from his tuition, as would make them good non-commissioned officers. Physique and regimental efficiency should be kept out of the schoolmaster's hands altogether.

552. Then you would not exclude the colour-sergeant from your notice altogether?—Certainly not. He is the proper man to bring forward his young soldiers with a view to their promotion.

Status of schoolmasters.

553. (*Lt.-Col. Chesney.*) It appears from facts befcre us, that in two years only 23 men from the whole army have gone up for examination at Chelsea; can you explain to the Commission the reason of so very small a number out of the whole mass of soldiers going up?—Yes, I will endeavour to do so; it is simply because the prospects of a man as a non-commissioned officer are far superior to those of a schoolmaster.

554. In what respects?—In promotion.

555. Is the present pay of a schoolmaster on appointment, namely, 3*s.* a day, sufficient to enable him to maintain his position?—It is insufficient for his position.

556. Would it be better for a man entering a regiment as schoolmaster if he began with 4*s.* and received the subsequent increases more slowly?—It would.

557. What are the prospects of a schoolmaster entering the service at present as to pension?—It is 6*d.* a day in addition to the pension of a sergeant-major after 21 years' service.

558. Is your wife an army schoolmistress?—Yes.

559. If you receive promotion to the position of superintending schoolmaster she must cease to act as a schoolmistress?—Yes.

560. Would any allowance be made to her for that circumstance?—That would depend upon the length of her service. If she were eligible for a pension, that is to say, if she were too sick to perform her duties, she would receive a pension, notwithstanding the intention of the Council or of the authorities to give her husband the position of a superintending schoolmaster.

561. But if not previously invalided she would be left outside altogether?—Yes.

562. Then it comes to this, that if you were promoted your income would be actually lessened unless your wife had been invalided as a schoolmistress?—It would.

563. The present income of a superintending schoolmaster not being so much as the joint pay of yourself and wife?—Yes.

564. (*Lord E. Cecil.*) Is there any loss of service on the part of a non-commissioned officer volunteering from the army to go to Chelsea?—Yes; he loses half his service. I lost half mine.

565. Does he lose any portion of his period of training?—The whole of it.

Normal school, Chelsea.

566. I suppose that having passed through Chelsea you are able to form an opinion as to the training there; do you think it good?—Do you wish me to speak generally?

567. Yes; I wish you to say all that you can about it?—I consider it good, more particularly the training in the method of teaching. I consider that excellent.

568. Would you wish to see any improvements carried out?—As regards the training in the teaching branches, I think that there are no improvements to be made. I was well attended to during the time that I was there, and I received a very great deal of instruction in the way of giving lessons, and so on; I would call it, in method.

569. Is the course so arranged that you are trained to teach adults as well as children?—No, the teaching of adults must be guided by the schoolmaster's own intelligence, and by the sympathy which he has with his men. Tact and experience are indispensable.

570. Do you think that it would be an improvement if any such instruction were given at the College?—I think that such instruction should be given by old schoolmasters to young ones who might be appointed to assist them in their schools, for the first two or three years of their service.

571. I do not know whether you have stated all the little or great grievances which the profession have to find fault with; but I should like to know whether the lodging allowance, for instance, has been reduced?—In the case of all schoolmasters it has been reduced.

572. Is that felt to be a grievance, or not?—I do not think that it is a major grievance; but it is certainly a breach of the 7th article of the authorized regulations of July 1857.

573. How much has it been reduced?—I am not exactly sure as to the amount.

574. It has been reduced from 11*s.* to 8*s.* 6*d.*, has it not?—I think that that is the amount.

575. As to the accommodation and food on board ship, have you ever heard of any grievance with respect to that?—Yes, that is a general grievance; it applies, I think, to every schoolmaster, without exception.

576. Can you enumerate those grievances?—Certainly. When I went out to India I was placed in exactly the same position as a private soldier, both in reference to my berth and to my food, and indeed my general treatment was precisely that of a private soldier; though I was entitled to a second class passage. But War Office Circular, clause 88, 1st December 1867, cancels that right.

577. And that of course you felt as a grievance?—I certainly did.

578. You have been asked a little about the system of lectures; how many lectures a week are generally given by schoolmasters to the same regiment?—There should never be more than one.

579. Have you ever known so large a number as three in a week to be given?—Never; I would not allow such a thing in my regiment.

580. You do not think that returns have ever been made by schoolmasters to the effect that they have given as many lectures as three in a week?—It is possible that three lectures may have been given in a week, but I say that it is overdoing it altogether, and the so-called lectures, if given by the same person and to the same regiment, are a mere exhibition of slides gone through with the object of "counting."

581. Do you think that there is any undue encouragement given by the Council of Military Education to those schoolmasters who do lecture?—I know I think, of only one instance where a man's position has been considerably bettered by the number of lectures which he is reported to have given.

582. Do you think that the encouragement which is given by the higher authorities leads at all to a falsification of returns?—I do not think so; but I fully believe that many have been returned as lectures that were unworthy of the name.

583. Do you think that the lectures are generally well attended by the soldiers?—So far as my experience goes they are certainly very well attended. Where they are badly attended I think the cause is that good lectures have not been given there.

584. The principal utility of these lectures, I ppose, is to keep the soldiers as much as possible om the beershop?—Yes, I think that that is one fect of them; but another, and an important effect, that they give the men a taste for reading, and at they improve their taste, and that they direct em to the libraries, and induce them to read a more holesome style of literature than they are ac- stomed to before they enter the service.

585. Are these lectures always given before or ter tattoo?—They are generally, so far as my perience goes, given before tattoo. I never myself ve but one lecture after tattoo, and that was not cording to my own inclination; but I was requested do so, and I did not like to refuse; but I have objection to lecturing after tattoo.

586. What would be that objection?—Simply that should fill the room with a lot of men who wished stop up a little longer than usual in order to smoke eir pipes, and some of them might not be quite in it state to profit by my instruction.

587. Have you any reason to believe that within rrisons, and at the different stations at which you ve been quartered, it has been the habit with other ioolmasters to give lectures after tattoo?—I know one case of it, and that is the only one that I ow of.

588. Are the readings better attended than the tures?—They are.

589. Why?—Simply because there are always sic and singing added to them as a part of the tertainment.

590. And I suppose that unless the lecturer is y successful in his delivery, the music and the ging are preferred to the lecture?—Decidedly so.

591. Are you in favour of giving more readings in lectures?—I think that the two can very well hand-in-hand. I do not think that any undue portance should be given to readings and mixed ertainments. I think that they are not so well culated to open the minds of the men, and to dispel iorance, as thoroughly well prepared lectures.

592. Do you think that every schoolmaster ought be required to lecture?—Certainly not.

593. Do you think it possible that every school- ster should have such a variety of knowledge as t he should be able to give lectures upon the mul- ide of subjects which appear now to be taken up a schoolmaster?—I think that in the course of a n's service, after years of service, he has an oppor- ity of reading to a certain extent, and of gradually proving himself, and in those cases, I think that y schoolmaster of 10 or 15 years' standing, ought be able to collate a lecture upon any subject, that to say, a sufficiently instructive lecture to induce men to come to it. The delivery of it effectively another matter.

594. You would not be inclined at all to limit the ge of subjects?—Not at all. There are men of all tes in the army, and in my opinion the illustrations t round to be lectured on are selected with great d taste and judgment. Applications are made by ds of institutions in the town of Aldershot to have ne of the camp lectures given there.

595. For instance, take any abstruse science or dy, such as astronomy?—A lecture on astronomy be made very entertaining.

596. Do the officers ever lecture?—Scarcely ever. e officers of the scientific branches of the Service, such as, for instance, the Artillery, and the Engi- ers—of course give more lectures than others, and y interest themselves very much in getting up ertainments of singing, and reading, and music for men; but as a general rule, lectures are avoided the officers. At the bottom of the instructions ich were sent to me by the Commission, there a passage which I will take advantage of, if you l allow me to do so, namely, that any suggestion ich I might have to make with reference to school tters, would be received by the Commission. re is one matter in particular to which I would refer, namely, the classification of the education of the army. I think that those returns are fallacious, and not to be depended upon. I mean the returns which come from the orderly rooms. The manner in which they are obtained is very loose; they generally come through the companies, and if not, they come through the orderly-room. There are no pains taken to ascertain who are educated men and who are not educated men. I do not mean to say that is done with a wish to mislead, but it is to avoid trouble. I think that the classification should be based upon educational certificates, and that any man not in possession of a third-class certificate should be returned as uneducated. For all practical purposes, a man who cannot obtain a third-class certificate is certainly uneducated; he has simply to write an easy passage from dictation, and to know addition, multiplication, division, and reduction of money.

597. (*Lt.-Col. Chesney.*) You would have four classes of education in the army, namely, the three certificates, and the men who had no certificate?—Yes. There is another matter to which I would allude, namely, in reference to the Industrial Grant. I see that according to the Army Estimates of last year, 1,650*l.* was granted for industrial purposes to the army. My experience goes so far as to show me that at least two-thirds of that money is completely thrown away, and does no good whatever. Five shillings a head is allowed for every girl and boy attending the infant school over four years of age, that is to say, if a boy is over four years of age, and below seven, and there is a general idea prevailing, I think, in all regiments that this 5*s.* is granted by the Government for the express purpose of clothing the soldiers' children. Five shillings is insufficient to clothe a child, and it gives rise to constant bickerings in the regiment. The 5*s.* in reality is allowed for the purchase of industrial materials to teach the children to sew, and it is far too much for that. Five shillings is not required for such a purpose; 2*s.* would be ample; and then the idea that the money is given to clothe the soldier's children would gradually die away, for no such purpose is intended by the Council. I would also beg to say that the rates of pay granted to schoolmistresses, pupil teachers, and monitresses, are very low, and cannot be looked upon as sufficient payment for the work they do.

598. (*Maj.-Gen. Wilmot.*) Do you think that feeling, with regard to the sum being granted for clothing, is general?—Most general.

599. What proportion of the schoolmasters are now under the old, and what proportion are under the new regime?—I cannot say.

600. Are the 16 of whom you have spoken, with whom you have been in communication, under the old or under the new regime?—They are of both classes.

601. (*Chairman.*) Have you served in India?—I have, more than eight years.

602. As schoolmaster?—Yes.

603. Is there any difference of system there?—Yes, in reference to the assistants, there is a great difference of system.

604. What is that difference?—An assistant there receives 10 rupees a month, whereas the assistants in the service in England only receive 3*d.* a day, and that 3*d.* a day is not sufficient to induce good men to come forward for the position of assistant. Again, the assistants at home are changed too frequently, and receive no promotion if they wish to remain in the school.

605. Therefore the position of an assistant in India is better than it is in this country?—It is.

606. Is it as much as three times as good?—I should think that it is about that.

607. An assistant in India is three times better off, so far as his pay is concerned, than an assistant in England?—Yes.

608. Is that taking into account the corresponding difference in the expense of living?—No.

609. Taking that into account the assistant in India is still better off?—Yes.

Regimental Schoolmaster A.

24 Feb. 1870.

Army schools.

610. Is there any other respect in which the two systems differ?—Yes. In India the selection of the assistants is generally left to the schoolmaster, but in England it is not left to him on all occasions.

611. Is the Indian plan the best?—I think so. Of course it rests with the commanding officer whether the selection is made by the schoolmaster or not, but I think that the selection of the assistant should rest with the schoolmaster. I have known men sent to school as assistants who were not sent with any special view to their qualifications for the office, but simply because they happened to be unsightly on parade, and were not wanted there.

612. Do you think that the schools in India are better conducted than they are in this country?—Certainly not, they are much more loosely conducted.

613. You have mentioned the respects in which the Indian system is superior to the English system, but yet the results are worse, and therefore in some respects the Indian system must be greatly inferior?—Greatly inferior, and requires a thorough revision.

614. In what respects?—In reference to the superintendence of the schools it is greatly inferior; there is no superintendence in India. Again, a young schoolmaster going to India with a European regi ment will receive about 60 rupees a month, an amoun equal to what many a corporal will obtain as a copyi in a departmental office. He will also come in conta with Indian trained schoolmasters, very likely junio to himself, who in rank and pay are doubly his equal This state of things disheartens men, and I full believe the ruin through drink and other causes of s many of our schoolmasters there is in the ma attributable to it.

615. You are attached to a mounted corps? do that fact render it more difficult to obtain the atten ance of men than in a foot regiment?—It does, b still the attendance of recruits is compulsory even i my corps, and they have to attend until they a dismissed drill. I think that recruits should n attend until after they are dismissed from drill, a that they should then attend by compulsion unt after they have obtained a third-class certificate.

616. You think that although yours is a mounte regiment, and the recruits have extra occupation account of their drill, it is still necessary to rend their attendance compulsory?—Quite so, after di missal from drill.

The witness withdrew.

Regimental Schoolmaster B.

Status of schoolmasters.

Mr. B. (Regimental Schoolmaster) examined.

617. (*Chairman.*) For how many years have you acted as schoolmaster?—20 years and 9 months nearly.

618. Where were you trained?—At Chelsea.

619. Did you come in under the old regulations?—I was one of the first to enter the training establishment, and one of the first to leave it.

620. Before you entered the training establishment what was your position?—I was articled to a civil engineer, and I served four years to that profession.

621. And the advantages which were offered to you under the regulations which at that time existed induced you to join the army?—No regulations then existed, therefore I can hardly go so far as that; I joined it more for the sake of change than anything else, although the advantages which were afterwards held out were certainly an inducement to me when I heard of them, but I am sorry to say that they have not been fulfilled.

622. And you now consider that the status of your branch of your profession is unsatisfactory?—Most decidedly.

623. You are dissatisfied, I believe, not so much with your pay as with your pension?—It is as to the pension more particularly.

624. And with your position in the regiment as being inferior to that of the sergeant-major?—In my case I happen to be a warrant officer, and therefore, nominally, I am superior to a sergeant-major.

625. You are a warrant officer, and you rank above the sergeant-major?—Yes, nominally, but I do not see that I have ever reaped any advantage from it, as it does not seem to be generally understood that I am to have any privileges extra to those of men who are not warrant officers.

626. Are you a married man?—I am.

627. Therefore it is not compulsory with you to mess with the sergeants?—It never has been so since I have been in the Service.

628. But you would consider that an undesirable obligation?—I should not like to be obliged to do it, but, for myself, I should take it for choice. I should prefer to mess with the sergeants to messing in my own quarters as a single man. Of course, that is entirely a matter of taste, different people would have different ideas on the subject.

629. Without going into the minor points as to which the schoolmasters may consider themselves aggrieved (for it would probably be difficult to find any body of men in any profession who had not their grievances), what would be the real, tangible, and important objections which you would have to prefer against the present regulations, besides those to which I have alluded?—I think that as regards the stat of the schoolmaster, he should never be of a low rank than that of sergeant-major, and if he has be a schoolmaster longer than the sergeant-major h been a sergeant-major, I think that he should be co sidered his senior. I say this because I have myself e perienced the unpleasantness of that; I was a scho master and senior to an individual one day, and t next day he was sergeant-major and senior to me; became senior to me upon being appointed sergea major, and all my services as schoolmaster, thou of the same rank nominally, counted for nothing regarded seniority.

630. Might not that happen conversely?—No; could not happen conversely, because a schoolmas enters the service with the rank of sergeant-maj therefore, all non-commissioned officers, with t exception of the sergeant-major, are his junio These, in their turn, as the schoolmaster's position a stationary one, mount over his head, rendering position not, certainly, one likely to be satisfactory himself; he, for instance, sees a man whom he l taught as a recruit become sergeant-major, while remains a schoolmaster; he sees a man who has co to his school to learn his letters, rise progressiv from a private soldier to be sergeant-major, leavi him behind. It has happened to me that I h taught a man his letters and afterwards have had salute him, he being a captain and I still a sch master.

631. Is not that an incident to which the profes of teaching is generally subject?—To army sch masters, in consequence of the relation form existing between them and the recruits, it is especi galling.

632. Is it not so generally in the army?—No the same extent.

633. Passing from that subject, would you b favour of not commencing the education of the sol until after he has ceased to be a recruit?—Certain until he is dismissed to his duty I think that he sh not be sent to school.

634. Would you then render his attendance c pulsory?—Only to a certain extent.

635. To what extent?—When the recruit is missed to his duty he should then be sent to schoolmaster for examination; the schoolmaster w be able to find out from that examination whethe was necessary that he should be sent to school or If he found that he had a sufficient amount of ed tion to take what is now called a third-class certifi he might not be required to attend school, but to

pete for a certificate at the first opportunity. If he had not a sufficient amount of information for that purpose, he should then be invited to attend school, and if he volunteered so to do, I think that he should be compelled to stay until he obtained a third-class certificate.

636. In fact, your notion is to make every man who remains in the army the possessor of a third-class certificate?—As far as possible. It is of very little use bringing a man to school unless he is desirous of being there; men may be brought there who are a nuisance to the schoolmaster and also to those who desire to learn, and who set a bad example; in fact, they are in every respect out of their place if they do not wish to attend school.

637. How would you get over that difficulty?—By giving them the option of going to school or not, but if they once chose to go I would compel them to remain there until they obtained their third-class certificate, unless after a fair trial they discovered their incapacity to do so.

638. Then you do not think that it would be possible, as a matter of compulsion, to teach every man in the army to read and write?—I think that it would not be possible.

639. What per-centage would be incompetent or refractory?—A very small proportion; my experience is generally that soldiers are anxious to learn.

640. I suppose that there would be only those who, through some defect of nature, were mentally incompetent?—Yes; and those it would not be worth while to teach.

641. Do you think that schoolmasters ought to be allowed to give instruction after school hours?—I think so.

642. You do not think that it would interfere with their vigour in the public service?—Not unless it was carried to an inordinate extent. Neither does the Council, as they require schoolmasters to prepare and deliver lectures after their ordinary school work is done; under proper regulations it would be a great advantage to the schoolmaster, and also to his pupils. In the first place it would be the means of keeping up his knowledge. He acquires a certain amount of knowledge before undertaking the duties of a schoolmaster; he is not called upon to use that knowledge in his ordinary work, but he might be called upon to use it in the course of private tuition, which would be a decided benefit to him, and also to his ordinary pupils, because he would be ready to apply that knowledge if called upon to do so by them.

643. Are you satisfied with your relations with the superintending schoolmasters?—I see no objection in that respect.

644. Do you think that they discharge their duties satisfactorily?—I believe that they discharge them conscientiously.

645. Does the system of superintendence work well?—I think that in some cases it might be dispensed with. For instance, I have been employed as a schoolmaster for nearly 21 years, and I do not think that I require so much looking after as one who is just starting in his profession, although I find that the superintending schoolmaster visits me quite as often as he visits the youngest schoolmaster in the garrison. It may be a sentimental grievance, but people who are there, when these visits are made, are apt to make the remark, "So and so wants looking after to the same extent as a much younger man."

646. But I suppose that wherever the principle of superintendence is recognized, it cannot be rendered either exceptional or arbitrary?—No, except by private instructions. The superintending schoolmaster might be instructed on that point to use his own discretion as to what schools he should visit, and how often he should visit them.

647. Do you think that two extra subjects are better than one, or that one is better than two for the first-class certificates?—I do not think that either of them are necessary for a first-class certificate. I should abolish the extra subjects, and if a man desired to be examined on such subjects I should give him, if his acquirements justified it, an extra certificate.

Regimental Schoolmaster B.

24 Feb. 1870.

Army schools.

648. Are you satisfied with the working of the special classes?—They are the only means which we have of imparting instruction. I have brought some books with me to show the Commission the result of special class work. (*The witness produced some books.*) The first two pages of this book will show the result of an ordinary attendance for four or five months; the date is the 17th of June.

649. That man was not strong in his spelling?—No, but that is commonly the case.

650. He did his ciphering pretty well?—That was after he had been in the special class for two months, before that he could do none.

651. At present it is the sergeants who authorize admission to these special classes, is it not?—I think not. I think that in the artillery the men are generally selected by the captains of batteries, and by captains of companies in the infantry and cavalry.

652. Has the schoolmaster anything to do with it?—No.

653. Do you think that he ought to do so?—Certainly. I have instances in my own special class where men will attend it for six months, and they will derive some advantage from it, but not an advantage which will be of any practical use to them hereafter; whereas if men of greater capabilities had been sent, they would really have learned what would have been useful to them throughout life.

Normal School, Chelsea.

654. Were you satisfied with the instruction which you received at Chelsea, and with the system pursued there?—I think that the system pursued at Chelsea is almost useless to schoolmasters when they go into the army.

655. Are you speaking now from your experience?—Yes.

656. I suppose that you were well educated before you entered Chelsea?—There were a great many persons examined, and only 30 were chosen out of the number, of whom I was one, and therefore I have perhaps some claim to say that I had received some education.

657. At Chelsea you were trained to teach others, or that is what is supposed to be done there?—That is what is supposed to be done there, but all the training which I received there was useless to me.

658. Can you suggest any respects in which an amendment might be made?—I think that it would be a great improvement if it were required that those who wished to be schoolmasters should possess the necessary knowledge to be such without going through the course at Chelsea, and after having given proof of that, they should be placed under schoolmasters who have proved themselves capable, and there learn the practical part of their work.

659. Then you do not think much of the institution at Chelsea as a training establishment?—I would almost say that it is useless. You acquire there habits which are of no use to you when you join the service. At Chelsea you are put to teach a lot of boys who are under very good command; you get into a system of teaching those boys, and you cannot carry out that system in a regimental school; you have there a mixed lot to deal with, and you gain nothing which is of use to you in instructing men.

660. You do not think that teaching comes by inspiration?—It comes by practice. No man can be an efficient teacher until he has had a certain amount of practice.

661. A training school professes to instruct you in the method of teaching, and gives you that practice?—But the class which you have to teach is different, and the means which you use to instruct them must also be different. For instance, if you have a class of men to instruct, you cannot talk to them in the same manner as you can to a class of boys. It is only by practice and experience that any one can become a really efficient military teacher.

662. It has been suggested to us that the 5*s.* which is given to the industrial school for materials is sub-

Regimental Schoolmaster B.

24 Feb. 1870.

Army schools.

ject to misconception and to abuse, and that it ought to be reduced, if not abolished. What is your opinion upon that point?—My opinion is that half would be quite sufficient. If the other half could be tacked to the schoolmistress's pay it would be a very great advantage.

663. Do you think that the pay of the schoolmistresses is insufficient?—Yes.

664. Does that apply to all grades of school-mistresses?—Yes, as well as to pupil teachers and monitresses. They are all under-paid; a monitress of 13 or 14 years old gets 4*l.* a year for working five hours a day in an infant and industrial school, consisting of from 50 to 100 children, not nearly so much as she would get if she was minding one child for a soldier's wife for the same time.

665. And that applies with equal force to the school-mistress?—Yes; a girl stays from 13 to 17 working in the schools for 4*l.* a year only, and then she is required to pass an examination for pupil teacher; if satisfactory to the Council she is allowed 6*l.* a year from the age of 17 to 18; from 18 to 19 she is allowed 9*l.*; from 19 to 20, 12*l*; and from 20 to 21, 15*l.* a year.

666. Are there any allowances?—No, she simply receives that bare pay, which is quite insufficient. In fact it is only from a certain class of girls that we can get them, that is to say, the daughters of soldiers who may be permanently located in the barracks, and who would rather have their children in the schools than that they should go away from them. As long as they remain there they must be a burden to their parents, because what they receive cannot find them in clothes, much less keep them.

667. Is the result of that, do you think, that an inferior class of girls are obtained?—No, I would not say that; I think that the girls are all that is necessary, but I think that they are worth a great deal more than they receive. I have heard of cases where a vacancy could not be filled, but it has never occurred to myself. Then coming to the classes of schoolmistresses, a third-class schoolmistress upon her appointment will get 24*l.* a year. Now I need not say that that is quite insufficient, and that no woman could keep herself respectably on 24*l.* a year. She is allowed, if single, 8*s.* 6*d.* a week lodging money. She may perhaps save something out of that, which would help to pay her expenses, but if such is the case it then becomes a hardship on a schoolmistress who is married, that a single schoolmistress shall receive 24*l.* a year and 8*s.* 6*d.* a week, which amounts to some 22*l.* a year more, making 46*l.*, while a married schoolmistress only receives 24*l.* for doing the same duty. A married schoolmistress derives no benefit from that allowance which is granted to single schoolmistresses only.

668. Have you any experience of the ordinary village or national schools?—None whatever.

669. On the whole, do you think that the grown children's schools, and the infant schools, are all well conducted?—I think that they are all well conducted, and that the children are in advance of those of their age in civilian schools. I have always found children coming from civilian schools inferior to those whom I have had in my own school.

670. It does not belong to the particular inquiry upon which we are engaged, but it has been incidentally stated to the Commission that there is an excessive mortality amongst the children of soldiers, and that when they grow up, they are incapacitated by a want of physical stamina, from embarking upon so fatiguing a career as that of schoolmaster; do you agree in that opinion?—I have always been of opinion that soldiers' children are the strongest and healthiest to be found anywhere; and I think that if you could get together 100 soldiers' children, and took the first 100 children whom you would find in the neighbourhood, and compared them, you would be of the same opinion. I think that there are no children to be compared with soldiers' children for health or for strength.

671. Have you any suggestions to make with regard to lectures?—As regards lectures, I do not think that they are a success. The idea is a good one, but the manner of carrying it out is certainly very defective.

672. It is too obligatory?—You force upon a schoolmaster, as a duty, a thing which he knows he is unfit for, and which he knows he is incapable of doing in a satisfactory manner, but yet he is obliged to do it, because if he does not he will lose, as it is termed, marks or chalks. An idea seems to have been fostered in the minds of schoolmasters, that the more marks or chalks they get for lecturing the better they will stand with the Council. Now this does away with the possibility of a schoolmaster devoting sufficient time to get up a proper lecture, and one worth hearing.

673. Although that is your opinion, I suppose that you would look with favour upon competent schoolmasters, or persons who had special qualifications for such a duty, occasionally discharging it?—I think that if properly qualified persons were allowed to lecture, it would be a source of amusement and profit to the soldier; but as it now is the soldier is simply disgusted with them. The soldiers are neither amused nor instructed, for they stay away from them. I think that the class of entertainments which have been got up at Aldershot this season afford much greater gratification to the soldier; and there is this to be said in their favour, that they are of no expense to the public.

674. (*Lt.-Col. Chesney.*) You speak of Readings?—Yes; there are programmes of some of them (*producing the same*). These programmes are, I believe, all different. We had a case in point the other night; it unfortunately happened that the same night was appointed for a lecture in my schoolroom, as had previously been appointed for one of these entertainments; the room for the entertainment was full, and we had not a man at the lecture. I would not advocate the doing away with the lectures entirely.

675. (*Chairman.*) But as a matter of fact, lectures are frequently given which are very well attended?—I have had lectures attended as well as could be wished. When I was at Aldershot, five years ago, I gave a good many lectures, and after the first one I was pretty sure of a good attendance, and, therefore, I went to the corps again; but I have attended a great many lectures given by other schoolmasters, and have seen that the attendance has amounted to about nil. You may get five or six men there, go through the form of showing the slides, and it is put down as a lecture, but no one derives either amusement or instruction from it.

676. Are you of opinion that too many returns are insisted upon from the schoolmaster?—The returns which the schoolmaster now has to make are very few; he has to make a monthly report which might certainly be condensed into a quarterly one. I think that one in three months would answer the same purpose, as one per month, except for one thing, namely, that soldiers' children are charged fees for attending school, and these fees have to be entered in the monthly report, and to be shown monthly. If the fees for soldiers' children were abolished, I do not see that there would be any necessity for a monthly report. I think that it would be a good thing to abolish the fees for soldiers' children.

677. Why?—They are of very little use to anybody as they are now received, they amount to very little, and sometimes a soldier might be very glad if, for instance, he has four or five children going to school, to make a better use, in one sense of the word, of the 5*d.* which he has to pay, than simply giving it for no use whatever, as he considers. The soldier generally has the idea that the fees which he pays go into the pocket of the schoolmaster.

678. Do you think that the soldiers are more apt to value education for which they pay than they would do if it was given gratis?—The amount is so very trifling that it cannot be called paying. A

Regimental Schoolmaster B.

24 Feb. 1870.

Status of schoolmasters.

man sends five children to school for 5*d.* a month; he sends three children for 3*d.*, or two children for 3*d.* In no case does the charge exceed 2*d.* per month for one child. The amount which the soldiers pay is a mere trifle, but it is the general opinion that the schoolmaster gets it, whereas he gets none of it. When there are children other than soldiers' children, some are pensioners' children, and some are officers' children, who attend our schools, and the fees which they pay go to the public also. An officer pays 5*s.* a month for his child, who gets precisely the same instruction as the child of a private soldier who pays 2*d.*

679. Generally speaking, in what light is the schoolmaster regarded by the men of the regiment?—It depends entirely upon himself. I never had reason to complain.

680. As a general rule, do you think that the schoolmasters are popular and respected?—I have never myself had reason to complain. I have heard of schoolmasters not being popular, but it has been from their own act. I do not think that a soldier has any antipathy to a schoolmaster. I think that he rather likes him. I have generally found that soldiers like to get instruction, and consequently they will like the person who imparts it to them, if his manner is such as they can understand. The great fault which young schoolmasters have is that they do not understand the men with whom they have to deal, and that therefore they are not understood by the men. A schoolmaster may have a very good feeling towards the soldier, and yet the soldier may have a bad one towards him, but this wears away gradually. The schoolmaster becomes acquainted with the soldiers, and their manners and habits, he assimilates himself to them to a certain extent, and then they understand each other, and everything works smoothly.

681. Do you think that the schoolmaster receives fair encouragement at the hands of the officers?—He might receive more with advantage. It would be an advantage to him, and also the men, if officers generally took more interest in the men attending school. Some commanding officers take a great interest in the subject. I have been under commanding officers who would make a point of frequenting my school every day, and staying for an hour. I have been again under commanding officers who would never come inside it. As I am situated at present, the only officers who ever pay me a visit are the orderly officer, who walks in, puts his name in the visitor's book, and walks out again—he seldom or never asks a question—and officers commanding batteries, who sometimes come to make enquiries as to particular men.

682. Do you think it is undesirable that the schoolmaster should be required, at the option of the chaplain, to attend school on the Sunday?—I think that the schoolmaster should not be required to do that at all.

683. (*Lord E. Cecil.*) You have mentioned some of the grievances of schoolmasters, perhaps it would not be troubling you too much to ask you to give a categorical list of the principal grievances complained of by the profession, other than those which you have mentioned?—In the first place, I think that it is a grievance that they should be required to wear stripes. This no doubt is a sentimental grievance, but it is one which has made a very deep impression upon schoolmasters. They think that they have been very much lowered by having stripes placed upon their arms. I do not think that it is at all necessary that they should wear stripes to be known as schoolmasters; it is undoubtedly the sign of a combatant rank; the schoolmaster is not a combatant non-commissioned officer, and therefore the stripes might be dispensed with, and such a dress might be accorded him as would preclude his being taken for a commissioned officer. The former dress of the schoolmasters was a very nice one, and there would be no possibility of its being taken for an officer's dress at the present day, as officers no longer wear frock coats; they wear patrole jackets, but a frock coat is peculiar to the schoolmaster.

684. Is there any other grievance which you have to mention?—Another thing which I have heard schoolmasters complain of is, that their quarters are very often quite inferior to those which are supplied to other ranks in the army. I have myself very recently suffered from that cause, but thanks to the local officer of Engineers, I have been liberated from it to a certain extent. These are the main points of grievance, so far as I am aware. The schoolmasters consider that their pay or allowance at the beginning of their service is too small, and I quite agree with them.

685. Is there anything which you have to say with regard to the inspection of kits?—The inspection of kits I consider is an indignity to a schoolmaster. In a line regiment a platoon sergeant is never asked to show his kit, but a schoolmaster is obliged to show his kit every three months.

686. Have you served abroad at all?—I was eight years in North America.

687. Then you know something about the treatment of a schoolmaster on board ship?—I went out and came home in a mail packet, and therefore have no experience of the treatment of schoolmasters in troop ships; but I have heard them most bitterly complain of the manner in which they are accommodated; their wives are separated from them, and put with the other women of the regiment, and obliged to mix up with them there, when they never have done so at any other time. I have also heard the schoolmasters complain of the food which is supplied to them when they are on board troop ships; they would not be allowed to get better food even by paying for it.

688. You have seen the regulations of July 1857. You will there see that it was laid down how a schoolmaster should be treated when you first entered the service. I do not know whether you approve of those regulations?—I never knew a schoolmaster to get a second-class cabin, as prescribed by those regulations. I never heard a schoolmaster say that he got any better accommodation than the non-commissioned officers of the regiment got. In going out by the mail steamer I had a second-class cabin, and coming home the same.

Lectures.

689. Do you think that the multiplication of the lectures leads at all to a falsification of returns on the part of individual schoolmasters?—There is no doubt about it.

690. Do you know instances of that?—I have heard from good authority of schoolmasters getting a few drummer boys into the school, reading what was written on a few slips of paper to them, and returning it as a lecture on a certain subject.

691. And of their gaining a certain amount of credit?—Of course; the number of lectures which they deliver is put down to their credit.

692. I presume that you very much approve of readings, with music, being given in greater proportion than lectures?—Most decidedly. As I have observed before, they afford more gratification to the men; they are better attended, and, in my opinion, they are quite as elevating, in fact, I think more so, for a man listening to dry statistics, such as lectures are usually composed of, has not his mind really elevated at all, whereas if he goes to an entertainment where he hears good music and good reading he must be lifted up by it. I think that it must incite a desire in his own mind to emulate that which he there sees and hears.

693. At what time in the evening are these lectures or readings generally given?—From seven to ten; they seldom extend over two hours. Some begin at seven and terminate at nine. In the Artillery they begin at half past seven and they generally finish by gun-fire.

694. Have you never known them to be given after tattoo?—I have known lectures to be given after tattoo. Five years ago the lectures at Aldershot were

Regimental Schoolmaster B.

24 Feb. 1870.

Lectures.

all given after tattoo, and it was to secure a good attendance that that time was chosen.

695. Do you not think that objectionable ?—Yes.

696. Is not the principal object of a lecture to keep the men out of the beer houses ?—Yes.

697. And if the lecture is given after tattoo it has not that effect ?—No; they come there so that they should not have to go to bed, but they are far more fit to go to bed than otherwise.

Army schools.

698. (*Lt.-Col. Chesney*). You have spoken of an objection to the schoolmasters engaging in Sunday school teaching. Is it not considered much better for the children themselves to meet with fresh faces on Sunday rather than to see the schoolmaster in the Sunday school ?—Certainly, they always feel under a certain amount of coercion in the presence of the schoolmaster, whereas in my idea Sunday school teaching and learning should be a labour of love.

699. It seems to have been so intended by the Regulations of 1857, which exempted the schoolmasters from that service ?—It is a recent regulation that a schoolmaster should take part in Sunday school teaching. I know many chaplains who object to it, in fact, with one exception, I think that I never knew any chaplain who required me to attend Sunday school; almost all chaplains are of opinion that the schoolmaster has quite sufficient to do in teaching for five or six days in the week, without teaching on Sundays.

700. Then you are of opinion that the present regulation is objectionable, but it is not carried out ?—Yes; the order exists, and it remains with the chaplain whether he shall ask the schoolmaster to do so, or not.

701. Are you aware of the practice in the civil schools in your district, as to whether the civil schoolmaster in the national schools has anything to do on the Saturday, or not ?—In most national schools I think that the schoolmaster has nothing to do on the Saturday morning. I always look upon the Saturday school as a great drawback to our average daily attendance; we never get a full school on Saturday mornings, and that reduces the average attendance very considerably.

702. Then you think that you could dispense with that Saturday morning's school, the same as in a civil school, and that there would be no great loss to any one by so doing ?—I think that it would be a gain to the schoolmaster and no loss to the pupils.

Status of schoolmasters.

703. Is it the case that your wife is a school mistress ?—She is.

704. Is it also the case that if you were promoted to be a superintending schoolmaster tomorrow you would lose by it ?—I have understood so. I have never seen any order on the subject. When the first superintending schoolmasters were appointed, their wives were allowed to retain their schools. One case has come under my knowledge in which, when a schoolmaster was promoted, his wife was not only deprived of her school, but her right to pension for her former services was resisted.

705. Under those circumstances, I suppose that you would hardly consider it to be an advantage to be promoted ?—It would be a present loss; it might be a future advantage as regards the increased retiring allowance, which a superintending master gets, compared with one who is not so. The pension to which a schoolmaster is now entitled is lower, in proportion to his pay, than that of any other person in the service. I, after having served for 21 years with one rank (for, as I said before, I never derived any benefit from the warrant rank), look forward to getting 3*s.* 6*d.* a day, which is seven-sixteenths of my pay, but a private soldier, who serves, gets two-thirds of his pay and very often more; a corporal gets very much more than two-thirds of his pay; and a sergeant gets his full pay; so that every rank has a higher rate of pension, in proportion to the pay, than the schoolmaster. I think he should get, at least, two-thirds of the amount he is receiving at the close of his 21 years' service.

706. Was your warrant rank delivered to you in the form of a written warrant ?—I never received it.

707. But you are a warrant officer ?—Yes; in my own opinion, but not in that of others.

708. Have you ever heard any objection raised on the part of the non-commissioned officers in your brigade or regiment to your holding that rank ?—I was told the other day that a recent Regulation had placed all schoolmasters lower in rank than the sergeant-major. The last Regulation states that all army schoolmasters are to be considered as below the sergeant-major in rank.

709. That Regulation took away their rank from those persons who had been appointed first-class schoolmasters ?—I do not think that it quite took it away, because Regulations exist by which they are made warrant officers.

710. But it ignored it ?—It did.

711. How many warrant officers are there now existing as schoolmasters. I ask the question because I see that in 1867 there were 14 ?—I do not think that there are so many now, because all the superintending schoolmasters have been made from the warrant officers.

712. (*Maj.-Gen. Wilmot.*) When the order to which you have just referred came out did it make any practical difference in your position ?—I never felt any difference, because the advantages of the warrant rank had never been secured to me.

713. How would you arrange the rank of schoolmasters on joining, and their subsequent promotion ?—They should have the rank of sergeant-major on joining; and after seven or ten years service, but I think ten, they might have the warrant rank with all the advantages of that rank secured to them, and not a nominal rank.

714. (*Lt.-Col. Chesney.*) In accordance with the regulations of 1857 ?—Yes; by those Regulations a first-class schoolmaster could put in a claim to live in officers' quarters, if any were vacant and not required, but now he has no such claim, although he may hold the same rank as he held then.

714*a*. (*Chairman.*) Have you any further suggestions to make ?—I would respectfully desire to bring to the notice of the Commission that army schoolmasters are almost entirely shut out from that promotion to the rank of commissioned officers which is open to all other classes of non-commissioned officers. Throughout a period of 21 years, and from a body of between 300 and 400 men I think only 13 have received commissions. Of these, 12 have been or are superintending schoolmasters, and one is now a paymaster. As it cannot be that their educational acquirements are below those of such as are being constantly raised from the ranks, it follows that there must be some other cause which prevents their being placed in that position; and what that cause is, I would most respectfully suggest, might be made a legitimate subject of enquiry.

The witness withdrew.

Col. Hamley, C.B.

BREVET-COLONEL E. B. HAMLEY, C.B., Royal Artillery, examined.

Libraries and recreation rooms.

715. (*Chairman.*) You are the member of the Council of Military Education with whom the management of libraries and recreation rooms rests ?—Yes.

715*a*. Are you satisfied with the general management and condition of the recreation rooms and libraries ?—Yes, on the whole; I should, I think, only suggest two changes.

716. Will you have the kindness to state them ?—One is that the Government allowance, although it is quite sufficient for troops who are at large stations, and where libraries are already established, is very insufficient in the case of establishing a new library. The custom is only to allow 10*l.* towards the purchase of books. I should suggest that books in

roportion to the number of troops should be anted in cases where a new library is established, d where we have no old library which has fallen in, om which we can get the books. The other case is e case of the Artillery and the Engineers, which e Council brought some years ago before the War ffice, but without success. The Government allow- ce is quite sufficient as a general rule for the com- nies of the Line, but batteries of Artillery and oops of the Engineer-Train are put into the same tegory, although they greatly exceed the companies strength. For instance, batteries of Artillery are 0 strong, which is more than double an ordinary mpany of infantry, and yet both have the same lowance. It is still more disproportionate in the se of the Engineer-Train. The Engineers have o troops numbering 207 and 180 respectively, with depôt numbering 37. The total strength is, there- re, 424 non-commissioned officers and men, and for ese they have only the same allowance as two com- nies of infantry.

717. To what do you attribute the state of things which you have urged objections?—To the jection to incur additional expense. The answer the War Office to the suggestion which was ade, was that each section of the Engineer troops ight be considered as a company, and that we might -distribute the total sum allowed for all branches the service; but as we did not consider the lowance too much at present for the infantry and the valry, we did not make any attempt to re-distribute e sum. In the Engineers each of the two troops is w divided equally into two sections. The average rength of a single section is, therefore, 97 men, which is far beyond the number in a company of the Line; and the consequence of the inadequate allowance is that the subscribers are very rapidly falling off in the Engineers. The report of the officer in command of the Engineer-Train is as follows; he says—"The "number of subscribers are, in the A troop, 161, in the "B troop, 154 (who are not present just now), and in "the depôt, 25. The insufficiency of furniture still "exists, and prevents men from subscribing. Through "the exertions of the officers the number of sub- "scribers have been kept up to the above; but now "that one troop is absent it has become necessary "to strike off some newspapers. The 11th company "of the Royal Engineers, which shares the same "recreation room, has reduced its subscribers to 10 "out of 100. The bagatelle balls are broken, and "the few comforts which we have in the way of "furniture and games are damaged beyond repair. "There are no funds, and I do not see my way to "keep going any longer."

Col. Hamley, C.B.

24 Feb. 1870.

Libraries and recreation rooms.

718. Do the papers which you have with you contain the statistics?—I think they contain all possible information.—(*The witness delivered in certain documents, vide Appendix.*) (*The Witness.*)—The proportion of books to troops is 120 volumes per troop or company, and 324 per battery. The Council receive no library reports from India. The superintendents of army schools there furnish inspection reports of some, but not of all. The average cost of books for military libraries is 2*s.* 6*d.* per volume, or about 125*l.* for 1,000 volumes. The average number of subscribers to the recreation rooms is, roughly estimated, about eight-thirteenths of the troops.

Appendix, p. 136.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 1st March 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.	C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.	LIEUT.-COLONEL CHESNEY.
MAJOR-GENERAL EARDLEY WILMOT.	

BREVET-COLONEL F. R. ELRINGTON, Rifle Brigade, examined.

Col. F. R. Elrington.

1 March 1870.

719. (*Chairman.*) You are in command of the 4th ttalion of the Rifle Brigade, at Aldershot?—Yes.

720. There is an army school attached to your ttalion?—Yes; there is the usual regimental school- aster who has gone through the course at Chelsea; is one of the regulated schoolmasters.

721. He is a schoolmaster who came into the ser- ce with a warrant?—Yes. He has been with us me eight years, and, therefore, he must have done . The warrant was then taken away.

722. From the point of view of a commanding offi- r, do you see any objection to the schoolmaster lding a warrant, and taking rank with the sergeant- ajor?—I think that he may take rank with the rgeant-major, but I think that it is objectionable at he should have a warrant which would entitle him what is called a second-class cabin on board a ship; ere is great trouble connected with it. I recollect barking for Malta, and one of these schoolmasters as appointed, and he said "I am entitled to a second-class cabin," I said "I believe that there is no cabin of this sort, if there is you shall have it." sent for the purser and I asked whether the school- aster, as a warrant officer, could be put up, and he id "No." I then said to the schoolmaster, "Then you must leave the ship and find your way to Malta as you can," which he did at the expense of 10*l.* to he public; whereas if he had not had a warrant he ould have taken his place with persons in as good a social position as himself. I think that it put them (schoolmasters) a little above their position. As warrant officers they do not like to associate with the non-commissioned officers, and there were no other persons for them to associate with, and they were obliged to form a body among themselves in the garrison, and it did not in my opinion work satisfactorily.

Status of schoolmasters.

723. Supposing that schoolmasters had not a warrant, where would you think that they should rank?—After the sergeant-major. I would put the sergeant-major first in the position, he is the head of the whole of the non-commissioned officers, and then I think that the schoolmaster might rank after the sergeant-major, and with the quartermaster sergeant, and the other staff sergeants; but I think that the head of the non-commissioned officers should be the sergeant-major of the regiment, and that there should be no non-commissioned officer senior to him in the regiment. These schoolmasters were very troublesome people at first, they owed you no authority; they did not actually snap their fingers in your face, but they very nearly did so in some cases. They said, "We are appointed by the Council of Military Edu- "cation, and we have nothing to say to you." They have put their hands in their pockets, and have put their arms akimbo when talking to their commanding officer, which, in a military point of view, is a want of respect.

724. You think it very desirable that the school-

Col. F. R. Elrington.

1 March 1870.

master should be under the discipline of the commanding officer?—Yes; with whatever precautions it may be hedged in, so as to prevent any harsh treatment in any way. The schoolmasters are treated with the greatest consideration; but whenever you give them too much consideration they get bumptious.

Status of schoolmasters.

725. As far as those points are concerned, you would not be inclined to recommend any very great change in their present status?—Certainly not.

726. Do you think that the men who now come into the service under the new regulations, that is to say, without a warrant, and in a position subordinate to that of the sergeant-major, are a satisfactory material?—I am unprepared to speak upon that point because I only know what happens in my own battalion. I have not made inquiries among others; but for the little education which the schoolmaster is required to give, and the few simple things which are for the benefit of the soldier, you do not want a high class man; if he is a high class man he is apt to introduce things which are of no practical use, and which will bother and confuse the soldier. Indeed, I think that in the early days under the old system, when a sergeant was selected, the schools were well attended, and I must say that I think that the results were as satisfactory as those of the present system. An ordinary sergeant who had greater attainments than the rest was selected, and he was under one's immediate control; he taught the men to read, write, and cipher, to the extent which it was necessary for the ordinary sergeants to learn, and I do not think that it is desirable to teach them much more.

Army schools.

727. Would you render attendance at school compulsory on a recruit?—Yes; I think that they might be retained at school, not only during drill, but until they should have obtained the rudiments of education, namely, that they should be able to read and write, and do plain addition and subtraction sums.

728. A previous witness has suggested that their attendance upon school should be postponed until they have finished drill. What is your opinion in that respect?—I have no doubt that different commanding officers will disagree in opinion. I think that the instruction at school might be carried on simultaneously with drill.

729. Would you make promotion dependent upon the possession of a second and of a first-class certificate?—A first-class certificate is rather high. I think that you might have a third-class certificate for the first promotion to corporal. Theoretically, of course, the educational acquirements are very necessary, but practically, we very often find a man who is to a certain extent educated but who has not control, and he does not keep his men in order, or their rooms, while another man may have less book knowledge, but his men obey him, and he is a better non-commissioned officer. You cannot make a good non-commissioned officer by putting him through certain educational tests. There is no doubt that the art of governing people in all ranks is not to be learnt at a school. There is a difficulty in young corporals dealing with men over whom they are put; they think that they know a great deal, and they are apt to be more insolent when they fancy they possess superior attainments.

730. The quality which enables a good non-commissioned officer to exercise his ascendancy over his men I suppose is in fact superior intelligence?—It is not superior intelligence, it is simply tact. One man can deal with men, whereas another cannot; he may be very intelligent and a very clear headed and clever fellow, but yet he cannot manage his men. I have often found that to be the case. I have been obliged to make men colour-sergeants and pay-sergeants who are correct in their books and everything else, but who cannot manage their men satisfactorily.

731. By whatever name we call the quality, whether we call it tact or intelligence in the management of men, is it not probable that where that quality exists, if it was rendered a *sine quâ non* that reading and writing should form a necessary preliminary to promotion, those very men whom you thus describe would acquire those two arts?—They must do so now to a certain extent in order to be promoted; they must know that that is necessary before they can be promoted at all and before they can get their first lance corporal's stripe.

732. Are these the rules which you have yourself established?—Yes; and there must be a certificate from the schoolmaster with a specimen of the man's handwriting from dictation, and if he is otherwise good he is promoted.

733. The Council of Military Education have nothing to do with that?—No; they lay down no scale whatever for promotion; that is left to the commanding officer of the regiment, who promotes.

734. The Council only lays down a scale for the certificates?—Yes.

735. Would not this scale of yours for promotion to sergeant be tantamount to more than a third-class certificate?—I think not. All the non-commissioned officers have to attend school until they can do what is laid down in the paper which I have put in.

736. (*Sir D. A. Cameron.*) But it does not prevent your promoting them?—No; I do not promote them but I can do it, and sometimes I am obliged to do it. It is now very hard to get good non-commissioned officers they have deteriorated very much in the last 20 years. It might be easy to make it compulsory that all corporals should have a third-class certificate, or that they should get it within a reasonable time after promotion, because sometimes you may be very hard put to in order to make non-commissioned officers. The men do not now care about the promotion. There is so much duty of one sort and another that a number of acting corporals have to be made. The lance corporals may be two or three years before they get to the rank of corporal and they have the same duties as corporals, and they get no extra pay whatever. If a man makes a slip, if he meets a friend and takes a little more drink than he ought to do, his stripe is taken away from him. I think that the lance corporals of regiments should receive a penny a day extra pay; it would not cost the country much, and would be a very great thing.

737. Except that it rather deters them from qualifying themselves, they having to wait so long as a lance corporal before they rise to the superior rank?—Yes.

738. (*Chairman.*) Do you know anything of the Hibernian School?—No.

739. Do you know anything of the Duke of York's School?—We have two boys from the Duke of York's School who are very good, and they generally are so.

740. Have you any suggestion to make generally with regard to the system of army schools?—I think not.

741. Do you think that the system of inspection is satisfactory?—I think that it is; but now the regiments are reduced to such very small numbers that you hardly get any men to attend the school. There are now daily musketry and gymnastics, and one thing and another, so that not much time is left for the men for schooling, and at present the regiments are so weak that you can scarcely get any men to attend.

742. What is the general attendance?—I am sorry to say that it is very small indeed; the men do not like it. In December 1869 the average daily attendance of sergeants in the 4th battalion of Rifle Brigade was 3·69; of corporals, 4·07; and of privates 3·69. In January 1870 the average daily attendance of sergeants was 3·87; of corporals, 5·81; and of privates, 4·31. In February 1870 the average daily attendance of sergeants was 2·05; of corporals, 3·; and of privates, 5·30. Then there are a good many men on furlough during the winter months; and in summer, owing to the field days, and one thing and another, they cannot attend the school.

743. What is your opinion of the School of Musketry at Hythe; do you think that it is an institution which ought to be maintained?—I think so. I should

n favour of there being one central school; you t have a standard for the rest to go by.

44. That being your opinion, would you maintain etty much upon its present footing?—I think so. soldiers, like myself, were a little opposed to it at . We thought that we could do our own shooting, I have altered my opinion, and I think that the he system is a good one, and if it were left regitally, which has been thought of, I do not think it would work so well.

45. It has been suggested to us that the art of oting has become such a necessity, and so comely a part of the soldier's functions, that it might aught in the regiment just as much as drill; but as I understand, are of a different opinion? t might be so taught, but I think that Hythe is of the best military institutions in the country, and ink that it would be a mistake doing away with it, use it is a standard; it is a place of reference. ink that it might be modified, but I think that, he whole, it is good.

46. (*Lt.-Col. Chesney.*) To return to the subject schools, have you not had an evening school in r battalion?—Yes; that is voluntary, and the ntary school is better attended in the evening n in the afternoon.

47. If such instruction was looked upon in the y as a regular school system, a part of the duty g to look at the school work more than at present, ld you recommend the evening in preference to afternoon?—No; the men do not like to have their nings interfered with. You might get them in afternoon. I would give them their drill in the ning, and their attendance at school in the afternoon. I would have no drill in the afternoon, but I k that they would not like to attend school in the ning. I think that a voluntary class is a good g; in fact, one volunteer is worth two pressed .

48. I have gathered from you that you understand difficulty in getting educated non-commissioned cers to arise from the fact that the men do not e for promotion?—Yes, they do not care about it.

49. Still, as many regiments insist upon a regintal standard of education, would it not be practlly as easy to enforce a third-class certificate hich is simply elementary) on men before being de full corporals?—Yes, I think that a third-class tificate might be fairly insisted upon for promotion the rank of corporal, unless it is a very exceptnal thing; it is nothing but what any man of inary intelligence can acquire.

50. And you do not find any great difficulty in rking your non-commissioned officers to the present ndard?—No, I should say to a man at the top of list, "I should make you sergeant, but you cannot pass the examination of the schoolmaster, and you must remain where you are." I should do so unless vas hard pressed for it; that system can only work peace time, in service it would be different.

51. Do you see any advantage in attempting to ry the education regimentally higher than a simple limentary education?—Certainly not. I think that men get a little knowledge of things, and that y get their heads rather more addled than they herwise would be.

52. (*Sir D. A. Cameron.*) I think that you said t it was compulsory on recruits to attend school? No, it was so according to the Queen's regulations, t not now. During their drill, in some instances, ey attend school, but as soon as they are dismissed ill it is not compulsory for them to attend school.

53. For how many hours in the week in your giment do the recruits attend school; is there any ed number of hours in the week; do they attend ily?—Yes, some of them.

54. I suppose that there are very few men in the giment who cannot read and write?—I should think at there are not more than four or five per cent. who not sign their names.

55. Do you think that a man who could obtain a second-class certificate would be qualified for the position of pay sergeant, to keep the accounts of his company?—Certainly. *Col. F. R. Elrington.* 1 March 1870.

56. Would a second-class certificate include fractions?—An ordinary pay sergeant has no fractions; he, perhaps, would not be able to make out a ration return. Army schools.

57. But you consider that he can keep his ledger accounts without a knowledge of fractions?—Certainly.

58. One of the witnesses whom we have had before us has stated that the general education of the army has very much deteriorated since the Crimean war; do you agree in that opinion?—No, I do not agree with him—certainly not as to general education—but the non-commissioned officers have unquestionably deteriorated.

59. They are a different stamp of men?—Yes, some of the sergeants that I have now would not have been corporals 15 or 20 years ago.

60. Is not that owing to the limited service?—Yes, that has something to do with it. You got a great deal of riff-raff into the service in the time of the Crimean war, and you got on better than one might suppose.

61. And in former days non-commissioned officers were trusted with money a great deal more than they can be now?—Yes, you cannot trust some of them now with a 5*l.* note; they have deteriorated immensely.

62. (*Dr. Butler.*) It has been stated to us by some witnesses, that the efficiency of the schoolmasters of late years has been decidedly inferior to what it was, and that the schoolmasters as a body are dissatisfied with their position; do you think that there is ground for that statement?—My own schoolmaster has been with us some eight or nine years, and has given general satisfaction. He is a decent sort of man, and he has done his work satisfactorily. I have no fault to find with him; but I have not gone into other schools, and I do not really know as to the schoolmasters outside my own battalion. Status of schoolmasters.

63. You are clearly of opinion that the schoolmaster should rank below the sergeant-major?—Yes.
